Melbourne:

MASON, FIRTH & M'CUTCHEON,

51 & 53 FLINDERS LANE WEST.

1882.

P R E F A C E .

IN compiling this statement of the proceedings of the Royal Commission appointed by His Excellency the Governor, under the authority of the Act No. DCXIX. (*An Act to provide for the holding of Victorian Exhibitions*), to hold an International Exhibition at Melbourne of the Arts, Manufactures, and Products of all the Nations of the World, an effort has been made to add to the interest of the OFFICIAL RECORD by giving a brief account of the Exhibition Buildings and their contents. This latter is, of course, far from complete; and no attempt has been made to advance independent opinions, or induce any theories from the facts stated. Most of the descriptive matter is founded upon the able and exhaustive reports of the Melbourne Exhibition which appeared from time to time in the columns of the daily press.

ERRATUM.

THE following should have appeared under Jury IV., page 40:—The award of a First Order of Merit given by the Jury to the exhibit of the Art-Union of Victoria could not be confirmed by the Committee upon Juries and Awards, inasmuch as the exhibit was not entered in time, according to the regulations.

VICTORIA.

ANNO QUADRAGESIMO SECUNDO

VICTORIÆ REGINÆ.

No. DCXIX.

An Act to provide for the holding of Victorian Exhibitions.

[14th November, 1878.]

WHEREAS it is desirable to hold public exhibitions of works of industry and art: And whereas it is also desirable that suitable buildings and grounds be provided for such purposes: And whereas it is expedient that commissioners should be appointed to carry out and superintend such exhibitions, and that trustees be appointed for such buildings and grounds: Be it therefore enacted by the Queen's Most Excellent Majesty by and with the advice and consent of the Legislative Council and the Legislative Assembly of Victoria in this present Parliament assembled and by the authority of the same as follows (that is to say):—

1. This Act shall be called and may be cited as "*The Victorian Exhibitions Act 1878*" Title of Act. and shall be read and construed as one Act with "*The Exhibitors Protection*" No. 422. Act 1872."

2. The Governor in Council may from time to time appoint or remove such persons as he may think fit to be Exhibition Commissioners one of whom he shall appoint to be president. Subject to the provisions of this Act such commissioners shall carry out and superintend any public exhibition of works of industry and art authorised to be held in accordance with the provisions of "*The Exhibitors Protection Act 1872*" and for which they may be appointed to be or act as commissioners. Provided that no commission for the holding of any exhibition shall remain in force for more than three years. The commissioners for any exhibition shall for the purposes of this Act be a body politic and corporate by the name of "Exhibition Commissioners" and shall by that name have succession until the purposes for which they have been or shall be appointed respectively shall have been carried out and all claims demands and suits by or upon or against them in such their corporate character shall have been satisfied, and shall have a common seal and shall by the same name sue and be sued plead and be impleaded answer and be answered unto in all courts and places whatsoever and shall have power to compound or to prove in any competent court all debts due to them.

3. Unless otherwise directed by the Governor in Council such commissioners shall take all measures necessary for providing erecting altering and maintaining the buildings and premises required for any exhibition for which they may be appointed commissioners, and for securing and obtaining the most effective display of all articles received for public exhibit: Provided that plans and specifications together with an estimate of cost for the erection of the original building shall be first submitted to Parliament and shall receive the approval of the Governor in Council.

4. The commissioners for any exhibition or a majority of them at any general meeting assembled shall have power from time to time to make repeal alter and re-enact such rules and regulations as they may think fit for the purpose of providing for—
Commissioners may make rules and regulations. No. 357 s. 6.
(i.) The conduct of their own proceedings:
(ii.) The due management of the affairs of the exhibition in its several departments:

- (iii.) The temporary admission or exclusion of the public or any individual to and from the exhibition or buildings or grounds or any part thereof and the behaviour to be observed therein:
- (iv.) The sum to be demanded and paid for admission to the exhibition or buildings or grounds or any part thereof, and the manner in which all moneys received by the commissioners shall be applied: and
- (v.) The purposes of public instruction enjoyment or entertainment for which any buildings or grounds or any part thereof may be used and applied.

And all such rules and regulations shall be signed by the president and submitted for the approval of the Governor in Council, and if approved they shall be published in the *Government Gazette*, and until such publication such rules and regulations shall not have any operation; and every person who shall be guilty of a breach or contravention of any such rules or regulations shall on conviction thereof be liable to a penalty not exceeding Ten pounds.

5. A public exhibition of works of industry and art shall be held in Melbourne in the year One thousand eight hundred and eighty, and the commissioners appointed to carry out such exhibition shall have the exclusive control of all matters whatsoever connected with the said exhibition until the thirtieth day of September One thousand eight hundred and eighty-one and no longer.

6. Subject to the conditions contained in any regulations which may from time to time be made by the Governor in Council and published in the *Government Gazette* and on receiving a statutory declaration from any importer exhibitor or his agent of his intention to exhibit any article specified in such declaration at any public exhibition within the meaning of this Act it shall be lawful for the Commissioner of Customs by order under his hand to authorise the admission into Victoria by land or sea without payment of any duties of Customs of any such articles so intended as exhibits at any such public exhibition.

7. The Governor in Council may from time to time appoint or remove persons to be Trustees. trustees for the purposes of this Act: Provided that the number of trustees at any time shall not exceed seven, of whom one shall be the mayor for the time being of the city of Melbourne, and one other shall be such member for the time being of the Council of the said city as the said Council may from time to time elect to be trustee for any period not longer than one year; but if the said mayor for the time being shall fail or refuse to act as a trustee the Governor in Council may from time to time appoint any other person to be trustee instead of such mayor, and if the said Council shall at any time fail to elect any member thereof to be a trustee, or if any member elected shall fail or refuse to act as trustee, the Governor in Council may at any time after such failure to elect, or failure or refusal to act, appoint any person to be a trustee: Provided also that during the time or period for which any commissioners may be appointed to act in respect of any public exhibition such commissioners unless otherwise directed by the Governor in Council shall have the exclusive control of all lands buildings and premises held by such trustees, and such commissioners shall exercise all the powers conferred on them by this Act, and neither shall such commissioners nor shall any lands buildings or premises used in connection with any exhibition carried out and superintended by such commissioners be interfered with in any respect whatever by such trustees.

8. No power authority act or proceeding of any trustees or commissioners appointed under the provisions of this Act shall be invalidated or be illegal in consequence only of the whole number of trustees not being filled up or of there being any vacancy in the number of such trustees or commissioners as the case may be at the time of the exercise doing or execution of any such power authority act or proceeding.

9. The trustees appointed under the provisions and for the purposes of this Act shall be a body politic and corporate by the name of "The Exhibition Trustees," and shall by that name have perpetual succession and shall adopt and have a common seal, and shall by the same name sue and be sued plead and be impleaded answer and be answered unto in all courts and places whatsoever, and shall have power to compound or to prove in any competent court all debts due to them.

10. The majority of the trustees for the time being at any general meeting assembled shall have power from time to time to make repeal alter and re-enact such rules and regulations as they may think fit for the purpose of providing for—
(1.) The conduct of their own proceedings;
(2.) The due management of the affairs of the corporation in its several departments and the manner in which all moneys received by the trustees shall be applied:

And when there are no commissioners in existence under this Act—

- (iii.) The use and terms to and on which the buildings or grounds or any part thereof may be applied:
- (iv.) The temporary admission or exclusion of the public or any individual to and from the buildings or grounds or any part thereof and the behaviour to be observed therein:
- (v.) The sum to be demanded and paid for admission to the buildings or grounds or any part thereof.

And all such rules and regulations shall be reduced into writing, and the common seal of the corporation having been affixed thereto shall be submitted for the approval of the Governor in Council, and if approved they shall be published in the *Government Gazette*, and until such publication such rules and regulations shall not have any operation; and every person who shall be guilty of a breach or contravention of any such rules or regulations shall on conviction thereof be liable to a penalty not exceeding Ten pounds.

11. The said trustees and any commissioners appointed under this Act shall respectively
 Annual report. • on or before the thirtieth day of September in every year report the
 No. 357 s. 7. proceedings of the said corporation or commissioners as the case may be
 No. 86. • during the previous financial year to the Chief Secretary, and such report
 shall contain a full account of the income and expenditure of such corporation
 or commissioners duly audited by the Commissioners of Audit, and a copy of every such
 report and all rules or regulations made under this Act shall be laid in each year before
 Parliament.

12. The expenses of providing or erecting buildings and premises for the said exhibition
 Expenses of • to be holden in the year One thousand eight hundred and eighty and
 buildings and • of securing and obtaining the most effective display of all articles received
 exhibitions. • for public exhibit and of the carrying out of the provisions of this Act shall be
 Surplus. • defrayed out of the moneys to be provided by Parliament therefor: Provided
 that if after all necessary expenses have been defrayed the Commissioners of
 Audit report that there are any surplus proceeds from any source whatever in respect of such
 exhibition or any future exhibition for which any appropriation of revenue may at any time
 be made, such surplus proceeds shall be forthwith paid into the Consolidated Revenue.

13. As to the land described in the First Schedule hereto, the Order in Council dated the
 Permanent • ninth day of June One thousand eight hundred and seventy-three by which
 reservation of • certain land in the parish of Jika Jika at Carlton was reserved from sale
 land at Carlton • permanently and the grant of such land dated the thirteenth day of June in
 and Crown grant • said year for certain purposes therein named to the Board of Land and Works
 thereof con- • and to the mayor aldermen councillors and citizens of the city of Melbourne

 scribed in Second • and the remaining portion of the said land shall be restored to the joint
 Schedule. • possession of the Board of Land and Works and the mayor aldermen councillors and citizens
 Second Schedule. • of the city of Melbourne to be held and enjoyed under the grant hereinbefore mentioned:

Provided always that the public shall be deprived only upon any special and temporary
 occasions for which the said Exhibition Trustees shall receive the approval of the Governor in
 Council of the right of free ingress and egress as foot passengers only to and from the grounds
 around the buildings on such land described in the Second Schedule hereto.

Provided also that so often as the land mentioned in the Second Schedule shall be required
 for the purposes of a public exhibition of the character hereinbefore mentioned the Commis-
 sioners to be appointed for every such exhibition shall have the sole control of the said land
 and the buildings thereon whilst such exhibition may continue.

Provided also that nothing in this section contained shall be deemed to divest the Board of
 Land and Works and the mayor aldermen councillors and citizens of the city of Melbourne of
 the legal estate of such land described in the Second Schedule hereto.

SCHEDULES.

FIRST SCHEDULE.

Greeting—

WHEREAS, by a Commission under the hand of His Excellency Sir George Ferguson Bowen, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Governor and Commander-in-Chief in and over the Colony of Victoria and its Dependencies, and Vice-Admiral of the same, &c. &c., and the Seal of the Colony of Victoria, dated the second day of September, in the year of our Lord One thousand eight hundred and seventy-eight, by virtue of the power and authority vested in him by the Act of Parliament No. 422, certain of you were constituted and appointed Commissioners to take measures for the holding of an International Exhibition of Works of Industry and Art at Melbourne, in the month of October, in the year of our Lord One thousand eight hundred and eighty: And whereas by an Act to provide for the holding of Victorian Exhibitions styled "*The Victorian Exhibitions Act 1878*," which Act came into operation on the eighteenth day of November, in the year of our Lord One thousand eight hundred and seventy-eight, it is provided that a Public Exhibition of Works of Industry and Art shall be held in Melbourne in the year of our Lord One thousand eight hundred and eighty: And whereas it is further provided by the said last-mentioned Act that the Governor-in-Council may from time to time appoint or remove such persons as he may think fit to be Exhibition Commissioners for carrying out the said Public Exhibition of Works of Industry and Art, and that on such appointment such Commissioners shall, for the purposes of the said last-mentioned Act, be a body politic and corporate by the name of "Exhibition Commissioners": Know ye that, by the power and authority vested in me by the said last-mentioned Act, I, the Administrator of the Government of the Colony of

Victoria aforesaid, with the advice of the Executive Council thereof, relying on your loyalty, integrity, learning, and ability, have constituted and appointed, and by these presents do constitute and appoint you, the said William John Clarke, James Joseph Casey, James Munro, Sir Bryan O'Loughlen, Sir George F. Verdon, Sir Samuel Wilson, Graham Berry, James Macpherson Grant, William Colliard Smith, Francis Longmore, James Brown Patterson, John Woods, Peter Lalor, Henry Cuthbert, John Cumming, Caleb Joshua Jenner, Robert Dyce Reid, William Wilson, Sir Charles Gavan Duffy, John Andrew, Henry Bell, George Bilsdon, Joseph Bosisto, Robert Bowman, Alfred Thomas Clark, Edward John Dixon, John L. Dow, Jeroniah Dwyer, James Fergusson, George Randall Fincham, James H. Graves, Thomas Hunt, Robert de Bruce Johnstone, George D. Langridge, John Laurens, James Mirams, John Nimmo, William Joseph O'Hea, John Orr, Richard Richardson, Alexander Kennedy Smith, Joseph Story, Ephraim Lamen Zox, Samuel Henry Bindon, Thomas Loader, William Mountford Kinsey Vale, Joseph Aarons, Richard Bowen, John M'Ilwraith, Thomas O'Grady, John Pigdon, Robert Richardson, Joseph Anderson Pantom, John Buncle, James Dallas, John Danks, George E. Douglas, William Gillbee, William Gray, John Halfey, William Bushby Jones, Edmund Keogh, Robert Knaggs, George Lansell, Alexander Marks, L. L. Mount, David Munro, William E. Murphy, John Owen, J. A. Reid, D. C. Sterry, William Kerr Thomson, William Williams, E. A. Wynne, William R. Yeomans, John Zevenboom, Louis Thomeman, Gustave Beckx, Jonathan Binns Were, Charles Fauconnet, William Alexander Brane, George N. Oakley, Henri J. Hart, Daniel Ploos van Amstel, Thomas Charles Napier Cooper, James Danvion, Robert Murray Smith, Guillaume de Pury, O. M. Spencer, Samuel Perkins Lord, and Samuel M. Gibbs, to be Commissioners to carry out and superintend the said Public Exhibition of Works of Industry and Art to be held in Melbourne in the year of our Lord One thousand eight hundred and eighty, now known and called "The Melbourne International Exhibition, 1880," and for the erecting, altering, and maintaining of suitable grounds and buildings for the purposes of such Exhibition, you keeping the entire control and management thereof until otherwise determined, and for appointing and regulating the charges for admission to such buildings, premises, or grounds, or the rent or hire of any part thereof or otherwise, and the application of the proceeds towards the objects and the expenses of the said Exhibition; and for appointing the purposes of public enjoyment and entertainment for which such buildings, premises, and grounds, or any part thereof, may be used and applied; and for obtaining such exhibits as may, in your judgment, be necessary to illustrate the progress of industry and art elsewhere, and for securing the most effective display of all articles sent for public exhibition, their safe custody, their due return to their owners, or their disposal otherwise, as may be arranged; and for determining as to the nature, number, and value of the prizes to be awarded to the exhibitors and the impartial distribution thereof; and generally to do and execute all other matters and things whatsoever deemed necessary by you for the full accomplishment of the duties entrusted to you by this Commission: And further, I do hereby, with the advice aforesaid, constitute and appoint you, the said William John Clarke, to be President; and you, the said James Joseph Casey, James Munro, Sir Bryan O'Loughlen, Sir George F. Verdon, and Sir Samuel Wilson, to be the Vice-Presidents of this Commission. And lastly, with the advice aforesaid, I do, by these presents, ordain that this Commission shall continue in full force and virtue until otherwise determined, and that you, the said Commissioners, or any seven or more of you, shall and may from time to time, and at any place or places, proceed in the execution thereof, and of every matter and thing therein contained, although your proceedings may not be continued from time to time by adjournment.

Given under my Hand and Seal of the Colony, at Melbourne, in the said Colony, this twentieth day of March, in the year of our Lord One thousand eight hundred and seventy-nine, and in the forty-second year of Her Majesty's reign.

(L.S.)

---	--

CONDITIONS AND REGULATIONS.

The following Conditions and Regulations for the governance of the Exhibition, together with the classification of exhibits, were published, and forwarded to all parts of the world:—

THE MELBOURNE INTERNATIONAL EXHIBITION, 1880.

In accordance with a Commission issued under the great seal of the Colony of Victoria, and with the co-operation of the Imperial Government of our Gracious Sovereign the Queen, an International Exhibition of Arts, Manufactures, and Agricultural and Industrial Products of all Nations will be opened at Melbourne on the 1st day of October, 1880, and will close on 31st day of March, 1881.

The Exhibition will be held in buildings specially erected for the purpose in Carlton Gardens, centrally situated in the City of Melbourne, and the cost of erecting such buildings, and all expenses incidental to the Exhibition, will be defrayed out of funds voted by the Parliament of Victoria.

The Commissioners are empowered to invite the British, Foreign, and Colonial Governments to take part in this Exhibition, and they will be glad to learn that steps have been taken to provide for the representation of every country and colony thereat.

The fact that Australasia has been represented at all the great Exhibitions of the world since their inception in the year 1851, and the advance she has made in productive industry, the extent of her commercial relations, and the high position to which her imports and exports have attained, indicate that she has now reached the period when she may profitably invite the great manufacturing countries to send the most complete products of their skilled industry to a people who are in a position to become not only generous competitors but good customers.

1. Applications for space, with full particulars, are invited as early as possible. Copies of the official form of entry can be obtained upon application to the Secretary to the Commissioners.

2. Excepting under the circumstances specified under Article 4, applications for space must be made through the representatives of the country or colony to which the applicants belong.

3. Governments intending to take part in this Exhibition are requested to forward an intimation to that effect not later than the 1st of June, 1879.

4. In the event of no representatives being appointed by the country or colony to which an intending exhibitor belongs, he can communicate direct with the Secretary.

5. Applications for space should be made not later than the 1st March, 1880.

6. British, Foreign, and Colonial Governments, or Commissioners appointed by them, are requested to inform the Melbourne Commission not later than the 1st day of January, 1880, whether they require any increase or diminution of the space offered them, and the amount. They are also requested to state whether there will be any exhibits for which special space should be provided, together with a description showing their nature and quantity.

7. Before the 1st day of June, 1880, the representatives of countries or colonies should furnish approximate plans, showing the manner of allotting the space assigned to them, and lists of their exhibitors, and other information necessary for the production of the Official Catalogue.

8. Commissioners representing countries or colonies, and private exhibitors, may adopt one of three courses, viz.:—

(a) They can ship their exhibits direct to Melbourne, and make their own arrangements for their shipment, reception, and exhibition.

(b) Or consign their exhibits to

*The Secretary International Exhibition, 1880,
Melbourne, Australia,*

with specific instructions as to what is desired.

(c) Or, having previously forwarded an entry to the Melbourne Commission, they can forward the Goods, together with invoices and descriptions, to any of the following firms or companies:—

London—Messrs. James M'Ewan & Co., 27 Lombard-street; or to Messrs. Milwraith, M'Eachran & Co., Leadenhall-street.
Liverpool—Messrs. John Swire & Sons.
Glasgow—Messrs. Aitken, Lilburne & Co.
Antwerp—Messrs. Jules Renard & Co.
New York—Messrs. R. W. Cameron & Co.
San Francisco—Pacific Mail Company.
All Ports where the Company has Agencies—The Peninsular and Oriental Company.

9. Packages forwarded from countries and colonies represented at the Exhibition should be addressed—

*To the Commissioner for.....
at the International Exhibition of 1880, Melbourne,
Victoria, Australia,*

and have two labels bearing the flag of the country to which the exhibitor belongs : or where no representative has been appointed—

*To the Secretary
International Exhibition of 1880, Melbourne,
Victoria, Australia,*

and two labels, affixed to different but not opposite sides of the package, giving the following information :—(1) The country from which it comes. (2) Name or firm of exhibitor. (3) Residence of the exhibitor. (4) Group and class to which exhibits belong. (5) Total number of packages sent by same exhibitor. (6) Serial number of that particular package. Each package must contain a list of the exhibits it contains.

Packages from foreign countries containing goods intended for the Exhibition must likewise have painted on them, as distinctive marks, the letters M.I.E. surrounded by a circle (MIE)

Packages from foreign countries must all be marked in such a way as to show distinctly whence they come, viz., with the colours and devices of their national flag. Foreign Commissioners are particularly requested to forward to the Melbourne Commission, as soon as possible, copies of the forms of address and the distinguishing marks which they have severally adopted.

10. In cases where exhibits are forwarded to Melbourne through any of the above-named agents of the Commission, all expenses of freight, marine insurance, &c., should be prepaid by the exhibitor; but if that be inconvenient, the exhibits will be forwarded, and the charges and freight paid by the agents. The sum advanced by the agents will be regarded as a first charge upon the exhibits, to be deducted from the net proceeds, in the event of their being sold. Should such exhibits, however, not be sold, but be claimed by the exhibitor or his authorised agent at the close of the Exhibition, then such sums as may have been disbursed by the Commission or any of its agents must be paid before such goods are delivered.

11. Customs entries, transportation, receiving, unpacking, and arranging the products for exhibition will, if required by the exhibitor, be undertaken by the Commission, at the expense of the exhibitor.

12. Arrangements will be made for transporting goods from the port of Melbourne, or the several railway stations, to the Exhibition grounds at a fixed rate of charges.

13. Exhibits will be admitted free of duty for the purpose of exhibition. The removal of goods, except under special circumstances, will not be permitted prior to the close of the Exhibition. Facilities will be given for the sale of exhibits, delivery to be made after the close of the Exhibition.

14. The protection of inventions capable of being patented, and of designs, is secured by the patent laws of Victoria.

15. The placing and fixing of heavy articles, requiring special foundations or adjustment, should begin by special arrangement as soon as the progress of the work upon the Exhibition Buildings will permit. The general reception of articles in the Exhibition Buildings will commence on 1st July, 1880, and no articles will be admitted after 31st August, 1880. The plans for the display and accommodation of such objects as may require either special arrangements or exceptional works for their erection must receive the approval of the Commission before they are executed, and the works must be carried out under the supervision of its agents. The special preparations of which mention has been made will be commenced as soon as the building and various annexes are sufficiently advanced. The works of general fitting-up must be commenced not later than the 1st of May, 1880, and must be ready to receive goods before the 15th day of July, 1880.

16. Space assigned to countries and colonies, and not occupied on the 1st day of September, 1880, will revert to the Commission, and will be subject to re-arrangement.

17. If exhibits are not intended for competition, it must be so stated by the Exhibitors, and they will be excluded from examination by the International Jurors.

18. An Official Catalogue will be published in English by the Commission, by which the sale of Catalogues is reserved. Every country and colony will, however, have the right of producing at its own expense, but in its own language only, a special Catalogue of the objects exhibited in its section. No work of art, nor any article whatever, exhibited in the buildings, parks, or gardens, may be drawn, copied, or reproduced in any manner whatever, without the permission of the exhibitor. The Commission reserves the right of authorising the production of general views.

19. The representatives of countries and colonies, when appointed, will be allowed to group their exhibits as they may think fit in that portion of the Exhibition Buildings allotted to the country or colony which they represent.

20. Exhibits from any country or colony whose Government is not represented, will be grouped according to some one of the following classes. The same direction will be followed in the Catalogue :—

1. Works of art.
2. Education and instruction—Apparatus and processes of the liberal arts.
3. Furniture and accessories.
4. Textile fabrics, clothing and accessories.
5. Raw and manufactured products.
6. Machinery—Apparatus and processes used in the mechanical industries.
7. Alimentary products.
8. Agriculture.
9. Horticulture.
10. Mining industries—Machinery and products.

Each of these groups is divided into classes, according to the system of general classification annexed to these regulations (Appendix). This Appendix includes for each class a summary enumeration of the objects which it will comprise.

21. A limited quantity of steam and water power will be supplied gratuitously. The quantity of each will be settled definitely at the time of the allotment of space. The Commissioners desire to encourage the display of machinery in motion, and they will endeavour to provide adequate power to meet all reasonable demands. Any power required by the exhibitor in excess of that allowed will be furnished by the Commission at a moderate price. Demands for such excess of power must be settled prior to the 31st August, 1880.

22. By the introduction of steam-power it is proposed to afford facilities for presenting not only the machinery for any given manufactures, but the manufactures themselves; and it is further intended that space shall be afforded for the production in the Exhibition of interesting objects by manual labour.

23. Exhibitors must provide at their own cost all show-cases, shelving, counters, fittings, &c., which they may require; and all shaftings, pulleys, belting, &c., for the traces and measures of power from the main shafts; but the Commission is prepared, if required, and upon being furnished with full particulars, to make arrangements for the construction of show cases by contract at a price per cubic foot, the cost to be borne by the exhibitor using the same. All artistic decorations and arrangements must be approved by the Commission.

24. The Commission reserves the right of rejecting or returning any proposed exhibit.

25. The following special regulations are framed for the reception and admission of works of art. The works admissible include the five classes mentioned below :—

1. Paintings.
2. Drawings, water-colours, crayon drawings, miniatures, enamels, porcelain, designs for stained-glass windows (with the exception of those which merely represent subjects of ornamentation), and mosaic work.
3. Sculpture and die-sinking, and engraving on precious stones.
4. Architecture.
5. Engraving and lithography.

26. The following are excluded :—

1. Unframed pictures or drawings.
2. Sculpture in unbaked clay.

27. The duty of deciding upon the admission of works of art will devolve upon a special jury. Special and suitable rooms will be reserved for the exhibition of such ancient pictures and works of art as may be admitted by a special jury. Other regulations will give information as to the despatch and reception of works of art.

28. Facilities will be given, upon application to the Commission, for the erection of special constructions, whether in the buildings or grounds.

29. The Commission will take precautions for the safe preservation of all objects in the Exhibition, but will be in no way responsible for damage or loss of any kind, or accidents by fire or otherwise, however caused.

30. Facilities will be afforded the representatives of countries and colonies, and private exhibitors, for insuring their goods; and they may also employ watchmen of their own choice to guard their goods during the hours the Exhibition is open to the public. The appointment of such watchmen will be subject to the approval of the Commission. These persons shall wear a special dress or distinctive badge, and they will always have the power of calling the police to their aid.

31. Articles that are in any way dangerous or offensive, or injurious to public decency and morality, will not be admitted into the Exhibition.

32. Sketches, drawings, photographs, or other reproductions of articles exhibited, will only be allowed upon the joint consent of the exhibitor and the Commissioners; but views of portions of the building may be made, upon the sanction of the Commission alone.

33. The following is the system under which the awards will be made :—

The awards shall be based upon written reports adopted by the Jurors.

The Jurors shall be selected for their known qualifications and character, and shall be experts in the departments to which they are especially assigned. The British, Foreign, and Colonial Jurors shall be appointed by the representatives of each country or colony exhibiting. The Jurors for Victoria will be appointed by the Melbourne Commission.

Jurors will be reimbursed their personal expenses.

Reports and awards shall be based upon inherent and comparative merit, the elements of merit being held to include considerations relating to originality, invention, discovery, utility, quality, skill, workmanship, fitness for the purposes intended, adaptation to public wants, economy, and cost.

Each report shall be delivered to the Commission as soon as completed.

Awards shall consist of gold, silver, and bronze medals, and a certificate of honourable mention, together with a special report of the Jurors on the subject of the award.

Each Exhibitor shall have the right to produce and publish the report awarded to him, but the Commission reserves the right to publish and dispose of all reports in the manner it thinks best for public information, and to embody and distribute the reports as records of the Exhibition.

84. Immediately after the close of the Exhibition, exhibitors, or their duly appointed agents, shall remove their effects, and complete such removal by the 1st June, 1881. Goods then remaining will be removed by the Commission, and sold by auction, or otherwise disposed of, under the direction of the Commission, and the net proceeds handed to the exhibitors, or their duly appointed agents.

85. Every person who becomes an exhibitor thereby acknowledges, and undertakes to observe, the rules and regulations established for the government of the Exhibition.

86. The Commission reserves the right to alter, explain, amend, or add to these regulations whatever may be deemed necessary.

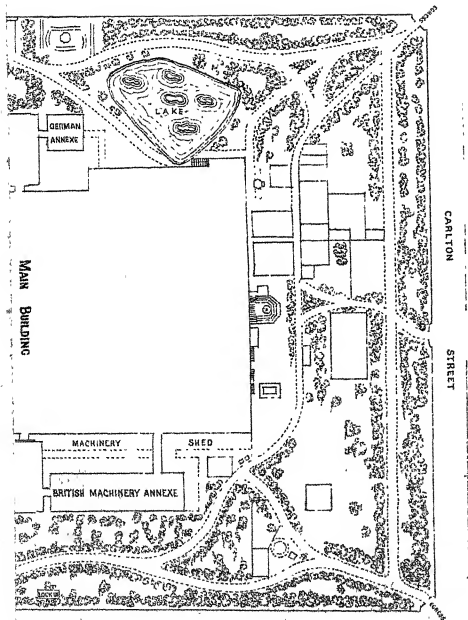

Information upon any question of details can be obtained upon application to

The Agent-General for Victoria,

8 Victoria Chambers, Victoria-street,

Westminster, London, S.W.

INTRODUCTORY.

"Nothing is new under the sun." Revolvers and breechloaders date from the middle ages; electric telegraphs and steam engines were foreshadowed in the *Arabian Nights*; and when the Society of Arts and Prince Albert initiated the series of international exhibitions, which have commenced in Hyde Park and culminated in the Carlton Gardens, they were only enlarging upon the ideas of King Ahasuerus, who, according to the Book of Esther, showed, in the third year of his reign, "the riches of his glorious kingdom and the honour of his excellent majesty many days, even an hundred and four score days. The exhibition took place in Shushan, the palace; and the exhibits consisted of white, green, and blue hangings, fastened with cords of fine linen and purple to silver rings and pillars of marble. The beds were of gold and silver, upon a pavement of red and blue and white and black marble. And they gave them drink in vessels of gold, the vessels being diverse one from another." Exhibitions not international, excepting that they consisted to a considerable extent of the spoils of conquered countries, were held at Rome during the last years of the Republic and the early days of the Empire; but the invasion of the barbarians was fatal to any of the triumphs of peace, and there were no exhibitions from the time of Nero till the middle ages were well advanced. The first of modern times was that at Venice, held during the dogeship of Lorenzo Tiepolo, in 1268, when there was a grand display, consisting of a water fête, a procession of the trades, and an industrial exhibition. The various guilds of the queen city of the seas defiled through the narrow and filthy streets to debouch upon the grand square of St. Mark. Tanners and tailors, smiths and skimmers, hosiers, mercers, weavers and drapers, glassblowers, gold cloth workers, fishmongers and butchers, all clad in their robes of state, marched into the presence of their prince. After some compliments had been exchanged, the heads of the various guilds asked the Dogressa to inspect the exhibition of their industry, spread out in the apartments of the palace, which for that day, at least, bore a smiling aspect. The fairs held at Leipsic and Nijui-Novgorod in Europe, and Tantah, half-way between Cairo and Alexandria, during the middle ages, had many of the characteristics of modern exhibitions; and in 1689 the Dutch held at Leyden a singular fair, at which they exhibited a number of curios, including "the skin of a woman prepared like leather," "the ears and tongue of a thief who had been hanged," "Arabian jewels, East Indian corals, Egyptian linen, Chinese songs, and Chinese beer."

The first of the series of modern exhibitions was that of 1756, when the Society of Arts in London offered prizes for improvements in the manufacture of tapestry, carpets, and porcelain, the articles exhibited being ranged in competition. In 1761 a similar exhibition was held by the same society, the objects shown being agricultural and other machinery, and a gentleman being engaged to explain the merits of the various objects. In 1797 a collective display of the art factories of France, Sevres, the Gobelins, and the Savonnerie was commenced in the deserted walls of the palace of St. Cloud. Political troubles interfered somewhat with the success of the scheme, but it was carried out the following year in the Rue de Varennes, Paris, by the Marquis d'Aveze, with such success that an official exposition, this time in a building erected in the Champ de Mars, was held during the last three days of the

same year. The display on that occasion was not confined to the art manufactures of the State, but private firms were allowed to compete, and there were altogether 110 exhibitors. The inaugural ceremonies were very remarkable, for Napoleon, who had just returned from his successful campaign in Italy, had a triumphal procession, in which the art spoils from Venice, Rome, and Milan, the masterpieces of Titian, Raffaele, Domenichino, and Paul Veronese, were paraded through the streets of Paris, and displayed before the populace, which had not then forgotten the days of terror. A second official exhibition was held three years later, in 1801, in the grand court of the Louvre. Upon that occasion juries of practical men examined the objects shown, and the winners of a gold medal were invited to dine with Napoleon, then first Consul, the first public and official recognition upon ceremonial occasions of the *tiers état*—the great middle class. The advantage of exhibitions to exhibitors was thoroughly realised by the jury, for in their report appears one very remarkable sentence, the truth of which all exhibitors appear to realise:—"There is not an artist or an inventor who, once obtaining thus a public recognition of his ability, has not found his reputation and his business largely increased." The third Paris Exhibition, held the following year, was the first which published an official catalogue, or rather, perhaps, it was the first of which any traces of the official catalogue have been handed down to posterity. At this exhibition there were 540 exhibitors, including such names as those of Montgolfier, the first aéronaut, and Jacquard, the inventor of the loom which bears his name. The fourth exhibition was held in 1806, in the Esplanade in front of the Hotel des Invalides, with 1422 exhibitors. The wars of the Empire followed, and there were no more exhibitions in Paris till 1819, when the fifth was held in the court-yard of the Louvre, under the presidency of Louis XVIII., with 1622 exhibitors. Similar exhibitions were held at Paris at various intervals until 1849, the last having 4500 exhibitors, a vast increase upon the 110 with which the series had been inaugurated.

The idea of exhibitions was not long confined to France, and in 1827 the Royal Dublin Society commenced a series of triennial exhibitions in their grounds, which are stated to have had very satisfactory results upon the trade of the Irish capital. In the following year a National Depository was opened in the Royal Mews, Charing Cross, London, for the exhibition of specimens of new and improved productions of the artisans and manufacturers of the United Kingdom. This was intended to have been a repository for all sorts of inventions and improvements, and it succeeded in bringing together a vast variety of useful and interesting articles. But the project fell stillborn, and in a very short time was abandoned.

A number of national exhibitions were held in various parts of Germany and Austria in the first half of the present century, and in 1844 there was a grand Teutonic display at Berlin, with 3040 exhibitors, of whom 1932 were from Prussia and 75 from Austria. Indeed, exhibitions confined to the products and manufactures of the country in which they were held had taken place in almost every country in Europe long before 1851. Switzerland, Holland, Belgium, Sweden, Russia, Poland, Italy, Spain, and Portugal, all had exhibitions, and there was a Free-trade Bazaar of British manufactures at the Covent Garden Theatre in 1845, which at the time created a great deal of interest.

But all these organisations were upon a very small scale, and it was reserved for the Society of Arts, under the presidency of the Prince Consort, to commence the series of great international exhibitions, of which that held at Melbourne during 1880-81 has been the latest. The first advice of the Prince was to encourage the operations of fine arts to manufactures, and a special prize fund was organised for the improvement of the caste of manufacturers and artisans. The objects which gained prizes were displayed the following year, and the first exhibition of select specimens of British manufactures and decorative art was opened in March, 1847. The idea was good; the patronage of royalty made it fashionable, and when in

1849 the Prince Consort unfolded his plan of an international exhibition, at which all countries should be invited to compete, and which should form a new starting-point from which all nations were to direct their further exertions, the suggestion was taken up warmly. A site—Hyde Park—was selected, and in the following June the plans of Sir Joseph Paxton were accepted, and the palace of glass was commenced. The building covered twenty acres, its length was 1851 feet, it cost £193,168 10s. 2d., it was open five months and fifteen days, the cash receipts were £506,100 6s. 4d., and there was a surplus of £186,000. The number of visitors was 6,039,195, and the money taken at the doors amounted to £423,792 4s. 7d. The total number of exhibitors was 13,937, of which Great Britain contributed 6861, the colonies 520, and the rest of the world 6556.

The exhibition of 1851 was followed by those of New York and Dublin in 1853, Melbourne in 1854, and Munich the same year, where 7055 exhibitors were brought together from every part of Germany. The French had a grand gathering in 1855 at the Palais d'Industrie, in the Carré Marigny, Champs Elysées, which is still standing, and serves as a receptacle for the pictures of the Salon, sometimes as a show for horses and dogs, and at other times is used for State ceremonials. The building cost half a million sterling, and the other expenses amounted to an equal sum, while the total receipts from all sources were less than £130,000. The result was partly attributable to the small sums charged for admission, there being many days on which it was only twopence, while on others it was entirely free. The total number of exhibitors was 20,839; the visitors numbered 5,162,330. The great feature of this display was the fine arts gallery, which was the first international art display of any magnitude.

There were national exhibitions in several European countries, but the next great world's fair was that held in London in 1862. One preparatory had been held at Melbourne, in the old Exhibition-building, in the previous year. The death of the Prince Consort had a depressing effect upon the whole enterprise, and the buildings were but badly adapted for the purpose for which they were intended. The total space roofed in was 988,000 square feet. The amount received was £408,530, and the number of visitors was 6,211,103, in 171 days. The display was remarkable for its machinery and for its fine art galleries, the collection of paintings by the British masters being the finest and most complete which had up to that time been brought together. For the first time had royal and ducal galleries displayed their collections; the poet laureate wrote an ode for the opening; Sir Sterndale Bennett composed the music, and two thousand choristers and four hundred musicians gave effect to the work.

Dublin held an exhibition in 1865, the funds being principally supplied by Sir B. L. Guinness, the total number of admissions during six months being 900,000. Upon this occasion the experiment of night openings was tried, the average attendance after dark being 3000. The sculpture gallery was very well filled, and the art wealth of the Irish metropolis was permanently increased by the large number of fine specimens purchased after the exhibition was closed.

The Paris Exhibition of 1867 was upon a far larger scale than that of 1855. Held upon the Champs de Mars, that celebrated historical site, where took place during the Revolution the Fête de la Fédération, where Louis XVI. swore fealty to the constitution, and where the first exhibition was held in 1793, it took a complete hold upon the feelings and sympathies of the French people. The building was aptly termed an exaggerated gasometer. The external ring was devoted to machinery, the internal to the history of labour, commencing with the stone age, the age of lacustrine dwellings, Gaul in a state of savagery, semi-civilisation under the Romans, the days of Charlemagne and the Carlovingian kings, the Moyen-age, the Renaissance, down to the present time. A great feature was the park, which was studded with specimens of all buildings in the world—Turkish mosques, Swedish

cottages, English lighthouses, Egyptian palaces, and Swiss chalets. The attendance reached 6,805,969, the exhibitors numbered 43,217, and the total amount received was £420,735 7s. 2d. Another novelty was the introduction of restaurants and bars from all the nations of Christendom. The visitor could travel from the extreme east to the far west; and commencing with the tea and caviare of Russia, go to the buckwheat cakes and sherry cobblers of the United States, taking intermediate refreshment in Austria, Holland, Germany, France, and England, and tasting not only the various foods and drinks, but testing the method of cooking.

There were small exhibitions in various parts of Europe between 1867 and 1870, and annual exhibitions during 1870, 1871, 1872, 1873, and 1874 at London; but the next great international exhibition was at Vienna, in 1873. The site was in the Prater, the beautiful park of the Austrian capital. The main building had a rotunda, surmounted by a monster model of the Imperial Crown, and was 3000 feet in length. There were halls for machinery and agriculture, surrounded by hundreds of buildings of all lands and nationalities, scattered amongst the lovely woodland scenery of the Prater. Unfortunately, the attendance of visitors was diminished by the outbreak of the cholera, and the receipts only amounted to £206,477 13s., although the attendance reached 6,740,500. The number of exhibitors was 25,760.

The Centennial Exhibition of 1876, celebrative of the one hundredth anniversary of American Independence, was held in the Fairmount Park, Philadelphia. The funds were raised partly by private subscriptions and partly by donations from the State of Pennsylvania and the city of Philadelphia; the United States Government assisting by a large loan, which was subsequently repaid. The principal buildings, five in number, occupied an area of 48.47 acres, and there were a large number of smaller structures, which, in the aggregate, must have filled half as much space more, the largest being that devoted to the exhibits of the various departments of the United States Government, and covering nearly seven acres. The principal novelties introduced at Philadelphia were that instead of gold, silver, and bronze medals, only one description—bronze—was issued, the difference between the merit of the various exhibits being determined by the reports. Season tickets were definitely abandoned, and the price of admission was always the same, half a dollar, or about 2s. The display of machinery was the finest ever made; that of the United States occupying 480,000 square feet, the motive-power for which was obtained from a Corliss engine of 1600-horse power. The exhibition was visited, from 10th May to 10th November, by 9,892,625 persons, of whom 8,004,214 paid for admission; the balance being exhibitors, officials, and attendants. The largest attendance upon any one day was 274,919. The exhibition was not open at night or upon Sundays. The total receipts amounted to £763,899. This was the largest sum ever received at any exhibition, but it must not be forgotten that the rate of admission was double that paid upon any previous occasion.

The Paris Exhibition of 1878 was upon a far larger scale in every respect than any of its predecessors. The total area of ground covered upon both banks of the Seine was not less than 100 acres, the main building alone occupying 54 acres. The French exhibits filled one-half the entire space, the remaining moiety being occupied by the other nations of the world, Great Britain and her colonies taking up nearly a third of the area set apart for foreigners. The display of fine arts and machinery was upon a very large and comprehensive scale, and the Avenue des Nations, a street 2400 feet in length, was occupied by specimens of the domestic architecture of every country in Europe, and several in Asia, Africa, and America. The palace of the Trocadero, on the northern bank of the Seine, was a magnificent structure, with towers 250 feet in height, flanked by two galleries. The same rules about admission which prevailed at Philadelphia were enforced at Paris, and every person, exhibitor, journalist, or official, who had the right of entrance at all times, was compelled to send two copies of his or her photograph, one of these being

attached to the ticket. The ordinary entrance-tickets were not sold at the doors, but were obtainable at all Government offices, at various shops, and from countless pedlars in various parts of the city and suburbs. The buildings were somewhat incomplete upon the opening day, political turmoil and rumours of possible complications with foreign powers having prevented the French Government and the French people from putting their shoulders to the wheel until the beginning of 1878. But the efforts made during April and May were prodigious, and by the 1st June the exhibition was in a very complete condition. The total number of persons who visited Paris during the time the exhibition remained open was 571,792, being 46,021 in excess of the number of visitors during the exhibition of 1867, and 308,974 more persons than came to the French metropolis in 1877. The number of paying visitors to the exhibition was 13,000,000, and the cost of the enterprise to the State a little less than £1,000,000 sterling, after allowing for the value of the building material left on the ground, and the sale to the city of Paris of the Palais du Trocadero. But, on the other hand, it was asserted that the revenue of the Republic and of the city of Paris, where an import duty is placed upon all articles of food, was increased by nearly £3,000,000 sterling, so that the indirect advantages far more than made up for the apparent cost of the exhibition.

The Sydney International Exhibition of 1879 was opened on 17th September of that year. Unusual difficulties had attended its inception, owing to the fact that it had, in the first instance, been intended to hold the exhibition under the management of the Agricultural Society of New South Wales, and the decision of the Government to incur the entire responsibility for the expenditure and administration was not taken until many of the preliminary arrangements had been completed. The work done by the officers and representatives of New South Wales in Europe was of considerable assistance to the Commissioners for the Melbourne Exhibition; and there is no doubt that the great success of the latter was, to no inconsiderable extent, attributable to the Sydney Exhibition. Many exhibitors, especially upon the Continent, forwarded their contributions to both, who might not have exhibited had only one been held; and the experience gained at Sydney of the wants of the Australasian market was largely utilised in the larger and more comprehensive display made subsequently at Melbourne. The Sydney Exhibition was kept open until 20th April; and during that period it was visited by 1,117,536 persons, of whom 267,056 entered free, and 850,480 paid for admission, the amount realised being £40,432 9s. 6d. The total amount of space covered by the exhibition buildings, including the restaurants, was 650,000 square feet, or rather more than 15 acres. There were 6299 exhibitors, in addition to 3046 who took part in the live-stock, horticultural, and agricultural shows, and the display made by the public schools. The number of awards was 6756, in addition to 798 prizes given to exhibitors at the special shows. The net cost of the exhibition, after deducting the amount received for entrances at the doors, sales of concessions, &c., was £264,244 5s. 8d. The display made by Victoria at Sydney was large and extremely creditable. The arrangements were under the control of the Hon. J. J. Casey, M.P., C.M.G., Executive Commissioner, who was assisted by the Hon. W. M. K. Vale, M.P., the Hon. J. Munro, M.P., Mr. J. Bosisto, M.P., and Mr. G. C. Levey, C.M.G., Secretary to the Melbourne Exhibition. Mr. R. D. Bannister was Secretary to the Victorian Court. The number of exhibitors was 900; and the awards received were—gold medals 3, silver medals 46, bronze medals 251, and certificates 375; total, 675. The exact cost of the exhibition to the Government of Victoria was £3166 1s.

In conclusion, we may remark that Victoria took part in the London Exhibitions of 1862 and 1873, in that of Vienna in 1873, at Philadelphia in 1876, at Paris in 1878, and at Sydney in 1879. Upon all occasions the number of prizes taken was very large in proportion to the exhibits, and in the European and American

exhibitions this colony occupied the leading position, after Canada, over any portion of the Empire, excepting, of course, the United Kingdom.

PREVIOUS EXHIBITIONS AT MELBOURNE.

A small exhibition was held in Melbourne in the year 1850, and prior to the foundation of the colony of Victoria, but we have been unable to obtain any particulars or statistics; and the first Melbourne Exhibition of any note was opened in October, 1854. Its primary objects were to afford facilities to those colonists who were desirous of contributing specimens of their industry, and of the natural products of the colony, to the Exposition Universelle to be held at Paris in the following year. On the whole, a larger amount of success attended our first exhibition than its humble beginning and the state of the colony warranted any one in anticipating. Victoria, known previously only as the district of Port Phillip and part of New South Wales, had not long before gained the distinction and dignity of being erected into a separate colony, possessing constitutional government. The community was experiencing the gold-digging mania in its most intensified form. Towards the close of 1851 and during 1852 the goldfields of Clunes, Ballarat, Bendigo, and the Ovens were discovered. Almost everyone embarked, for a time at least, in the exciting and roving life of a gold-digger. Under such circumstances, it was hardly possible that the arts and manufactures would prosper. The first Melbourne Exhibition, therefore, was not a very representative one so far as colonial industrial art was concerned. But the Commissioners, foremost amongst whom was the late Mr. Justice Barry, received sufficient encouragement to undertake the responsibility of holding an exhibition. A grant was obtained from Parliament to defray the cost of erecting a suitable building upon a site situated in William-street, now occupied by the Mint. The building was constructed of wood and iron, and its dimensions were 257 feet in length, 90 feet in breadth, and 50 feet in height; altogether 19,000 feet superficial space was provided. For many years the old Exhibition-building was regarded as a graceful and elegant structure. But the art of building was in those days not practised to any very elaborate extent. The "bush carpenter" was the skilled artisan of the period, and his peculiar *forte* was in being able with hammer, saw, and tomahawk to accomplish very nearly everything in the building line. As may be imagined, his work was not the most finished or substantial; but if it possessed no other distinction, it would certainly lay claim to being decidedly novel. It is highly creditable to the enterprise of the colonists that in those expensive days, and with only a very limited revenue, the Government embarked upon the enterprise and expended £21,000 in the erection of an Exhibition-building. The contents of the exhibition were very little more than a display of imported goods. The colony was then mainly dependent upon England for a supply of most of the necessary commodities and luxuries of life. Only a few specimens of colonial workmanship were exhibited, and these were no more than interesting curiosities of labour in the infancy of its development, before the art of workmanship blended beauty with utility. Of the 428 exhibits which composed the collection many arrived from Bendigo, where a preliminary exhibition had been held—principally through the exertions of Mr. J. A. Panton, one of the present police magistrates of Melbourne. Amongst the most noticeable exhibits were a collection of specimens of Victorian gold, valued at £10,000, and a few samples of coal and iron ore, from Cape Patterson. The Governor, Sir Charles Hotham, K.C.B., in his inaugural address, said that before many years expired he hoped to "see steam-engines working on the Victorian railways, consuming Victorian coal, and produced by Victorian capital." But when His Excellency uttered these prophetic words he had very slender grounds for indulging his imagination in forecasting future events, and even the most sanguine would hardly have ventured to predict a progress so rapid and comprehensive as this colony has experienced. Our

industrial growth was then represented by the following meagre list of manufactures, numbering altogether 197:—34 saw-mills, 5 iron foundries, 16 breweries, 17 coach factories, 40 flour-mills, 9 fellmongeries, 1 boiling-down establishment, 1 rope-walk, 4 wine presses, 1 chaff-cutting machine, 1 steam washing-machine, 2 sausage-machines, 1 pottery; 12 candle, 5 cordial, 7 soap, 22 soda-water factories; and 1 bone-dust mill.

The exhibition was kept open for thirty days, and was visited by about 40,000 persons during that time. One of the most noticeable incidents in connection with the exhibition was that the first copy of the *Age* was printed in the building. Some Victorians of to-day will read with amazement the cost of provisions in 1854, and for their information we subjoin the following list:—Butter, 5s. per lb.; bread, 1s. 9d. per 4-lb. loaf; milk, 2s. 6d. per quart; eggs, 9s. per dozen; flour, £35 to £40 per ton (and as high as £100 per ton on the goldfields); beef, 1s. per lb.; mutton, 8d. per lb.

The next exhibition, opened on the 1st October, 1861, was held in anticipation of the great London Exhibition of 1862. A great change had in the meantime taken place in the colony. The seven years intervening between these two expositions were employed to the greatest advantage by the community. Although the gold diggings still continued to attract the larger proportion of the population, labour was now plentiful, owing to the steady influx of immigrants. From 77,345 souls in 1851 the population had increased to 540,671 in 1861. The discovery of gold brought people from all quarters of the world to the mines, but many of them soon became tired of the uncertainty of this life and its wild lawlessness, and gladly returned to the trades and pursuits which they had followed in their native land. A considerable fall in the price of labour followed, which gave new birth to colonial industries. Besides, the golden tide that set in during 1851 was slowly receding, and those of the population who were masters of a trade bethought themselves seriously about turning their knowledge to account. Under these favourable circumstances new industries were called into existence to supply the wants of the greatly increased population. That new life and vigour was imparted to our native industries and manufactures is made apparent by the fact that from 179 their number had been increased to 429, employing nearly 4000 persons. The population undoubtedly was becoming more settled, and fast emerging from the primitive existence in a calico tent or bark hut, with its inevitable dietary scale of everlasting "damper" and tea. Amongst the 703 exhibitors whose goods were displayed at the second Melbourne Exhibition in the old building in William-street, many had sent interesting specimens of colonial handicraft. The exhibition was very successful, and, including season ticket-holders, there were 67,405 admitted during the sixty days for which the exhibition remained open. The gross cash receipts were £3400.

The wonderful progress which Victoria had made is clearly marked by this national collection of works of industry and art. In 1836 the district of Port Phillip was included in the colony of New South Wales, and only possessed a population of 177, of whom 35 were women. The area of Victoria is 86,831 square miles, or scarcely a thirty-fourth part of the whole Australian continent. Since Victoria's separation its prosperity had been of amazing growth. In ten years after the discovery of gold enormous wealth was extracted from the soil. Within this period there had been raised and exported through the customs and other channels gold to the value of £103,940,976. In addition to this vast mineral wealth, the colony was also enriched by the production of wool. The exports, even as early as 1851, were valued at £734,618, but a large increase occurred in the following ten years, in 1860 £2,025,066 being the value of the wool exports. Upon examining the agricultural statistics a proportionate increase will also be found. At the exhibition of 1854 Victorian agricultural products were wholly unrepresented. That the husbandman had then only gained a weak footing is shown by the fact that there were only altogether 52,176

acres under cultivation; our agricultural products fell far short of requirements, and large sums were annually paid for these necessary articles brought from abroad. The year 1861, however, showed that the agriculturist was rapidly assuming a position of primary importance in the community. An enormous increase had taken place in the quantity of land under cultivation, which now amounted to 419,591 acres. There were now reasonable prospects that, in addition to supplying our own wants, at no very distant day the balance of trade would be turned in favour of the Victorian tiller of the soil, and he be also compelled to seek foreign markets for the disposal of a surplus. At the exhibition these resources of the colony were well represented. Another feature of the exposition was the exhibits of colonial wine, which were then being brought into prominence. About this period attention was also paid to the development of quartz reefs. Hitherto the alluvial mines had exclusively engaged the minds of men, but these were fast becoming exhausted. It was also seen that in quartz lodes a more permanent source of wealth and prosperity would be opened up. The great difficulty, however, was machinery wherewith to work these reefs below the water level, and also proper appliances for extricating the ore from the quartz.

The colony generally had emerged from the half-cultivation which existed in the old days of the pioneers. Men were beginning to surround themselves with the comforts and luxuries enjoyed by older-settled countries. A Public Library was founded, and this institution has since been advanced to the position of one of the noblest and best-appointed public institutions in the colony. Railway construction was also undertaken; the main line to Sandhurst had been commenced, but it was not completed until after the exhibition closed. Another line to Ballarat had also been started, electric telegraph communication with the various chief towns had been opened, and in all directions the work of road-making commenced, a sum of £5,272,620 having been expended between the first and second exhibitions on making roads and bridges. In 1851 there were 129 schools in the whole colony, and 7060 scholars. These had been increased during the following ten years to 886 schools and 51,668 scholars. Even a more surprising advancement is discovered in connection with churches, of which there were only 39 in 1851, but in 1861 the number had been increased to 874.

Referring to the statistics for the period, bearing upon the industrial state of the colonies, the 179 mills and manufactories in existence in 1851 had increased to 474. Amongst these were 94 mills for grinding and dressing grain, 1 oatmeal factory, 8 bread and biscuit manufactories, 20 agricultural implement manufactories, 7 steam chaffcutter makers, 4 bone manure manufactories, 28 tanneries, 21 soap and candle manufactories, 15 fellmongers and curriers, 2 woolstaplers and washers, 1 woollen flock factory, 1 sugar refinery and distillery, 2 steam coffee and spice mills, 2 ice manufactories, 38 breweries, 25 gingerbeer and sodawater manufactories, 7 cordial and 3 cider manufactories, 64 saw-mills, 8 lime kilns, 50 brick yards, 4 drain-pipe and tile manufactories, 1 pottery, 20 brass, iron, and copper factories, 2 iron rolling factories, 6 millwrights, 1 saw making, 20 coach factories, 1 chain manufactory, 1 lead pipe factory, 1 boiler manufactory, 1 railway carriage manufactory, 3 organ and pianoforte factories, 6 ship and boat builders, 5 gasometers, 2 electroplaters, and 2 curled-hair factories. To appropriately crown all, the colonists also meddled with military matters, and volunteer corps were established, whose effective strength was 3948 rank and file. The Government spent at the rate of £15,342 per year upon these volunteer corps.

The year 1866 saw the birth of the first Intercolonial Exhibition held in Melbourne. To the late Judge Bindon is mainly due the credit of realising the idea of holding such an exposition, which would be the means of establishing between the colonies an interchange of thought, a better knowledge of the products of each colony, and also promote a friendly rivalry which could not fail to advance the

interests of all the colonies. Parliament readily lend its aid to the project, and supplied a grant in aid to defray the expenses. The Governments of neighbouring colonies entered into the scheme with warmth. To secure an adequate representation of the products and manufactures of Victoria, the Commissioners invoked the aid of all borough and shire councils throughout the colony. The local bodies cordially took up the work, and lent their hearty sympathy to the movement. Local preparatory exhibitions were held at Ballarat, Bendigo, Castlemaine, and several other of the chief up-country towns. In addition to receiving the support and active co-operation of all the Australian colonies, the Commissioners also made successful exertions to secure the representation of New Caledonia, Mauritius, and Netherlands-India at the exhibition.

As this undertaking was to be conducted on a larger scale than any hitherto attempted, it was apparent that the primitive Exhibition-building, which had done the State good service since 1854, could not be utilised, as its accommodation would be totally inadequate to the requirements. The resolution arrived at was to erect a new building in connection with the Public Library, on such a scale that it would be hereafter available as a museum. A sum of £25,000, granted by Parliament, was expended on the great hall, which formed the main portion of the new Exhibition-building. The dimensions of the hall were—220 feet in length, 82 feet in breadth, and 50 feet in height; together with the temporary annexes, a total of 56,240 feet superficial space was provided. Many months were spent in making preparations for this great display of Australian arts and products, and as the opening day approached the interest concentrated in the project reached a climax. Many thousands of people visited Melbourne to see the collection. On the 24th October the exhibition was opened with great éclat by the Governor, Sir Henry Manners-Sutton, K.C.B., in the presence of a large and representative assemblage. There were 2956 exhibitors, including 1479 from Victoria, 738 from Tasmania, and 273 from New South Wales, the balance being distributed amongst the other colonies who were represented. Some of the politicians of New South Wales declined at first to take part in the exhibition. Had it not been for the kindly feeling and warm sympathy manifested by the inhabitants themselves, New South Wales would have probably been unrepresented.

The progress which the community had continued to make was shown in a most gratifying manner by the excellence and variety of the Victorian exhibits. These specimens demonstrated that the prosperity of the colony rested upon a solid and sure foundation. A great increase was shown in the number of exhibits coming under the heading of colonial manufactures, and these showed undeniably that a keen competition with the imported article had commenced, and that the genial and luxuriant climate of Australia was capable of producing not only all the common necessities, but also very many of the luxuries of life. At the date of holding the exhibition there were 903 manufactories of various kinds established in the colony. These represented 53 distinct branches of trade. On the gold-fields the introduction of improved machinery, new chemical appliances for extracting gold, and the abundance of skilled labour, also soon produced highly satisfactory results. A large number of quartz lodes were being profitably worked, and the gold obtained from this source made up the deficiency in the returns received from the alluvial mines. During the fifteen years which had elapsed since the discovery of these treasure-fields, gold had been raised to the value of £141,144,160.

Side by side with the growth of colonial industries, the metropolis and various up-country towns manifested outwardly the tide of prosperity which had set in. The "shanties" of the good old days were gradually replaced by buildings of, in many instances, imposing appearance. Public buildings of goodly proportions and improved design were beginning to dot the principal towns throughout the colony.

Costly water-supply schemes for domestic purposes had also been undertaken at Melbourne, Geelong, Sandhurst, and Ballarat. Gasworks, public parks, and gardens had long before this period sprung into existence. In short, even in the small space of fifteen years, such was the magical power of the colony's prosperity that it had transferred a wilderness, in which the blackfellow, the kangaroo, and the gum-trees alone flourished, into many prosperous, well-governed, and picturesque townships and cities. The exhibition which marked this epoch and recorded its achievements was an unqualified success. It was kept open for 105 days and evenings. The attendance within this period was 268,634.

After the lapse of six years the fourth Melbourne Exhibition was held. The formal opening ceremony was performed on the 6th November, 1872. From a general point of view this exposition was not so attractive as the one immediately preceding it. The exhibits asked for were in the first instance exclusively confined to Victorian products intended for display at the International Exhibition held in London in 1873. Exhibitors were restricted to displaying "works of art, scientific inventions, new discoveries, and certain specified manufactures." While the Commissioners were yet occupied with the preliminaries, the Secretary of State gave intimation that an International Exposition was also to be held at Vienna in 1873, and requesting that exertions should be made to have the colony represented. The wishes of the Secretary for State were complied with, and preparations made for forwarding a collection of exhibits to Vienna. This considerably enlarged the Commissioners' sphere of action. Though the exhibition was not on a scale so extensive as the intercolonial one held in 1866, yet the collection of exhibits displayed was both extensive and varied. Taken altogether, the exhibition was extremely gratifying to Victorians, as it demonstrated the remarkable fertility of our soil, the excellence of its natural productions, the abundance of our mineral resources, and also the inventive genius and manufacturing ability of the colonists. It was shown that the unexampled advance made by the community in the various branches of industrial art was not a forced and artificial growth. The previous exhibitions proved the contrary. There were now 1909 manufactories in the colony, employing 21,822 persons. A falling-off in the number of exhibitors compared with those of the International Exhibition was naturally to be expected, as the collection was purely a Victorian one. The exhibitors on this occasion numbered 1740, and their goods occupied 32,000 feet of space. The trustees of the Public Library placed at the disposal of the Commission the Museum-hall and a number of out-buildings, which obviated the necessity of any fresh outlay for building purposes. During the sixty-four days and evenings for which the exhibition remained open, 160,747 visitors attended. The total cash receipts were £4973 4s. 4d.

The inaugural ceremony connected with the fifth Melbourne Exhibition took place on the 2nd September, 1875. An exhibition—the great Philadelphia Centennial—was to be held in the following year, and in order to secure at this gathering of all the civilised nations an effective and creditable representation of the Australian colonies, neighbouring colonies were invited to take part in a preliminary intercolonial exhibition—the second—to be held in Melbourne. An attempt was made to hold an exhibition at Sydney, but for political reasons the Government of New South Wales declined to undertake the responsibility of the work. The success of this exhibition is such a recent event that it will yet be fresh in the recollection of most Victorians, and, therefore, a brief reference to the details will suffice for present purposes. The building used was the Museum-hall, which was again placed at the disposal of the Commissioners, who, however, were compelled, owing to the large demand for space, to erect a number of temporary buildings. This exhibition was conducted on a larger scale than any previous similar undertaking; altogether 78,000 feet of space was provided, and the exhibitors numbered 4500. Special efforts were made to secure a thorough representation of

the raw products of Australia for transmission to Philadelphia, and this desirable aim was successfully accomplished. The collection was both the largest and most varied display of exhibits which had been brought together in this colony. It embraced specimens of nearly all the products of our soil; wool and cereals occupied a prominent place, nor was any neglect shown in the proper representation of the value of Australian timber, precious metals, ores and minerals, preserved animal food, and the excellence of colonial fruits and wines. Amongst these exhibits were a number of splendid samples of colonial tweeds, wools, leather, potteryware, and machinery, all the work of the Victorian artisan and mechanic. Under the system of protection many native industries were flourishing. Immense strides had been made since 1854. Instead of a few hundred skilled hands being employed, as was the case twenty years ago, 22,109 persons found employment in the Victorian manufactories. It is undoubtedly to the establishing of these industries, and the remunerative employment which they afford, that the colony owes a portion of the pre-eminence which it holds in the Australian group. All the neighbouring colonies, in addition to the Straits Settlements, New Caledonia, and the Northern Territory of South Australia, were well represented, and the distant Empire of Japan sent two Commissioners and a large number of exhibits. The exhibition, after remaining open for seventy-six days, was closed on the 16th November. The attendance of visitors had been 240,000, and the cash receipts for admissions amounted to £6384 17s. 3d.

THE HISTORY OF THE MELBOURNE INTERNATIONAL EXHIBITION OF 1880-81.

THE Commissioners appointed to secure the representation of Victoria at the Paris Exhibition, in their first report, which was presented to Parliament in July, 1877, after remarking upon the rapid increase in the material wealth and prosperity of the colony, expressed an opinion that the time had arrived when Victoria could with advantage invite foreign nations to take part in an International Exhibition at Melbourne. The Commissioners pointed out that the people of this and the neighbouring colonies would derive important information from a comparison of foreign exhibits with their own productions, and that such an Exhibition would induce many persons to visit Australia whose presence would prove of great practical value to the national development of Victoria. It was further urged that although five Exhibitions had previously been held in Melbourne, and although the colony had been represented at nearly all the great Exhibitions of the world, no buildings existed which could be utilised for holding an Exhibition in this city. The erection of a permanent and extensive building in a central position, and vested in a body of trustees, was therefore recommended, with the view of arranging for an International Exhibition to be opened in Melbourne about October, 1879.

The proposition made by the Paris Commissioners was favourably entertained by the Ministry of the day, of which the Hon. Graham Berry was Premier, and on the 18th November, 1877, a bill "To Provide for the Holding of Victorian Exhibitions" was introduced in the Legislative Assembly, and passed through without delay, in order that the representatives of Victoria at the Paris Exhibition, 1878, might be enabled to utilise to the fullest extent the aggregation of foreign exhibitors who were expected to be present upon that occasion in the French capital. A most advantageous site—the Carlton Gardens—was selected for the proposed buildings, and the bill provided for an Exhibition of works of industry and art in the year 1879, it being provided that the Commissioners appointed to carry out the Exhibition should have the exclusive control of the grounds and buildings until the end of June, 1880. Owing to the bill failing to pass the Legislative Council, the project was laid aside for several months, but as designs for the proposed buildings had been invited by the Commissioners for the Paris Exhibition, that body was furnished with the funds necessary for the payment of the premiums offered for the three best designs. These premiums—of £300, £200, and £100—were awarded to Messrs. Reed and Barnes, Lloyd Tayler, and P. Matthews respectively.

The proposal to hold an Exhibition, and the probability that it would eventually be held, were brought under the notice of the exhibitors assembled in the French capital, through the President of the Paris Commission, the Hon. J. J. Casey, and the Secretary, Mr. G. C. Levey. Many warm assurances of support and co-operation were received from artists, manufacturers, and producers, residing in nearly every part of the world. In consequence of the renewed representations of the Commissioners for the Paris Exhibition, the bill providing for the holding of Victorian Exhibitions was again submitted to Parliament, and became law on the 14th day of November, 1878. The Victorian Exhibitions Act, 1878, differed in some matters of detail from the original measure, the most important change being that, as the adjacent colony of New South Wales had in the meantime proposed to hold an International Exhibition in 1879, the date for opening the Melbourne Exhibition was fixed for 1st October, 1880.

A portion of the Commissioners had, prior to the passage of the Act, been gazetted for the purpose of carrying out a public Exhibition of works of industry and art in Melbourne in the year 1880, and no time was lost by them in carrying out the necessary details. The site selected for the Exhibition was the Carlton Gardens, comprising an area of about sixty-three acres, over the whole of which the Commissioners were to have exclusive control until the end of September, 1881, after which the central twenty acres two roads four perches upon which the permanent buildings were erected are permanently reserved for Exhibition purposes, and vested in seven Trustees, five appointed by the Government and two by the Corporation of Melbourne, the remaining forty-three acres being restored to the Board of Land and Works and the Corporation of Melbourne. The plans and specifications for the Exhibition Buildings were prepared and duly submitted to Parliament on the 12th November, 1878, together with an estimate of the cost, in accordance with the third clause of the Act. According to the architects' estimate, the cost of erecting the main building, with one machinery annex, was to be £67,395, a further sum of £4400 being added for the cost of constructing extensive cellars accommodation, which the Commissioners considered was a necessary adjunct to an Exhibition. The site for the buildings was promptly cleared, and on the 1st December tenders were called, returnable on the 27th January, 1879. The tender of Mr. David Mitchell was accepted, the amount being £70,251, a sum within the amount named in the estimate presented to Parliament.

The foundation-stone was laid on 19th February, by His Excellency Sir George Bowen, G.C.M.G., Governor of Victoria, in the presence of the members of the Ministry and the Executive and Legislative Councils, of the Legislative Assembly, the Commissioners, and at least 10,000 persons.

The Hon. W. J. Clarke, President of the Commission, read the following address:—
To His Excellency Sir George Ferguson Bowen, Knight Grand Cross of the most distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief in and over the Colony of Victoria and its dependencies, and Vice-Admiral of the same, &c.

May it please your Excellency—We, the Commissioners for the Melbourne International Exhibition of 1880, desire to assure your Excellency of our continued loyalty and devotion to our beloved Sovereign Queen Victoria, and of our respect for yourself personally, and as Her Majesty's representative in Victoria. Two years ago the proposal to hold an International Exhibition at Melbourne was submitted for your Excellency's consideration, and was approved by you. Although some difference of opinion existed as to the probable utility and success of the undertaking, you were, we believe, constant in your encouragement and support. It is therefore peculiarly gratifying to the Commissioners that your Excellency is enabled to accede to their request and to formally lay the foundation-stone of this building, designed for the display of all that can be achieved by the science, art, and labour of mankind. The place where your Excellency will to-day lay the foundation-stone of a palace of industry was within a generation part of an unknown forest, in an almost unknown land. It is now the site of a populous and well-built city, presenting all the evidences of wealth and civilisation, taking rank with the foremost cities of the world, and surpassing in many respects the capitals of ancient and powerful states. The rapid progress of Australasia is one of the marvels of modern times. But yesterday it was colonised by a few enterprising men, while to-day it possesses an extensive trade and a population of millions. In erecting this young empire in the southern hemisphere, our colonists have obtained the surest success by closely following the example of the mother-country, by jealously adhering to her regard for law, by preserving her national customs, and by maintaining her well-ordered freedom. Though separated from the capital of the empire by the diameter of the globe, loyalty to the throne is as earnest in Melbourne as in Middlesex, and in Sydney as in Surrey. Under the benign rule of our Gracious Sovereign, the colonists of Australasia have been enabled to give uninterrupted attention to the development of its natural wealth and resources, to the establishment of industries and manufactures, to public instruction in all its branches, and to the promotion of the moral and material welfare of its people. In this building the nations of the earth will meet in peaceful competition for the display of their products, manufactures, and works of art, and we are hopeful that the undertaking will afford Australia many useful lessons, will inculcate a spirit of commercial rivalry, and will stimulate her to increased exertions in every branch of industry. Only twenty-seven years have elapsed since the first great exhibition was held in London. Europe and America have since enjoyed the advantage of several similar competitive displays, in nearly

all of which Australasia took part—latterly evoking more than ordinary attention by the evidences of its rapid and solid progress. The invitation to foreign nations to join in our Melbourne Exhibition has been accepted in a generous spirit, and hopes are entertained that the forthcoming display will not only be interesting and instructive, but will also lead to such a friendly sympathy and intercourse as will improve and extend the trade between these colonies and the great continents of Europe, Asia, and America. In conclusion, the Commissioners desire to express their earnest good wishes for the future welfare and happiness of your Excellency, Lady Bowen, and your family.

His Excellency made the following reply :—

Mr. President and Gentlemen of the Commission—I thank you, in the name of the Queen, for this assurance of your continued loyalty and devotion to the person and crown of our beloved Sovereign—the living symbol and link of the unity of the British Empire. On my own behalf, I thank you for your expressions of respect for myself, both officially and personally. In my many visits during the past six years to every district in Victoria, it has ever been a source of gratification to find that loyal and patriotic sentiments prevail throughout this colony, as, indeed, throughout Australasia, and that the presence of Her Majesty's representative is especially welcomed everywhere as affording an occasion for their display. I believe that time will clothe with fresh grace and vigour these national feelings, which add so much strength and glory both to the mother-country and to that "Greater Britain," the United Empire. It has been observed that "the happy inspiration of the genius of the late illustrious and lamented Prince Consort inaugurated, in the year 1851, a new era for exhibiting the state of development of the arts and manufactures of all nations. For the first time in history an admirable opportunity was afforded for instituting a comprehensive comparison of their relative progress in those sciences and inventions which constitute the types of an advanced civilisation. We all know that the splendid conception of His Royal Highness was a brilliant and triumphant success. The impulse it gave to trade was immense. The rapid improvements which subsequently took place in every art and manufacture were everywhere most marked and conspicuous. Abundant proofs of the wonderful extent to which this progress has been carried are apparent to all those who have witnessed the exhibitions of Paris in 1855, 1867, and 1878; of London in 1862; of Vienna in 1873; and of Philadelphia in 1876. The whole world appears to have been stimulated to put forth its utmost energies in waging this vital and critical contest of peace. Each separate community has competed in keen but friendly rivalry to excel every other, and has advanced at railway speed along the road of improvement in the arts and manufactures of its own individual nationality." It has, moreover, been truly said that the pains and cost expended on international exhibitions cannot be in vain, for they place, as it were, on record, for present use and future reference, the arts and inventions, the products and capabilities, of various lands, thus affording the means of comparison between different countries, and determining the localities on which commerce can rely for its supplies, and the fresh channels which it may be expedient to open. The abundant resources of this group of colonies, and the contributions expected from the old world and from America, will render easy the work of collection; it is the task of selection and arrangement which will require experienced judgment and enlightened care on the part of the Commissioners. I trust that the result will show that the forthcoming exhibition will draw attention not only to the great staples of wool and gold, which have hitherto constituted the chief riches of Australasia, but also to many new and valuable products and sources of wealth as yet undeveloped, but which, as population increases, will furnish alike the material and the reward for the exercise of intelligent enterprise and of victorious industry. And here I may express the hope that the display at the exhibitions to be held at Sydney this year and at Melbourne next year, of the collective products of the Australasian colonies, may prove a foreshadowing of that intercolonial federation which is the aspiration of every wise and patriotic colonist. These forthcoming exhibitions can hardly be deemed premature, when it is recollected that Australasia, if federated, like Canada, in one Dominion, in loyal allegiance to the Crown, would at once rank, in point of wealth and commerce, among the ten or twelve foremost nations of the world, for it would have an aggregate annual revenue of above 16 millions sterling, and an aggregate trade exceeding in value 90 millions. It has been already said that the idea of holding an international exhibition was originally the happy inspiration of the late Prince Consort—the "silent father of our kings to be." Let us hope that the opening of the Melbourne International Exhibition may be graced by the presence of his son—the heir of England and of the British Empire. It is well known that the success of the recent exhibition at Paris was due in no slight degree to the personal tact and energy of the Prince of Wales; that His Royal Highness paid special attention to the contributions from the colonies; and that he is animated by a desire to visit in person, should high reasons of State permit it, our Australasian colonies, as he has already visited India and Canada. Meanwhile, I am proud, on the eve of my departure from that Australasia which I love so well, and in which I have spent nearly twenty years—the best, the happiest, and, I trust, not the least useful years of my life—as Governor successively of the great colonies of Queensland, New Zealand, and Victoria, to inaugurate, at the

request of the Commissioners, the construction of the noble building, destined to hold the Melbourne International Exhibition. That building will be completed under the auspices of my distinguished successor, the Marquis of Normanby. I earnestly pray that this exhibition building, together with the railways and the various other public works commenced during my administration in Queensland, in New Zealand, and in Victoria, may realise the expectations of the Governments and Parliaments which sanctioned them, and endure through the great future of Australasia as sources of permanent and ever-increasing prosperity.

Melbourne, 19th February, 1879.

G. F. BOWEN.

The contract was originally entered into for the erection of one large permanent hall and machinery annexe; but subsequently it was decided, in view of the demand for space being larger than was at first anticipated, that provision should be made for the erection of additional buildings of a temporary character extending northwards. In order to give effect to this portion of the scheme, the position of the machinery annexe was altered so that the temporary courts when constructed should form a continuation of the courts within the main building. A proportionate increase was anticipated in the space required for exhibits of machinery; and, in order to impart uniformity to the design, it was decided to erect two, instead of one, machinery annexes, running parallel with Nicholson and Rathdowne streets, and forming with the main building three sides of a square, the temporary courts filling up the quadrangle, and extending as far northwards as the requirements might demand. The Commissioners also decided upon substituting brickwork for wood in the dome, a change which necessitated an advance on the contract of £7781; but the increased stability of the building, and its greatly improved appearance, more than compensated for the extra expenditure. The difference in the cost of temporary and permanent machinery annexes was shown to be comparatively trifling, and it was, therefore, decided to construct them of brick, stuccoed, to correspond with the permanent hall. The total amount of the contract was increased by this alteration to £87,740. Although not following the historical sequence of the proceedings of the Commissioners, it may be as well to state here that the applications for space were far larger than was at first anticipated. The original buildings only provided for 243,658 feet of space; but various additions and enlargements were from time to time determined upon. The Commissioners, upon the recommendation of the Secretary, made provision, in the middle of 1879, for 543,658 feet of space; and this was added to from time to time, as the demands made by Great Britain, by foreign countries, the neighbouring colonies, and the manufacturers of Victoria, grew larger and larger. So late as the early part of 1880 the United States Government made a formal application, through the Secretary of State for Foreign Affairs, for 35,000 additional feet of space, and at the same time the British agricultural implement-makers applied for 20,000 feet additional floor space. The magnitude of the display made by Germany and Austria induced the Commissioners, a few weeks before the Exhibition opened, to construct annexes specially for the accommodation of the exhibitors of those nations for whom room could not be found in the main hall, and a special machinery annexe was constructed by and at the expense of the Government of Germany. The buildings, as finally completed, consisted of—

The permanent nave, 500 feet long and 160 feet wide, with galleries and large collars.

Two permanent annexes, 460 feet long and 138 feet wide.

One main temporary hall, 820 feet long and 490 feet wide.

A temporary annexe for British machinery containing about 21,000 square feet of space.

German and Austrian annexes containing about 20,000 feet of space.

There were, in addition, spaces outside, reserved for machinery and agricultural implements, refreshment-rooms, kiosks, buildings showing the working of the Victorian school system; offices for the administration of the Exhibition, for the

customs, police, and post-office, a hospital, retiring rooms, &c., &c., so that the total space occupied was about 907,408 feet—the space originally proposed under what was termed the C scheme.

The total cost of the buildings was £246,365 3s. 6d., of which the permanent building cost £132,950 12s. 8d.; the temporary annexes, £83,111; gardens, £18,481 4s. 8d.; machinery, £5714 19s.; organ, £5560 9s.; miscellaneous, £546 18s. 2d. Plans showing the buildings, temporary and permanent, the apportionment of space amongst the countries and colonies exhibiting, and the manner in which the Carlton Gardens were laid out, are given in this volume.

The Commissioners decided upon improving the appearance of the Carlton Gardens. The portion between the buildings and Victoria-street was planted with valuable trees; lawns and flower-beds were constructed; the paths asphalted, and the whole grounds were surrounded with a substantial iron fence. The whole management of the gardens was placed under the control of a Gardens Committee, with the Hon. J. Munro, M.P., chairman; and the work was let by contract to Mr. Sangster.

The Commissioners originally selected were supplemented by others appointed from time to time by the Government of the day, but no alteration was made in the system by which the business of the Commission was in the first instance conducted. The whole body was divided into a number of Committees, each of which had charge of one department of administration, and reported from time to time to the Executive, which, in its turn, reported its proceedings once a month to the whole body of the Commissioners. The plan worked extremely well, and notwithstanding the large number of Commissioners there was little or no conflict of jurisdiction. Much of the success of the Exhibition was due to the wisdom and energy of the different Committees, more especially to the manner in which the Executive and Finance performed their multifarious and important duties, and to the tact and temper shown by the Hon. W. J. Clarke, M.L.C., President, the Hon. J. J. Casey, C.M.G., Executive Vice-President, the Hon. J. Munro, M.P., Vice-President, and the Hon. W. M. K. Vale, M.P., Treasurer, all of whom were unwearied in their attendance.

Shortly after the passing of the Act, it became necessary to appoint a Secretary, and the position was offered to Mr. G. C. Levey, C.M.G., then representing this Colony at the Paris Exhibition, and who had acted as Secretary to the Commissioners for the London and Vienna Exhibitions of 1873, and the Philadelphia Exhibition of 1876. Immediately after his acceptance of the appointment, the Secretary took steps to bring the forthcoming Exhibition under the notice of the manufacturers and producers of Europe, and placed himself in communication with the various municipalities and Chambers of Commerce throughout Europe and America. Upon the 24th January, 1879, immediately after the official announcement of the passage of the Exhibition Act, and of his appointment as Secretary, had reached Europe, Mr. Levey urged upon the Right Honourable the Secretary of State for the Colonies the advisableness of appointing a Royal Commission to assist with its advice and co-operation, and generally to promote the success of the Exhibitions which were to be held in Sydney and Melbourne. The suggestions met with the approval of Sir Michael Hicks-Beach, Bart., and His Royal Highness the Prince of Wales was graciously pleased to express his willingness to accept the position of President. On 5th April a Royal Commission was gazetted, including the names of H.R.H. the Prince of Wales, K.G., President; the Duke of Richmond and Gordon, K.G.; the Duke of Manchester, K.P., the Marquis of Salisbury, K.G., the Earl of Carnarvon, the Earl Cadogan, the Earl of Belmore, K.C.M.G., the Earl Granville, K.G., the Earl of Kimberley, Sir Michael Hicks-Beach, Bart., the Right Hon. H. C. E. Childers, F.R.S., Sir Daniel Cooper, Bart., Sir John Rose, Bart., G.C.M.G., Sir J. D. Hooker, K.C.S.I., C.B., Sir P. Leighton, Messrs. R. S. Owen, C.B., F.R.S.,

S. Morley, and W. W. Smyth, F.R.S., Commissioners, with Mr. T. A. Wright, Secretary. Mr. Levey had previously received letters from the Foreign Office to the Ministers of Great Britain at the various European Courts, and he paid several visits to France, Holland, Belgium, Wurtemberg, Prussia, Saxony, Austria, and Italy, in the interests of the Exhibition.

Immediately after the return to Victoria of the Secretary, an estimate was prepared of the probable expenditure necessary to carry out the Exhibition on three different scales. Deducting probable receipts, and allowing ten per cent. for unforeseen expenses, the three schemes may be briefly summarised as follows:—

Scheme A, affording 243,658 feet of space, £137,895.

 " B " 543,648 " £218,735.

 " C " 907,408 " £269,500.

The Government decided upon the B scheme, with some modifications, but additions were subsequently made in consequence of the large demands for space, and the Exhibition, when it opened, was upon a scale of magnitude about as large as was contemplated under the C scheme. Twelve months later, and before the full extent of the additional buildings was determined upon, the Treasurer, the Hon. W. M. K. Vale, M.P., estimated the cost of the Exhibition to the State at £250,806, credit being taken for a sum of £50,000 realisable from admissions. The Exhibition was upon a larger scale than was anticipated by Mr. Vale, and, out of deference to the wishes of the Foreign Commissioners, it was not opened at night, as was originally intended and provided for, but the net cost to the consolidated revenue of the Exhibition will, when all the accounts are wound up, be between £249,000 and £250,000. This balance includes the payment by the Government on behalf of the Trustees of the Exhibition Buildings of £4000, the estimated value of the furniture and plant in the building when they took possession on 3rd October, 1881.

Energetic measures were taken to circulate the programme of the Exhibition, and the regulations issued by the Commissioners, throughout the whole of the civilised world, and to bring them before the notice of all nations through the medium of Her Majesty's representatives in different foreign nations and British colonies. The Secretary left Victoria in August, 1879, and travelled all over North America and Europe on the business of the Exhibition, returning in June, 1880. The efforts of the Commissioners were also ably aided by the British Royal Commission, and by the London Committee of their own body, under the presidency of the Right Hon. H. C. E. Childers, M.P., F.R.S., Secretary for War.

Meanwhile, rapid and satisfactory progress was made in the permanent building and the various additions which were from time to time determined upon. The Building and Machinery Committees (the late Mr. A. K. Smith, M.P., chairman) made energetic efforts to push on the work, and they were so ably seconded by the architects and contractors—Mr. David Mitchell in the permanent, and Messrs. Walker and Halliday in the temporary buildings—that all was ready upon the 1st July, when the Exhibition was declared open for the reception of exhibits, which commenced to pour in with great rapidity.

To facilitate operations, massive timber framework had been erected at the goods entrances in Nicholson and Rathdowne streets, on which travelling winches lifted the cases from the lorries and placed them on trucks running on tramways which traversed all parts of the interior of the annexes. The most ponderous articles were thus easily and expeditiously deposited on the sites where they were to be displayed, and the various courts soon began to assume an orderly appearance.

A large organ was constructed by Mr. George Fincham, in order to give greater effect to the opening ceremonies, and a cantata—the words by Mr. Meaden, and the music by M. Caron—was selected by the Ceremonial Committee (Sir S. Wilson, M.L.C., chairman).

Great efforts were made to have the Exhibition ready by the opening day, and the Commissioners were highly gratified at the forward state of all the courts upon that occasion. The Fine Arts Committee, Sir George Verdon, K.C.M.G., C.B., chairman; the Mining and Minerals Committee, Mr. J. A. Panton, P.M., chairman; the Animal Products, Sir S. Wilson, M.L.C., chairman; the Great Britain Committee, Hon. J. J. Casey, C.M.G., chairman; the Vegetable Products, Mr. Bosisto, M.P., chairman; the Manufacturers Committee, Hon. W. M. K. Vale, M.P., chairman; and the Districts of Victoria, Hon. W. Wilson, chairman, were unwearied in their exertions, and the whole of the arrangements of the Commissioners had been completed some weeks before the 1st October. Some exhibits for the British Court did not arrive in time, through the stranding of the "Sorata;" the United States did not make the appearance they contemplated in consequence of the loss of the "Eric the Red;" and it was not for some days after the opening that the arrangements of the Austrian, Fijian, German, and Italian Courts were quite complete; but it may safely be said that there had never been an exhibition since that at Hyde Park in 1851 at which all the arrangements were in a condition so perfect, or at which the exhibitors had worked so hard to second the exertions of the Commissioners and their officers.

The following countries were officially represented by the following Commissioners:—

Austria	Victor Schönberger, K.C.F.J.
Belgium	Chev. Gustav Beckx
France	Chev. J. Belcour
New Caledonia and Algiers		W. J. Daly, Esq.
Germany	Dr. Francis Reuleaux
Italy	Cav. A. de Goyzueta, Marchese di Toverena
Japan	Hideharu Kawase
Netherlands	Chev. D. Ploos van Amstel
Switzerland	M. Ernest Eugster
United States of America	...	O. M. Spencer, Esq.
United Kingdom	Colonel Sir Herbert Sandford, R.A.
British India	E. C. Buck, Esq.
Ceylon	A. M. Ferguson, Esq.
Mauritius	Sir S. Wilson, M.L.C.
Straits Settlements	...	Major Clementi
New South Wales	...	Dr. Renwick, M.P.
Tasmania	C. M. Officer, Esq., M.P.
Western Australia	...	Hon. Malcolm Frazer, M.L.C.
South Australia	...	Samuel Davenport, Esq.
New Zealand	Dr. Hector, C.M.G.
Queensland	Hon. George King
Fiji	W. K. Thomson, Esq.

The following countries, although not officially represented, had forwarded exhibits:—

China
Denmark
Norway
Portugal
Russia
South African Settlements
South Sea Islands
Spain
Manilla
Sweden
Turkey

The exhibits from these countries were placed in a special court, under charge of the Committee for Europe, Asia, and Africa (the Hon. J. J. Casey, C.M.G., chairman).

The total number of exhibitors was 12,792, and there were about 32,000 exhibits. The number of exhibitors and exhibits from each country is as follows:—

	EXHIBITORS.	EXHIBITS.
Austria	373	852
Belgium	327	817
France	1,106	2,765
New Caledonia and Algiers	40	100
Germany	963	2,407
Italy	888	2,220
Japan	168	420
Netherlands	79	197
Switzerland	52	155
United States of America	366	915
United Kingdom	1,379	3,447
British India	1,172	2,950
Ceylon	818	2,045
Mauritius	98	245
Straits Settlements	97	252
New South Wales	419	1,047
Tasmania	258	645
Western Australia	149	372
South Australia	330	820
New Zealand	629	1,562
Queensland	587	1,467
Fiji	285	612
Victoria	2,130	5,325
China	20	50
Denmark	8	18
Norway	7	17
Russia	1	8
South African Settlements	24	60
South Sea Islands	1	25
Spain, Portugal, and Colonies	5	13
Sweden	10	25
Turkey	3	8
Total	12,792	31,856

The Exhibition was opened on 1st October, 1880, by His Excellency the Governor, in the presence of the Governors of the various Australian colonies, His Grace the Duke of Manchester, K.P., the British and Foreign and Colonial Commissioners, Her Majesty's Ministers, the members of the Executive and Legislative Councils, the judges of the Supreme Court, the members of the Legislative Assembly, the foreign consuls, the captains and officers of the British, French, German, and Italian men-of-war in port, the permanent officers, naval, military, and civil, of the local Government, a large and representative gathering of the trades of Melbourne, and a numerous and brilliant assemblage, by whom the nave of the building was filled. The gentlemen wore full dress, and the ladies morning costume. The day had been proclaimed a general holiday by the Government, and, as great public interest was taken in the event, the city was thronged with thousands from the suburbs and the country, making an aggregation of population that had rarely before been assembled in Melbourne. Business was generally suspended, and flags were displayed from the buildings in the principal streets and on the shipping lying at the wharves. By eight o'clock in the morning large crowds had assembled in the

streets forming the route of the procession, and every place from which a good view could be obtained was soon occupied. Whilst the associated trades were gathering at their hall in Victoria-street, and the fire brigades near the Tank Reserve on the Eastern Hill, the naval forces arrived at the Queen's Wharf by the steamers "Resolute," "Williams," and "Warhawk." Having been formed into battalion order, the sailors were marched by Market-street into Collins-street, and thence by Spring-street to the Exhibition. Their march through the city was one of the finest spectacles of the day. They numbered about eight hundred rank and file, and trod along with admirable precision and regularity. The "Cerberus" brass band led the way. Then came the Victorian Naval Brigade, followed by contingents of sailors and marines from the British war-ships "Wolverene," "Cormorant," and "Emerald," and of sailors from the French, German, and Italian war-ships "Finistère," "Nautilus," and "Europa." The varied uniforms and military bearing of all the men gave the battalion a very picturesque appearance, and the effect was heightened by the martial music which was contributed at intervals by a band of buglers, who occupied a position in the centre of the line. They passed up Collins-street at half-past nine o'clock, and marched on to the Exhibition-building. About nine o'clock the volunteer forces mustered at the Victoria Barracks, St. Kilda-road, and the rolls having been called, they were formed into battalions. At twenty minutes to ten they marched in excellent order by Swanston, Collins, and Spring streets to the Exhibition. Colonel Anderson, C.M.G., the commandant, and staff, rode at the head of the column. The following shows the number of all arms present, and the order in which they were arranged:—

CORPS, &c.	Officers.	Sergeants.	Rank and File.	Total.
General staff	12	20	..	82
Victorian Artillery	1	4	100	105
Local naval forces	10	18	366	394
CAVALRY ESCORT.				
Metropolitan troop and Southern troop	4	4	42	50
FIELD ARTILLERY.				
East Melbourne corps	6	8	68	82
St. Kilda corps	3	13	90	106
Metropolitan corps	2	12	89	103
GARRISON ARTILLERY (No. 1).				
Williamstown corps	3	6	107	116
GARRISON ARTILLERY (No. 2).				
Emerald Hill corps	6	7	100	113
Engineer corps	4	6	126	136
Torpedo and Signal corps	2	..	12	14
RIFLES.				
1st Metropolitan Battalion.				
Metropolitan corps	4	6	96	106
Carlton corps	5	7	111	123
2nd Metropolitan Battalion.				
Collingwood corps	6	8	112	121
East Collingwood corps	5	6	83	94
Richmond corps	4	6	100	110
Southern corps	5	5	74	84
Detachments from country corps—Officers, non-commissioned officers, and 15 privates each allowed to attend the parade	270
Grand total	2159

Following this naval and military display came the procession proper. The associated trades having assembled at their hall in Victoria-street were marshalled into order by Mr. Gratton and his sub-marshals, and started with banners flying and bands playing down Russell-street. The fire brigades met at about the same time near the Tank Reserve on the Eastern Hill, and having been marshalled by Superintendent Hoad, joined the associated trades in Spring-street. When the trades procession reached the Treasury they halted, and the bands played the National Anthem. The following is the order, and an approximation of the numbers in which the procession ascended Collins-street:—

Trades Committee	70
City of Fitzroy Brass Band	20
Ironmoulders	360
Bootmakers	490
Richmond Fife and Drum Band	40
United Labourers' Society	80
Victorian Brickmakers	50
Mill Sawyers	150
Brown's Brass Band	15
Cabinetmakers	150
Boilermakers	160
Brickmakers' Fife and Drum Band	30
Bricklayers	100
Carpenters and Joiners	260
Brunswick Brass Band	30
Amalgamated Society of Engineers	220
Sailmakers	30
Seamen's Union and Brass Band	170
Melbourne Gas Stokers	60
Quarrymen	100
City of Fitzroy Drum and Fife Band	40
Operative Plumbers' Society	50
Port Phillip Shipwrights' Society	100
Williamstown Brass Band	20
Operative masons, bookbinders, plasterers, &c.	200
Hallas's Brass Band	40
Firemen of city and suburban brigades	250
Total number	3285

Shortly before eleven o'clock His Excellency the Marquis of Normanby, G.C.M.G., and his distinguished visitors, with their suites, left Government-house, and a salute of seventeen guns was fired from the Prince's-bridge battery announcing their departure. The Vice-regal party drove in seven carriages, and besides His Excellency and the Marchioness of Normanby, there were Lord Augustus Loftus, G.C.B., Governor of New South Wales; Sir Wm. F. D. Jervois, G.C.M.G., C.B., Governor of South Australia; Sir Wm. Robinson, K.C.M.G., Governor of Western Australia; and Sir Francis Smith, Acting-Governor of Tasmania, with their ladies and suites; Commodore J. C. Wilson, of H.M.S. corvette "Wolverene," and His Grace the Duke of Manchester. They were escorted by troops of the Victorian Volunteer Light Horse, and, having passed between the lines formed by the trades' societies, they then headed the procession, and proceeded to the Nicholson-street entrance of the Exhibition grounds.

On arrival at the principal entrance of the main Exhibition-building, the Governor and his party were received by the Hon. W. J. Clarke, M.L.C., the Presi-

dent of the Exhibition Commission, the Vice-Presidents, the Treasurer, the Executive Committee, and the Secretary; and were conducted by them to seats on a dais erected at the intersection of the nave and transept under the dome; Captain Maxwell, of H.M.S. corvette "Emerald;" Commander Bruce, of H.M.S. sloop "Cormorant;" Chevalier Angey Dufresse, captain of the French man-of-war "Finistère;" Captain Chünden, of H.I.M.S. gunboat "Nautilus;" Cavaliere Cesare Romano, of the Italian war steamer "Europa," being also seated thereon.

In the front of the grand organ a gallery had been erected, on which were arranged several hundreds of choristers and musicians, and as soon as the Vice-regal party had been seated, "God Save the Queen" was sung by solo vocalists and the choristers. This was followed by the performance of a cantata, written for the occasion by Mr. J. W. Meaden, and sung to music composed by M. Caron. The cantata was as follows:—

PART I.—THE PAST.

The Argument.—Victoria, sleeping amidst the primeval solitudes, is aroused by voices which foretell the speedy discovery and settlement of the country, and presently the songs of the mariners are heard as they make their way across the ocean to the, as yet, undiscovered land—

In slumbers deep—where branching fern-trees wave,
And Austral seas the long, low beaches lave,
Where, fringed with reeds, the silent, lone lagoon,
Reflects the starry cross and crescent moon,
With garner'd sweetness in her peaceful breast
The fair Victoria lies too long at rest.

O summer land of silence,
O land of beauty rare,
Where solitude lies brooding
O'er hills and valleys fair.
Where silent streams are stealing
O'er each untrodden plain,
And the lonely shores but echo
The sigh of the surging main.

On thy sweet peace intruding
The old world soon will pour
An army, vast and busy,
Forth from its teeming shore.
And to thy pleasant harbours,
That now all lonely lie,
"As the doves unto their windows"
Shall the white-winged vessels fly.

Then, fair South Land, no longer
Thy coasts shall silent be,
The merry voice of laughter
Shall echo songs of glee.
Then busy sounds of labour,
Shall rise on the summer air,
And sweetly chime the Sabbath bell,
That calls to the house of prayer.

THE MARINERS' SONG.

Our northern homes we leave behind,
To seek some golden strand,
Our sails we trim to catch the wind,
And steer for the Southern Land.
O'er glittering seas we gaily glide
Where the sunbeams dance on the laughing tide.

When storms arise their wrath we brave,
Nor fear the lightning's flash,
Though madd'ning winds around us rave,
And the surging billows dash,
O'er unknown seas we fearless sail
Where the Storm-fiend rides on the hissing gale.

PART II.—THE PRESENT.

The Argument.—Victoria discovered engaged in various pursuits—pastoral, agricultural, industrial, &c.—is approached by a company of nymphs, representing the various nations of the earth. They hail her with acclamation as the "Queen of the South;" Victoria responds with a jubilant song of welcome, and, as she leads her guests to the banquet, the people burst forth into a patriotic hymn, with which the cantata concludes.

Now, on the grassy plains the browsing flocks descend,
While Ceres' toiling swains her fruitful reign extend;
Deep in the gloomy mine the digger seeks his prize;
'Neath Labour's sway benign the fair domed cities rise;
And all around we see a power subdue the land,
A power from God that nerves the toiler's willing hand.

CHORUS OF THE NATIONS.

From distant shores we come to greet
With loud acclaim, our sister sweet,
And hail her, as with queenly grace
Amidst our band she takes her place,
"Queen of the Southern Seas."

VICTORIA'S SONG OF WELCOME.

O golden day of glory! O chrysolite of time!
Now fly all shadows hoary before a dawn sublime,
Now clad in golden sunlight a bride adorn'd I stand,
My dowry, England's birthright, her banner in my hand
O welcome! Sisters gracious, and friends from every land!
My heart warms at your coming to this bright and sunny strand.
My banquet-hall is furnished, my table richly spread,
The grand old flag, with star-gems deck'd, gleams brightly overhead
Wave, wave your silken banners! your silver trumpets blow!
Sing, sing your loud hosannas! that all the world may know
This day is born a Nation, 'neath England's banner free,
That, like a constellation, flames o'er the Southern Sea.

HYMN.

O Thou, whose arm hath for our fathers fought,
Whose guiding hand their sons has hither brought
Lead onward, till Australia's land shall rise
A Greater Britain, 'neath these Southern skies.

With bounteous hand our fields with plenty bless,
Increase our flocks, our homes with peace possess;
Make wise our rulers, and in righteous ways
Guide Thou our feet, to Thine eternal praise.

At the conclusion of the performance of the cantata, the address of the Commissioners to the Governor was presented by the Hon. W. J. Clarke, M.L.C., who was accompanied to the dais by the Hons. J. J. Casey, C.M.G., Executive Vice-President; Sir Bryan O'Loughlin, Bart., M.L.A., Sir George Verdon, K.C.M.G., C.B., Sir Samuel Wilson, M.L.C., and Hon. J. Munro, Vice-Presidents of the Commission; the Hon. W. M. K. Vale, M.L.A., the Treasurer; and Mr. G. C. Levey, C.M.G., the Secretary. The address was as follows:—

My Lord Marquis—As Commissioners appointed under the great seal of the colony for the purpose of taking the necessary measures for holding an International Exhibition of arts and industries in Melbourne during the present year, we desire to welcome your Excellency with all dutiful respect, and to convey to you, as the representative of Her Most Gracious Majesty, the expression of our loyalty and devotion to Her Majesty's Crown and person.

The Commissioners appointed to promote the representation of Victoria at the Paris Exhibition of 1878, in their first report presented to Parliament, after commenting on the rapid increase in the material wealth and prosperity of the colony, expressed an opinion that the time had arrived when Victoria could, with advantage, invite all the nations of the world to take part in an International Exhibition at Melbourne.

The proposition was favourably entertained by the Government, and the then Premier, the Hon. Graham Berry, requested the Paris Commissioners to take all the necessary steps to give effect to their proposal, pending the passing of an Act of incorporation and the gazettement of an International Exhibition Commission. Acting upon this request, immediate action was taken; the site for the building in Carlton Gardens, upon which we are now assembled, was chosen, and the design for the structure adopted. This site comprises an area of sixty-three acres, of which the Exhibition covers about thirty, being larger than that of the first Great Exhibition held in London in the year 1851.

On the 14th of November, 1878, the Bill providing for holding the Melbourne International Exhibition was approved by the Legislature. The Commissioners were then gazetted; the work of the Paris Commissioners was handed over to them, and by them approved.

The foundation-stone was laid on the 19th February, 1879, by His Excellency Sir George Fergusson Bowen, G.C.M.G., then Governor of Victoria, in the presence of Lady Bowen and a distinguished assemblage, invited to witness the ceremony.

The undertaking, once entered upon, was supported heartily by the people of this colony, and the proposal was received elsewhere most graciously. The first expectations were very modest, in comparison with what has been actually realised. The interest taken in the Exhibition by foreign nations, stimulated by the patronage of the Imperial Government, and by the experience gained at the preceding exhibition at Sydney in 1879, has forced your Commissioners from time to time to expand the dimensions of the building, until the available space is now about four times the area originally contemplated.

At the suggestion of the Imperial Government, which appointed a Royal Commission, with the Prince of Wales as President, and which is officially represented here, the Governments of Austria, Belgium, France, Germany, Holland, Italy, Japan, Switzerland, the United States, British India, Ceylon, Mauritius, Straits Settlements, New South Wales, Tasmania, Western Australia, South Australia, New Zealand, Queensland, New Caledonia, and Fiji, have appointed representatives to your Excellency at this Exhibition; and most of them have expended large sums in bringing the arts and industries of their people before the notice of the inhabitants of Australasia. Other countries, not officially represented by Commissioners, are also exhibiting their various products.

Your Commissioners desire to draw the attention of your Excellency to the contrast presented by the scene here displayed and that which existed less than forty-five years ago where Melbourne now stands. Then it was an unknown part of a comparatively unknown land. The colony itself has grown into existence during the reign of our beloved Queen, whose name it bears. To-day you are opening an International Exhibition in a large city, where you are surrounded by the accredited representatives of the great nations of Europe, Asia, and America, and articles illustrating the growth, produce, manufactures, arts, and sciences of the whole world, while this assemblage testifies not only to the wealth and culture but to the energy and enterprise of the colonists.

Your Commissioners desire, through your Excellency, to express to the Governments of this and the various countries and colonies here represented their sense of the obligation conferred upon the people of Victoria by the magnificent collections forwarded for exhibition, and for the great assistance which has been most generously given. They desire, further, to express their obligation to the Governments of this and the other Australian colonies for the facilities afforded by the free use of the electric telegraph, and the free transit of goods by railway; and to the Parliament of Victoria for the liberality with which it has voted the necessary funds for carrying out this great enterprise.

Grateful recognition is also due to corporations and associated bodies for the valuable assistance they have afforded.

Our thanks are also due to the exhibitors from all parts of the world for the splendid display to which we propose immediately to invite the attention of your Excellency.

Some idea of the magnitude of this Exhibition may be formed from the Official Catalogue, a copy of which we have the honour to present for your acceptance.

Your Commissioners further desire to state that, in discharge of the onerous and important duties with which they have been entrusted, it has been their constant aim to work in harmony with each other, and with those to whom the discharge of similar duties elsewhere has been confided. They venture to hope that their efforts will tend to draw into a closer union their countrymen in all parts of the world, fellow-subjects of the illustrious Sovereign who reigns with a benignant sway over this vast empire, which has been consolidated as much by her just and temperate sovereignty as by the wisdom of her advisers.

Your Commissioners trust that, under the blessing of Divine Providence, their labours may be successful, and that the Melbourne International Exhibition of 1880 may serve to carry out the wise, patriotic, and philanthropic desires of the late lamented Prince Consort, by whom international exhibitions were first inaugurated in Great Britain.

On behalf of my fellow-Commissioners, I have now the honour to request that your Excellency will declare the Melbourne International Exhibition to be open, in the name of Her Most Gracious Majesty Queen Victoria.

His Excellency replied as follows :—

Gentlemen—As the representative of Her Most Gracious Majesty, I receive with profound satisfaction the expression of your devotion to Her Majesty's throne and person.

The idea of holding in the city of Melbourne, this year, an international exhibition, is alike creditable to the Victorian Commissioners at the exhibition in Paris, who suggested, and to the Executive and Parliament which adopted it, and provided for its complete success by most liberal grants.

To many unacquainted with the rapid growth of Victoria and the indomitable energy of its people, the idea of inviting the nations of the earth to a competitive display of arts, science, mining, manufactures, and pastoral and agricultural products, might appear premature, and the response from the nations might fairly have been awaited with deep interest, not unmixd with anxiety. The fear, if it ever existed, that the invitation of this colony would be imperfectly responded to, has passed away; and the display of industry and art within these walls, gathered from every quarter of the known world, is one that any country might be proud of.

The foresight, energy, and ability displayed in all the details of this important undertaking reflects the highest credit upon the community.

The Imperial Government promptly and cordially co-operated in the work by appointing a Royal Commission, and His Royal Highness the Prince of Wales kindly consented to accept the office of President; and I am glad to hear that foreign countries have so completely responded to this example that it is now an assured fact that the International Exhibition of 1880 will take equal rank with its predecessors as a satisfactory exponent of the world's industries. It must be a source of legitimate pride to you, gentlemen, as well as to the Government and people of Victoria, that a colony which has had only thirty years of self-government, and the territory comprised in which was an unknown land less than half a century ago, has been enabled by the wealth of natural resources, the wisdom of its laws, and the enterprise, intelligence, and industry of its population, to bring to a successful completion this grand project.

I esteem it a high honour that, as a representative of my Most Gracious Sovereign, it is my good fortune to take part in this patriotic work, so well and ably commenced by my predecessor, Sir George Bowen, whose sympathy and co-operation have been well and wisely displayed.

It will be my pleasing duty to convey to the Governments of those countries and colonies who have responded to the invitation of Victoria, by sending collections of their varied national resources, that feeling of obligation and satisfaction which you express in your address. I accord also hearty recognition of the prompt co-operation of corporations and associated bodies, as well as to the harmonious spirit in which you, gentlemen, have performed the very onerous duties imposed upon you.

I sincerely join in the hope that you express as to the beneficial result of your labours, and trust that the Melbourne International Exhibition of 1880 may aid in this new world to illustrate, enforce, and extend the wise and philanthropic views of the Prince Consort, whose thoughts and actions during his lifetime have had such enduring influence on the progress, peace, industry, and comfort among the nations of the world. And I pray that the Almighty may bless and prosper this great undertaking.

In the name of Her Most Gracious Majesty Queen Victoria, I declare the Melbourne International Exhibition now open.

The following telegram, for transmission to the Queen, was then handed to the superintendent of telegraphs :—

To the Queen, Buckingham Palace, London.

The Marquis of Normanby presents his humble duty to the Queen, and has much pleasure in informing Her Majesty that he has just opened in Her Majesty's name the Melbourne International Exhibition—the last of the series of great enterprises inaugurated by the Prince Consort. The attendance was very large and enthusiastic, and the success of the undertaking far exceeds the most sanguine anticipations.

NORMANBY.

The Exhibition Building, Melbourne, 1st October, 1880.

The "Hallelujah Chorus," sung with great effect, concluded the ceremony.

The Marquis of Normanby, accompanied by Lord Augustus Loftus, Sir William F. D. Jervois, Sir William Robinson, Sir Francis Smith, the Duke of Manchester, and escorted by the President, Vice-Presidents, Treasurer, and Secretary of the Commission, then paid a visit of inspection to the courts in the main avenue. The leading representatives of each court were successively introduced to His Excellency and his distinguished companions. The visit was merely formal, and very brief.

In the morning of the next day, Saturday, 2nd October, His Excellency the Governor received the following telegram from Her Majesty the Queen, in reply to the telegram forwarded to Her Majesty on the opening of the Exhibition :—

Balmoral, 1st October, 9.5 a.m.

I thank you sincerely for your most satisfactory telegram, and wish all possible success to the Exhibition.

THE QUEEN.

A telegram, conveying similar information, having been forwarded to His Royal Highness the Prince of Wales, the following reply was received by His Excellency the Governor:—

London, 4th October. 1880, 2.35 p.m.

To Marquis of Normanby.

Many thanks for telegram. Am very glad to hear opening of Exhibition went off so well, and that everything was such a great success.

WALES.

An official dinner, in connection with the opening of the Exhibition, was given on the evening of that day by His Excellency the Marquis of Normanby at Government House. There were over sixty guests present, including the Governors of the various Australian colonies, their families and suites, the Executive Commissioners of the countries and the colonies represented in the Exhibition, with the President, Vice-Presidents, Treasurer, and Secretary of the Commission, the Chief Justice, the Bishop of Melbourne, the President of the Legislative Council, the Speaker of the Legislative Assembly, the Chief Secretary and other members of the Ministry, the commanders of the ships of war in port, and other distinguished gentlemen. Two nights afterwards a second State dinner, and on the 6th October a State ball, in celebration of the opening of the Exhibition, were given at Government House. The opening of the Exhibition was signalled by a series of official entertainments, including a dinner given by the Victorian Commissioners to the representatives of the various countries and colonies taking part in the Exhibition, a *matinee musicale* given by the President (the Hon. W. J. Clarke, M.L.C.), and a dinner given by Sir Samuel Wilson, M.L.C., to all the Commissioners, British and Foreign.

It was several days after the Exhibition opened before everything was in full working order, and it was not until 1st November that some of the Foreign Commissioners were enabled to announce that their courts were ready for the inspection of the juries.

The following is the amount of space in the buildings and grounds occupied by the various contributing countries and colonies :—

COUNTRIES.					SPACE OCCUPIED.
Austria	38,147 feet
British India	11,093
Belgium	24,798
Ceylon	2,400
China	500
Denmark	500
Fiji	1,670
France	107,370
Germany	111,669
Great Britain	177,758
Holland	8,902
Italy	57,052
Japan	7,000
Ladies' Court	6,425
Mauritius	600
New South Wales	33,880

New Zealand	10,235
Queensland	9,875
Russia	200
Scandinavia	500
South African Settlements	600
South Australia	9,875
Turkey	400
United States	64,920
Victoria	187,758
Western Australia	6,000
Dining-rooms, retiring-rooms, pavilions, &c.	about	37,281
Total	907,408 feet

So soon as the various courts were ready, arrangements were made to form the international juries. One of the first duties imposed upon the Committee of Juries and Awards was the selection of a superintendent. Mr. J. C. Newbery, of the Technological Museum, had been previously employed at similar work at the recent Intercolonial Exhibition in Melbourne. The trustees of the Public Library were asked for permission to employ Mr. Newbery in that capacity, and to offer him a suitable honorarium, and in due course authority was cheerfully given. By the regulations each country or colony outside Victoria had the right of nominating one juror for each section in which it was interested, provided always that such juror was not a permanent resident of Victoria. The Commissioners for the Exhibition reserved to themselves the right, if necessary, of appointing an equal number of jurors to those appointed from outside. It was hoped that these regulations would have had the effect of inducing foreign nations and the neighbouring colonies to send here men of science and experience, whose presence would have materially strengthened the juries, and who would have added by their presence to the prestige and dignity of the Social Science Congress which it had been determined to hold in connection with the Exhibition. Unfortunately, no country took complete advantage of these regulations, although some few jurors were sent here by the French and Italian Governments. While the representatives of foreign countries were unwilling to surrender their right of appointing jurors, they requested the Commissioners to abandon the restriction as to residence. The Committee of Juries and Awards consisted of the Hon. J. J. Casey, C.M.G., chairman; the Hon. James Munro, and Mr. G. O. Levey, C.M.G.; and to this body—assisted by Mr. J. C. Newbery (Superintendent of Juries and Awards), subject always to the supreme control of the Executive Committee—was entrusted the delicate task of settling the conflicting claims of the visiting Commissioners. The regulation authorising each Commissioner outside Victoria to appoint a juror for each class in which he exhibited was, of course, unworkable so soon as the restriction of residence was abolished. A conference between the Committee of Juries and Awards and the visiting Commissioners was held on the 25th September, 1880 (the Hon. J. J. Casey in the chair), and, after a long discussion, it was decided that the visiting Commissioners should be collectively allowed to nominate one-half the total number of jurors, irrespective of nationality and place of residence, the other half being nominated by the Victorian jurors; that the total number of jurors should not exceed four hundred, and that no section should consist of more than twenty. When each Commissioner had sent in his nominations, it was found that they amounted to four hundred, or two hundred in excess of the number decided upon. In order to arrive at some satisfactory result, the Commissioner for the United Kingdom, Colonel Sir Herbert Sanford, R.A., invited the Commissioners for India and the British Colonies to meet and review their nominations. This was done, and their

joint list was reduced from one hundred and eighty to one hundred, thus leaving one hundred jurors to be nominated by the Commissioners for Austria, Belgium, France, Germany, Italy, Japan, the Netherlands, Switzerland, and the United States. After a protracted negotiation, another conference was held between the Committee of Juries and Awards and the visiting Commissioners (Mr. Casey in the chair), and, after a lengthy discussion, it was decided that all the Commissioners from countries outside Victoria should meet and jointly appoint two hundred jurors. This was done; and the appointment of the extra-colonial jurors having been made, those for Victoria were selected by the Executive Committee from names submitted by the committees in charge of the various sections.

Full details of the various steps taken before the juries were formed, the system followed, and the results of the jury work, will be found in the report of Mr. Newbery, commencing at p. 1.

The attention of the Commissioners had been directed to the subject of providing musical entertainment for the visitors; but it was thought advisable not to expend any very large sum in this direction, but to rely almost exclusively upon the legitimate attractions of the Exhibition. The performance of the Exhibition Cantata was repeated with great success. The services of an Australian band, organised by M. Leon Caron, were engaged for some afternoon concerts, and those of an Austrian band were similarly availed of. As the grand organ approached completion several performers of eminence gave recitals, which proved the power and general excellence of the instrument. At a later period arrangements were made for weekly concerts by children from the various State-schools in and around Melbourne, about 1000 being accommodated upon each occasion on the gallery in front of the organ. These concerts were under the direction of the singing-masters of the Victorian Education Department. In the courts where pianofortes were exhibited recitals were given at intervals by several leading artists, and these concerts were largely attended.

It had been resolved by the Commissioners to have special shows of the animal and vegetable productions of Victoria and the adjacent colonies, and to give special awards to live stock exhibited at Spring Show of the National Agricultural Society. In pursuance of this decision, 6 gold, 13 silver, and 22 bronze medals were presented to the owners of prize animals. The first of the series of special shows was opened on 19th November, in the western nave of the permanent building. It was an exhibition of flowers, fruit, vegetables, and dairy produce, and the number of entries of each class was numerous, while the quality of the exhibits commanded universal admiration. The butter, cheese, hams, and bacon were exceptionally good, while the fruit from New South Wales, South Australia, and Victoria, was very fine.

The second of the series of horticultural shows was opened on 17th December. This was restricted to flowers, fruits, and vegetables; and again the fruits were universally admired, especially by the foreign visitors.

An international wool show was opened on 6th January, 1881. Strenuous efforts had been made by Sir Samuel Wilson, the chairman, and the members of the Animal Products Committee to obtain an unusually good display of this great staple, and the result was that 200 entries were made, and the exhibition of wool was pronounced to be the finest ever seen in any part of the world. The exhibits were arranged in bales and single fleeces, the former being shown in the western nave, and the latter in glass cases placed down the middle of the central avenue of the annexe. The different varieties and qualities were well classified under their respective headings, and a very comprehensive catalogue was compiled and published, which furnished a full description of each exhibit. The washed Merino wool was shown in splendid condition, the fleeces being clean, bright, and soft in handling. The unwashed Merino wool was of very superior quality. In the long wool sections

both the quality and condition of the samples were remarkably good, and the entries of scoured wool, although not numerous, were good, the wool being long and bright in colour. The exhibition of the fleeces in cases was allowed to remain on view for a considerable period.

A dairy produce show was held in the basement of the main building on 4th and 5th February, and the exhibits were of acknowledged merit, but less numerous than on the previous occasion.

The third show, of horticultural products was inaugurated on 11th February, and was better than even at the previous exhibitions of this class. The fruit, especially that from South Australia and Queensland, was much admired.

An interesting and instructive display of the agricultural resources of Australasia was made in the western nave of the building on the 3rd, 4th, and 5th of March. The exhibits comprised grain of all descriptions, with other products of agricultural districts, and New South Wales and South Australia entered heartily into the project.

The last special horticultural show was held on the 18th, 19th, and 20th March, and, in the opinion of the judges, it excelled its predecessors, and showed the resources of the colony in a highly satisfactory manner. Fruit from this and the adjoining colonies was the most prominent feature.

The expectations as regards attendance were fully realised. Although the Exhibition was closed at night, and although no extraneous attractions were offered, the total attendance was—Adults, 853,655; children, 116,182; season tickets, 16,061; miscellaneous, 344,431—total, 1,330,279, of whom 985,848—or, in round numbers, a million—paid for admission, which is considerably more than the whole population of the colony. These numbers will compare very favourably with the result of any previous International Exhibition held either in Europe or America, at none of which was there an attendance so large in proportion to the population. The statistics of the Exhibition department will be found in the report of its comptroller, Capt. Espinasse, commencing at p. lxxii.

The formal declaration of the awards made by the jurors was made upon 22nd March, by His Excellency the Marquis of Normanby, G.C.M.G., and the day was proclaimed a public holiday.

A military display had been organised; not on so large a scale as at the opening, but sufficiently impressive to attract thousands of spectators.

The metropolitan volunteers were augmented by detachments from the country corps, and altogether not less than 1300 mustered at the appointed hour. Colonel Redc was in command, and the naval forces were under Captains Mandeville and Fullarton. Each corps was headed by its band. On entering the grounds the volunteers were drawn up in a line along the central carriage drive, in front of the main entrance, and remained there until the Governor arrived. As His Excellency drove past they presented arms, and the bands played the National Anthem. The Governor was escorted to and from the Exhibition by a troop of the Prince of Wales Light Horse, and a salute of twenty-one guns was fired from the Prince's Bridge battery as he left Government House.

His Excellency, who was accompanied by the Marchioness of Normanby, Lord Hervey Phipps, and Captain Le Patourel, was received at the main entrance by the Hon. W. J. Clarke, M.L.C., President; Sir George Verdon, C.B., K.C.M.G., Sir Samuel Wilson, M.L.C., Hon. J. J. Casey, C.M.G., and Hon. J. Munro, M.P., Vice-Presidents; Hon. W. M. K. Vale, M.P., Treasurer; and Mr. G. C. Lovey, C.M.G., Secretary; a few of the Commissioners, the representative Commissioners of each of the foreign countries, the commanding officers of the German, French, and Italian war-vessels then lying in Hobson's Bay, and a few of the officers of the volunteer forces of the colony. As he passed along the avenue to the dais in front of the orchestra, Mr. David Lee, on the grand organ, played the National

Anthem. At the dais His Excellency and party stood as the escort bowed and retired. The President, Vice-Presidents, Treasurer, and Secretary then advanced, and Mr. Clarke read the following address :—

To His Excellency the most Honourable George Augustus Constantine, MARQUIS OF NORMANBY, Earl of Mulgrave, Viscount Normanby, and Baron Mulgrave, of Mulgrave, all in the County of York, in the Peerage of the United Kingdom ; and Baron Mulgrave of New Ross, in the County of Wexford, in the Peerage of Ireland ; a Member of Her Majesty's Most Honourable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief in and over the Colony of Victoria and its Dependencies, &c., &c., &c.

My Lord Marquis—As Commissioners appointed under the great seal of the colony for the purpose of taking the necessary measures for holding an International Exhibition of arts and industries in Melbourne, we desire to welcome your Excellency with all dutiful respect, and to convey to you, as the representative of Her Most Gracious Majesty, the expression of our loyalty and devotion to Her Majesty's crown and person.

Your Excellency was pleased to declare the Exhibition open on the 1st day of October last, and since then your Commissioners have worked indefatigably to promote the success of the great undertaking so auspiciously commenced.

Although the generally complete state of the Exhibition on that occasion afforded matter for congratulation, a very large number of exhibits were subsequently received, and the space at the disposal of your Commissioners was taxed to the utmost in providing accommodation for the many beautiful and valuable specimens of art and industry sent to the Exhibition.

The onerous task of effectively disposing of all the exhibits was, however, successfully completed, and the vast collection gathered from all parts of the globe was within a brief period after the opening ceremony brought into thorough order.

Since the opening day the Exhibition has been largely attended by visitors from all parts of the Australasian colonies.

Our countrymen from Great Britain, and the many foreigners from the Continent attracted to these shores, have been afforded opportunities for studying our rich and varied indigenous resources, with the view of developing closer relations with the countries of the old world.

The total attendance to the present date has exceeded one million, the exact number being 1,008,802, and this satisfactory result will be largely increased between the present date and the final closing of the Exhibition on the 30th April.

The financial results have been extremely satisfactory, and the net cost of the Exhibition to the country will be less than was estimated in July, 1879.

The formation of the juries was commenced during the middle of the month of October, and the voluntary gratuitous services of over 350 gentlemen were secured for the purpose. These were formed into 88 juries, averaging from 7 to 22 persons in each jury.

The patience with which the examinations were conducted, and the amount of time bestowed, are especially worthy of note, and the thanks of your Commissioners are due to the jurors for their disinterested labours.

The result has been that 2465 exhibits have been placed in the first order of merit, 2013 in the second order, 1661 in the third order, 812 in the fourth order, and honourable mention has been accorded to 581 exhibits.*

We have now to place these lists of awards, duly confirmed by your Commissioners, in the hands of your Excellency, and we have to ask you to distribute to the representatives of the British, Foreign, and Intercolonial Commissions a list of the awards gained by the country which each represents.

To conclude, we venture to hope that the entire conduct of the Melbourne International Exhibition from its inception will have commended itself to the approval of your Excellency, and that, with the blessing of Divine Providence, permanent benefits to the people of this country, and to the nations which have accepted their invitation to take part in the present gathering, will result from the Melbourne International Exhibition of 1880-1881.

His Excellency then read the following reply :—

Mr. President and Gentlemen—I thank you in Her Majesty's name for the assurance which you give me of your loyalty and attachment to the crown and person of Her Majesty.

I congratulate you, gentlemen, most sincerely upon the marked success which has attended the arduous labours which you undertook in inaugurating and carrying out to a brilliant conclusion this grand undertaking.

When the proposal was first made to hold an International Exhibition in Melbourne, it might well have been doubted whether it were not presumptuous in a country so young to adopt so grand an idea ; the result has, however, undoubtedly proved that such fears were ground-

* These numbers were subsequently increased, as supplementary reports were received.

less, and the Exhibition of 1880 may now justly claim to rank among the great International Exhibitions which, following the example set by the far-seeing wisdom of His Royal Highness the Prince Consort in 1851, have been held in so many of the older countries of Europe and in America.

Its success has certainly far exceeded my most sanguine expectation; the display of manufactures and products in the Victorian Court is such as the colony may well be proud of, and I believe such is the feeling of most of those who have visited this building; and the Exhibition of Melbourne will long remain an example of what may be accomplished by a young, an energetic, and an ambitious country.

In congratulating you on the success of the Exhibition, I must not, however, forget that that success is mainly due to the splendour of the exhibits which have been so handsomely and generously contributed both by foreign nations, the mother country, and by the sister colonies; and I now beg, in the name of Her Majesty, and in the name of the Government and people of this colony, to tender my sincere thanks to all those who have accepted our invitation, and, by the excellence and number of their exhibits, have so nobly seconded our endeavours; and I must also thank those gentlemen who have devoted so much time and attention to the arduous and important office of jurors.

It has afforded me the greatest satisfaction to be present here to-day to distribute their awards; and I trust that the result of the Melbourne Exhibition may prove to be an increase of friendship and good feeling between this colony and the rest of the world, and the promotion of its commerce and enterprise.

The formal presentation of the awards was next made, the representative of each country or colony receiving from His Excellency a document containing a statement of the number of awards in each class made to exhibitors in his court. The representative of each country was introduced in accordance with its alphabetical position, and, as he advanced to His Excellency, a national air or appropriate selection was played on the grand organ by Mr. David Lee. The following is the list of the Commissioners, with the order in which they approached the Governor, and the airs played:—

Austria—Mr. Victor Schönberger, K.C.F.J.	..	“Emperor’s Hymn”
Belgium—Mr. Prosper Lamal	..	“La Brabançonne”
British India—Mr. James Inglis	..	“March of the Empress of India”
Ceylon—Mr. A. M. Fergusson	..	“March of the Brahmin Priests”
France—M. J. Belcour	..	“Marseillaise”
Fiji—Mr. W. K. Thomson, J.P.	..	“Cheer, Boys, Cheer”
Germany—Dr. Francis Reuleaux	..	“Die Wacht am Rhein”
Italy—Chev. A. de Goyzueta dei Marchesi di Toverena	..	“Italy’s Royal March”
Japan—Mr. T. Tokuda	..	“Feast of Lanterns”
Mauritius—Sir S. Wilson, M.L.C.	..	“Beautiful Isle of the Sea”
Netherlands—Chev. Ploos van Amstel	..	“Chant National Hollandais”
New Caledonia—Mr. W. J. Daly	..	French Marching Song—“Chant de Depart”
New South Wales—Dr. A. Renwick, M.L.A.	..	“Happy Land”
New Zealand—Mr. J. H. Blackwood	..	“Isle of Beauty”
Queensland—Mr. G. E. Layton	..	“God Bless the Prince of Wales”
South Australia—Mr. S. Davenport	..	“The Golden Farmer”
Switzerland—Mr. E. Eugster	..	“Ranz des Vaches”
Straits Settlements—Mr. S. Pryce	..	“A Life on the Ocean Wave”
Tasmania—Mr. C. M. Officer, M.L.A.	..	“The Tight Little Island”
United Kingdom—Colonel Sir Herbert B. Sandford, R.A.	..	“British Grenadiers”
United States—Mr. O. M. Spencer	..	“Star-spangled Banner”
Victoria, and Courts of other Countries not officially represented—The Hon. W. J. Clarke, M.L.C.	..	“Home, Sweet Home”
Western Australia—Mr. H. U. Alcock	..	“The Land of the West”

The Marquis of Normanby with his party then retired from the building.

In accordance with an universally expressed desire, the Exhibition was kept open until the 30th April—one month longer than was originally intended. The experiment was entirely successful. Very few of the exhibitors made any preparations to pack up until the last day, although they had the legal right to do so, and the attendance kept up very well until the end.

There was no ceremony of any kind on the closing day, the 30th April, and on the following day the removal of exhibits commenced; but concerts were given on 21st and 24th May, and a ball, at which the Governor, Earl Clanwilliam, Prince Louis of Battenberg, and the officers of the Detached Squadron, were present, was given on 1st June. Great energy was displayed by the foreign Commissioners and exhibitors in dismantling their courts, and their exertions were ably seconded by the officers and staff of the Victorian Commissioners. The system which had ruled at previous International Exhibitions, of allowing the public to enter the building during the removal of the exhibits upon orders signed by the Commissioners and officials, was not followed; but the same regulations for admission prevailed after the close of the Exhibition as during its currency—that is to say, no person, except exhibitors and their workmen, or those who had business in the buildings, were admitted without payment. The result of this charge for admission was to largely restrict the influx of visitors, and enable the exhibitors to get through their work with greater rapidity than would otherwise have been the case. The establishment under the charge of the Commissioners of a storage ground for empty cases worked extremely well. Exhibitors found no difficulty whatever in obtaining cases when they were required, and the Commissioners held themselves responsible for returning all the cases they received. Very few exhibits remained in the building after 1st July, and these were removed into the western machinery annexe about the middle of July. The temporary buildings were formally handed over to the Railway Department, by which they had been purchased, in the latter end of the same month.

The Emperor of Germany had at the commencement of the Exhibition offered a service of plate to the most meritorious exhibitor from any Australian colony. The regulations provided that each jury should be entitled to name a competitor, but that the final decision should be vested in Professor Reuleaux, the Executive Commissioner for Germany. The following exhibitors and firms were selected by the jurors:—

- The Albion Woollen Mill Co., Geelong, woollen goods.
- Mr. J. Buncle, Melbourne, agricultural implements.
- Mr. J. Bosisto, Melbourne, eucalyptus preparations.
- Messrs. Cuning, Smith and Co., Melbourne, chemicals.
- Messrs. Cameron Brothers, Melbourne, manufactured tobacco.
- Mr. H. Lennon, Melbourne, agricultural implements.
- The Mossiel Woollen Factory Company Limited, Dunedin, woollen goods.
- Messrs. J. Miller and Co., Melbourne, rope.
- Messrs. W. H. Roake and Co., Melbourne, furniture.
- Messrs. Sands and McDougall, Melbourne, stationery.
- Messrs. Shelmerdine and Co., Melbourne, felt hats.
- Messrs. Stevenson and Elliot, Melbourne, carriages.
- Messrs. Swallow and Ariell, Melbourne, biscuits, &c.
- Messrs. Castella and Rowan, St. Hubert's, Lilydale, wine.
- Mr. H. Steiner, Adelaide, jewellery and plate.
- Victorian Railway Department, Melbourne, locomotive and railway carriages.
- The Hon. John Woods, Melbourne, automatic continuous brake.
- Sir Samuel Wilson, Melbourne, wool.
- Messrs. Wright and Edwards, Melbourne, steam engine.

Professor Reuleaux decided upon awarding the prize to Messrs. Castella and Rowan, of St. Hubert's, for the Victorian wine exhibited by them. Some discussion arose as to the recognition which the unsuccessful competitors should receive at the hands of the Commissioners, and eventually it was decided that each should be awarded an emblazoned certificate and a gold medal, but not the gold medal of the Exhibition.

Very satisfactory progress was made with striking the medals ; and, through the energy of Mr. Delves-Broughton, the Deputy-Master of Her Majesty's Mint, the delivery commenced to take place early in June, 1881, and was all completed by the end of September, with the exception of those for Victoria, which were ready for distribution on 4th October. The medals were of gold, silver, and copper. Upon the obverse was the head of Her Majesty the Queen, draped, and the legend, "Melbourne International Exhibition, MDCCCLXXX;" and on the reverse, the motto, "Vitam excolere per artes," surrounded by a wreath of oak leaves. Each medal had engraved upon its rim the name of the recipient and the reason for its being awarded. The special medals for Her Majesty the Queen and for His Royal Highness the Prince of Wales were on 10th May entrusted to Sir Herbert Sandford, the representative at Melbourne of the British Royal Commission, and presented by him to the Prince of Wales, who personally handed to the Queen the medal intended for Her Majesty.

Some delay took place in the preparation of the certificate, the design originally adopted not meeting with the approbation of the Commissioners. Eventually competitive designs were invited, and that of M. Rampant, a French artist, temporarily resident in Melbourne, was accepted. The engraving, which was by the process of lithography, was entrusted to Messrs. Hamel and Ferguson, and the Commissioners are, on the whole, well pleased both with the certificate and medals. *Fac-similes* of both will be found in another portion of this volume. The delivery of the certificates did not commence till 1st November, 1881, and did not terminate until the end of the year.

After the close of the Exhibition, the members of the staff were entertained by the President at dinner at Menzies' Hotel ; the Secretary was entertained at dinner by a large number of the Victorian and foreign Commissioners at Gunsler's Café ; and on 30th August, a few days prior to his departure from Victoria on a visit to Europe, the President was entertained at dinner in the Exhibition Buildings by the Commissioners. Upon that occasion the chair was taken by the Premier, Sir Bryan O'Loughlen, M.P., one of the Vice-Presidents, and the health of the guest of the evening was proposed in a highly eulogistic speech by the Hon. Graham Berry, M.P.

In the final report to the Chief Secretary, dated 30th September, the Commissioners returned thanks for the assistance which they received on every side ; to the British, foreign, and colonial Governments which took part in the Exhibition ; to the exhibitors—British, foreign, and colonial ; to the jurors, who laboured with great industry, patience, zeal, and intelligence ; and to their officers and staff, and especially to the Secretary (Mr. G. C. Levey), the Superintendent of Juries and Awards (Mr. Cosmo Newbery), the Assistant-Secretary (Mr. T. B. Hill), and the Accountant (Mr. Wm. Morgan), and the Secretary of Committees (Mr. James Thomson).

Upon the same occasion Mr. Wilks moved, Mr. Vale seconded, "That this Commission record its appreciation of the valuable services rendered by the President of the Exhibition, and the hospitality shown by him to the local and foreign Commissioners."—Carried unanimously.

Mr. Vale moved, Mr. Lennon seconded, "That this Commission desires to express its sense of the continued and unexampled services rendered to the Exhibition by Messrs. J. J. Casey and J. Munro (Vice-Presidents)."—Carried unanimously.

For some time prior to the 30th September negotiations had been taking place between the Commissioners and the Government as to the proper steps for winding up the business connected with the Exhibition, delivering the medals and certificates, compiling, publishing, and distributing the "Official Record." It was the desire of the Government that this work should be undertaken by the Executive Committee, but

it was pointed out that if the Commission was *functus officio* on 30th September, the Executive Committee would be in the same position. The Commission lasted until 31st March, 1882, but the fifth clause of the Exhibition Act prohibited the Commissioners from doing any business after 30th September, 1881. The new trustees of the Exhibition buildings gave the Commissioners permission to retain their offices, and eventually the Government amended the Exhibition Act in such a manner as to enable the Commissioners to carry out the powers delegated to them by their Commission until 31st March, 1881.

Subjoined will be found the balance-sheet up to 30th September, duly certified to by the Auditors and the Commissioners, and a statement of assets and probable liabilities up to that date, signed by the Secretary and Treasurer, together with the report of the Comptroller of Admissions, and a statement of the attendances at the various meetings of the Commissioners, both general and committee.

SEVRES VASE,

PRESENTED TO THE VICTORIAN GOVERNMENT BY THE FRENCH REPUBLIC.

GEORGE COLLINS LEVEY, Secretary.

26th November, 1881.

REPORT OF THE COMPTROLLER ON THE WORKING AND SYSTEM ADOPTED IN THE ADMISSION DEPARTMENT.

The system for keeping correct statistical and other records was the same as that adopted at the Sydney and other Exhibitions, and has answered well throughout.

The machines used for registering the number of persons daily visiting the Exhibition were some of those used at the Paris Exposition of 1878, and have served their purpose tolerably well.

Tickets were sold in wholesale quantities of not less than one hundred, subject to a discount of $2\frac{1}{2}$ per cent. for retail vendors, at the Treasury, and the issue of free pass tickets constituted a second branch of the department.

On 1st October, 1880, there were sixty-six *employés* attached to the main admission office, consisting of two clerks, two ticket-tellers, four overseers, thirteen ticket-takers, thirteen ticket-erasers, thirty-one gatekeepers, and one janitor. This large staff was subsequently reduced to twenty-three. There has not been any extraordinary number of visitors gathered together on any one day, but the average daily attendances compare very favourably with those at the Sydney Exhibition, the daily paid admissions at Melbourne showing an average of 5214 for 182 days as against 4184 for 185 there.

The attendance of public school children admitted free on ten consecutive Fridays, from 21st January to 25th March, was 8388; the corresponding attendance in Sydney, of school children for eleven days in succession, from 6th April to 17th, 1880, being 15,503.

The largest total attendance on any one day was on 22nd March (official declaration of awards ceremonial) when 25,189 persons entered the grounds; the smallest, 9th March, with 3486. The largest number of paid admissions by daily ticket was on 18th April, Easter Monday, when 18,553 adults and 2969 children paid for admission; the smallest, 22nd October, when 1923 adults and 169 children paid for entrance. The total daily average of attendance, including all free passes and season tickets, has been 7195 during the 182 days that the Exhibition has been open, and the annexed tables are complete summaries of the attendances during the seven months of its continuance and for one month after its official close.

R. ESPINASSE, Comptroller of Admission.

ATTENDANCE OF COMMISSIONERS—GENERAL AND COMMITTEE—Continued.

[illegible]

DESCRIPTION OF THE EXHIBITION BUILDINGS AND THEIR CONTENTS.*

IN describing the buildings erected for the purposes of the Melbourne International Exhibition, 1881, it will be necessary to regard them in detail, since they were determined upon at different periods, and their erection was let in separate contracts. The permanent building is in the space between Gertrude-street, Fitzroy, and Queensberry-street, Carlton, the southern or principal frontage being parallel with Victoria-parade, and forming a continuation westward of the building frontage of the northern side of Gertrude-street. The length of this main front is 500 feet. The style adopted by the architects, Messrs. Reel and Barnes, is that known as the Italian renaissance, somewhat divested of ornament, from motives of economy. In the centre of this front is the entrance of honour, which is through a lofty archway between two towers. The three doorways are of great magnitude, and over them is a semi-circular fanlight 40 feet in diameter. The flanking towers have pavilion tops, surmounted with flagstaffs, and these structures rise to an elevation of 100 feet from the ground. The façade extends on either side of the centre towers, and is terminated by pavilion towers 80 feet high and 30 feet square. The walls between the towers rise to the height of 52 feet from ground to parapet. The walls are panelled, and there are three windows in each panel; over the windows are semi-circular arches in cement, and above them an equal height of wall, relieved by arches and tablets, surmounted again by a series of clerestory windows required to light the galleries in the interior. The panels in the wall are contained between boldly projecting Gothic buttresses, and as all the weight of the roof rests upon these massive supports, the brickwork in the walls of the panels is lessened in thickness and the cost thereby reduced. The east and west frontages of the main building harmonise with the south front, having a tower at each extremity with a central doorway, surmounted by a semi-circular fanlight in a deeply recessed arch. These three entrances are each approached by a flight of steps, the flooring of the whole of the main building and annexes being on a uniform level at a slight elevation above the surface of the ground. The internal dimensions of the main building are—length of nave from east to west, 500 feet; width, 160 feet; height, 72 feet. Length of transept from main south doorway to the entrance to the principal avenue of the main annexe, 200 feet, and the width and height are the same as those of the main building. At the intersection of the nave and transept the walls at the four corners form massive piers from which spring bold lofty semi-circular arches, upon which the walls of a noble square tower are built. At the height of 100 feet there has been a platform constructed to which easy access has been provided for visitors, by a well staircase winding round the interior of one of the towers flanking the main front entrance. From the platform there is a magnificent view of Melbourne and the surrounding suburban municipalities, with the harbour, Port Phillip, and an immense area of the country beyond in all directions. From the platform the walls are continued upwards, but the form of the building is changed to an octagon, 60 feet in diameter. These again are covered by a dome, the ribs of which are of iron, and the exterior

* It will be advisable in going over this description to consult the plan which will be found facing page lxxviii, and the view of the exterior of the building facing page xxxiii.

covered with slate. At the summit of the cupola is an eight-windowed pavilion, the apex of which is richly gilded, and is 220 feet from the ground. A flagstaff surmounts the whole, and a British flag of large dimensions was displayed therefrom upon all days upon which the Exhibition was opened. The interior of the main structure is surrounded on all sides by continuous galleries, access to which is gained in eight points by strongly built staircases. The galleries are 25 feet above the ground floor, are of a uniform width of 30 feet, and have a handsome and substantial balustrade. They are lighted from the clerestory or upper tier of windows which pierce the main walls, while the spaces on the ground floor beneath them receive light from the larger windows in the lower tier.

At the distance of about 200 feet from the eastern doorway occur two of the four piers supporting the dome, and their angular projections slightly encroach beyond the line of the galleries. The following description of the dome is abridged from the *Argus*:—"The arches, reaching from pier to pier, produce a fine architectural effect, and have afforded the decorator scope for introducing some striking devices. A ring of brickwork, faced with cement, has provided space for a scriptural text—'How manifold are Thy works, O Lord!' &c. The internal diameter of the trunk and cupola is 60 feet. Both are octagonal in form, and the apex of the cupola is about 165 feet above the floor. Its inner surface has been coloured and decorated in imitation of the sky. As regards the decorations generally, the system of colouring followed is quiet, and well adapted as a neutral back-ground for setting off brilliant objects which were to be found in the courts. It is only under and about the dome that any attempt at richness of treatment has been made. The arts and sciences are symbolised by single figures, but groups occur over each of the four arches. The group over the northern arch—the one facing the main entrance—represents Peace in a white robe introducing Science and Art to Victoria, who stands with outstretched arms and laurel wreath to receive and reward the prized immigrants. Agriculture and Commerce are shown as already installed. Over the opposite or south arch the nations are responding to the invitation of Victoria. On the extreme left is seated "the noble red man," not in his war-paint, but with the pipe of peace in his hand. Then we have a Greek with manuscripts, books, and broken statuary, denoting that his native land was once the cradle of the arts, but that they have since fallen to decay there. Next in order is a Chinese, with pigtail and fan. He is seated on a tea-chest. Then there is an Italian, with musical lyre and painter's palette, conveying the idea that Italy excels in the graceful art. On the other hand may be seen the Teuton, in sober-tinted drapery, with wallet in hand. Behind him is seen an Hindoo carving ivory, and kneeling on a rich Oriental rug. A son of the desert in Arab costume, and the emancipated slave, with his broken chains, complete the group. Over the eastern archway is depicted Science instructing the Arts. Railroad-making and naval engineering are typified; while the torchlight of ancient days is extinguished, and gaslight is shown to have taken its place. The old-fashioned system of signalling with beacon-lights is superseded by the electric telegraph. Æsculapius is receiving electric and other improved instruments of his craft; and Caxton, the inventor of printing, is giving up his pen and antiquated hand-printing press, as being too slow for the times. The spinning-wheel may also be seen, but well in the background, while a sewing-machine holds a more prominent position in the foreground. The group over the western arch pictures Peace and Plenty rewarding Labour, Happy Youth, and Contented Old Age. The eight single figures in the panels at the level of the galleries are intended for the practical and fine arts, comprising Manufactures, Commerce, Agriculture, Science, and Painting; Music, Sculpture, and Architecture. The arms of the different nations which were officially represented at the Exhibition are to be seen over the arches, and amongst them a copy of those singular devices which were long ago adopted by the corporation of the city of Melbourne. A difficulty was felt in suitably honouring France,

the republic not having any recognised arms at the present time. Each shield has an encircling wreath of oak leaves. The decorations were executed according to the designs, and under the superintendence, of Mr. Mather."

At the western extremity of the nave a large and powerful organ was built by Mr. Fincham, of Richmond, at a cost of £5560 9s., and sloping down from it to the ground-floor there is a gallery containing seats for from 700 to 800 adult choristers, but upon which 1000 State-school children have frequently been seated. Viewed from the nave the organ presents a most imposing appearance, and the decoration of the front is extremely rich and graceful. The organ fills up a frontage of 63 feet by a height of 45 feet from the floor on which it stands. In the basement of the Exhibition building is fixed the gas engine which works the feeders or bellows, from a minimum of four-inch pressure to a maximum of ten inches. These feeders supply great reservoirs, from which great wind-trunks convey the necessary supplies to other reservoirs within the body of the instrument, and from these different channels the sound-boards are fed with air of the required pressure and equable current, free from pulsation or other fluctuation. The organ has 78 stops, 4726 pipes, and 651 square feet of reservoirs, while that in the Melbourne Town Hall has 79 stops, 4289 pipes, and 257 square feet of reservoirs. The largest organ in the world—that at the Albert Hall, London—has 11,000 pipes, controlled by 125 stops; but with this single exception the Exhibition organ ranks with the largest in the world, that at Haarlem having only 4038 pipes and 68 stops, and that at St. Paul's, London, 4004 pipes and 60 stops; while, on the other hand, the organs at St. George's Hall, Liverpool, and the Town Hall, Leeds, and those at Sheffield, Notre Dame de Paris, St. Sulpice, the Ulm Cathedral, are all rather larger than the Melbourne Exhibition organ.

The following condensed technical description of the principal parts of the instrument appeared in the *Argus*:—The player sits at the keyboard and faces the organ, at a distance of about 14 feet from the front of the case. He has under his control four manuals, namely, great organ, swell organ, choir organ, and grand organ, each compass CC to C, 61 notes. The pedal organ has a compass C to F, 30 notes. The key action to the great, swell, grand, solo, and choir organs are supplied with pneumatic levers; also the action to the pedal organ. On either side of the player are placed the draw-stops in circular steps, each rising step receding four inches. This arrangement gives an elegant appearance to the keyboard, and is found to be very handy to the performer. The ivory keys of the manual are nearly double the usual thickness, and each manual is partially overlapped by the one above it, so that all four rows are close to the player's fingers. The draw-stop action is so constructed that each stop can be pulled easily, brass squares with iron centres being used where necessary. The sound-boards are specially constructed so that each stop may have ample speaking room. The swell-box is double lined, the space between inner and outer lining being filled in with sawdust. The louvre shutters are constructed upon the same principle, and each shutter is not less than ten inches wide. The solo box with Venetian front contains the following stops:—Vox angelica, clear flute, bassoon, clarinet, orchestral oboe, vox humana, oboe clarion. The metal pipes are of the best spotted metal, of full scale, voiced to full wind pressure. Pitch, Philharmonic. The wood pipes are made of Swiss pine, St. John's pine, and Baltic, voiced as above."

The foundations of the main structure are of a most substantial character and laid deeply in the ground. Under a great portion of the interior the earth has been excavated, and thus cellars have been formed, ten feet high. The floor throughout them is laid with tar paving, and in the height of summer the temperature is very cool. The cellars were utilised throughout the period of the Exhibition for the storage of samples of wines sent in for competition, and a number of bars were fitted up at which the wines, &c., of the competing countries

were to be obtained. An exhibition of dairy and other farm produce was also held there. Connected with the main building, and entered therefrom at the north-eastern and north-western corners of the nave, are two permanent machinery annexes. These, like the main structure, are most substantially built of brick, upon massive foundations of bluestone, and the walls are all stuccoed on the exterior. The permanent annexes are each 460 feet long, 75 feet wide, and 35 feet high. Of these areas about one-fourth were allotted for first and second class dining-rooms with the requisite kitchens, and also other requisite offices. Between the two permanent annexes, and extending northwards from the northern extremity of the transept, a temporary annexe was erected. The dimensions were—Length from north to south, 820 feet; and width, 490 feet. The floor space of this immense area was divided into a centre avenue 40 feet wide, with a height of 58 feet; side aisles 30 feet wide, 32 feet high; courts 175 feet long, 45 feet wide, and 36 feet high; passages between courts, 15 feet wide, 19 feet high. The urgent demands for space necessitated the erection of additional temporary buildings, those on the north-east being appropriated for British and Victorian machinery, and that on the north-west to the extension of the German and Austrian main courts. All these temporary annexes were constructed of corrugated-iron and timber, and the materials were subsequently sold at fair prices to the Victorian Railway Department, to be utilised in building sheds, &c., at railway stations.

In the centre of the walls of the permanent annexes entrances for the exhibits were provided, abutting on Nicholson-street on the east and Rathdowne-street on the west. Between the street-gateways at these entrances a tramway was laid down across the main and temporary annexes, and crossed at four points by other rails at right angles, with a turn-table at each intersection. Over the gateway in each street a framework of massive timber was constructed, furnished with a travelling lift on the top, by means of which the most ponderous exhibits of machinery and large heavy cases were lifted from the lorries which had brought them from the ships. The exhibits were then easily placed upon the tramway trucks, and conveyed to any quarter of the annexes.

The interior of the Exhibition buildings, covering more than 17 acres, was allotted in blocks to the different countries forwarding exhibits, those requiring the largest areas having their space divided into subdivisions by passages. Entering the main building at the east end of the nave, which was throughout the Exhibition that most frequently employed, the visitor found spaces allotted as follows:—On the left hand, Italy, France, the United States, New South Wales, and India; on the right hand, Germany, Great Britain, Austria, and Victoria; in the northern transept leading towards the large temporary buildings, and on the west side, were Mauritius, China, Denmark, Sweden, Norway, South Africa, Spain, Portugal, Turkey, Palestine, and other smaller courts. The galleries in the main building were occupied by the fine art collections, displayed by Great Britain, Victoria, Germany, Belgium, the Netherlands, France, Italy, the United States, &c. There was also a small Victorian Ladies' Court, and another in which Germany exhibited ecclesiastical and educational appliances. Proceeding northward from the space under the dome along the transept the principal annexe was entered. Here on the main central avenue 40 feet wide, the frontages of the courts abutted; those on the left hand being Great Britain, France, Germany, Italy, and Austria; and on the right hand Victoria, New South Wales, Tasmania, Western Australia, South Australia, New Zealand, Queensland, Japan, Belgium, the Netherlands, Switzerland, and the United States, with Fiji, Ceylon, the Straits Settlements at the rear of the Belgium, Netherlands, and Swiss courts, but having a frontage to the wide passage leading to the machinery annexes. The fronts of all the courts abutting on the main avenue were highly decorated with numerous trophies, statuary, and national flags; and the view from south to north, which there terminated in a splendid display

of Australian and New Zealand ferns, was regarded as the most imposing in the Exhibition. The eastern machinery annexe with the temporary additions was allotted to Great Britain and Victoria, and the western machinery annexe was divided amongst New South Wales, South Australia, Belgium, Italy, the United States, France, the Netherlands, and Germany.

In the grounds at the north end of the reserve there were buildings erected by the Board of Education, one being a schoolhouse. The Singer Sewing Machine Co. exhibited their machines in the basement story of a Chinese pagoda, which was built up to a considerable height. At the north-western corner of the temporary annexes was an Austrian kiosk, in which the lager beer of Vienna was sold in large quantities. A number of large exhibits, such as windmills, crushing machines, building stone from Tasmania, timber from Western Australia, railway apparatus from Germany, conservatories, a building for the sale of tracts and religious publications, and an Indian temple, were displayed in the grounds. Pumping apparatus was shown in connection with the various lakes, upon one of which floated two Venetian gondolas; and the space between the main building and the British machinery annexe was devoted to agricultural implements, masonry, and specimens of building stone.

INTRODUCTION TO THE ART GALLERIES.

"THERE are only two fine arts possible to the human race," says a great critic—"sculpture and painting!" They speak a language that all can understand; they treat of nature that all see and know and love, and of the ideal that all can believe in, and towards which all true art is striving. Probably it was this feeling of the ideal which imparted to the antique that noble grandeur of outline and form, the confidence that there was a something beyond the marble which could better be suggested than expressed.

The art galleries of the Melbourne International Exhibition contained a praiseworthy assemblage of modern works of art. Some great names were unrepresented, but that is very probably due in part to the risk of trusting priceless pictures for transmission to so great a distance.

It is unfortunate that owing to her many troubles Spain did not send any paintings to the Melbourne Exhibition. Her high rank in art is fully recognised amongst the nations which have given to the world great schools of painting, and her absence from the Exhibition galleries is to be regretted. Nevertheless, it is gratifying that so large and valuable a collection from other European countries was gathered, and gratitude is due to those whose judgment and taste selected it, thus giving a fresh impetus to art in Australia, which will, no doubt, develop.

AUSTRO-HUNGARY.

WORKS OF ART.

There were some very beautiful paintings on china in the Austro-Hungarian court. Amongst others was an antique jewel-case three hundred years old, the setting of solid silver, and enamelled on copper. There were a pair of vases, beautifully ornamented with paintings of Bacchantes wreathing flowers round the god Pan. Then there was a delicate tea service, the whole set charmingly painted; and vases with nymphs and cupids. The Austrians had a large collection of oleographs, Czeiger's being the best in every way. The oleograph of Raphael's Madonna was also excellent. Kurzbauer, a well-known artist, who died last year, had a reproduction here of the painting of "The Runaway Pair, whom the Mother has Found." Dachstein, in the Alps, was also a charming scene. There were some photo-lithographic experiments, taken especially for the Melbourne Exhibition, of different English and foreign newspapers. Some wood carvings were very cleverly executed out of the solid block. One or two were copies of Deirégger's pictures. These wood carvings found so many admirers that duplicates were sold over and over again. The bronze bust of the Emperor of Austria, which occupied a conspicuous position, took the grand prix at the Paris Exhibition. The original cast was taken from life, the Emperor sitting for it sixteen hours. There was also an oil painting of Gabriel Max's celebrated picture of the impression of Christ's face on St. Veronica's handkerchief.

BELGIAN ART GALLERY.

INTRODUCTION.

The earliest seeds of art were implanted in the Netherlands towards the latter part of the seventh century by English and Irish missionaries. From a very early period intimate relations had been established between the rulers of Constantinople and Belgium, and many works of Byzantine painters and sculptors found their way thither. Bruges was the birthplace of the Flemish school, which was afterwards rendered still more famous by the works of Heemskirk, Van der Heyden, Memling, Van Mabuse, Rubens, Vandyck, Lugders, Jordaens, and David Teniers. The Dutch school was in reality an offshoot of the Flemish, and Lucas van Leyden, who lived between 1494 and 1533, is generally reputed to be its founder. It gave a brilliant succession of artists, including Anthony More, Rembrandt, Cuypp, Gerard Dow, Wouvermans, Berghem, Paul Potter, the Vandeveldes, Hobbema, Ruysdael, Jan Stein, Van der Heyden, Van Huysum, and others.

BELGIAN PICTURES.

"The Broken Chair," by J. de la Hoesse, of Brussels, introduces us to the interior of the workroom of a Belgian Madame Mantalini, in which upwards of a dozen young girls are at work. The manipulation of this painting is charming, and the patterns on the wall are beautifully treated. Bossuet sent the best landscape in the Belgian gallery. It was a "View of Grenade." The day is nearly done, the lower and larger half of the picture is already in shadow. The translucent sky is admirable, and the chiaroscuro perfect. Another painting by De Pratere deserves especial notice. It was called "Extra Post Horses in Snowy Weather," and gained a gold medal in Brussels. It was purchased for the city of Adelaide. "The Fisherman's Fiancée," by Eug. de Block, represented the tall figure of a girl, betrothed to one of those "toilers of the sea," seated by the shore, gazing wistfully seaward. "A Village Shop in Flanders," by T. Heyermans, was a homely subject happily treated. "After la Bosse," by T. Ceriez, represented a couple of art students of the time of Louis XV. drawing from a statue with their backs to the spectators. "The Studio," by Pierre Oyens, was a striking piece of impasto painting. A. Asselberg's "Winter's Day" was another instance of the fidelity to nature exhibited by Belgian artists. H. van Seben's "Winter" was a solidly-painted composition. F. Roffian's "Morning on the Lake of Brienz, Switzerland," was a lustrous landscape, suffused with silvery light. M. Portails, one of the foremost artists in Belgium, a member of the Antwerp Academy, director of the Academy of Ghent, and a professor in that of Brussels, had a painting in the gallery, amongst four from his brush, called "A Souvenir of Morocco." In colour it was almost monochromatic, with only two bright tones casually introduced. There was a good chalk drawing, "In a Forest," by Mlle. C. Michel. Of hand-painted plates and vases there were many specimens, the best of which were by Mlle. Gasparoli and Mme. Rochard. There were a few marble and terra-cotta groups. Amongst the latter, "Winter" and "Summer," and "Mutual Love," were worthy of notice.

FRENCH FINE ARTS GALLERY.

TAPESTRY.

In France the manufacture of tapestry has received an immense stimulus from the State. An extensive establishment has been in existence for centuries at Gobelins, near Paris, at which the finest tapestry produced in the world is made. The Gobelins manufactory is not a competitive one—that is, its products are not made for sale, but are usually given away by the State.

There were four tapestry panels, after F. Boucher, a celebrated French artist of the eighteenth century, from the establishment of Messrs. Braquenié and Co. They represented a "Music Lesson," "Surprised Lovers," "A Favourable Reception of a Bouquet," and "The Shepherd's Recompense."

In the centre of the picture gallery hung a magnificent specimen of Gobelins tapestry, entitled "The Earth." It was manufactured in 1877, according to the model of Charles Le Brun, by seventeen artists. It is worth £10,000, and is intended to be placed in the new Hotel de Ville, Paris. There were two specimens of "Beauvais" tapestry, a lighter kind than the Gobelins.

Messrs. Sanrel Bros., of Nismes, showed a very good sample of machine-made tapestry, worked with the Jacquard loom.

The vases in the centre of the gallery were from the National Manufactory at Sevres. There were specimens of the blue lapis, clodian, Etruscan, and other specialities.

THE FRENCH PICTURES.

Art cannot be said to have made a definite commencement in France until near the middle of the sixteenth century. Francis I. had splendid tastes, and attracted to Paris, amongst others, Andrea del Sarto, Primaticcio, and Cellini. Of these, Primaticcio deserves to be regarded as the founder of the French school. In the middle of the seventeenth century Nicholas Poussin arose, who restored the heroic style of landscape painting. Claude Lorraine (1600-1682) is the next great name we come to. He was the Turner of his epoch, and was unrivalled as a landscape painter. At the beginning of the last century the artist had become a mere creature of the court, and the painter who elevated his profession in the eyes of Europe was Antoine Watteau, who began life as a scene-painter. David and Vincent afterwards became celebrated as the revivalists of good painting in France. From the school of David, who died in 1825, issued a succession of brilliant artists—Girodet, painter of the "Universal Flood" and of "Pygmalion and Galatea," concerning which last a French lady was overheard to say, "On n'a rien vu d'aussi beau depuis le Déluge," Gérard, and Guérin, the master of Gérécault, whose "Radeau de la Meduse," now one of the most precious works in the Louvre,

could not find a purchaser in France, and was taken to England, where the artist cleared £700 by exhibiting it. To our own times belong some splendid artists, beginning with Delaroche, and ending with Meissonnier and Gérôme.

E. Dubufe, celebrated as a portrait painter, contributed two pictures. One of these, "The Widow's Mite," is well-known all over Europe through Gustav Schauer's splendid photograph. The picture is full of character, and very effective in its arrangement of light and shade. One of the first names in rank was represented by a small cabinet picture, "The Siesta" (E. P. Dorne-Colleou), in the style of Meissonnier. T. Lobrichon had two beautiful paintings, "A Covey" and "The Child's Dream." The first of these was a life-sized picture containing the portraits of a mother and her three children, the youngest of them nude. Finely modelled and picturesquely grouped, the composition was a very charming one. The second picture represented a beautiful child, perfectly nude, with his golden hair falling in opulent profusion over a crimson velvet cushion, resting on a large silver salver. "The Last Stage of Coco," by P. M. Boyle, was full of homely pathos. The horse of an itinerant showman has fallen dead in the midst of a bleak moor, covered with snow, at some little distance from the town to which the caravan was proceeding. "On the Way to the Shambles," by E. Bayard, was a good picture, though a souvenir of that terrible episode in French history, the siege of Paris. The "Chloe," of the Chevalier J. J. Lefebvre, a pupil of Cogniet, was exhibited at the Salon in 1875, and is a fine study of the nude. "Jeannot in Search of the Kitchen," by J. M. Baader, was thoroughly French in treatment. "The Players with Bones," by J. F. F. Lematte, was a picture that obtained the Prix de Rome in 1870, which carries with it a pension for a term of years, to be spent in study at Rome. A. Defaux's "Feeding the Fowls" was a lovely little bit of colouring. His "Effect of Snow" was the finest in this gallery. You felt that you could brush off the snow from the branches of the trees upon which it lay with feathery lightness.

M. Pierre Charles Comte has been pronounced by so competent a critic as Mr. Hamerton to be "the most perfect painter of historical incident in France," and his "Dante" is worthy of his high reputation. This picture was first exhibited at the Salon in 1878. Mr. Charles Landelle's "Fellah" was a choice and highly finished work, which has been so often reproduced by photography as to have become very familiar. It was one of the gems of the gallery.

There were a few sculptures in the French gallery. "The Flute Player," by D. Ringel, was a typical example of the grace and spirit in which French artists excel, particularly in their bronze works. M. Martin had a work, "A Black Man Strangled by a Dog;" a very painful subject, realistically treated. "A Young Girl at the Bath," by Madame Leon Bertaux, was a life-size study, by a lady sculptor, of a girl startled by the drone of a mosquito, which has settled on her shoulder.

"Let him that is without sin cast the first stone," was the inscription at the base of J. Campos's bronze figure, a characteristic example of French workmanship. There were some very good French engravings—"A Spanish Wedding," after Forteney, being very beautiful; a splendid head of "Alfred Tennyson," by Herkommer; Girardet's "The Last Victim of the Terror" was a fearful scene, very artistically executed.

There was a beautifully-toned water-colour in the French gallery by S. Baron, called "A Presentation."

GERMAN FINE ARTS GALLERY.

Charlemagne brought some of the last remains of classic art from Italy, and established in connection with his court a school of miniature painters and illuminators. During the short reign of Otho II., who married a Greek princess, German art was largely influenced by Byzantine models and methods, and towards the end of the tenth century it is related of St. Bernard, Bishop of Hildesheim, that he never travelled without a retinue of artists, who copied every fine work they met with. Brilliance of colour seems to have been the characteristic of this period; but in the first half of the following century more regard began to be paid to accuracy of drawing and form. It was not, however, until the last years of the twelfth, and the earlier ones of the thirteenth century, that German artists began to imitate natural objects. A peculiar school of painting sprang up in Bohemia between 1340 and 1378, of which Nicholas Wurnser, of Strasburg, and Kunz and Theodor, of Prague, were the leading representatives, and soon after the school of Cologne, with Meister Wilhelm as its pioneer, showed a feeling for nature as remarkable for its purity as for its completeness. German art began to make rapid progress in the fifteenth century, towards the end of which the artists of Nuremberg attained their highest excellence; and at the beginning of the sixteenth century German art burst into full bloom. To this period belong Albert Dürer and Lucas Cranach. Almost at the same time a school of painting was formed at Ulm, by Zeitbloom, Shaffner, and Hans Holheim. During the latter part of the sixteenth century art underwent a temporary eclipse, until a revival took place in the seventeenth century. The modern school of Germany is the youngest in Europe. At the beginning of the present century German art had sunk to its lowest ebb, until a supreme

effort was made by a few noble souls to rescue it from destruction. Winckelmann's "History of Art" and Lessing's "Laokoon"—the latter inspired by Hogarth's "Analysis of Beauty"—paved the way for this great event; to which also the writings of Goethe, Schiller, and Richter contributed. Overbeck was the leader of a little band of students, who devoted themselves to the regeneration of German art. From this brotherhood, which successively furnished directors and chiefs for the four great academies of Berlin, Munich, Düsseldorf, and Dresden, radiated the main influences which have determined the character and direction of modern German art as we see it to-day.

GERMAN PICTURES.

"Morning Landscape in Thuringia," by J. N. T. van Starckenborgh, was a beautiful painting. The morning mist rests in the distance, and the gradations of the atmosphere are beautifully rendered. Attention must be drawn to the portrait of a "Black Forest Mayor," by Carl Lasch, of Munich. It was one of the best pieces of flesh painting in the Exhibition. A delightful little cabinet picture by L. Blanc was called "Rest after the Bath." A young girl was reclining on a couch, with one arm thrown over her head, and some drapery covering her lightly. All the details had such a rich, soft finish and grace that the eye rested on it with pleasure. "Cloister Pond," by E. Hellrath, represented the lilted pool of a convent garden at the approach of twilight. A large pool, with a dark background of trees, occupied the greater portion of the picture, and two nuns were paddling in a punt among the water-lilies floating on the surface of the pond. Karl Ludwig, of Stuttgart, exhibited "Mid-day Rest of a Herd of Cows in the Forest." It was a work of force and feeling, and it gave the idea of its having been commenced and completed out of doors. "Venice—Moonlight," by L. Douzette, showed the moon at her full just breaking through a cloudy sky, defining a pathway of shimmering silver upon one portion of the watery expanse, the other being deep in shadow. The water was admirable in its liquid transparency and keeping, and the whole treatment of the well-balanced composition displayed the hand of an accomplished painter. "Help is Near," by H. Arnold, represented the wreck of a house near the sea. The ruin on this occasion had evidently been complete. The colour was good, and the distance effectively treated. "The Mother's Return Home," by W. Roegge, was a simple subject. In an antique cradle a rosy-cheeked child wakes up from sleep to find his young mother, who has just returned from a marketing excursion in the town, bending in love over her darling. The work was beautiful in colour. It was one of the pictures purchased for the city of Adelaide. "Freshwater Bay, Isle of Wight," by H. Eschke, depicted one of the last glimpses outward-bound voyagers often get of old England. There was a beautiful effect of light across the picture. "Motive from Sogne Fjord," by A. Normann, was a good picture of a lonely Norwegian Fjord, bright with feeble sunshine of a winter's day. "Venus and Adonis," by Lindenschmidt, was a very large canvas. The subject was an ambitious one, but handled in a scholarly manner. "The Bartholomew Lake, in the Bavarian Mountains," by August Becker, was a splendid scene, ably treated. It gave the effect of vastness of object and amplitude of space. "The Lake of Lucerne," by Horst Hacker, was worthily treated. The foreground was a ledge of verdure, with a chalet rising out of a patch of pasture-land, sheltered by a grove of trees, and beyond the waters of the famous Vierwald-städtersee.

SCULPTURE.

In the middle of the gallery was an exact copy of the only statue by Praxiteles which has ever been discovered, the original having been exhumed at Olympia by the scientific expedition organised at the cost of the German Government. Downstairs were some casts of antiques, all of which have been presented to the different colonies. In the German chapel annexed to the picture-gallery was a number of ecclesiastical images, most of them painted.

PAINTINGS ON PORCELAIN, GLASS, ETC.

In the centre of the gallery stood a pair of magnificent vases from the Royal Porcelain Manufactory at Berlin. They were made after designs by the late Professor Schinko, the celebrated architect of the Berlin Museum. The paintings on the vases were after the designs of Professors Schrotter and Bendemann. There was also a pair of very beautiful vases from the Royal Porcelain Manufactory of Meissen, near Dresden. They were of excellent form, large, with handles, and painted figures in sepia. These were works of art of the highest kind, and they might take those by surprise whose only notions of Dresden china have been formed from the trifles of the "old style," to which, at one time, the historic factory at Meissen confined its productions. Meissen will always be very interesting in the history of ceramic art as the place in Europe where the porcelain was first manufactured, and from the romantic career of its first discoverer, Böttger. At the end of the last century the manufactory had been such a burden to the Government that Wedgwood offered to take over the management entirely in his own hands. That offer was declined, and a complete revival has now taken place.

EXHIBITION.

ENGRAVINGS, CHROMOS, ETC.

William Hogarth's works were exhibited, illustrated by 118 photo-lithographs, with explanations. There was a very good engraving, called "The Sewing School," in the chapel. The carved cork exhibits are very well done. There were chromos in the German Court well worthy of mention as being the best in the Exhibition. Three paintings of the Emperor of Germany, the Crown Prince, and Bismarck, were hung with the chromo reproductions, but under them, so as to show the exact similarity.

EDUCATION AND INSTRUCTION.

First of all was a collection of Hennes's "Drawing Instructors;" next a stand of every conceivable kind of geometrical models, constructed by Dr. Langhans, of the Royal Realschule. Fifth; and then of globes and maps a great variety. There were microscope photographs and botanical ones, and designs and photographs of objects from different German schools of art. Froebel's kindergarten system was illustrated by models and examples. Prof. Edward Herdtré sent diagrams for elementary instruction in freehand drawing. The Royal School of Art at Munich sent photographs of models, &c. Dr. Blankenhorn, of Carlsruhe, exhibited samples of different grape pips in bottles, with oenological books and specimens. An herbarium for agriculture and forest management was sent from Darmstadt.

ITALIAN ART.

The history of art in mediæval and modern Europe is connected with that of art in the ancient world by the link of Byzantium. Although Byzantine art was low, and her painters were classed with carvers and gilders and house decorators, they, nevertheless, exercised a great influence on Italian art in the fifth century. Prior to that period rude paintings decorated the walls of the catacombs of Rome, and tradition records that Raphael derived thence the idea of his immortal Madonna.

But Venice and Ravenna, having drawn their artists and architects from Constantinople, became two of the most influential art capitals of Italy from the fifth to the thirteenth century; and the conquest of Byzantium by the Latins in 1204 was followed by a migration of Eastern artists to Italy, and by the communication of a marked impulse to pictorial art in that country.

Towards the close of the same century, in the fields near Florence, the great artist, Cimabue, whose own picture of the Madonna—still extant in the church of St. Maria Novella, in Florence—was carried to it from the painter's studio in solemn procession, with trumpets before it—

"Found a shepherd boy
Tracing his idle fancies on the ground."

This was Giotto, who became the Luther of Italian art, rejecting old Byzantine superstitions and traditions, and founding a new school, with nature for his inspiration, truth as his guide, and a delicate sense of beauty, proportion, symmetry, and purity to chasten his imagination and direct his pencil. His influence was felt from the Alps to Naples. He accompanied Pope Clement V. to Avignon, and painted many pictures in France. He was the friend of Dante, who immortalised him in his *Divina Comedia*; and he was almost as illustrious an architect—witness that beautiful bell-tower adjoining the Duomo in Florence—and sculptor as he was a painter. Giotto marks the transition from the middle ages to the renaissance. As such he is entitled to be regarded as the father of modern art. From this time until the period of decadence all the great cities of Italy had their distinctive schools of painting. That of Sienna was headed by Simone Memmi, the friend of Petrarch and the contemporary of Giotto, and it was remarkable for its depth of feeling and its tendency to allegory. Fra Angelico belongs to this school, although he passed the greater part of his life near Florence. Among the schools of Central and Upper Italy those of Bologna and Venice were justly famous, while Padua and Verona, Lombardy, Parma, Umbria, and Rome had each their distinctive schools and artists. For about twenty-five years at the end of the fifteenth and the beginning of the sixteenth century there flourished in Italy a constellation of painters, sculptors, and architects. To this period belong Leonardo da Vinci, Michael Angelo, Raphael, Titian, Giorgione, Sebastian del Piombo, and Correggio. Since then Italy has produced no great painter. She has been living on the traditional glories and on the inherited masterpieces of the past.

ITALIAN PAINTINGS.

It is to be regretted that owing to a National Art Exhibition at Turin art was somewhat inadequately represented in the Exhibition. One of the most ambitious paintings in the Italian gallery was by Enrico Simenradzki, of Rome. It represented a pirate's cavern, and some of the detail and colouring were excellent, but the perspective was defective. In contrast

to this was a very small painting by A. Guerra. It was a well-toned, harmonious piece of colour, a characteristic bit of Italian life—a church door, three peasants, and a lady in a black mantilla standing on the steps. Professor Stefano Ussi, of Florence, had a small picture, "Tacruri Amusing Arab Merchants camped in High Egypt." There are Arab tents, and hot sands beyond. The merchants are seated on the ground, whilst the black prophet, in fantastic garb, is dancing and singing before them with his attendant. Professor Ussi had one of the noblest pictures produced by the modern school in the Universal Exhibition in London, 1862, "The Expulsion of the Duke of Athens." Its popularity was so great that the Government purchased it. There was a large work by Marinelli, of Naples, "An Episode of the Song of Solomon," in which the figures are drawn in impossible attitudes. "Alone in the Roman Campagna," by Aurelio Tiratelli. There is no more impressive scene on earth than the Roman Campagna under evening light, and this picture enabled us to realise it. The long knotted grass waves and tosses spectrally in the evening wind, and the huge fragments of the Claudian aqueduct melt away into shadowy darkness. The bull stands alone, the evening light tinging the ridge of his back, deep lights and shadows cast around. "Villa Clara, on Lago Maggiore" was interesting as depicting the residence of Her Majesty the Queen during her sojourn amidst the lovely lake scenery of Italy. Antonietta Brandeis had two pictures—"Palazzo Cavalli, Venice," lately the residence of the Comte de Chambord, in which the play of light and shade was admirably rendered; and "A Balcony in Venice," where two ladies are seen coquetting with some invisible cavalier below. A painting by Glisenti, of Florence, showed great skill and talent. It was named "Caught," for an old man has on his knee a mousetrap, and he is just in the act of removing the mouse. A cat sits on the *qui vive*, waiting for her prey. But the marvel of the painting is the alto-relievo appearance produced by the effective shadows. Every article seems to stand out from the canvas—the old boots and bottles on the floor; the old green shelf, rubbed at the edge; the boots and stone jugs upon it; the old clothes, bronze plates, trumpets, &c., hanging on nails round the wall—so real is the effect that beholders may think they can take the trumpet off its nail, and the jugs from the shelf; and the order posted beneath the picture, "Please don't touch," was a very necessary injunction.

Two winter scenes well repaid inspection—the one was by Prospero Roca, of Turin, and the other was by Girolamo Trenti. Cavaliere Gordigiani's portrait of the late King Victor Emmanuel is an excellent likeness of *il re Galantuomo*; rough, brusque in manners, and detesting the pomp of courts, he lives in the memory of his people as a fine example of an honest man. "An Old Caress," by G. Guzzardi, was a painting of great merit. An old peasant woman sits sewing at the door, a basket of work beside her, the cat sitting on the doorstep; an old man comes up with a long staff, and a *hotte* (basket) on his back, filled with wine bottles. He turns her face towards him with a light caress. They are ancient lovers, and look into each other's eyes with thoughts of "long ago." This picture has been purchased by the National Museum at Adelaide.

C. F. Biscarra's "First Symptoms of Jealousy" portrayed the handkerchief scene in "Othello." The noble Moor was painted as a full-blooded negro, and Desdemona as an insipid young lady.

Hermann Corrodi, of Rome, had two scenic landscapes, one of them representing the great temple at Paestum. It has been said to have just missed being a very fine picture, owing, it appears, to its having been sketched on the spot, and painted in the artist's studio. The other picture, "Nicosia, the Capital of Cyprus," was a finer composition in some respects, but marred by the same defect. "The Market of Treviso," by G. Ciardi, of Venice, was a pleasant transcript of a bright and animated phase of the out-of-door life of Northern Italy. "Ruins of the Aqueducts of Claudius," by Pietro Sassi, of Rome, was one of the finest studies of aerial perspective met with in the gallery. The artist fused all the elements of the picture into one harmonious whole. In the Italian court below was a mirror, upon the face of which was cleverly painted a charming piece of still life, by A. Martinetti, of Rome. Amongst the very few water-colour drawings the palm must be given to P. de Tommasi's "Public Letter Writer." Two figure drawings by Cipriani were also very good.

In this court there were a choice collection of photographs, and a few lithographs and engravings.

SCULPTURE.

In turning to the examples of sculpture exhibited in the Italian Court, the present condition of the sculptor's art, and the surrounding circumstances under which it is prosecuted, must be kept in view. Too often—particularly in the art of modern Italy—the whole of the charm is in the representation rather than the thing represented. In modern sculpture the tendency to realism has been carried too far. Everywhere the aim has been realism, but not the realism of the grave and severe art of the past. When, some years ago, Italian sculptors were weak enough to accept the applause of the unthinking for their statues of veiled figures and marvellous rendering of textures, it was easy to see how rapid would be the descent from the standards of true art; but the lowest depth has now, it is hoped, been reached. First

of all, there was a bronze statue, cast and exhibited by A. Toignozzi, of Morem, of Duprè's celebrated "Cain." This is a *chef-d'œuvre* of one of the greatest of modern Italian sculptors. There is in this a perfect knowledge of anatomy, and a feeling which is inspiration. The head is bent, and his hand would seem to ward off the curse of the Almighty, as, defiant and despairing, he hears His voice after the murder of his brother Abel. This fine work was purchased by the Victorian Government. One of the gems of the collection was Luigi Paganì's life-size statue of the "Peri," and it was also one of the finest pieces of marble in the Exhibition. The subject is the Indian mythological story of the beautiful Peri repulsed from the gates of Paradise for the sin of pride. The expression of the face is marvellous—such utter sorrow and remorse, yet tinged with pride, the limbs are full of grace—the conception is sublime. The Commendatore Giulio Montenerde sent an important contribution—"The Genius of Franklin." Lightning conductors were first set up by Benjamin Franklin about 1752. The sculptor, in this composition, attempts the representation of the genius of Franklin bringing down the lightning by an ideal personification of genius in the shape of a nude figure, seated on the turret of a castle, guiding the dangerous element into empty space. Antonio Bottinelli, a Roman sculptor, had several works of merit. His four busts, personifying "Spring," "Summer," "Autumn," and "Winter," have an originality of conception uncommon in the treatment of such a hackneyed theme. These four poetically-treated busts were almost the first to which the label "sold" was attached. Signor Bottinelli had also a full-length statue, half-life size, in the Italian court below the gallery. The subject was the "Virgin Camilla." Camilla was Queen of the Volsci, a territory in ancient Latium, near the Tiber. She was educated in the woods, inured to the labours of hunting, and fed upon the milk of mares. She is depicted before her warlike period, with large, wondering eyes, and all the ingenuous loveliness of a beautiful gazelle, with a wolf-skin gathered gracefully around her, a bow in her hand, and, suspended from her shoulder a quiver, denoting her dedication to Diana. The lips are parted, as if in a waiting, listening attitude. Few men's work in the Italian court were more full of promise. There was a very beautiful little marble group by Professor G. Meli, of Rome, of "St. John the Baptist and the Lamb." It was an exquisitely modelled study of a sleeping child.

There was a copy of the celebrated sculpture named at the two last International Exhibitions, "The Forced Prayer," by Pietro Guarnerio, of Milan. The original of this took first prize at every former Exhibition.

There was a *replika* in the Italian court of the most fascinating and popular work of sculpture in the Paris Exhibition of 1878, "The Bather," by Professor Tabacchi, of Milan. It represented a young girl in a closely fitting bathing-dress, her arms extended straight above her head preparatory to taking a header into the sea. The bathing-dress leaving the arms and lower limbs bare, reveals some exquisite modelling. In the main avenue was a very popular study by Cavaliere Zannoni. It was one of the best works of the realistic school in the Exhibition and was called "Study and Work." It was a graceful rendering of a legitimate subject, free from so much that is objectionable in many of the ignoble things exhibited. Giovanni Ciniselli sent a veiled bust, "Modesty." Although in general these tricks of mechanical dexterity are not to be commended, this head was beautiful in execution, the provoking veil half revealing, half concealing the lovely features. There were some works by Professor Pietro Magni, the famous sculptor of the "Reading Girl," who was so wonderfully popular at the International Exhibition of 1862. "Complacency" was a life-sized study of a young female, just risen from her slumbers, reclining on an arm-chair, with her dishevelled hair falling over her shoulders, engaged in admiring herself, before dressing, in a pier-glass. Two statuette's were also shown of Michael Angelo and Leonardo da Vinci, copies of P. Magne's works, the veteran artist having since passed away. A bust on the staircase, by Francesco Terace, "Victa," had great breadth and dignity of style.

Under the dome in the main building stood the marble group of "Lynceus and Hypermetra," by the late Charles Summers. "Ophelia," by Signor Rossetti, of Rome, had considerable merit, the drapery being most faultlessly executed.

There were a few works in terra-cotta, amongst which A. Cencetti's busts of an elderly beau, in the dress of the first French empire, attracted by the blandishments of a pretty coquette. "Progress," by Antonio Gemignani, of Naples, was a very realistic, well-executed work, the subject being a youth of the lazzaroni class. He is represented as leaning over a basket with one arm, as he squats on the ground, and is writing letters in the sand with a stick. This work was purchased by the Victorian Government. There were also some painted terra-cotta groups, which were remarkably clever. They were small, delicately chiselled studies.

MAJOLICA.

Above the pavilion occupied by the Venice and Murano Company was one containing a fine display of Capo di Monte ware and majolica, after the old Italian maestri. There were reproductions of the pottery and porcelain of Egypt, Greece, ancient and mediæval Italy, as well as of the period of the renaissance.

It was in Italy that majolica acquired an indisputable superiority from the fifteenth century downwards. The name itself was derived from the island of Majorca, where the fabrication of this particular article seems to have commenced. Specimens of it were brought to Italy, and it was soon discovered that there were large deposits of fine clay available for the manufacture of similar wares in the peninsula. Luca della Robbia, the Florentine sculptor, finding himself overwhelmed with orders for statuary, cast about for some method of reproducing his works in a more plastic but scarcely less durable material than marble; and it occurred to him to bake his clay model, and to cover it with an enamel of tin and lead. His experiments being perfectly successful, the process was soon extended to all kinds of fictile wares. The heads of many of the ducal houses of Italy devoted themselves to the study and practice of the potter's art with the utmost enthusiasm. The fictile wares of the fourth Duke of Urbino, produced at Castel Durante, were ornamented with designs by Raffaele, Michael Angelo, and Giulio Romano with such perfection that, as Vasari tells us, they equalled the best oil paintings. Equally celebrated were the lusted wares of Gubbio, the whiteness and polish of the majolica of Faenza (whence the name *faience*), and the brilliant glaze of that of Rimini. The decorative arts, as applied to pottery and porcelain, reached their highest stage of development in Italy during the period of the Renaissance, and rapidly declined afterwards; but whilst in the fictile wares of ancient Greece the lines were nearly always faultless, as in the *Stamnos*, the *Krater*, the *Kelebe*, the *Prochos*, the *Kyathos*, the *Kalpis*, the *Amphora*, the *Hydria*, and the *Kylix*, and decoration was always subordinate to structure, it is too often the reverse in the ceramic arts of Italy, where the designers seem to aim at constructing ornament, instead of ornamenting construction; and thus attention is distracted from what ought to be the primary element of beauty in a cup or vase—its form—and one is compelled to regard only, or chiefly, the redundancy of the ornamentation, which ought to be a secondary consideration. The old Etrurian ceramics are preferable to works of the fifteenth and sixteenth centuries in the peninsula. There was a cabinet containing numerous examples of the former, faithfully copied from the originals in Italian museums, while in another were to be found some curious *fac-similes* of ancient Egyptian pottery. It is in the application to colour to ceramics that the moderns excel.

As to the fictile fabrics of Faenza, there were sufficient examples in this pavilion to serve as illustrations of a complete history of the art of modelling, hand-painting, glazing, and baking these articles for the last five centuries. Conspicuous among the more valuable of the exhibits were two massive vases of Capo di Monte ware, with a lustrous ground of deep purple and figure paintings, which were real works of art. Another pair, also hand-painted, and three dishes, embellished with groups of figures borrowed from Greek mythology, were of Faenza ware, besides some brackets, vases, dishes, &c. Of Luca della Robbia figures there were two specimens. These were two specimens of majolica coffers, reproductions of fifteenth century work; two vases in the Urbino style; two of Abruzzi ware, upon one of which Virginius was represented as having just slain his daughter, while upon the other was portrayed the body of Hector being dragged through the Grecian camp at the tail of Achilles' chariot. A candelabrum of Capo di Monte ware, fully seven feet high, was well deserving of attention.

MOSAICS.

The Italians are famed for the wondrous beauty of their mosaics. To the Australian these exhibits possess a special interest, as mosaics are, as yet, a comparative rarity here.

This art is as old as the days of the Pharaohs, and was practised by the Assyrians. Mosaic pavements were common enough in Greece also. Of the old Roman mosaics, there is a fine example in the pavement of the Pantheon. This was called *scette* work, in contradistinction to the tessellated mosaics which were so popular in Pompeii. About the middle of the fourth century, glass mosaics began to be largely used by the architects and artists of Byzantium, and this method of decorating walls and composing pictures very soon reached Italy, where it was greatly in use for ecclesiastical purposes.

Somewhat later a new variety of mosaic was introduced. Grooves about half an inch deep were cut into white marble, and small cubes of coloured and gilded *smalto*—that is to say, a transparent composition, of which fusible glass is the basis, coloured with metallic oxides—were let into them. This kind of work was chiefly used for pulpits and tabernacles. But it was an exotic branch of art which was not thoroughly mastered by the Italians until the thirteenth century, and it seems to have died out with Gaddo Gaddi in the first decade of the fourteenth. The shrine of Edward the Confessor, in Westminster Abbey, offers a very fair illustration of Italian glass mosaic. Another variety—known as the *Opus Alexandrinum*—consisting of geometrical arrangements of cubes of marble, porphyry, and serpentine, is ascertained to have been in general use from the fourth to the thirteenth centuries; not merely in Italy, but in Spain, Asia Minor, and Hindostan. When the dome of St. Peter's came to be decorated two hundred and eighty years ago, a school of mosaic workers was established in Rome, where it is still known as *La Fabbriaca*.

The modern process is thus described:—"A plate, generally of metal, of the required size, is first surrounded by a margin rising about three-quarters of an inch from the surface. A

mastic cement, composed of powdered stone, lime, and linseed oil, is then spread over as a coating, perhaps a quarter of an inch in thickness. When set, this is again covered with plaster of Paris, rising to a level with the margin, upon which is traced a very careful outline of the picture to be copied, and just so much as will admit of the insertion of the small pieces of *smalto*, or glass, is removed from time to time with a fine chisel. The workman then selects from the trays on which are kept thousands of varieties of colour, a piece of the tint which he wants, and carefully brings it to the necessary shape. The piece is then moistened with a little cement, and bedded in its proper situation, the process being repeated until the picture is finished; then the whole, being ground down to an even face and polished, becomes an imperishable work of art."

Of mosaics of this class there were numerous examples in this court, exhibited by L. Gallands, C. Boccheggiani, and L. Tarantoni, of Rome; by the Ginori manufactory at Doccia, near Florence; by the Venice and Murano Society; by T. Bianchini and G. Montelatici, of Florence; by D. Redondo and Dr. Salviati, of Venice; and by the Società Musiva Veneziana.

There was a very beautiful old Byzantine mosaic, a copy from St. Mark's, in Venice, of "Christ, the Redeemer." The tones and colouring were very soft and delicate, the lights and shades in the purple mantle thrown over the body being especially lovely. There was a copy of mosaic work in the Church of Santa Maria e Donata, of Murano, Venice—a "Byzantine Madonna."

The Florentine mosaics claim our great admiration. They are not such monuments of patient industry and skill as those of Rome and Venice, but their artistic beauty is very great indeed; while the materials employed—malachite, coral, chalcedon, breccia, agate, jasper, porpora, lapis lazuli, turquoise, serpentine, verde d'Arno, and various sea-shells—are of considerable value.

These are used in their veneers, and advantage is taken of their natural tints and shades to produce the closest imitations of fruits, flowers, and numerous artificial objects. The cost of workmanship is very great. None but the hardest stones are used. Every separate piece must be backed by thicker slices of slate or marble to obtain additional strength, and every minute portion must be ground until it exactly corresponds with the pattern previously cut. Where it is necessary to introduce shadows, it is effected by subjecting the stone employed to the action of fire until the exact tint or demi-tint is produced.

Among the exhibits of Mariotti and Fautone, of Florence, which were in the south-east pavilion upstairs, was a table of black marble, into which was inserted a group of Etruscan vases and tazze, standing on a variegated slab, together with a jar containing convolvulus, yellow roses, and lilies of the valley, a locket and riband, and a ring.

Equally choice were the large and small mosaics of Messrs. Boncinelle and Sons, of Florence. One table was ornamented with a lovely combination of flowers in the centre, consisting of camellias, roses, tulips, and convolvuli, surrounded by six smaller groups.

CAMEOS.

The cameos, which have come down to us from antiquity, were cut from stone of great hardness, and are of much beauty. Glass cameos were also produced by the ancients, and the famous Portland Vase is an imitation of one of these; but the cutting of shell cameos is of modern invention. It is said to have been first practised in Sicily, and it commenced in Rome about seventy-five years ago. The shells usually selected are those which possess layers of different colours, such as the bull's mouth, the black helmet, and the Queen's couch. The last named is said to consist of three strata, the lowest serving for the ground, the second for the principal figures, and the third for their superficial ornaments. The shell in its rough state is attached to a small block of wood so as to steady it. The outline of the design is then traced on the surface, and afterwards scratched in. Then the outer layer surrounding it is removed by files and gravers, after which the work of the artist commences, and is carried out with extreme delicacy of touch by means of very fine tools, some of them little larger than ordinary needles.

In the choice collection of Messrs. Francati and Santa Maria, of Rome, the place of honour was justly awarded to a cameo representing the triumph of Neptune, the subsidiary ornamentation of which—pure white on a delicate pink ground—was as beautiful as the execution of the main subject.

IVORY AND WOOD CARVINGS.

Carving in ivory is, without doubt, the oldest art in the world, inasmuch as there has been found at Le Moustier, in the Dordogne, the tusk of a mammoth, upon which some prehistoric barbarian had incised a pretty correct outline of the monster himself. Curiously enough, some of the finest specimens of this kind of work in the Italian court were executed in a similar manner. Among others, there was a copy of Titian's "Assumption," which had all the delicacy of a line engraving. There was also a mirror frame, containing sixteen medallions of the great writers and painters of Italy, a head of Christ, and one of the Virgin Mary in low relief, microscopically carved. But the most remarkable feature of the collection was an ebony table,

inlaid with ivory, executed in Rome under the direction of Signor Gatti, of Milan, which carried off the first prize in Paris. It contained accurate portraits of Captain Cook and of Luca della Robbia, Vasari, Cimabue, Ghirlandaio, Pisani, and Buffalmacco. There were figure subjects at the angles, and the intermediate panels, as well as the borders, were filled with arabesque scrolls and ornaments of the daintiest devices. Several cabinets, by Brambilla, of Milan, were of ebony, ornamented with ivory, pietradura, cornelian, malachite, agate, lapis lazuli, and verde di Prato. Two cabinets of the Sansovino period in Venice, one of them surmounted by recumbent figures of Fame and Glory, with a bust of one of the Doges in the centre, were exhibited by Signor Guggenheim, and were covered with a perfect efflorescence of carved work in high relief. There was a walnut bookcase, in the early Florentine style, from Messrs. Mariotti and Fantoni, sumptuously decorated; and two pedestals of the renaissance period, executed in Venice by Besaret Brothers.

NETHERLANDS PAINTINGS.

The Netherlands were represented by sixteen pictures only. "In the Roef," by G. Henkes, was the representation of the interior of the cabin of a frekschnit or canal boat. "A Bouquet of Roses," by Mlle. J. van de Sande, Backhuysen, showed that the countrymen of David de Heen and Rachel Ruysch have neither lost their love for flowers nor their skill in portraying them.

THE UNITED KINGDOM GALLERY OF PAINTINGS.

THE ROYAL PLATE.

A special exhibit in the British Gallery of Painting consisted of different electrotype reproductions of some of the regalia preserved in the Tower of London, which was contributed by the Department of Science and Art at the South Kensington Museum. These were chiefly copies of plate made at the time of the Restoration in 1660. Two silver tables—one of *repoussé* work and the other chased—were reproductions from those belonging to Her Majesty, and which are in use at Windsor Castle.

OIL PAINTINGS.

There were five paintings lent by Her Majesty and H.R.H. the Prince of Wales. They included Signor Belli's copy of Winterhalter's celebrated picture of the Royal Family in 1857; Leslie's fine composition, representing the Queen receiving the sacrament after her coronation in 1838, and Frith's picture of the marriage of the Prince and Princess of Wales in 1863—these are excellent as works of art, besides possessing great historical value; there were also two ceremonial paintings by Mr. N. Chevalier—"Royal Procession to St. Paul's on Thanksgiving Day," and the "Opening of the International Exhibition in Vienna."

"Saturday Night in the East End of London" was by Frederick Barnard. To those who have explored Houndsditch and the Minories at such a time it recalled some of the most characteristic features of low life in that neighbourhood. The whole picture is without a trace of coarseness, and as full of character as Hogarth's "Gin Lane." Alfred Montague's "Off the Coast, Isle of Wight," was a bright, breezy picture, with a pretty shore outline, a shimmer of diffused light on the sea, the incoming tide pouring through a rocky barrier on to a muddy beach, a sky full of eddying clouds, and a charming effect of sunny haze in the offing. "The Sleeping Beauty," by E. F. Brentnall.—This was exhibited at the exhibition in Paris two years ago; and if the reclining figure were as finely painted as the Prince and the different accessories, the work would challenge unqualified praise. Otto Weber's painting, "Come on; come along," is a clever animal painting, with picturesque effects of watery sunshine falling on the dappled coats of the horses. "Wards in Chancery," by John Morgan, is a brilliantly painted picture. The fresh young beauty of the two girls, and the furrowed face of the Master of the Rolls, are artistically contrasted. W. M. Wylie's picture of the House of Commons in the session of 1877 is chiefly interesting on account of the portraits it contains. Mr. Calderon's "Joan of Arc" shows her standing on a mass of rock facing the east, having her hands folded, and watching with a ray of countenance the newly risen sun breaking through the mist. A good picture, by one of the veteran marine painters (E. W. Cooke, R.A.), called "Ruins on Island of Philæ the Beautiful," attracted much attention. "Joseph Revealing Himself to his Brethren," by D. W. Winfield, was one of the best scriptural pictures in the Exhibition, and, as a study of Egyptian architecture and of Eastern costume, was very interesting. "Girl and Dogs," by Richard Ansdell, was one of the best pictures exhibited at any time by that artist. "A Brook in the Meadows," by T. Sydney Cooper, R.A., will not suffer by comparison with some of those painted by the old Dutch masters. "Samson and Delilah" was by Sir Frederick Leighton.

The drawing of the blind athlete shows the hand of a master. Welcome to every lover of art were pictures of Sir John Gilbert, B.A., president of the old Water-Colour Society. His "Doge and Senators of Venice in Council" was a vigorous composition, and obtained a medal at the Paris Exhibition of 1878. Another by him is "The Battle of Naseby." It is a scene of tumultuous excitement such as he excels in portraying.

Lady Nicholson, wife of the former Speaker of the Legislative Assembly at Sydney, sent a charming picture of her three sons, treated somewhat after the method of Sir Thomas Lawrence.

The "Threshing-floor of Gilgal," by Richard Beavis, represented a number of oxen treading out the corn. The drawing is admirable, and conveys the assurance of its having been done on the spot. T. G. Cooper's "Scene in Sherwood Forest" showed that there are still fragments of sylvan England not unlike what its forests were in the olden times.

"All Among the Barley," by Mr. E. H. Fahey, was one of the finest pictures in the gallery. The foreground is very finely painted, the feeling of space and distance between the dense vegetation being conveyed with singular skill and dexterity. "Wood-gathering in the New Forest, Hampshire," by George Chester, was a strongly painted picture, somewhat scenic in its breadth. "The Interior of Strasburg Cathedral," by Mr. Wyke Bayless, was a picture which combined the grandiose drawing of David Roberts with the finely discriminated detail of Louis Haghe. Alma Tadema's "Elizabeth" had a sheeny background of yellow satin, casting a dingy hue on her flaxen hair. The face was very pleasant, and the colouring good, but the attitude constrained and ungraceful. "Midsummer Noon," by Mr. C. Bauerlé, represented three children who, weary with play, had fallen asleep with a graceful carelessness of attitude. Their faces were full of sweet repose. Mr. G. Munger's "Treberwith, Cornwall," was a cleverly painted bit of sea, sky, and rock. "Foundlings," by Mr. Haynes Williams, was full of human interest, as well as artistic merit. Each orphan's countenance was cleverly individualised and the work was powerfully painted. Mr. Val Prinsep's "Death of Cleopatra" fell below the usual level of his work. "Daisies," by Mr. C. Bauerlé, was a charming head, in the full, fresh beauty of early childhood. "King Lear Disinheriting Cordelia," by Mr. T. R. Herbert, B.A., was a *replica* of the large fresco executed by this artist as one of a series of eight scenes from British poets which adorn the walls of the upper waiting-hall in the House of Commons at Westminster. "Moses Viewing the Promised Land," by Mr. R. Dowling, was a dignified composition.

Mr. F. Ditton's "House of the Sheikh Sedat, Cairo," was a brightly painted bit of Oriental architecture. Mr. E. Hargett's "Loch Sing" was a massive subject, well treated. The bright, broken foreground and the cattle to the left were masterly in execution. The "Death of George Villiers, Duke of Buckingham," by W. W. Winfield, was the finest example of chiaroscuro in the whole collection. "A Modern Bacchante," by C. E. Perugini, was a lovely picture of a young girl, full of beauty and happiness, in the midst of an English hay garden. Mr. H. Weigall's "Trumpeter" was very effectively painted.

One of the noblest works of modern times is Sir Frederick Leighton's cartoon, "Industrial Art as Applied to War." The Lords of the Committee of Council on Education deserve the gratitude of all art students in Victoria for the loan of this valuable picture. Nearly sixty figures are introduced. Some are buckling on their armour, others are testing their swords, others are burnishing shields, and others unfolding their ensigns, while a group of women in one corner are busily plying their needles on tabards and banners. Mr. Frank Dillon's "Japanese Interior" was bright in colour, harmonious in arrangement, pure in tone, and careful in finish. "Amongst the Rocks, Glencoe," by T. S. Cooper, B.A., is a splendid work, by a great animal painter. Mr. F. Barnard's "Scene from Barnaby Rudge" is a popular hit. Dolly Varden has just come down to breakfast, looking "as fresh as paint," while Gabriel chuckles her under the chin with unconcealed admiration of her bright and girlish beauty, and Sim Tappertit surveys them both with cynical moroseness, biting his thumb-nail to the quick. "Lady Teazle," by Mr. T. F. Dicksee, might serve as a portrait of the beautiful Elizabeth Farnen, who took her leave of the stage in that character. "Bedouin Caravan *en route* to Mount Sinai" may vie with the best works of Mr. F. Goodall. It is by Mr. R. Beavis, and depicts a file of camels crossing a stony ridge in the hot glare of a cloudless sky, when the sand is burning under foot. Mr. Colin Hunter's "Salmon Fishers, Loch Fyne," was chosen for the gold medal. It is a study of shoal water with a strong ripple on it, seen under the influence of a diffused light. The colour is laid on with an almost audacious thickness and breadth; but the result at a distance is very fine. "An Appeal for Mercy" is a work of great merit by Marcus Stone, A.R.A. While yet a lad he made book illustrations to please his father's friend, the late Charles Dickens. Coming under French influence, he has greatly changed his style, and by close study risen to an unexpected height. This painting is a story of the Reign of Terror. "Morning in the Market Place, Cairo," is a careful study of architecture, character, costume, and atmospheric effect in a city rich in picturesque motifs. It is by Mr. Dowling. Mr. J. Faed's striking historical picture of "James the Fourth before the Battle of Flodden" attracted much attention. While the King, according to the chronicler, was at his devotions in the church of Linlithgow, there

came an old man to him in a blue gown, with "brodekins on his feet and long fair hair falling down his back, who demanded an audience of James, and, without any reverence, leaning on the King's desk, began to address him. Then, while the King meditated what answer he should make, the old man melted into air, and shortly after James fell, nobly fighting on the field of Flodden." The "Anxious Mother," by Mr. Ansdell, represents a long-wooled ewe with two black-faced lambs, who have apparently been frightened by some dogs and guns, and have retreated to a lofty knoll, from which secure post of observation they scan the distant danger. The "Unwilling Salute" is by J. C. Horsley, R.A., in which the veteran painter of the light comedy of painting has depicted a scene under the trees in Kensington Gardens in the time of Queen Anne. "Cupboard Love," by the same artist, is bright in colour, and contains some pretty smiling child's faces looking up at their nurse, who stands with a smaller child in her arms, and the keys in her hand, ready to give them out some dainties.

"On the Housetops," by Mr. A. Elmore, R.A., is a modern illustration of the Scripture words, "That which ye have spoken in the ear shall be proclaimed upon the housetops." The "Jolly Postboys," by Mr. H. S. Marks, R.A., is a humorous reminiscence of the old days of the chaise and six. "Autumn Afternoon near Amsterdam," by Mr. G. S. Walters, is warm in colour and harmonious in tone. In Mr. T. O'Connor's "Granada," the Alhambra is seen basking in the light of the afternoon sun, while the chief part of the city, in the hollow below, is buried in shadow. The snowy summits of the Sierras are visible in one direction, while in the other the Vega stretches away to meet the mountains.

WATER-COLOURS IN UNITED KINGDOM GALLERY.

Sir John Gilbert's "Louis XIV. Transacting Business with his Ministers in the Apartment of Madame de Maintenon" is painted in a rich key of colour. The value of the picture is enhanced by the fact that all the faces introduced are portraits. Mr. E. A. Goodall was represented by three pictures, one of which conducts us to "The Gate of Judgment" in the Alhambra, outside which the Moorish kings were accustomed to sit administering justice. A second was a view of Venice by sunset. Mr. Goodall's third picture represented "The Remains of the Causeway which originally connected Memphis with the Lileyan Hills." "Alfred Tennyson," by Mr. Hubert Herkomer, A.R.A., might have been easily mistaken for an oil painting, it is so full of strength and solidity. Mr. J. A. Houston, R.S.A., whose water-colours are well known and greatly appreciated by buyers in this colony, contributed eight works, in every way worthy of his high reputation. "Loch Vennachar and Ben Venue," and "Loch Earn," may be specially mentioned. Mr. J. Mogford contributed five works, which touched a high point of excellence. "A Path through the Ferns" showed a foreground rich in bracken, mellowing under autumnal influences. "Colzean Castle" (on the west coast of Scotland) and "Cornish Harvesting" were both choice examples of this artist's pencil. "Madame Desmoulins," by Mr. J. Absolon, as standing in the gardens of the Luxembourg Palace, gazing on the walls of her husband's prison with a countenance full of touching sadness. Mr. E. G. Warren's "A Clearing in the New Forest, Hants," was a noble study, on a large scale, of a magnificent group of beech trees. The distance had all the misty tenderness which characterises the far perspective of a forest glade. "A Signal of Distress in the Offing, Gorleston Pier, Great Yarmouth," by E. Hayes, was a large and very fine drawing of a subject full of old England and her storm-beaten coast. Carl Haag had one of his interiors—"In the Cloisters of the Stiptskirche at Berchtesgaden, Bavarian Highlands"—a picture with a beautiful effect of light, skilfully treated. "The Choir of St. Mark's, Venice," by Miss Clara Montalba, had all her usual force, and occasional want of finish. In other productions, Mr. N. Chevalier's "Te Anau Lake, New Zealand," was one of the finest water-colour drawings from this artist's pencil. The scene is a magnificent one, and in point of atmosphere nothing is left to be desired. Louis Haghe's "Road Loft in the Church of Dixmude, Belgium," was a splendid piece of architectural drawing. Mr. J. A. Benwell's "Desert Travelling in the Valley of Mount Sinai" was a brilliant reminiscence of oriental colour. James W. Smith had one of the loveliest bits of English country in the Exhibition—a few cottages, with bushes and trees behind, and in the foreground heathery mounds, purple with the little bells. "Anxious Moments," by F. E. Mapleton, was an interesting drawing of a scene laid in the time of the civil war. "Thirlwall Castle, Northumberland," by H. G. Hine, was a fine bit of architectural drawing.

THE DEPARTMENT OF SCIENCE AND ART, SOUTH KENSINGTON, LONDON.

This department is charged by the Government with the administration of the South Kensington Museum and schools of science and art throughout the United Kingdom, including the science classes, and the National Art-training School, established at South Kensington for the instruction of teachers. The exhibits under this head comprised—"Linear Drawings by aid of Instruments;" "Freehand Outline Drawing, Rigid Forms from Flat Examples or Copies;" "Freehand Outline Drawing from the 'Round';" "Shading from the 'Round';" "Anatomical Studies;" "Flowers, Foliage, &c.;" "Painting from Nature, groups of still life, &c., as compo-

sitions of colour;" "Elementary and applied designs." Some of these were remarkably well done.

Painting and Etchings by James Barry, R.A. (born 1741, died 1806), have been given to the trustees of the Public Library, Melbourne.

SCULPTURE AND DIE-SINKING.

One or two medallions, by A. Bruce Toy, under this head, were worth noticing—one was of Mrs. Siddons; another of the Viscountess Monck. "The Song of the Shirt," by Marshal Wood, was an interesting piece of sculpture. There was a frame of specimens of engraving and die-sinking, heraldic painting, seals, &c., by Harry Soane, which were very well done.

ARCHITECTURAL DRAWINGS AND MODELS.

This collection was very good. Mr. Pearson, R.A., sent "St. Augustine's Church, Kilburn," which was greatly admired. J. Oldred Scott had a "Design, submitted in competition for the new Examination-schools for the University of Oxford." "Brambletye" (designed and built for Donald Larnach, Esq., by T. Roger Smith) was a charming water-colour. The "Interior View of the Index Museum, Natural History Museum, South Kensington, London," by Alfred Waterhouse, A.R.A., F.R.I.B.A., was splendidly executed. "Messrs. Doulton's Studios, Lambeth, London," by Messrs. Farrington and Wilkinson, was a good architectural study. H. E. Coe sent a splendid design—"First Premiated Design for the Foreign Office, Whitehall, London."

ENGRAVINGS AND LITHOGRAPHS.

"Happy as the Day is Long" was by W. H. Simmons, after T. Faed, B.A. It was an artist's proof, and capitally executed. "Her Majesty the Queen, with her Grandchildren, Prince Albert Victor, Prince George, and Princess Victoria of Wales," after J. Saub, R.A., by Thomas Oldham Barlow, A.B.A., was a very pleasing engraving. Some etchings by A. Ballin were also very good.

PHOTOGRAPHS.

There was a large collection of photographs, some of which were very meritorious. One or two were by the instantaneous process. These were artistic studies from nature.

Besides these were a good many maps and other documents exhibited by the Ordnance Survey Department of Great Britain, which were presented to the Public Library of Victoria at the close of the Exhibition. There were also some photo-zincographs of the Domesday Book (in separate counties), National MSS., Anglo-Saxon MSS., the Magna Charta, and the National Covenant of Scotland.

THE UNITED KINGDOM VICTORIA CROSS GALLERY.

The order of the "Victoria Cross" ranks amongst the happiest conceptions of our age. It is thoroughly English in every particular, given alike to the highest and the lowest in rank; but given always with a cautious and discriminating hand. In itself without any intrinsic value, and yet, because of its symbolism, held to be inestimably precious. The Victoria Cross is an epic poem, and just such an epic poem as a true painter would like to produce in actual representation upon his canvas. Such pictures as form a "Victoria Cross" Gallery must of necessity command public interest and sympathy. They appeal to national feeling under a form which is certain to secure a becoming response.

To Mr. L. W. Desanges belongs the honour of having both originated the idea of forming a collection of pictures to be entitled the "Victoria Cross Gallery," and of having carried his own project most successfully into effect. Mr. Desanges is the great grandson of the Marquis Desanges, a French refugee of 1742. His earliest studies in art were made in Florence. At the age of sixteen he went to France, and studied for a short time under Grobon, at Lyons. As a portrait painter he takes a very high position. Having proposed to himself to paint two pictures illustrative of the Crimean war, Mr. Desanges selected his subjects—two of Her Majesty's park-keepers, Shields and Parker, both of them old soldiers, and decorated with the Victoria Cross, were to be the heroes of the pictures—and the work was commenced. From these two was developed the collection now amounting to upwards of half a hundred pictures. The Prince of Wales has always taken a lively interest in the progress of the undertaking, and the canvas which represents the gallantry of Colonel Lindsay was commenced under his roof at the White Lodge, Richmond. Mr. Desanges has exhibited his gallery of paintings at the Egyptian Hall. It was also placed for some time in a separate gallery in the Crystal Palace. The "Battle of Inkerman" was exhibited at the Royal Academy; and Negretti and Zambra succeeded in obtaining one of their first-rate negatives from it, thus perpetuating the memory of that sad yet glorious November morning.

It seems strange that this collection should not have been bought as a national heirloom. Versailles is crowded with ill-drawn but stirring pictures of national heroism, lavishly paid for by the Government. Greenwich has its naval; why should not Chelsea have its military

gallery? The value of the Cross thus illustrated would be incalculable both in the upper and lower ranks. We all know the quickening of the pulse which is involuntarily attendant upon a narrative of such actions as win that Cross; and therefore it follows, as a matter of course, that we should be roused and stimulated by the representation of these acts of bravery and "heroic self-devotion." Mr. Harry Wood bought the entire Victoria Cross Gallery from Mr. Desanges for £4000, and sent it to Melbourne as a speculation. We here notice a few of the principal pictures of the collection:—The "Battle of Inkerman," Mr. Desanges's greatest picture, was of much merit; it is full of detail, and many of those represented are portraits from life. The great Duke is reported to have praised one of Allan's battle-pieces, because there was "not too much smoke." Notwithstanding the fires, and the bursting of shells, Mr. Desanges has also kept the smoke within proper limits. The account of the incident is as follows:—Lord Raglan, anxious to gain some commanding point which would enable him to obtain a more definite notion of the disposition and numbers of the enemy, was moving with his staff along the ridge in front of the second division camp, when General Strangways, who was riding at his side, was mortally wounded by the bursting of a shell. The battle was raging on every side of the field.

No. 24 was a very interesting picture, though as a painting not carefully finished. It represented Lieutenant-Colonel Lloyd Lindsay, V.C., Scots Fusilier Guards. When the formation of the line of the regiment was disordered at the Alma, Captain Lindsay stood firm with the colours, and by his example and energy greatly tended to restore order. He stands with an earnest face, faithful unto death, in the midst of the enemy and the dead, bare-headed whilst he clasps the colours. Twenty-five years of time have deprived the gallant colonel of some portion of his Adonis-like grace; otherwise there is not much change. Colonel Lloyd Lindsay has a seat at Wantage, below Windsor, and is heir-presumptive to the baronetcy held by his elder brother, Sir Coutts Lindsay, proprietor of the Grosvenor Gallery.

Among the large canvasses was (No. 3) Major C. C. Teesdale, C.B., V.C., at the battle of Kars, 29th September, 1855. It is a moonlight scene, and the glow of fires and bursting shells lights up the earnest face, as Teesdale disarms his glaring opponent. The enemy had penetrated during the darkness of the night into the redoubt, when Lieutenant Teesdale threw himself, sword in hand, into the midst of them, thus encouraging the garrison of defence to make a vigorous onslaught. This was one of the best portraits of the whole series. Colonel Teesdale has been one of the equerries in attendance on the Prince of Wales for many years. The gallant colonel may be seen any day strolling down Pall Mall his hair perhaps a little grey, but wearing a moustache curled in precisely the same peculiar manner as on that unpleasant night at Kars twenty-five years ago.

No. 12 represented Sir Frederick Sleigh Roberts, V.C., earning his Victoria Cross in India, in 1858. At Khodagunge he saw in the distance two Sepoys carrying off a standard, and, without a moment's hesitation, galloped after them, and, cutting down the standard-bearer, recaptured the colours. Her Majesty has conferred upon Sir Fred. Roberts the Grand Cross of the Order of the Bath for his services in Afghanistan.

No. 8 depicted Commander John Talbot Burgoyne, V.C., and Lieutenant Cecil W. Puckley, V.C., landing by night at a port in the Black Sea, in presence of the enemy, and by means of lighted cigars, igniting their appliances and setting fire to the Russian stores. They are painted descending the rocks, with their cigars lighted, the foremost having his in his mouth, whilst the fire was raging behind. Captain Burgoyne was afterwards lost while in command of the ill-fated "Captain." His father, the gallant Sir John Burgoyne, who commanded the engineers in the Crimea, survived his loss but a very short time.

No. 19 was a small picture recording the bravery of Dr. Horne and Dr. Bradshaw, of the 90th Regiment. They were in charge of the sick and wounded, and having missed the road to the Residency, and penetrated into the heart of Lucknow, a fearful massacre took place. One of them is depicted as tending one of the wounded, whilst his comrade gave the word of command; slaughter and fire all round. With a very few survivors they gallantly defended themselves from behind some sheds until they were rescued from their living tomb next day.

No. 20 represented Lieutenant Havelock—now Sir Henry Havelock, Bart., V.C., M.P., and a vigorous opponent of the late Beaconsfield Ministry—severely wounded, lying in a dooley, deserted by the bearers, Private Pilkington, of the 78th Highlanders, having flung himself into it when wounded, thus causing them to drop their double load. Private Henry Ward stands beside them, having remained there all night, and with one arm stops a bearer who was in the act of decamping.

No. 21. Commander Hewett, V.C., R.N., before Sebastopol, refusing to believe in a mistaken order to retire, purporting to come from Captain Lushington, reminding one of Nelson placing his eye-glass to his blind eye, declaring he could not see such a signal. The boyish figure stands with one hand on the trigger, one man who was about to pull it having fallen mortally wounded with the end of the cord still held tight in his hand. The bright face and dauntless courage and coolness of such a mere lad give an added interest to this large painting.

No. 81. Sergeant Alfred Ablett, V.C., 3rd battalion Grenadier Guards. "On the 2nd of September, 1855, seeing a shell falling in the centre of a number of ammunition cases and

powder, he instantly seized and threw it outside the trench. It burst as it reached the ground."

No. 32 recorded an act of brave humanity, surpassing any dashing feat enacted when the blood is at a white heat, Lieutenant W. G. Cubitt, V.C., 13th Bengal Native Infantry, having, in the retreat from Chinhut under most adverse circumstances, and at the imminent risk of his own life, saved the lives of three men of the 32nd Regiment. He is painted on horseback, one wounded man clasping his waist, another supporting himself by the side of the horse, whilst on the other side Lieutenant Cubitt has his arm round, supporting his third comrade. All around are the enemy. This was a scene commanding our liveliest sympathy and admiration.

STRAITS SETTLEMENTS.

This little court contained some photographs of native groups, as well as views of Malacca, native towns, and Singapore.

NEW SOUTH WALES.

Prominently displayed at the entrance to the court of New South Wales, in the permanent building, was a splendid large oil painting of the Queen, copied by Her Majesty's express permission from Winterhalter's picture at Buckingham Palace, by G. Kobermeier, for the municipal council of Sydney. Opposite this painting was a silver statuette, being a *fac-simile* of the national monument to Captain Cook, erected at Botany Bay in memory of his discovery of New South Wales in 1770. A splendid photographic panorama of Sydney was exhibited in two compartments. J. H. Newman's autotype photographs of the scenery in the Blue Mountains were beautifully executed, both as to printing and delicate softness. The photographs of the Fish River Caves, by Hart and Rouse, were very interesting. J. H. Boyd had a fine display of photographic portraits, amongst which were some carbon enlargements by single transfer. There were two exquisite pen-and-ink etchings by Mrs. Forde. The Technical College Mechanics' School of Arts sent some good drawings from the round and from plaster casts. Oil painting and water-colours of the scenery in New South Wales decorated the walls of the court. W. C. Piguenit sent two oils—one a lovely, harmonious sylvan scene, representing "Cock's River, Canterbury, from near Undercliff Bridge." A. L. Jackson's picture had an effective group of ferns in the foreground, the whole being a view of the fern-trees on the creek at Upper Kurrajong. E. Combes, C.M.G., sent several sketches of rural scenes at home, done in a good, bold style, and one or two of native scenes. C. E. Hern also contributed some water-colour drawings, one being "Govett's Leap," whilst another was a view "On the Dart, Devon." The New South Wales court in the annexe contained a splendid collection of sketches representing every variety of Australian orchids, sent by R. D. Fitzgerald. There were also some interesting carvings in stone and Australian beech, models in plaster, and a few sculptures. G. S. Thorpe sent some busts, models, and reliefs in marble, amongst which one veiled head was very carefully executed. Simonetti exhibited some life-size statues and busts, which were speaking likenesses.

NEW ZEALAND.

John Gully's beautiful water-colours of New Zealand scenery occupied a prominent position in the court, and numerous other paintings of New Zealand scenery were hung on the walls. A water-colour drawing of "Langitoto Island" was interesting as having been painted by a crippled Maori boy. There were many water-colours of New Zealand flowers, notably those of Mrs. F. C. Rowan. The collection of ferns was very fine. H. Boscawen, of Wellington, sent pen-and-ink drawings on paper and parchment, reflecting great credit on his ingenuity. There were several carvings in kakanui and in Oamaru stone, and in the native white marble. A bust of the late native chief, Hapuka, was also exhibited. The display of photographic portraits was very good. The scenery of New Zealand was very well represented by numerous photographs.

QUEENSLAND.

The oil paintings in the Queensland court were not of the highest order of merit. J. A. Clarke sent some comic sketches as illustrations to two poems which appeared in the *Queenslander*, one of which was called "Roley-Poley People," the other being "Marsupial

Bill." A large collection of photographs, coloured in oils, was arranged on a board in the centre of the mineralogical exhibits; these two hundred and twenty pictures of every kind of Queensland scenery representing agricultural pursuits and mining districts, and sheep and cattle stations; others were of explorers and early pioneers, whilst an enlarged view of Brisbane (coloured) was hung in a conspicuous position.

TASMANIA.

Several oil paintings of different scenes in Tasmania adorned the walls of the court. One of these represented a river winding through large paddocks, where cattle were grazing; whilst in the distance were mountain ranges. A very interesting large oil painting had been done by Robert Dowling of some of the aboriginal inhabitants of the island; they were executed from original portraits, and the artist had presented it to the town of Launceston. Flower sketches were plentiful. A "Mountain Memory," by Mrs. Meredith, was a very tastefully executed collection of Tasmanian flowers and berries, painted on a screen in water-colours. Mr. James Fenton, of Launceston, sent a chart illustrative of the colony's history. It contained views of scenery and the history and statistics of the island, and must have been a work requiring great patience. It resembled a steel engraving. Miss E. Sherwin had several pencil drawings on view, one of which was an excellent likeness of Miss Amy Sherwin, the talented artist. There was a cast of Laurie, the last aboriginal of Tasmania, and casts of native skulls. Besides these, there were two framed photographs of the last aboriginal man and woman.

VICTORIA.

The Victorian Gallery contained an interesting collection. On one side was arranged the display of loan pictures. Most of those contributed by Mr. Charsley were by Flemish masters. "A Landscape," by Joseph Vernet, and "The Guardroom," by Rembrandt, were specially interesting; whilst "Christ's Agony in the Garden" was beautifully treated by Sir Benjamin West. Mr. Aitken's pictures were chiefly by Italian artists. There was a "Madonna and Child" by Guido, a "Hunting Scene" by Salvator Rosa, and amongst others a much-disputed painting called "Italian Seaport at Sunset." The owner insists on its being the work of Claude Lorraine, which others deny, on the ground of the atmosphere and luminous bits not being in his usual style of broad, rich brightness; the figures on the margin of the water in the foreground were drawn by a master's hand, and that was one of Claude Lorraine's strong points, when he chose to exercise it. Mr. Walduck's pictures were choice examples of Martin and Corbould; and Mr. Birkmyre contributed also two paintings by the latter. There were several clever sea pieces, two of which were by O. W. Brierley; another representing "A Grey Evening on the Cornish Coast," by Charles Smith. There were two hunting scenes by Wouwermans, and an effective "Candlelight" by Scholken. Dalgety, Blackwood and Co. lent two of Cooper's animal paintings. "Tis Opportunity that Makes the Thief" was a capital scene in a neatly laid out garden of strawberry plants; some sheep were jumping over a broken fence into the forbidden ground, and feasting with great gusto on the ripe strawberries. Sir Godfrey Kneller's painting of Lord Somers, the first wigged Chancellor, was exhibited by E. R. Whitty; whilst Dr. Lefevre lent the picture of "Dr. Johnson at Chesterfield House," by Catermole. Mr. Moulden exhibited a curious ivory miniature of "Hans von Griffendorf," executed in 1587 by Lucas Buefat; and another beautifully-finished work was a miniature of Oliver Cromwell, done in 1656. "The Toilet of Venus" was a Roman cameo, very delicately handled, lent by Mr. Teale.

PAINTINGS AND DRAWINGS EXHIBITED BY THE VICTORIAN ACADEMY OF ARTS.

Fifty-five exhibitors contributed oil paintings or water-colour drawings to this collection. Amongst the artists were Henry Rielly, William Ford, C. D. Richardson, M. A. Campbell, and Mrs. Parsons, who contributed oil paintings, and F. B. Gibbs, John Carter, and three of those just mentioned, who sent some water-colours. Henry Rielly's picture is most aptly described by the inscription beneath it:—

Oh! summer land of silence; oh! land of beauty rare,
Where solitude lies brooding o'er hills and valleys fair.

These lines were taken from Meaden's Exhibition Cantata. C. D. Richardson's "Princess" was a very aspiring picture, the theme of which was taken from Tennyson's poem, whilst ideas in its working out were gathered from Long's beautiful painting of "Esther" in the Public Library of Melbourne. The figure of the Princess is rather stiff, and the head and face do not come up to the ideal; but the accessories are painted in with great

delicacy and care, and give promise for the future. Wm. Ford's study of "White Flowers" was very good, contrasting the yellowy white of the cactus with the pinkish hue on the roses, pure white lilies, greenish passion flowers, magnolias, geraniums, and begonias. S. Calvert showed an effective and attractive portrait of a girl, called "Light and Shadow."

Besides these Academy pictures, there were exhibits from sixty to seventy Victorian artists. Amongst the landscapes must be mentioned Mr. von Guérard's scenes in New Zealand and Victoria; Louis Duvelot's "Between Tallarook and Yea," which was a poetical rendering of Australian vegetation and the mountain ranges, with a characteristic little bit of bush life in the foreground; Isaac Whitehead's New Zealand scenes, and a view of Fernshaw, as seen in the early morning through an opening in the trees from the adjoining ranges; and Miss Riddell's work, "Near Mount Kosciuszko." J. R. Ashton contributed several portraits, as did T. Flintoff, G. E. A'Beckett, and others. Those by F. Wolf were specially attractive, that of Mrs. G. C. Lovey being one of the most effective, with its light French treatment of the background, expressive rendering of the features, and delicate manipulation of the lace and flowers. "A Child," by the same artist, was a full-length picture of a little girl in a low-necked white frock and broad blue sash. The flesh tints were very good, and the turkey carpet was very truthfully handled, all the accessories blending in so harmoniously with the central figure of the child, whose attitude was charmingly natural, that the picture attracted universal praise. Mr. Pantoni's copy of a little sketch by Admiral King was very interesting as a representation of the first Government residence in Melbourne in 1837.

On entering the Victorian Gallery, Mrs. Rowan's four-leaved screen was the most prominent feature of attraction. It consisted of beautiful arrangements of the native flowers of Victoria, New Zealand, and New South Wales, executed in water-colours upon black, pale yellow, pale blue, and crimson satin. Ten framed groups of Australian wild flowers and panels with lilies and various flowers, also on satin, were exhibited by the same lady. Some most artistic flower paintings were sent by Miss Purves. Miss Fanny Currey had, amongst other subjects, some spring flowers, and a clever sketch of "An Old Doorway in Brittany." J. R. Ashton exhibited a number of water-colours, amongst which "Early Morning on the Yarra" and "Queen's Wharf" were fresh, bright pictures. Mrs. J. E. Black sent a curious collection of Australian insects, painted in clusters on the branch of a tree. Theophilus Murecott also contributed some rural scenes. The heraldic paintings shown by Thomas Stevenson and C. Harper were most creditable, and gained special commendation. Porcelain-painting was represented by Lady Nicholson's plaque; some specimens by Mr. Murecott, amongst which a cup and saucer decorated with violets was very chaste; Miss Brush and Miss Parker also sent a variety of designs on ornaments and cups, plaques, and medallions. Miss Guilloid, of London, contributed several porcelain paintings, the bluebells and cowslips being very light and graceful. Eight outline sketches by Bernhardt Smith, of Mansfield, were very original and mystic, with their figures in long flowing, pointed draperies.

There were a few medals, dies, and seal engravings, and several rural scenes cut out of stone which came from Wootton Vale, near Coleraine. Of architectural drawings there were upwards of twenty, by Messrs. J. J. Clarke, Paolo Dattari, Henderson, and Smart, Miss F. C. Niven, Messrs. W. Pritchard, Lloyd Taylor, and W. Weedon—all of which spoke well for the capabilities of the profession in Victoria. McEwan and Son's model in plaster of St. Patrick's Cathedral, and that of the Scots' Church by Mr. J. L. Bolger, attracted a good deal of attention.

There were excellent exhibits of wood engravings by Mr. R. Jenny, Mr. S. Calvert, and Mr. R. Bruce. Some blocks of boxwood untouched by the pencil, others drawn on and partly engraved, and others finished, furnished instructive illustrations of the wood engraver's art. Chromo-typography was also exemplified in its various stages by Massina and Co.; and lithographic art was worthily represented by the exhibits of Messrs. Hamel and Ferguson, Messrs. Trevel and Co., Mr. G. R. Ashton, and Mr. A. J. Watson. Some of the illuminated addresses were most beautifully designed and executed, several being decorated with flowers, others with flowers and sylvan scenes combined, others with descriptive subjects or buildings. Mr. Baird sent an illuminated original poem dedicated to the Princess of Wales, the decorations of which were beautiful. A sheet of vellum was ornamented by an artistic design of flowers in oils. Mr. J. Noone exhibited eight mounted specimens of photo-lithographic plans. A clever specimen of pen-and-ink drawing was by Mrs. J. J. Gourlay, done at sixty-five years of age. Another most extraordinary work of patience was a specimen, or rather an immense sheet, of framed writing, executed by J. Meeks, being a condensed history of Victoria to 1860. Perugia and Son, J. Scurry, and Wm. Scurry, jun., contributed sculpture and busts. The "Diomedes," copied from the antique by the latter, was a good composition; and one or two of J. Scurry's busts were very life-like. J. R. Peppercorn sent a well-designed group for the centre of a conservatory, with a fish basin.

All along the outer wall of the gallery were innumerable photographs, sent by different boroughs, of local views. N. Caire and C. Nettleton exhibited forest scenery and country views.

Foster and Martin, Johnstone, O'Shanassy and Co., J. W. Lindt, and Tuttle and Co. sent splendid displays of photographic portraiture. The "Miniature of a Gentleman" by the first of these was a most artistic production. Johnstone and O'Shanassy had a whole array of coloured photographs in every style, some of which were highly finished. Mrs. Bennett and A. E. Taylor sent specimens of the art of photographic colouring.

The various schools of design in the suburbs of Melbourne, at Talbot, Footscray, Geelong, and Ballarat, exhibited specimens of the pupils' work. Some of the work sent by the Hotham and Ballarat schools was very praiseworthy, being copies from the round and architectural drawings.

A painting from the round, in oils, of "Apples," was splendidly executed by Mr. A. Nicholson, of the Audit Office. It did not form part of the schools of design exhibits.

WESTERN AUSTRALIA.

Mr. Prinsep's picture, "A Tale of the Southern Seas," is interesting on account of the tale it tells. Mrs. Boldt, the heroic wife of Captain Boldt, of the "Moorburgh," steered the vessel safe into port through a terrible gale in the Pacific, the crew being dead, and her husband and the mate unable to take any part in the management of the vessel. The wild flowers of West Australia were represented by twenty framed water-colours, painted by Mrs. Rowan. There were photographs of Bunbury, Albany, and other towns; and the Survey Department sent specimens of photo-lithographs executed in the Government Photo-lithographic Establishment. A model of Government House on the island of Rottneest was also exhibited.

UNITED STATES OF AMERICA.

There was only one oil painting in this court, by P. C. Weber, "Grand Cross, Grand Manon Island, Canada." The subject was a shipwreck off a desolate, rock-bound coast. Some of Forbes's lithographs are well known and of superior style, such as "Quatre Bras," "The Roll Call," and the "Retour de la Pêche." The Americans had also a good collection of photo-graphs.

GENERAL EXHIBITS.

AUSTRIAN COURT.

THE Austrian court, with its stately fern-trees and beautiful flowers, its draperies and flags, and the unique display of exquisite glassware along its frontage, was one of the most striking features of the Exhibition. Nothing could exceed the beauty of the Bohemian glass. Foremost in the rank of exhibitors was Count Harrach, of Nouwelt, whose life-passion has been to bring this exquisite industry to as great a perfection as possible. The frontage of Count Harrach's exhibit, at the entrance to the court, was chiefly devoted to table sets of glass, with different beaded or linear patterns, mirrors, and cut decanters and flower-bowls. A table covered with amber glass had a charming effect. The ruby glass was enriched in some instances by fine enamellings in gold and white. Then came the crackled glass, covered with a thousand apparent fractures, produced by plunging the object into ice-cold water when heated to a certain point, and then replacing it in the furnace. Beautifully enamelled green glass drinking-cups were also shown, one of which had a knight in full armour, in the style of the fourteenth century, depicted on it. Passing to the stands of other exhibitors fresh beauties met the eye. J. Schreiber and Nephews showed specialties of aquamarine, some of which were brilliantly enamelled in white and marbled glass.

Hermann Müller's display of cut glass was extremely fine. One cut glass jug, which took the artist nine months of constant labour, had a series of classic designs engraved upon it, every detail of which was perfect. Julius Muhlhaus sent samples of china inlaid in the glass, with lovely sketches painted on them; and the dark hyalith, with its white enamelling, was very beautiful. A casket shown by Wagner was said to be 800 years old, and the paintings of the four seasons executed on the lid and sides were little gems. Hegenbarth's Heirs displayed a fine collection of hollow glassware, candlesticks, and table sets; and Lazarus and Rosenfeld had several vases with pretty children's figures painted on them. S. Reich and Co. had a nice assortment of lamps and other glassware.

The porcelain from Vienna was magnificent. Under the dome, in another section of the Austrian court, was a handsome show-case containing beautiful paintings on china by J. Lasche, academic painter in Vienna. Radler and Pilz sent elegant specimens in the old Viennese and other styles; and Haas and Czizek, of Bohemia, exhibited a beautiful set in white, with a blue and gold border. Ernest Wahliss, of Vienna, had a large assortment of china, some of very chaste designs. W. Zsolnay had articles of table use in Wedgwood, Turkish, and old Indian patterns.

Austria made a splendid show of electro-plated ware. J. L. Hermann exhibited handsome epergnes, mirrors, church-plate, urns, tea services, and vases. The Berndorf Manufactory also had some striking new designs amongst their articles. There were numerous and brilliant displays of garnets, which is one of the specialties of Bohemia; and A. Bohm had a fine collection of imitation jewellery. On the platform at the western end of the court was a bronze bust of the Emperor, taken from Victor Tilgner's model, for which his Imperial Majesty gave him three sittings.

The department of furniture comprised a large display of the elegant bent-wood suites from Thonet Bros., J. and J. Kohn, J. Eissler and Sons, and D. G. Fischel and Sons. J. B. and R. Ludwig, of Vienna, had fitted up an elegant rococo boudoir; and some chairs may be specially mentioned which were made at the Industrial School at Mariano, in Istria, and sent by the rector. Venetian blinds and frames of every variety were shown; and a large case of embroideries, sent by E. A. Richter, was amongst the upholstery. C. Gianni's exhibit in the northern transept came under this heading, with his patterns of furniture stuffs and antique embroidered drapery. The patterns of parquettes for flooring from C. Leistler, of Vienna, were of every variety. Novelties in walking-sticks were displayed by J. Nagl and Matich, of Vienna; and a number of large show-cases were devoted to pipes of meerschauum and amber, tobacco-boxes, and other smoking materials. The collection of Schönberger Bros., of Vienna, contained some elegant designs. Amongst the fancy articles A. Klein's exhibit took first rank.

The art of paper-making was largely represented. Sporline and Zimmernann sent tapestry wall decorations; whilst the Joint Stock Co. of the I.R. Privileged Paper Manufactory of Schloglmühl; Eichmann and Co., of Arnau; M. Kink and Co., of Vienna; C. and W. Weiss, of Prague; and the Neusiedl Share Co., of Vienna, and several others, sent shows of the best

Austrian paper. F. Pentl's Sons, of Graz, had a beautifully-arranged case of fancy papers and cards. The writing paper and envelopes of Theyer and Hardtmuth were also very tastefully got up. Excellent specimens of book-printing may be mentioned here. Hogarth's Works, as exhibited by the Bruun Chamber of Commerce; Messrs. Artaria and Co.'s lithographic samples; the Statistical Work on the Coalfields and Iron Ores of the World; and a geological map, in chromo-lithography, of the Austro-Hungarian Monarchy.

Musical instruments were numerous in the Austrian court. On the platform at the western end were five grand pianos from the manufactory of Ludwig Bösendorfer, of Vienna. One of these instruments contained a "tuning-post," which was a novel patent invention, whereby the rigidity of the "tension-bars" can be regulated at pleasure. Charles Hofmann had two "diminutive pianos," being miniature grands, in whole iron frame (a recent invention, and said to be the shortest instruments on the Continent). L. Holzl had two excellent pianos in plain walnut cases. Apart from the pianos were orchestral instruments of every kind; and a great variety of toys, amongst the latter being a collection of jew's-larps, ocarinas, and toy-trombones.

The chemicals and surgical instruments come next under notice. F. Wilhelm and Co. had a beautiful show-case of various drugs, with wreaths and bouquets of dried herbs and flowers. One of the walls of the court was lined with cases of perfumery, A. C. Dzedek and Son, perfumers to H. I. Majesty, having a specially good assortment. G. Taussig displayed every kind of imitation fruit and vegetables in soap; besides which were exhibits of rukóczy and other waters, and salis. Cereals were represented by samples of malt, wheat, yeast, and clover seed; chocolate and different sugar articles were sent by L. Fischinger, of Vienna; A. Tschinkel, Sons, of Bohemia; and A. Valerio, of Trieste. M. J. Lipka and Co., of Brunn, sent sugar. There were numerous samples of Hungarian wines, and of spirits and liqueurs, amongst which were maraschino, from Dalmatia, and "Vino Sauto," exhibited by G. Sommadossi, and F. Tommasich, of Capo d'Istria. Sardines, anchovies, and salted sables were also included amongst the alimentary products. Capital exhibits of linen and cotton goods were sent by the firms of G. A. Frohlich's and Son, A. Reiss, E. Berger, and H. Klinger. The latter was an interesting display of canvas and coloured linens, for military, technical, and household purposes. E. Berger had a few handsome tablecloths and tea napkins.

The woollen fabrics were of excellent quality. The Chamber of Commerce and Trade, Brunn, sent splendid goods; whilst F. Liebig, of Reichenberg, Bohemia, who holds an imperial privilege, and does an enormous business, had a tastefully-arranged, creditable exhibit.

The few specimens of laces in the Austrian court were very beautiful. F. Bollarth sent a handsome collar and cuffs in the Louis XIV. style; and J. Stramitzer displayed some exquisite articles, fan-covers, parasol-covers, &c. T. Daubek's and Son had chenille shawls; and M^{me}. Amalia de Brunfaut's glass wool fancy articles were very pretty. Gloves, mother-of-pearl buttons, and hosiery of various kinds were exhibited; D. Schwarzmann and Co. being the largest exhibitors of men's clothing. The Vienna Boot and Shoe Co., already a large exporter to the colonies, was represented by a handsome show-case of goods; and A. R. Loewenstein's exhibit consisted of specialties in ladies' boots and shoes, which were highly finished. A. Rueff and Co. sent a collection of sparterie hats and fancy articles. They were made of wood sliced into thin stripes, which can be applied to all the purposes for which straw is used.

The pretty ball chains made of various metals exhibited by J. Bolzani Fils may be mentioned here; as well as H. Potěbrad's gold and silver jewellery. The leather exhibits were very fine. M. Grünfeld's specialties of horse leather were sent by the Brunn Chamber of Commerce and Trade, calf and cow skins by A. Weponer, and glove leather by H. M. Eckstein. Travelling trunks came from K. Schüttenhelm's and Son. Cutlery was represented by five different houses. Tinned and enamelled ironware was displayed by A. Bartelmus and Witte, of Brunn; Haardt and Co., and F. Quereser. A. Rast and Co. had some sewing machines, and there were scythes, sickles, files, wire, and tacks and nails, and fire-proof safes from F. Wertheim and Co., all of the best quality. J. Weiss and Son had a wall exhibit of joiners' and coopers' tools, &c., arranged with the greatest taste. The carriages and other vehicles exhibited by Messrs. Lohner and Co., Schustala and Co., and Johann Weitzer, were both elegant and strongly built.

THE BELGIAN COURT.

Belgium, which possesses an area of 11,000 square miles, with a population of five and a-half millions, has made marvellous strides since 1831, when she commenced her separate existence. In 1878, at the Paris Exhibition, Belgium astonished the world by the grandeur of her show; and out of 1215 exhibits, 992 received prize medals. The proud position she now occupies is mainly due to the frugal habits and industry of her people, although enterprise and natural resources must be considered as well. The principal exhibits in the Belgian court at

the Melbourne Exhibition were — A trophy of wrought-iron and steel, erected by the Société John Cockerill, founded in 1817 by the Englishman whose name it still bears. The works of the John Cockerill Co. cover 220 acres, and the annual salaries of the *employés* amount to half a million sterling. Their exhibit comprised a steel rail 200 ft. long, coiled cold; several sets of figured iron, steel connecting rods and a crank axle for locomotive engines, wheels in wrought-iron, steel axletrees, tyres, springs, chains, embossed and weapon plates, chased boiler bottoms, and all kinds of foundry stock. The Cockerill Co. take the lead of all other manufactories of the world in these branches. Another handsome exhibit in this line was from the Société Anonyme de Marcinelle and Couillet. This firm employs over 6500 hands, their production being valued at a million and a-half sterling per annum. They had, amongst other things, one of the most compact locomotives ever constructed, and of novel design in some respects. This engine was made for a line of 1 ft. 11 in. gauge, and ran upon four wheels placed comparatively close together; consequently possessing the power of traversing very sharp curves, such as would be likely to occur on tramways for mining and other temporary purposes. Photographs of engines, &c., were shown by this firm, as also by the Cockerill Co.

Messrs. Montefiore had an exhibit of wires, and different articles of phosphor-bronze, a new alloy. This material is harder than common bronze; moreover, trials have proved its strength of flexure to be superior, while it resists torsion better than any metal known.

A trophy of nails was exhibited by the Société Anonyme des Corderies et Clouteries de Chatelet, as well as iron rope. A. Fix, of Brussels, and J. Ancion and Co., of Liège, also had nails of every description. Liège is celebrated for its fire-arms. These were displayed in several cases, arranged very attractively. M. Tambour sent cheap revolvers, and J. Ancion and Cie. breech-loading rifles; whilst Messrs Pirlot and Fresart's revolvers showed good workmanship. Several makers exhibited safes of various kinds. Amongst these were E. Allebos and G. Hoorickx. Ortmans et Fils had a prettily-arranged collection of machine-made horse-shoes.

Tremouroux Bros. sent a great assortment of enamelled wrought-iron utensils, at very low prices. Portland cement was exhibited by Josson and Delangle, of Antwerp. H. Puissant, of Court St. Etienne, sent a crucible made of very pure-looking welded iron. An association consisting of 17 firms, known as the Syndicat Liegeois, was represented here by M. Renard. They had a pyramid of rails and railway material, axles, &c., erected at the corner of the court to a height of 20 feet. The show-case of the Société des Acieries d'Angleur contained Bessemer's steel, and fractures of iron and steel. Mining tools, rails, and tyres. Messrs. A. Dawans and Orban sent fencing-wire; they also showed the pliability of their wire by a variety of knots. Messrs. C. Thiriart and Co. exhibited a small portable fire-engine, which appeared useful for farms or places where no pressure of water exists. M. H. Marchot contributed a collection of charcoal and Swedish sheet-iron, varying in thickness. Messrs. Francotte, Pirlot and Cie. exhibited zinc and copper in sheets, and brass boilers beaten out of sheet metal, useful for domestic purposes. Hamal-Mouton contributed single and double-blast portable forges, suitable for army and bush requirements. Messrs. G. T. Jowa sent apparatus for telegraphic posts, and samples of galvanised iron. The Société St. Leonard contented themselves with sending photographs of locomotives, &c. Some of the designs were very elegant. Messrs. R. B. Turner and Co. exhibited skates, horse-clippers, and sewing machines.

Belgium has some very good marble quarries, and the display of marble in the piece, as well as a variety of beautifully-designed mantelpieces, was very interesting. The manufacture of glass is one of the native industries of Belgium. Glass was very well represented at the Melbourne Exhibition. The Agence Générale de Vente de Glaceries showed two immense sheets of plate-glass, one polished, the other silvered, 9 ft. 6 in. high by 4 ft. 5 in. A good show was made of classical and other subjects burned into ground glass by an entirely new process.

Belgium excels in substantial kinds of pottery, but these were poorly represented. Messrs. Maerteus and Welz showed an assortment of Dutch tiles. The manufacture of paper thrives in Belgium. The largest exhibit under this heading was sent by Messrs. Pfeffer and Co., of Ghent, who supply paper-mills with the raw material and then sell the manufactured paper for them. This firm employs 4000 hands. Messrs. de Broux and Co. exhibited printing paper in sizes and rolls for continuous printing, a vegetable parchment, and different coloured stiff and supple papers. L. Biernans had a case of playing cards, and A. and B. Vanderborght sent printing materials and types.

CLOTH MANUFACTURES, ETC.

Every one has heard of Belgian Verviers cloth, Ghent cottons, and Brussels lace. The latter was, however, but poorly represented at Melbourne. Spinning and weaving are staple industries of Belgium. As early as A.D. 1170 Verviers was known as a centre of cloth manufacture; and in 1432, so great was the demand and so large the concourse of foreign buyers, that a cloth market had to be built. Over 800,000 spindles are employed in the manufacture of threads and cotton yarns, and 25,000 are used for jute and hemp, yet the majority of the fabrics are hand-woven. In 1877 Verviers worked up 100,000 bales of wool, turning out

400,000 pieces of cloth, besides exporting 33,000 bales of worsted. Two immense stands, covered on either side with sample lengths, represented this industry. There was an excellent model of a woolpress sent by Madame Snoeck, of Verviers. Messrs. Druwe and Henderickx exhibited every kind of thread for cloth, saddlery, and lace. There was a good show of leather for beltings by J. Rasquin, of Liège, and the Société Anonyme de Tannerie et Maroquinerie Belges had a very tastefully arranged exhibit of leather radiating from a blank centre in all the colours of the rainbow. There were also prepared furs from Zuree and Co., and every variety of rabbit skins.

CHEMICALS.

In 1866 the export of chemicals was valued at £81,000; in 1876 it was over a quarter of a million. Messrs. Solvay and Co., of Couillet, who are the foremost chemical manufacturers in Belgium, made a large display of pure alkali and chemicals, derived direct from carbonates of soda. The first announcement of the discovery of M. Ernest Solvay of manufacturing ammonia soda was made at the Vienna Exhibition, and the demand has become so great that the firm send out 50,000 tons a year of it. Messrs. G. Botelberge and Co., of Ghent, the only manufacturers of ultramarine blue in Belgium, sent a pretty stand of blue in blocks, balls, and powder. This firm make over 800 tons a year of blue.

Messrs. G. G. Verzyl and Cie., of Louvain, had a small case of nitrate of soda, chloride of potassium, saltpetre, sulphate suet of ammonia, and other chemicals. E. van Speybroeck showed coatings for preserving wood, metals, ships' hulls, &c. Candles were also exhibited by the "Manufacture Royale de Bougies d'Anvers" and the "Manufacture Royale des Bougies de la Cour," of Brussels.

FURNITURE.

Belgian furniture was not largely represented. Under a canopy were arranged different articles of furniture; and one or two old pieces of tapestry were also on view there.

Ranged along a wall at the end of the court were splendid specimens of patterns of wood-floorings, an industry peculiar to Belgium. Kitchen and hot-air stoves were exhibited by C. de Laresse, of Liège. Omnazes and Brauburger had some marble timpieces, which were very cheap, owing to the marble being quarried and worked near the same spot. Messrs. Byl, Sons and Co., of Grammont, had an attractive case of match-boxes grotesquely ornamented, the matches themselves being tipped with phosphoric paraffine.

ALIMENTARY PRODUCTS.

Messrs. Vanderschriek Brothers, of Brussels, sent a stand of fruits and syrups. E. Remy and Co. had a splendid case of rice starch, and J. F. de Bontridder showed vermicelli, macaroni, and pure rice starch. There were several exhibits of liqueurs and elixirs, the fermented drinks being mainly Geneva.

EDUCATION.

The school desks shown in the Belgian Court were of different kinds, and were distinguished by some novel features. An interesting exhibit in this line was a plain black globe, marbled with the parallels of latitude and longitude; and as its surface resembled a black-board, maps of the hemispheres, or of the continent, could easily be traced on it in chalk. The Institut Cartographique Militaire de Belgique sent some excellent maps. A ventilating stove was also shown for schools. It was of very light iron, easily taken to pieces, and was warranted not to smoke. Official reports were furnished on educational matters, and some specially interesting information given on the course of instruction of the special schools of arts and manufactures.

In addition to an agricultural college, there are 32 industrial schools, together with 59 training establishments for apprentices; besides the technical school at Mons, and a few others. These schools were stated to have trained since their foundation no fewer than 21,922 artisans.

PIANOS.

Pianos were the only musical instruments sent from Belgium, the principal exhibitors being Campo Brothers, of the Royal Manufactory of Pianos, Brussels. Messrs. Lichtenthal and Co. founded the business in 1827, when they made a specialty of their cross-strung square pianos, which they claim to have invented before the American Steinway. This house took prize medals at the London and Paris Exhibitions. Amongst their exhibits were a cross-strung oblique semi-grand piano, of seven octaves, in walnut case; an elegant cottage piano, and a piccolo piano, of seven octaves, in a plain polished black case, of very low price. B. van Hylte, established in Ghent in 1835, exhibited an attractive-looking cottage piano, of seven octaves; and G. A. Berrens, of Antwerp, had four cottage pianos, of seven octaves, constructed on the Herz principle, the cases of which were nicely ornamented, notwithstanding the cheapness of their price.

FRENCH COURT.

The different French houses were mostly represented by three large firms of commission merchants, Messrs. E. Gay, Lamaille and Co., Messrs. Arles-Dufour and Co., and Messrs. Wédeles and Co. M. Lix was also agent for about two hundred houses, and some chambers of commerce and Government departments sent out exhibits and delegates.

Many of the business houses in France are old establishments, having been handed down from father to son for generations. Such firms have survived the revolution of 1793, the first empire, the Bourbon interlude which followed it, the revolution of 1830, the downfall of the Bourgeois King, the republic of 1848, the *comp d'état*, the second empire, and the commune. The firm of Messrs. Japy Brothers and Co., of Paris, who exhibited clocks and watches, has been in existence 120 years. A few other Parisian houses represented at the Exhibition lay claim to a similar distinction of age. M. Lyonnet, maker of perfumes, established in 1770; Messrs. Arthus Brothers, leather manufacturers, established in 1775; M. Mange, looking-glass manufacturer, established in 1790; and M. Vitry, cutler, established in 1795. Some of the Besançon watchmaking houses represented were founded in 1793 by political exiles from Switzerland. Messrs. Roduwart Brothers, saddlers and harnessmakers, of Paris, took care to inform the public that their house was established in 1797. Messrs. J. M. P. Carrière and Son, tanners and carriers, of Millau, were founded in 1793 by Messrs. Paul Carrière and Son, "and have continued without interruption unto this day." The house of Messrs Arles-Dufour and Co., commission merchants, of Paris, was established in Lyons in 1805, under the title of Dufour Brothers and Co., and has remained ever since in the family.

The front of the principal French Court down the central avenue was decorated with the French colours. Higher up were exhibited shields bearing the names and coats-of-arms of the chief cities of France. Of course, the crown displayed on the shields of the republic is mural.

EXHIBITS OF THE MINISTRY OF PUBLIC INSTRUCTION.

The collection of exhibits from the Departments of Public Instruction and the Municipality of Paris were under the care of M. de Montmahou, Inspector-General of Schools in the department. It included a large number of books and other appliances used in the State-schools of all classes; and statistics and other information relating to those institutions. The Metropolitan Municipality sent views of Paris, including some of old streets which have been demolished in recent times to effect improvements. There were also books containing information about Paris, and views of the Hôtel de Ville, which was burned by the Communists in 1871. The Minister of the Interior contributed records and plans of charitable institutions. There were also reports from the General Administration, from the Departmental Administration, from the Communal Administration, and the Penitentiary Administration. M. Journet, engineer of roads and bridges, was in charge of exhibits from the Public Works Department, comprising models and sections of bridges and aqueducts, plans of harbours, &c.

EDUCATION, APPARATUS AND PROCESSES OF THE LIBERAL ARTS.

Class 6 and 7 included several methods for reading music and learning the piano. E. Fenillet sent a new method for teaching languages. Under the class of printing, books, &c., were many plates, scientific works, atlases, and dictionaries. There were also periodicals and different lithographic and chromo-lithographic specimens. The stationery, &c., included every variety of inks and colours, with paper of every description. A. Dubourget had a stand of elegant inkstands, and every kind of writing-table requisite in wood and bronzes; and Engel and Sons sent bindings of all descriptions.

Under the heading of "General Application of the Arts of Drawing and Modelling" were specimens of painting on watches, sent by Robert and Co.; models for drawing and painting by Rocher, Prost and Co.; N. Neill sent specimens of steel engraving, note paper with engraved crest, &c. J. Andouin had photographic apparatus; and P. Petit exhibited a linograph, in colours, for which he had received a prize. He also had a good carbon photograph and different modes of photographic colouring on wood and on "toile."

MUSICAL INSTRUMENTS.

Immediately adjoining the display of silversmiths' work were exhibits of some of the best-known French manufacturers of pianos. There were twenty-one firms represented, including celebrated manufactures like Erard, Pleyel, Herz, Bord, and Aucher Frères. On the Erard stand was a concert extra-grand pianoforte, of eight octaves, and two grand obliques of seven and a-quarter octaves. A seven octave oblique piano was in the Louis XIV. style, richly inlaid, with marble columns and bronze ornaments. The Bord and Ancher Frères pianos were, for the most part, in upright walnut cases. Debain and Co., Alexandre Père et Fils, M. Estève, and Gavioi and Co. were exhibitors of organs and harmoniums. Various kinds of bronze, wood, and stringed musical instruments, together with fittings and accessories for makers, were dis-

played by Lecomte and Co. Messrs. Henri Canut, Mariz-Iser and Co., successors of M. Philippe Henri Herz, had a fine collection of pianos. The firm was established in Paris in 1863 by M. Herz. Amongst the exhibits sent to Melbourne were two concert grands. There was a unique grand piano of slightly smaller dimensions, but of the same compass as the former. There were two instruments differing from any of the others in the shape of the fall which closes in the manual. Their compass is eighty-eight notes, one-fourth of which are strung oblique.

Under the medical class of exhibits were bottles for infants and surgical instruments from H. Vergne and A. Vitry. Under the mathematical and philosophical instruments class there were four exhibitors of spectacles and various glasses and several collections of optical instruments. A. Lemaire sent opera and magnifying glasses. There was a large collection of maps, sent by the "Dépôt de la Guerre," at Paris, and A. O. Macarthy, of Algiers.

"ARTICLES DE PARIS."

Of these there was a very varied display at the Exhibition. First, two cases of dog collars, one of which, a pretty little harness with bells, was shown off on a stuffed greyhound, which took the first prize. They were of all kinds; some large and handsome enough for a lady's belt. Lochet, sen., and Debertrand were the exhibitors of these articles. D. J. B. Bernadac showed ornaments, such as combs, belts, bracelets, and chains, made of the material known as celluloid, a pink polished substance somewhat resembling coral. Wedeles and Co. also had a case containing celluloid ornaments chiefly. M. Gauchot sent brushes and toilet ware of every description. M. Bocquillon's case of nick-nacks was full of original pretty things, most of them being silvered or gilt. G. Amson and Sons, of Paris, had a display of leather-work articles, such as purses, card cases, pocket-books, and travelling bags. M. Grunbaum took the first prize for his assortment of velvet jewel cases, cork glove boxes, and others covered with snake skin. A large show-case stood in the centre of one compartment of the French Court, containing a selection belonging to Arlès-Dufour and Co., to which was awarded the first prize. F. Baptesse had an assortment of buttons and pearls manufactured from porcelain. Dunelloroy sent a variety of fans, mostly painted, and having elaborate mother-of-pearl and gilt mountings. Amongst other fan exhibits, Duissot and Son had graceful, lightly painted ones, with mother-of-pearl handles. Another was made of cock's feathers, beautifully arranged; but the palm was carried off by E. Kees. M. Kees had one fan especially painted for the Melbourne Exhibition, upon which the different places *en route* from Paris to Melbourne were illustrated.

E. Brochard sent handsome dressing-cases and work-boxes of leather. His exhibit was awarded first prize. W. Krebs had a case of meerscham pipes, cigar and cigarette holders, with amber mouthpieces. E. Prunier's mother-of-pearl pictures were very effective, the different shades and colours being skilfully used. Arlès-Dufour and Co. exhibited elegantly trimmed and lined basketware. Barbier Son, from Paris, had a large case of balls and billiard cues, knife handles, paper knives, chessmen, and goblets of different sizes. Boubems was the exhibitor of mechanical singing birds, amongst which, one which was perched on a branch in a little landscape under a clock, sang to perfection. Others in cages also had sweet notes; whilst two were prettily set in the midst of the plants of a jardinière. W. Walcker sent inventions of his own, consisting of light tents, portable chairs, and other travelling apparatus.

A. Gossard's enamels were good imitations of the old Limoges. There were tiny bonbonnières, and the whole was handsomely mounted in brass. Soyser's case was awarded first prize, and contained enamels of every description. A. Foruet showed enamelling on bracelets, necklaces, &c.; a silver gilt and enamelled bonbonnière. Millet had choice photograph frames and other articles in perforated and *repoussé* work. There were good chromes and oleographs in this court, and a large collection of cheap oil paintings. The *Monde Illustré* also sent specimens of their illustrations. Some photographs on glass and mica were interesting reproductions of Cot's "Spring," Claude's "Princes' Gate," Hamon's "Morning," Gérôme's "Phryne," &c. Caillault and Sevasser had a prettily-arranged case of cracker holders, bonbon boxes, and other confectioners' ornaments. A. Lejeune had a case of indiarubber tobacco-pouches and balls, &c. M. Huet exhibited polished steel, made at the Coze manufactory, where 250 workmen are employed. The machinery is worked by double power, steam and hydraulic.

CHEAP AND FANCY FURNITURE.

There was only one suite of drawingroom furniture, exhibited by Schmitt and Piolet. Garceau had cast-iron chairs and tables. Damon, Namur and Co.'s exhibits of hangings and coverings for furniture were very artistic.

CRYSTAL, GLASS, AND STAINED GLASS.

The "Société des Glaces de St. Gobain" sent several mirrors, the glass, as well as the gilding and carving of the frames, being of first quality. One of these was the largest mirror

ever exhibited in Melbourne. The Paris "Society of Tempered Glass and Crystal" had some exhibits of "unbreakable" glass, the process for which was discovered by M. de la Bastie, after many experiments. Landier and Houdaille sent a great variety of the Sèvres crystal, amongst which was a crystal basket, flower vases, and other decorated fancy glassware. Lissaute and Cosson exhibited coloured and ornamented ware for vases, lamps, and nick-nacks. Bernard occupied a table with blown glass shades, which, though simple in appearance, require great skill in blowing, as well as purity of the glass. S. Brot exhibited a variety of tripartite mirrors, some which were of a Japanese pattern.

POTTERY.

Foremost under this head must be mentioned the collective exhibits of the manufactures of porcelain sent by the Limoges Chamber of Commerce, under the charge of M. Prease. Plain white porcelain is greatly appreciated in France, and one dinner service was expressly made for the Melbourne Exhibition of pure white hard-baked china, all cut out by hand, and was sold for two hundred guineas. The "Ecoles Municipales des Beaux Arts Appliqués à l'Industrie de la Ville de la Limoges" displayed enamels, cups, dishes, &c. M. Mounier, of Foëcy, had a variety of fire-proof porcelain. Birgkann, Paris, had both Sèvres and imitation Sèvres china, consisting of brackets, stands, and vases. D. Bouscard's porcelain flowers were greatly admired. Huart Brothers exhibited enamel ware and crackled china, and M. Houry had a stand of artistic pottery.

CARPETS, TAPESTRY, AND OTHER STUFFS FOR FURNITURE.

The premier exhibitor of Aubusson tapestry was the firm of Braquenie and Co. They sent some picturesque landscapes in tapestry for curtains, as well as carpets and wall tapestry of good designs, and pictorial scenes of every kind. Messrs. Saurel Bros., of Nismes, showed a good sample of tapestry, worked by the Jacquard loom. It is a piece à la Gobelins, representing the entry of Joan of Arc and Charles VII. into Rheims in 1489. Their rich silks de la Lampeze are composed of silk and wool, with a slight mixture of cotton; they were imitations of the embroidered productions of Persia and India. The flower patterns of J. Dupont and Herve were brilliant. In Messrs. Duplan and Hamot's collection there were large carpets, one a beautiful country scene with water, trees, and deer, &c. Sallandrouze Bros. had Aubusson seamless carpets.

L. Berchoud exhibited Belleville tapestry and Velour-Savonnerie fabrics, the latter consisting of the incorporation on any kind of texture of ornaments in velvet. M. Tresca had samples of furniture coverings made with the Jacquard loom, mostly in imitation of antique and Turkish fabrics. There was a collection of furniture tapestry from Messrs. Vannoutryve and Co., of Roubaix. L. and A. Emery had a large and attractive show-case, comprising two samples of tapestry, one with a ground of old gold.

CUTLERY.

There were only two exhibitors under this heading—D. Batisse, of Thiers, and Piant, from Paris.

PAPERHANGINGS.

M. Follet showed panels, in all of which ribbons were plaited in the frame under beading. The wall-papers from Messrs. Gillou and Sons were handsome, one having a basket of flowers as a centre-piece. Leroy and Sons print all their paperhangings by machinery. The patterns exhibited showed harmony of colouring.

GOLDSMITHS' AND SILVERSMITHS' WORK.

There were four firms at the Melbourne Exhibition, all of which showed the beauty and excellence of French silversmiths' work.

The Alfenide Société des Couverts had a show-case of the larger kind of plated goods. Boulenger and Borgest exhibited plated ware and Algerian goldsmiths' work; the former was awarded first prize. The firm of Christoffe and Co. had the largest and most generally attractive show-case. Before 1842, this firm had earned a great reputation for their solid silver goods; but when electro-plating was introduced they turned their attention to that branch of the trade, and, having discovered the nickel alloy, they now occupy the leading position in the world as manufacturers of electro-plated ware. The exhibit contained specimens of the nickel ore, wires of pure melted nickel, samples of goods before being plated, twenty-five different patterns of table knives and spoons, and every kind of coffee and tea service. One liqueur set was ornamented with mestaria and iris on burnished silver and cups. The "Trésor d'Hildesheim" was bought by the trustees of the Public Library, and comprised fifteen pieces—copies of ancient Roman treasure. 2000 years old, the originals of which are in Berlin. One of these was a large copper vase, gilded. They were all richly carved.

BRONZES AND VARIOUS ART CASTINGS.

A collection of cast-iron statuettes and vases, so treated as perfectly to resemble bronze, were placed between the Nicholson-street gate and the eastern portico of the main building. The fountain which stood in the centre came from the workshops of M. Durenne, and a group nearer the gates, consisting of a huntsman and two dogs, was exhibited by the Val d'Osne Company. The prices of these ornaments were very low. Messrs. Blot and Drouard, of Paris, sent a collection of imitation bronzes in zinc, for the interior decoration of houses. One was a pair of seagulls with extended wings, beautifully chiselled, and poised on a vane. Zinc has become of universal use in making casts of statues, &c., as it is far cheaper than bronze. The zincs d'art can now be made to imitate bronze, gold, silver, and platinum. A collective exhibit of Paris manufacturers of works of art in zinc were also sent out by M. Ranvier, and contained amongst other things imitation terra-cotta and china ware. J. Rolez, Robin Brothers, Hubault and Breuillard, Avoiron and Clement, and H. Barbedienne also sent interesting exhibits of the zincs d'art.

CLOCKS AND WATCHES.

There were over fifty different firms representing that important branch of French industry. The earliest clock of which there is a complete description was made in France in 1379. At the present time France exports yearly from 25,000 to 30,000 clocks, many of which are sent to England. Messrs. E. Gay, Lannalle and Co. sent the most important exhibit in this line. They acted as agents for the majority of the French exhibitors. Their own collection consisted mostly of black marble clocks. The interior works are, as a rule, supplied to the trade by Messrs. Japy and Co., a very old French firm, who also sent some cheap watches of their own manufacture, at prices ranging from 7s. 6d. Cheap clocks were likewise sent from manufacturers in the village of St. Nicholas. Amongst these were alarm clocks, of which the price was only 7s. Quinet and Richard, of Paris, sent an assortment of carriage clocks; and Diette, Son and Hour cheap carriage, and fancy and novel clocks. Messrs. Redier and Co. sent samples of twin *jumelle* clocks, comprising a clock on one side balanced by a barometer on the other. There were also pocket barometers, stop watches, pocket compasses with a weathercock attached, pocket sun-dials, and various instruments invented by Mr. Redier. Mr. Paul Brocot, who manufactures specially for the English and American markets, sent some complicated clocks, giving the time of day, the mean time at noon, the day of the week, the month, the year, and the moon's quarters, and making allowance for the additional day in February in leap years. The watch and clock manufacturers of Besançon had several representatives at the Melbourne Exhibition. They turn out annually about 1,500,000 unfinished watch works, and 500,000 clock works.

APPARATUS FOR HEATING AND LIGHTING.

There were only three exhibitors under this heading—Delafollie, Bastide, Castoul and Co., who sent gaslights, lustres, and lamps; C. Martin, who exhibited gas kitchen stoves and calorifers, and Viellard and Co., who had various heating apparatus for gas.

PERFUMERY.

The Maison Lyonnet sent different soaps and perfumes for the toilet. M^{me}. Carcano had perfumed satchets. One case was filled with Caudes and Co.'s Lait Antéphilique. Maison Raynaud, Cottance, and Guerlain, of Paris, sent different perfumes; whilst Viard had Eau-de-Ninon and V. Viard toilet vinegar.

WHITE FABRICS.

Messrs. Meunier and Co., one of the largest Maisons de Blanc in Paris, sent three curtains to the Exhibition, of which two were in imitation of old Venetian patterns in hand-made lace, and the third was in embroidered tulle, machine made. They also had damasked table linen, including a tablecloth 16 ft. x 10 ft., with a light green ground. Messrs. Magnier, Brunet, Duplay and Co. had a show of bed and table linen; and C. Bahey exhibited imitations of guipure lace curtains. H. Cazin sent a great variety of imitation laces, from Alençon to the old Venetian point. Sarazin, Montford and Co. were also exhibitors of imitation laces. E. and E. Dieutegard had three show-cases of tasteful passementerie, cords and tassels, and fringes.

Troyes is now the head-quarters in France for hosiery, but very few exhibits were sent from there. The most noticeable was from P. Raguet and Co. The L.V. brand of French cottons and threads was shown by Cartier-Bresson and L. Flamant. Messrs. Chardin and Co. had a pyramid of sewing silks, of all colours. A show-case of fancy trimmings, sent by L. Langlors, was well arranged. L. Pascal, Sons and Bros. had a case of woven elastics for boots and garters.

Loncle and Lamoitier sent shawls and opera cloaks, and E. Brochet had a case containing gauze and all sorts of fancy articles for millinery. Shapes and trimmings for hats and bonnets

were shown by Agnellet Bros.; and a collection of felt and ladies' hats, of all descriptions, belonged to B. Herzberg and Co.

WOOLLEN GOODS.

France had a very good display in the woollen department; and it was the more interesting to Australians from the fact that most of the goods were made of Australian wool. In 1879 France took more than a third of the whole quantity of wool exported from the Australian colonies. The largest exhibitor in Melbourne was the Chamber of Commerce of Rheims, which is now the chief seat of the woollen manufacture in France, more especially of the heavier kind used for men's clothing. The finer kinds of woollen fabrics, the merinos and cashmeres for ladies' dresses, are principally manufactured at Roubaix. The Chamber of Commerce of Rheims consumes no less than six millions and a-half pounds of wool annually, more than a third of which is grown in Australia. The class of woollens exhibited by the Rheims Chamber of Commerce consisted chiefly of materials for ladies' dresses. There were over two hundred samples, dazzling and beautiful in the artistic arrangement of their innumerable tints of colour. They also had a show-case containing soft fabrics for ladies' cloaks and mantles, and another containing samples of cloths for gentlemen's clothing. A number of private firms were well represented, such as Messrs. Stavaux, Bonnaire and Son, the Sons of T. Legrand, and H. Sieber, Seydoux and Co. Pinon and Guérin exhibited a variety of tweeds and coatings, of a quiet, subdued style and colour, suitable for Australian wear.

But the choicest collection of tweeds and superfine cloths was that sent by the Chamber of Commerce of Elbeuf, which was contained in two large show-cases. Nothing could surpass the delicacy and brilliancy and harmonious blending of colours of these very choice specimens. Some splendid grey mixtures for coats and paletôts, as well as samples of superfine broadcloths and stout doeskins, naps, and petershams, were also shown.

SILK.

Silk is the great staple industry of France, the value of her manufactures being estimated at one thousand million francs annually. Lyons is the chief centre of the industry, and there silken fabrics are yearly made valued at four hundred millions of francs, the greater portion of which are bought for the English market. That the French rely on the trade with England may be inferred from the English language being made an obligatory study under the course of instruction given by the Chamber of Commerce. Messrs. Arlès-Dufour and Co., one of the oldest firms in Lyons, had a collection including silkworms' eggs, cocoons, and samples of the different processes before the silk is ready for weaving. Almost all the large firms have one or more artists constantly engaged in creating new designs. There was a collective exhibit of the Chamber of Commerce, sent by E. Charbin, comprising some plain velvets, poplins, and fancy silks. Amongst the latter was an ivory silk, brocaded with palm leaves. It was unique and elegant. Messrs. L. and A. Emery had one of the most attractive show-cases of silks. It included two beautiful samples of tapestry, one of which had a rich old-gold grounding. They also had furniture covers and curtains. Messrs. Bonnet and Co. showed some specialties in black silks and satins, known as *cachemire de soie*. Messrs. L. Pernezel and Co., one of the largest firms in Lyons, principally make cheap silks, and amongst their exhibits were silks for umbrellas, brocatelles, pompadour silks, coloured satins, and also raw silk. Messrs. Broset-Heckel and Co. exhibited different satins, in all the newest shades of colour. M. Ringard Vanel sent silks for church vestments, very beautifully designed. Mr. A. Baboin's collection of tulles was very pretty; and Messrs. Ogier, Noyer and Co. sent printed silks, including a few well-designed pictures. Messrs. A. Guinet and Co. exhibited a novelty called marcelline, being a new waterproof cloth used for cloaks and coats, about four ounces each, and could be carried in an ordinary coat pocket. Messrs. Guinet also had silks embossed with velvet, and *cachemire de France* of different qualities, manufactured expressly for the Australian market.

CLOTHING, FLOWERS, ETC.

There were many exhibits of boots and shoes in the French Court. Agnellet Bros. had an assortment of hats and trimmings; and Revillon Bros. exhibited furs and carriage rugs, fur-trimmed seal-skin mantles, and circulars in cashmere. The manufacture of flowers and feathers is essentially a French industry. A union of thirty firms belonging to the *Chambre Syndicale des fleurs, plumes et modes de Paris*, sent a collection. There was a cushion made entirely of flowers, such as lilacs, roses, lilies of the valley, maiden-hair, and forget-me-nots. There were also wreaths of violets, and a large bouquet of roses, many of them seeming to be about to wither. This imitation of decay is one of the latest fancies of the Parisians. There was a good display of feathers, made up in a great variety of styles. Dupont, Delafosse and Co. had a large exhibit of flowers for house decoration. There were sprays of laburnums, westeria, and lilacs; bunches of cherry-blossoms and cherries, wallflowers, and lilies of the valley. One basket was full of lilacs and lilies of the valley. M. Delivré showed, amongst other things, a large bouquet of roses, in imitation of decay.

JEWELLERY.

There was a good deal of fancy jewellery in the French Court, most of it being imitation gold and precious stones. Pinsard-Martin had some pretty chains, bracelets, photo. stands, and mourning jewellery. L. Nérand exhibited handsome nickel chatelaines, and Moulinet Souchet sent enamelled jewellery. Some gold ornaments were shown by Arlès-Dufour and Cie. L. and H. Ruteau Bros. had imitation pearl jewellery, amongst which were some handsome single large pearls. E. Thomas had nicely enamelled lockets, oxydised belt clasps, and every design possible for breast-pins.

TOYS.

The exhibit of French toys was interesting and complete. There were swimming and floating dolls from E. Martin. G. Vichy had an exhibit of mechanical musical toys, which were very cleverly made. Amongst others was a young lady in ball costume, about a foot in height. Some music was first of all set going inside her, and then the eyes moved, the figure bowed and turned about, using an eye-glass with one hand and fanning herself with the other. Bru, jun., had a charming collection of dolls, with perfect baby faces and beautiful heads of hair.

RAW AND MANUFACTURED PRODUCTS.

The whole of a large section was taken up by exhibits of chemicals and pharmaceutical products, including a large number of patent medicines. Under the care of the *Chambre Syndicale des Fabricants de Produits Pharmaceutiques* about fifteen of the most important Parisian manufacturers have prepared special exhibits. There were one or two large cases containing handsome leather exhibits. Nine different houses sent exhibits of calf-kids. French calf was well represented.

MACHINERY, ETC.

There were some confectionery machines in constant work, and counters where French bonbons could be purchased as they were turned out.

J. F. Durenne exhibited a portable engine, having an upright boiler, with a conical funnel. It was supported on three wrought-iron wheels. The cylinder was vertical, and placed near the ground, the crank shaft being about level with the top of the boiler. A second shaft, with pulleys, was attached to the frame near the ground. Boivin and Co. showed electric bells, fire alarms, and rifle targets. The electric alarm consisted of a thermometer containing a platinum wire immersed in mercury. In case of fire, the mercury rises, and forces the platinum wire against an electro-magnet, which causes a bell fixed at the other end of the apparatus to ring continuously. F. X. Parfouy had a collection of fancy and plain marble mantelpieces, &c. Amongst his exhibits were some beautifully veined and carved marbles, including a mantelpiece valued at £180. The exhibit amongst the machinery that created the greatest interest was a loom for weaving silk. There were several exhibitors of carriages. Amongst others were a patent brougham sent by Desouches, of Paris, and a phaeton from C. Jeanteand, of Paris.

ALIMENTARY PRODUCTS.

Marquet Bros., of Morbihan, sent a case of sardines in oil. Lombart (late Mennier), C. Choquant, and A. Biardot had show-cases of chocolate, and Quinette and Co. sent preserved and crystallised fruits. There were numerous exhibitors of wines and spirits.

MINING AND METALLURGY.

Gallais, of Paris, had a very handsome exhibit of gilded and nickelled nails for furniture, arranged in an ornamental pattern.

Nickel, with its alloys, was shown by Christoffe and Co., and the Société Anonyme "Le Nickel," of Paris, sent nickel crystals and pure nickel ores.

ALGERIA.

Education in Algeria was represented in the French Court by modellings in clay from a State primary school. These models, done by Algerian boys, were mainly adaptations of the vine leaf, very creditably done. Algeria also showed samples of wheat, maize, vermicelli, and millet. Preserved dates were sent from the Agricultural Society of Médéah. The other Algerian exhibits were wines and liquors.

NEW CALEDONIA.

New Caledonia was very poorly represented at the Melbourne Exhibition. Though rich in nickel, gold, antimony, cobalt, iron, and coal, there were very few specimens beyond nickel, antimony, and copper ores. Two exhibits of shells were sent, and one of coffee. There were also many interesting photographic views of the island, and several maps and books.

THE GERMAN COURT.

The arrangement of the German Court at the Melbourne Exhibition was very complete in its unity of design, and reflected the greatest credit on Professor Reuleaux, the executive commissioner from Berlin. Germany was allotted 60,000 square feet of space, and five different sections of the building were reserved for her exhibits, independently of the fine arts gallery. Immediately on entering the building, the eye was attracted to the right of the eastern nave by a splendid exhibit of china, on stands rising to a height of 15 feet. Meissen china has rarely been exhibited before, and it is probably due to the admiration excited by the collection sent to the Belgium Exhibition that the one at Melbourne was favoured by so good a show. The general design in the ornamentation of the Meissen ware was the flower, geometrical, and scroll pattern; the tints employed being pale blue, rose colour, and gold.

There were specimens of manufacture from the earliest date. The "onion" pattern, that has been used for plates for more than one hundred years, still finds favour. Three varieties were shown. The first was a dark blue on a white ground, leaves, fruit, and seed being introduced: the second had the veins of the leaves gilt; and the third was in red and gold. A set of dessert plates was exhibited like one used by the Emperor; the centres had beautifully finished paintings, copies of original works of art. Round the pictures the groundwork was of the rich blue, which is one of the triumphs of Meissen; the borders were perforated, and decorated in squares of forget-me-nots and gold stars alternately. Another set had flowers painted on a deep grey tint. Others had the paintings in sepia, after Angelica Kauffman. Again, another had paintings after different celebrated pictures, such as Gerard Dow's "Hawk" and "Hennit," and "A Lady with a Parrot," after Netscher, one or two of which were especially beautiful. The two large Meissen vases in the fine arts gallery were mentioned in that particular section. There were others, such as the following series of four, illustrating the elements—"Fire," with Vulcan directing the flames; "Water," with inhabitants of the sea; "Earth," with flowers, dogs, &c.; and "Air," with birds flying upon clouds of blue. Some rococo models, with flowers and birds standing out in high relief, every petal perfectly natural in its folds and grace, were very beautiful. There was a stand of beautifully painted Dresden china, from Helene Wolfsohn. Amongst these exhibits were vases, with flowers, or admirable copies of Hogarth's pictures. Cups à la Watteau, lovely *tête-à-tête* tea services, and dessert plates were shown. Dinner sets and jewel caskets were amongst the exhibits. Messrs. Villeroy and Boch, of Mettlach, had a splendid show of porcelain, wedgwood, and terra-cotta ware, which was set off by marble statuettes of the Emperor of Germany and the Crown Prince. They are one of the largest firms of the kind in Germany. Merkelbach and Wiek showed one hundred fancy ornamented Wedgwood vessels. Uechtritz and Faist had a large show-stand of majolica ware, including dinner sets, chess stands, and handsome jugs and fancy articles. Lorenz Hutschenreuther, of Bavaria, made a capital display of hard china-ware; the dinner, breakfast, and tea sets were many of them exquisite in design. M. Hutschenreuther exhibited a large tureen, decorated in fine Grecian style—a maroon ground, with green and pink ornamentation, richly gilded. Tielsch and Co., of Altwasser, showed some beautiful porcelain ware. One of the dinner services consisted of one hundred and eighty pieces, and had little bouquets of field flowers painted on a rich lilac ground, with painted black and gold ornaments. The same firm had a good display of toilet ware. Messrs. Triebner, Ens and Eckert had a collection of china fancy ornaments and religious figures, vases, and mirror frames in porcelain. Fischer, Naumann and Co. had a fine display of terralith and terra-cotta figures and fancy articles. L. and P. Kieffer Bros. had some porous water-coolers; and H. Schomburg and Sons had a variety of porcelain vessels for chemical purposes. The Stolberg Glass Works furnished two large stands of table glass. Amongst the exhibit were engraved glasses, with polished facets and lustrous surface. C. H. Kraemer, of Bielefeld, sent choicely designed plain and coloured window glasses, muslin glasses, and artificial roses.

Immediately to the back of the glassware was a section devoted to mathematical and optical instruments. The highest proficiency was shown in the manufacture of these articles. A group of show-cases contained a collective exhibit of mathematical and philosophical instruments, made by Berlin mechanics. These embraced prisms, sextants, theodolites, graphometers, compasses, &c. The finish of these articles was superb. Of spectacles, notwithstanding their general use in Germany, the display was not large. P. Dörfel, Picht Brothers and Co., and S. Elster were the principal exhibitors. F. W. Breithaupt and Son, of Kassel, exhibited a universal instrument for astronomical observations and measuring angles for principal triangulations. The circles had a diameter of thirty centimetres, and could be read by means of two micrometer microscopes, which read to seconds. The construction was arranged to give a perfect equilibrium to the instrument. There were eight individual exhibitors from Munich, Kassel, Magdeburg, Kempten, and Chemnitz. They showed mathematical instruments and models for technical instruction, tachometers, scioptrons, polar planimeter, and ellipsograph.

Adjoining this was the billiard saloon, containing three tables from J. Neuhusen's billiard factory. The first was a full-sized reversible table, having pockets on one side and a plain

board for the cannon game on the other. Another one had pockets which could be closed at will, so that the cannon game could be played on it if desired. It could also be used as a dining-table, being capable of extension for that purpose to three times its ordinary length. L. Schultze, of Berlin, showed a large stationary table with pockets, rests for cues, cues, and marking-board. The billiard-room led into a space set apart for mechanical organs and musical instruments, beside a handsome display of bronze ware. There were accordions, concertinas, violins, guitars, zithers, mechanical pianos, barrel organs, and orchestrons. The last-named are principally at Vöhrenback, in the Schwarzwald, where whole families have devoted their ingenuity for generations to the perfecting of their capacity for musical expression. The firm of Imhof and Mukle, famous exhibitors in that line, sent a large orchestron and a mechanical piano. The orchestron is a fine instrument, showing behind glass sides and doors a glittering array of organ-pipes, both wood and metal, drums, cymbals, triangles, &c.; the barrel, with its pegs and stops of different lengths, by whose revolutions the valves of the organ-pipes are acted on; and the train of well polished clock-work machinery, which works the bellows and gives motion to the whole. The barrels may be easily changed; the price of the instrument depending on the number of tunes required. The tones produced are bright and powerful, and musical passages of great brilliancy may be faithfully reproduced. F. X. Heine also exhibited an orchestron. Wolff Brothers, of Kreuznach, had a case containing the normal quartette of string instruments—six violins, two zithers, ten bows, and one guitar. J. Haslwanter, of Munich, and G. Tiefenbrunner each sent three zithers. A. Terletzki sent two pairs of harmonia altar bells, used in Roman Catholic services. E. Hess, and Strathmann and Joachim, had accordions and concertinas in this section.

The bronzes and art castings occupied a prominent position amongst the musical instruments before mentioned, and several exhibits were arranged upstairs in the Imperial tent. Messrs. Koch and Bein, of Berlin, showed two bronze figures, nearly life-size, and full of spirit. They also had vases, figures, enamelled iron shields, arms, &c. There was a bronze figure of the German Emperor capitally executed, and several groups. A. Meves showed iron and zinc articles, statuettes, inkstands, and a set of chessmen, one side silver and the other gilt. A. Waagen and Co. exhibited elegant candlesticks, lamps and inkstands, in galvanised-bronze work. A. Lauter, of Carlsruhe, sent metal goods, silvered, etched, gilded; and zinc, artistically made into photograph, mirror, and picture frames.

The company for the manufacture of bronze and cast-zinc goods in Berlin sent an attractive display of different fancy articles in zinc, iron, brass, and bronze.

Beyond the room mentioned above was a large one entirely devoted to clocks, for which the Germans were always famous. In the centre was a large day clock, striking the hours and quarters, by F. A. Beyes, of Hildesheim. The works were visible through the glass case. Hettich Gordian, of Furtwangen, exhibited cuckoo and singing-bird clocks. When the hour struck, a little door flew open and a bird emerged and warbled a pretty air. E. Wehrle and Co. showed flute and trumpet clocks. The last of these was very good. When the hour struck, two doors flew open, and a soldier came out and blew a bugle call, and then retired again out of sight. Another clock opened, and a peasant came out, played a few bars on a flute, and then disappeared. G. Becker, of Freiburg, had some alarm clocks and a large thirty-day wall clock. A. Purpe, of Dresden, sent an antique time-piece, ornamented with mother-of-pearl enamelling. A. Fehrenbach had calendar regulator watches. There was a great variety of small clocks with metal faces. A. Lange and Sons contributed gold and silver pocket lever watches. Another room communicating with the clock room was given up to perfumery and soaps. J. M. and F. M. Farina, of Cologne, had several pyramids made of flasks of eau-de-Cologne. Junger and Gebhardt, of Berlin, made a good display of essences and scented waters. W. Rieger had a handsome show-case of soaps, scents, &c. M. C. Martin sent eau-de-Cologne and the famed "Carmeliter-Geist," made by the Carmelite monks, and so beneficial in cases of acute pains or spasms. L. Leichner had a good collection of theatrical perfumery, amongst which was the so-called Leichner's fat powder. In this section of the German department at the Melbourne Exhibition were to be found some beautiful wood carvings, from Ober-Ammergau, celebrated for its "Passion Play," and situated in the Bavarian Tyrol.

THE IMPERIAL TENT.

This structure was the most imposing object in the Exhibition, and was erected in the gallery over the portico of the north transept facing the dome. Heyden and Kyllmann, the leading architects of Berlin, furnished the designs, the draperies being designed by Herr Fischer, court decorator, and the ornaments of the pillars by Herr Kastner. The tent, which was about forty feet high, was enclosed by a balustrade, and the floor was thirty feet square, and handsomely carpeted. This tent was subsequently purchased by the Victorian Government, and remains in the Exhibition. The canopy was supported by twelve gonfalons, covered with crimson velvet, surmounted by eagles. The gilded exterior showed at each side a shield, bearing the arms of the four kingdoms of Prussia, Wurtemberg, Saxony, and Bavaria. The whole was surmounted by the Imperial crown, borne on a velvet cushion, sustained by an eagle with outspread wings. There were heavy hangings of orange and pale blue, the

inside of the canopy being light blue. At the back was a large gilt bust of the Emperor. This magnificent pavilion, valued at £2500, was destined for the exhibition of jewellery and plate. Hanging up on the walls of this section were splendid Smyrna and Brussels seamless carpets, made expressly for the Exhibition. Behind the Imperial tent was a fine display of bronzes. S. Elstör, of Berlin, sent some chandeliers, as well as other fine specimens of bronzes, with enamel painting, photo. frames, &c. Count Stolberg Wernigerode's factory was represented by ninety-six cast articles of antique, Roman, Gothic, Moorish, and renaissance styles.

The display of jewellery was most magnificent, and, being valued at £60,000, was well protected by the constant presence of attendants. The Joint Hanau exhibition blazed with brilliants and other precious stones, and the value of this case alone was £15,000. G. A. Korff sent some very handsome and original chains. Geissel and Hartung had a splendid pearl and cameo coronet; also a sapphire and diamond set. Hertel and Son showed beautiful amethysts cut into cameos. A. Voltz-Bier contributed brooches, pendants, lockets, and bracelets, unalloyed with diamonds and emeralds. C. Bissinger and Sons showed a magnificent diamond coronet, and elegant butterfly brooches in pearls, diamonds, sapphires, and rubies. There was a pendant of a spray, with a bird in diamonds upon it; a turquoise necklace, with pendant and earrings; a cross of brilliants, and a bracelet, with a diamond, a ruby, and an emerald of immense size. The Hanau exhibit attracted great attention, as representing some of the finest jewellery in Germany. The Pforzheim exhibit had twenty-eight participants. A. Kiehle showed a splendid cameo set; the cameos were very large. Ros-le and Haussmann had gold chains, P. Suedes exhibited silver ornaments with enamelling, and Bissinger and Co. showed some fine enamelled pendants, with a very large opal ring set in diamonds. Benz Brothers had some beautiful pendants, with birds and butterflies in lapis lazuli. F. Lutz had a collection of rings, with cat's-eyes, black coral, pearl, and turquoise.

H. F. Winkelmann, of Berlin, exhibited some handsome electro-plate ware; amongst other things, a beautiful pair of lamps. The fruit dishes were very elegant, and the ice buckets were beautifully chased.

A. Ritter and Co., of Esslingen, exhibited table sets in German silver, and Henniger and Co. had sets for the table in galvanised, silvered, and gilded metal. Goliassch and Co., of Berlin, had a fine display of aluminide and nickelled goods. The collection included a handsome album, the original of which was made for Prince Charles of Prussia; there were also vases and statuettes. Sy and Wagner, of Berlin, exhibited a pearl necklace, with diamond and sapphire links; a pendant of brilliants, black pearls, and sapphires; a necklace of brilliants, sapphires, and pearls; and a pendant with opals, brilliants, and black pearls. C. Schlesinger showed swans encrusted with brilliants. Wilkens and Danger had lockets, pendants, and bracelets, with diamonds and emeralds. M. H. Wilkens and Sons showed real silver dessert, table, and fish sets, a tea service, candelabra, &c. Czarnikon and Busch had very pretty fancy articles in bronze, zinc, &c., such as photo. frames and épergnes. J. Lichtinger and Co., of Munich, showed tinware, many of the things being beautifully chiselled. C. Kramme, of Berlin, contributed seventeen bronze lamps. From the centre of the Imperial tent hung a magnificent bronze chandelier, having forty-two gas jets in the form of wax candles. H. Meyen and Co., of Berlin, furnished a case with statuettes and presentation articles of plate. Wilkens and Sons had a magnificent plate chest, and Pausch and Pohl sent a beautiful chased tea service, table sets, and knives and forks.

GERMAN MUSIC SALOON.

Turning down the central avenue, and passing the British and French Courts, the visitor came upon a beautifully fitted oval music-room. Along the centre was a stand of plaster casts of ancient statuary. At the western end stood the statue of Polhymnia, the original of which is in Berlin. An estrade ran along the western end, which was reserved for grand pianos, the other pianos and harmoniums being arranged on platforms along the two sides of the saloon. Amongst the grand pianos were two from the factory of Julius Blüthner, of Leipzig. The large concert grand had in its upper register a fourth string tuned in accordance with the "trichord" which was struck by the hammer beneath, but suspended above, and not in contact with the ordinary sounding wires. The effect of this was to give a sympathetic echo of the sounding wires to which it was related, and to increase thereby the singing quality of that part of the register to which it was applied. Another most beautiful instrument came from the same maker—beautiful as a work of art and as a fine musical instrument. F. Schilling, of Stuttgart, had a very good cross-strung, upright piano, which was exhibited with Blüthner's. E. Kaps, the famous maker of Dresden, was represented by an instrument described as a patent grand, in old German style. The peculiarity of this instrument was the "resonator." It consisted principally of a "sound-box" screwed on to the sound-board, and affecting the tones from the first A in the treble clef upwards. This sound-box is fitted between the bridge and the line of the dampers. The strings in this part of the piano were suspended for two-thirds of their length over the sound-box, and underneath the mid-length of the strings was a sound-hole. The sets of strings did not lie free over the sound-box for their whole length, but each length was conducted through a sound-passage made fast to it, which reached from the bridge

to the before-mentioned sound-hole. There were sounding air passages by which the tone acquired a flute-like quality. Rönisch, Schwechten, Schmidt, A. Dassel, and Gerstenberger were each represented by fine instruments. Schiedmayer and Son, of Stuttgart, sent a beautiful *mignon* and a cottage model. Edouard Westermayer, of Berlin, showed two pianos of excellent quality. A new firm, H. Grotzian, had an instrument admirable both in touch and tone. Ibach, of Barmen, showed two pianos of good quality. J. P. Lindner and Son, of Stralsund, showed a cross-strung, triehord, upright piano. The peculiarity of this instrument was its skeleton iron frame, for which many advantages are claimed by the inventors. There were many other exhibitors of good instruments, amongst whom may be mentioned Edouard Seiler, of Liegnitz; Trau Brothers, of Heidelberg; L. Rönihildt, of Weimar; Holling and Spangenberg, of Leitz; L. Neufeld, of Berlin; C. J. Quandt, of Berlin; H. D. Schake, of Hanover; G. and E. Kanhauser, of Stuttgart; W. Biese, of Berlin; T. Gerhardt, of Berlin; and J. G. Irmier, of Leipzig. Exactly behind the German music-room was an exhibit of toys from Sonneberg, sent by thirteen exhibitors. There were great numbers of wax dolls' heads, of every variety of expression. There were playthings of every kind in porcelain, glass, wood, metal, and hardware; and many masks and amusing mechanical toys. On a pedestal, in the centre, was a large figure of Santa Claus himself.

FURNITURE COURTS.

In order to show off the German exhibits of furniture, a number of small apartments were fitted up. Roberts, Kelterborn and Co., of Berlin, are the largest manufacturers in Germany of their particular branch of the furniture trade, and employ over 480 men. They exhibited a dining-room suite richly carved in oak, of Gothic style. The suite comprised a dining table for twenty-four persons, one buffet, and sofa and chairs. The articles were of very superior workmanship. Karl Praechtel, of Berlin, has two large factories, employing upwards of 700 men. He sent a smoking-room suite, richly carved in walnut. The sofa was decorated with majolica plates, showing decorations in ancient style. F. Lund, of Bremen, exhibited a chiffonnière and flower-stand, in ebony.

J. C. Pfaff, of Berlin, contributed dining-room and drawing-room furniture. The dining-room suite was covered in leather, and carved in the style of Charles V. F. Vogts and Co., of Berlin, showed some substantial exhibits. One compartment was occupied with a suite of their solid oak furniture. The firm supplied carpets, paper for ceilings, and all accessories to match. The mirror frames with carved figures were very artistic.

There were several exhibits of bent-wood furniture.

Among the upholsterers' and decorators' work, F. Walter, of Kehl, showed photograph and looking-glass frames, with gold and polished heading, and gilt mouldings. G. W. Voeltzkow, jun., of Berlin, showed metal frames for photographs and mirrors, which were very neat. G. J. Ferrenholtz, of Wesseling, had mouldings and headings for frames, several of which could be cleaned by washing; and J. Döbbelmann had a similar exhibit. F. Radspieler and Co., of Munich, had some very handsome mirrors and sconces, &c. Burger and Heinert, of Zwickau, sent a model of a stucco ceiling piece. B. Harrass, of Böhlen, sent patterns of table-cloths, and ornaments in artistic woods for the decoration of rooms. The Künzig Mosaic Tile Works showed twelve different designs for flooring of courts and public buildings. N. Ehrenhaus, furnishers to the Empress, sent some beautiful silk stuffs for covering furniture.

TEXTILE FABRICS AND CLOTHING.

Some of the staple industries of Germany were very well represented. The Joint Elberfeld Exhibition was a magnificent exhibit. P. E. Bockmühl showed some fine woollen shawls; whilst J. Schmitts and Co. and Haarmann and Haarhaus had on view a variety of beautiful patterns in stuffs for furniture covering. F. W. Wüster and Co. had an exhibit of lasting, whilst A. Frowein and Brothers had a prettily arranged show-case of ribbons and braids. There were many exhibitors of zanzella and of silk and half-silk dress stuffs, and Reimann and Meyer showed some very elegant novelties in embossed silks and fancy woollens. There was also a joint Saxon exhibition of table linen. Some of the damasks had very artistic designs, and were deeply fringed. One very large tablecloth and a dozen napkins were valued at fifteen guineas. K. H. Schiffer had some tablecloths with a grey ground and flower pattern. Beside the linens were the joint Saxon exhibition of woven goods, consisting of mixed, white, and coloured woven goods and glazed linens; and the joint Saxon exhibition of stuffs for men's clothing, consisting of cotton, half-woollen, and linen stuffs. Fishing and drag-nets were sent by the Mechanical Net and Woven Goods Factory, Hzehoe. There was also a joint Saxon exhibition of Orleans. Most of the German exhibits were displayed in handsome show-cases of black and gold, which added greatly to their attractiveness. The woollens made a fine show. There was a joint exhibition of cloths from Berlin. S. B. Rüffer and Son, of Liegnitz, had some very good cloths of different colours, making a handsome and effective display. Greve and Quentin and Greve and Uhl, both of Osterode, had some woollen and half-woollen rugs. P. Reifschneider, of Berlin, showed silk, bed, and travelling rugs. The "Plauen Joint Exhibition" sent 650 loom and hand embroideries, white goods, &c. Albrecht and Bacher had every

variety of ladies' fancy collars, ruffles, and handkerchiefs. E. Stopp and Co., of Ehrenfriedersdorf, showed gold and silver trimmings. The Bielefeld joint exhibition of linens consisted principally of gentlemen's shirts. There was a very pretty collection of collars and cuffs from Wolf and Glaserfeld, of Berlin; and Philippsohn and Leshcziner sent shirts, collars, and cuffs. Elkan Brothers, of Chemnitz, and H. C. Hartel, of Waldenburg, sent assortments of stockings; and the Zella Umbrella Factory had a show of umbrellas.

O. Herz and Co., of Frankfort-on-Maine, and F. Langenickel, of Gotha, exhibited boots and shoes; and A. Oppelt, of Seifhennersdorf, had a truly national collection of wooden shoes. An interesting exhibit of portable weapons, hunting and shooting equipments, were on view from the factories of N. von Dreyse, Sömmerda; C. G. Haenel, of Suhl; and Ganz and Co., of Ratibor.

The work of elementary education was poorly represented in the German Court, but there were models for mathematical, physical, and technical instruction, treatises and plans of study for schools for educating artisans, globes, crystal and plaster models, busts and flat ornaments for schools lent by the Royal Commission of Wurtemberg and the Minister of the Interior for Bavaria. On the walls of the court in the gallery hung diagrams illustrating botany and physiology, while on tables and stands were globes of excellent construction, one of them being admirably executed in relief. In the line of stationery, bookbinding and drawing materials, there were a great number of exhibits. A beautiful show-case of blackwood contained a collective exhibition of stationery from a number of firms. There are in Germany 2230 paper factories, which employ 46,310 persons. Coloured paper is made principally in Aschaffenburg, metallic papers in Munich. Dresden, Offenbach, Berlin, Leipzig, Stuttgart, Augsburg, Furth, and Nuremberg produce papers of excellent quality. The papier-maché manufacture is carried on extensively in Thuringia; but the Forbach factory, which alone produces goods in value equal to 900,000 marks annually, is especially worthy of mention. Bookbinder's and cardboard work is produced in Berlin, Dresden, Nuremberg, and Lehr, of the best kinds. Kübler and Niehammer, of Kriebstein, had a prominent exhibit of six rolls of printing paper, about the size of a small steamer's cylinder. A bust of the Emperor crowned this exhibit. Each roll was one unbroken length of paper. The middle roll, which was the largest, weighed 1493 pounds, and contained 29,167 feet of paper in an unbroken sheet. The Joint Stock Paper Mills, of Bautzen, also sent printing paper in rolls, with rolls of paper for telegraphy, copperplate and other paper.

E. Horsch and Schleicher, Hofsummer Brothers and H. A. Scholler and Sons, had different notepapers in a large show-case. The Weesenstein "Laferme" paper-mill sent cigarette and tissue paper. E. Petersen had an elaborately carved show-case containing handsome bouquet-holders and flower twisted papers. There were dish papers and cosques, holders for the use of brides, for the theatre, balls, and souvenirs. Hockstein and Weinberg, of Berlin, exhibited some beautiful patterns of glazed and cardboard paper, and C. L. Wust, of Frankfort, had a fine display of playing-cards. The almost universally known lead pencils of A. W. Faber made a good show, and inks were sent by E. Beyer, of Chemnitz, and R. Tetzler, of Berlin. Gonnermann Brothers, of Nuremberg, had on view a large collection of painters' brushes. Schwanhauser, of Nuremberg, had a splendid show-case, beautifully carved and decorated, of leads, artists' and pocket pencils. There were four exhibits of photographs, and T. F. Borgfeldt, of Berlin, sent twelve delicately carved cork pictures.

One of the special features of the German Court was the display of fancy leather-work and bookbindings. F. F. Kullrich, of Berlin, had a collection of most beautifully got up albums. These had sprays of flowers painted on them, or embroidery, or embossed work. Münch and Seiffert, of Berlin, sent another collection of charming albums of every kind, out rivaling each other in novel designs and excellence of quality. F. Vité, of Berlin, also showed some splendid leather-work; whilst Foerster had a show-case of plush and velvet albums, in different colours. J. G. A. Peper, of Hamburg, exhibited book-covers and leather bookbinder's work of first-class workmanship; and J. C. König and Ebbhardt, of Hanover, contributed an attractive case of blank and note books.

Amongst the fancy goods were water filters of plastic porous charcoal, from C. Buhring and Co., of Hamburg; different brushes from D. Pruckner, of Munich; and cigar boxes and other fancy goods from M. G. Junge, of Berlin. G. Adler, of Buchholz, in Saxony, contributed pasteboard articles; and F. Ancion and Schnertzel, of Berlin, sent basket-work and osier goods.

Fermented drinks occupied a conspicuous place. There were numerous exhibitors of "Lager Bier," including those of the Schloss-Chemnitz Brewery; the Bohemian Brewery, Berlin, producing German Imperial and Crown beer; the Pfungstadt Light and dark export beer of J. Hildebrand, and others. There were several trophies in the court of various fermented drinks, the largest of which was a huge bottle, about six feet high, of malt bitters, this particular exhibit having been sent by H. Kantorowicz, of Posen, whose factory bears a wide reputation throughout Germany. The wine exhibition embraced samples of the most noted of German wines, including the celebrated Hockheimer. Spirits and cider were well represented, and there was an abundance of liqueurs. J. A. Gilks, of Berlin, had a fine show-case, many of

to the before-mentioned sound-hole. There were sounding air passages by which the tone acquired a flute-like quality. Rönisch, Schwechten, Schmidt, A. Dassel, and Gerstenberger were each represented by fine instruments. Schedlmayer and Son, of Stuttgart, sent a beautiful *mignon* and a cottage model. Edouard Westermayer, of Berlin, showed two pianos of excellent quality. A new firm, H. Götman, had an instrument admirable both in touch and tone. Bach, of Barmen, showed two pianos of good quality. J. P. Lindner and Son, of Stralsund, showed a cross-strung, tri-chord, upright piano. The peculiarity of this instrument was its skeleton iron frame, for which many advantages are claimed by the inventors. There were many other exhibitors of good instruments, amongst whom may be mentioned Edouard Seiler, of Liegnitz; Tann Brothers, of Heidelberg; L. Romhildt, of Wemar; Holling and Spangenberg, of Leitz; L. Neufeld, of Berlin; C. J. Quandt, of Berlin; H. D. Schake, of Hanover; G. and E. Kanhäuser, of Stuttgart; W. Biese, of Berlin; T. Gerhardt, of Berlin; and J. G. Immler, of Leipzig. Exactly behind the German music-room was an exhibit of toys from Sonneberg, sent by thirteen exhibitors. There were great numbers of wax dolls' heads, of every variety of expression. There were playthings of every kind in porcelain, glass, wood, metal, and hardware, and many masks and amusing mechanical toys. On a pedestal, in the centre, was a large figure of Santa Claus himself.

FURNITURE COURTS.

In order to show off the German exhibits of furniture, a number of small apartments were fitted up. Roberts Kellerebin and Co., of Berlin, are the largest manufacturers in Germany of their particular branch of the furniture trade, and employ over 480 men. They exhibited a dining-room suite richly carved in oak, of Gothic style. The suite comprised a dining table for twenty-four persons, one buffet, and sofa and chairs. The articles were of very superior workmanship. Karl Praechtel, of Berlin, has two large factories, employing upwards of 700 men. He sent a smoking-room suite, richly carved in walnut. The sofa was decorated with majolica plates, showing decorations in ancient style. F. Land, of Bremen, exhibited a chiffonnière and flower-stand, in ebony.

J. O. Pfaff, of Berlin, contributed dining-room and drawing-room furniture. The dining-room suite was covered in leather, and carved in the style of Charles V. F. Vogts and Co., of Berlin, showed some substantial exhibits. One compartment was occupied with a suite of their solid oak furniture. The firm supply carpets, paper for ceilings, and all accessories to match. The mirror frames with carved figures were very artistic.

There were several exhibits of bent-wood furniture.

Among the upholsterers' and decorators' work, F. Walter, of Kehl, showed photograph and looking-glass frames, with gold and polished heading, and gilt mouldings. G. W. Voeltzkow, jun., of Berlin, showed metal frames for photographs and mirrors, which were very neat. G. J. Fahrenholz, of Wesseling, had mouldings and headings for frames, several of which could be cleaned by washing, and J. Döbelmann had a similar exhibit. F. Radspieler and Co., of Munich, had some very handsome mirrors and sconces, &c. Burger and Heinort, of Zwickau, sent a model of a stucco ceiling piece. B. Harrass, of Bohlen, sent patterns of tablecloths, and ornaments in artistic woods for the decoration of rooms. The Sinzig Mosaic Tile Works showed twelve different designs for flooring of courts and public buildings. N. Ehrenhaus, furnisher to the Empress, sent some beautiful silk stuffs for covering furniture.

TEXTILE FABRIC AND CLOTHING.

Some of the staple industries of Germany were very well represented. The Joint Elberfeld Exhibition was a magnificent exhibit. P. E. Bockmühl showed some fine woollen shawls; whilst J. Schmits and Co. and Schmitt and Krugmann and Haarhaus had on view a variety of beautiful patterns in stuffs for furniture covering. F. W. Wuster and Co. had an exhibit of lasting, whilst A. Frowein and Brothers had a prettily arranged show-case of ribbons and braids. There were many exhibitors of *zanella* and of silk and half-silk dress stuffs, and Reumann and Meyer showed some very elegant novelties in embossed silks and fancy woollens. There was also a joint Saxon exhibition of table linen. Some of the damasks had very artistic designs, and were deeply fringed. One very large tablecloth and a dozen napkins were valued at fifteen guineas. K. H. Schuffner had some tablecloths with a grey ground and flower pattern. Beside the linens were the joint Saxon exhibition of woven goods, consisting of mixed, white, and coloured woven goods and glazed linens; and the joint Saxon exhibition of stuffs for men's clothing, consisting of cotton, half-woollen, and linen stuffs. Fishing and drag-nets were sent by the Mechanical Net and Woven Goods Factory, Hazelee. There was also a joint Saxon exhibition of Orleans. Most of the German exhibits were displayed in handsome show-cases of black and gold, which added greatly to their attractiveness. The woollens made a fine show. There was a joint exhibition of cloths from Berlin. S. B. Kuffer and Son, of Liegnitz, had some very good cloths of different colours, making a handsome and effective display. Greve and Quentin and Greve and Uhl, both of Osterode, had some woollen and half-woollen rugs. P. Reifschneider, of Berlin, showed silk, bed, and travelling rugs. The "Pauzen Joint Exhibition" sent 650 loom and hand embroideries, white goods, &c. Albrecht and Bacher had every

variety of ladies' fancy collars, ruffles, and handkerchiefs. E. Stopp and Co., of Ehrenfriedersdorf, showed gold and silver trimmings. The Bielefeld joint exhibition of laces consisted principally of gentlemen's shirts. There was a very pretty collection of collars and cuffs from Wolff and Glassefeld, of Berlin; and Philippsohn and Jaschiner sent shirts, collars, and cuffs. Elkan Brothers, of Chemnitz, and H. C. Hatzel, of Walsenburg, sent assortments of stockings; and the Zella Umbrella Factory had a show of umbrellas.

O. Hanz and Co., of Plankfort-on-Maine, and F. Laugemackel, of Gotha, exhibited boots and shoes; and A. Oppelt, of Seiffhennersdorf, had a truly national collection of wooden shoes. An interesting exhibit of portable weapons, hunting and shooting equipments, were on view from the factories of N. von Dreyse, Sommerda, C. G. Haesel, of Suhl, and Ganz and Co., of Ratibor.

The work of elementary education was poorly represented in the German Court, but there were models for mathematical, physical, and technical instruction, treatises and plans of study of schools for educating artisans, globes, crystal and plaster models, busts and flat ornaments for schools lent by the Royal Commission of Wurtemberg and the Minister of the Interior for Bavaria. On the walls of the court in the gallery hung diagrams illustrating botany and physiology, while on tables and stands were globes of excellent construction, one of them being admirably executed in relief. In the line of stationery, bookbinding and drawing materials, there were a great number of exhibits. A beautiful show-case of blackwood contained a collective exhibition of stationery from a number of firms. There are in Germany 2290 paper factories, which employ 46,310 persons. Coloured paper is made principally in Aschaffenburg, metallic papers in Munich. Dresden, Offenbach, Berlin, Leipzig, Stuttgart, Augsburg, Furth, and Nuremberg produce papers of excellent quality. The papier-maché manufacture is carried on extensively in Thuringia, but the Forbach factory, which alone produces goods in value equal to 900,000 marks annually, is especially worthy of mention. Bookbinders' and cardboard work is produced in Berlin, Dresden, Nuremberg, and Lehr, of the best kinds. Kubler and Nollmann, of Kriebstein, had a prominent exhibit of six rolls of printing paper, about the size of a small steamer's cylinder. A bust of the Emperor crowned this exhibit. Each roll was one unbroken length of paper. The middle roll, which was the largest, weighed 1498 pounds, and contained 29,167 feet of paper in an unbroken sheet. The Joint Stock Paper Mills, of Bautzen, also sent printing paper in rolls, with rolls of paper for telegraphy, copperplate and other paper.

E. Horsch and Schleicher, Hofsummer Brothers and H. A. Scholler and Sons, had different notepapers in a large show-case. The Weconstein "Laforno" paper-mill sent cigarette and tissue paper. E. Petersen had an elaborately carved show-case containing handsome bouquet-holders and flower twisted papers. There were dish papers and corks, holders for the use of brides, for the theatre, balls, and souvenirs. Hockstein and Weinbag, of Berlin, exhibited some beautiful patterns of glazed and cardboard paper, and C. L. Wust, of Frankfurt, had a fine display of playing-cards. The almost universally known lead pencils of A. W. Faber made a good show, and inks were sent by E. Beyer, of Chemnitz, and L. Tetzer, of Berlin. Gonnermann Brothers, of Nuremberg, had on view a large collection of painters' brushes. Schwanhauser, of Nuremberg, had a splendid show-case, beautifully carved and decorated, of leads, artists' and pocket pencils. There were four exhibits of photographs, and T. F. Borgfeldt, of Berlin, sent twelve delicately carved cork pictures.

One of the special features of the German Court was the display of fancy leather-work and bookbindings. F. F. Kulrich, of Berlin, had a collection of most beautifully got up albums. These had sprays of flowers painted on them, or embroidery, or embossed work. Monch and Seiffert, of Berlin, sent another collection of charming albums of every kind, outtrivalling each other in novel designs and excellence of quality. F. Vité, of Berlin, also showed some splendid leather-work; whilst Foerster had a show-case of plush and velvet albums, in different colours. J. G. A. Peper, of Hamburg, exhibited book-covers and leather book-binder's work of first-class workmanship; and J. C. König and Ebbardt, of Hanover, contributed an attractive case of blank and note books.

Amongst the fancy goods were water filters of plastic porous charcoal, from C. Duhning and Co., of Hamburg; different brushes from D. Pruckner, of Munich; and cigar boxes and other fancy goods from M. G. Junge, of Berlin. G. Adler, of Buchholz, in Saxony, contributed pasteboard articles; and F. Ansdn and Schnertzel, of Berlin, sent basket-work and osier goods.

Fermented drinks occupied a conspicuous place. There were numerous exhibitors of "Lager Beer," including those of the Schloss-Chemnitz Brewery; the Bohemian Brewery, Berlin, producing German Imperial and Crown beer; the Pfungstadt light and dark export beer of J. Hildebrand, and others. There were several trophies in the court of various fermented drinks, the largest of which was a huge bottle, about six feet high, of malt bitters, this particular exhibit having been sent by H. Kantorowicz, of Posen, whose factory bears a wide reputation throughout Germany. The wine exhibition embraced samples of the most noted of German wines, including the celebrated Hockheimer. Spirits and cider were well represented, and there was an abundance of liqueurs. J. A. Calka, of Berlin, had a fine show-case, many of

his liqueurs being peculiar to Germany. In the list were eau d'or, crème de moka, chair de spa, anisette suisse, &c. II. Kantorowicz, of Berlin, showed samples of liqueurs and fruit juices.

Preserved meats and vegetables were shown in abundance. The Munich Preserving Factory of Mr W. Nageb sent preserved fruits, milk, and vegetables. J. Gernert, of Munich, sent condensed milk. J. H. G. Walkhoff, of Hamburg, had tins of preserved fish, sardines, sardelles, and herrings. Fische and Schmitt sent gelatine. Lobeck and Co., of Dresden, had an exhibit of "Thee Waffeln," an excellent light water biscuit. The same firm sent samples of macaroni. M. Bartel, of Breslau, had also on view samples of macaroni and vermicelli, in various shapes and qualities.

The display of cigars was very large. This is an important industry in Germany. Loeser and Wolff had a show-case in the German Court containing every variety. One of the most expensive kinds had every cigar wrapped in tin foil, others were done up in triplets to preserve the flavour. J. Herz, of Frankfurt showed some good samples, besides several other firms. The "Compagnie Lafume," of Dresden, and the Turkish Cigarette and Tobacco Factory, "Sultan," of J. Pizdecki, of Breslau, had show-cases of cigarettes and tobacco.

J. Baith and Son, and J. Kann, jun., of Nuremberg, and J. Hees, of Gerdelengen, displayed a variety of hops. Lloesent and Foischner, cork-stoppers, of Stuttgart, had a large glass case of corks, varying in size from the bung of a barrel to a small phal cork. The manufacture of corks is carried on in many parts of Germany, the raw material being imported from Spain, and then shaped in the factories. In Berlin many objects of art are cut in cork. Leather was represented by the Leatherwork Company of Munich (who had a large show-case), Michel Mayer and Deninger, of Mayence, and one or two others. G. Schaller, of Lahn, sent all sorts of morocco skins of different colours. Amongst chemical products was a handsome monument from the Associated Stassfurt, Leopoldshall, and Douglasshall Salt Industry, Stassfurt; Heyl Brothers and Co., Charlottenburg, had a tastefully arranged exhibit of chemical colours; there was a display of nitramine, and several show-cases of drugs, gelatines, and oils. Van Baerle and Spinnangel, of Berlin, had a curious case of water glass in bottles and in crystallised lumps, and manufactured into soap.

At the end of the court was the Iserlohn joint exhibition of iron, brass, and nickel articles for household use. It was in a space draped off with green curtains. Close by was a tasteful case of needles and pins, sent by Brause and Co.

A very noticeable exhibit of iron and steel goods of all kinds occupied 70 feet to 80 feet of wall space. This was the Remscheid Joint Exhibition. The thirty cases represented 20,000 articles made in Remscheid alone. There were vices, pinchers, augers, anger-bits, bolts, locks, hinges, saws, skates, hatchets, hammers, shovels, and measuring instruments.

In the main annexe of the German Court Messrs Villeroy and Boch, of Mettlach-Meuzig, had an exhibit of tiles and mosaics for halls, public buildings, churches, vestibules, &c. This enterprising firm do a large business in china, earthenware, chromolith, and glass and crystal. They have seven factories, and employ about 8500 workmen. But their specialty is the terra-cotta ware, which was well represented. Every shade of natural stone can be imitated in the hard terra-cotta, not only in colour, but also in grain. There was a handsome earthenware manufactory, made in their Dresden factory, exhibited by this firm.

A kiosk was erected close to the Iserlohn Exhibition for the display of sewing-machines from the German Sewing-machine Factory, of Frankfurt-on-Maine. Many other makers also showed their particular specialties. A German portable engine stood in the temporary annexe, manufactured by H. Lenz, of Mannheim. The boiler was upright and single riveted. The cylinder was inverted, with a plain rectangular bar as guide for the cross-head. A rather unusual attachment was present in the form of a second feed-pump, worked by hand by means of a lever; the governor was of Tangye's form. The Saxon Machine Factory, of Chemnitz, exhibited one of the largest and most interesting collections of machines ever brought to this country. Machines for spinning and weaving were in full operation, and showed the whole succession of processes through which the wool has to pass, from its raw state to the finished twined. The same factory exhibited a collection of iron and wood working machines, displaying splendid workmanship, combined with strength. An engine was also shown worthy of special notice. It was small in size, but magnificently finished, and provided with the most modern appliances for securing economy of steam and regularity of motion.

The exhibit from the famous manufactory of Fried. Krupp, of Essen, Germany, was one of the most conspicuous. It comprised a field-gun, with carriage of beautiful workmanship; samples of railway carriage axles, of crucible steel, ready fitted with tyres of the same material, and spokes, wheels, and nave of wrought iron. Locomotive and railway carriage springs were shown in large variety, and also specimens of iron and steel. One monster plate of crucible cast steel, measuring 26 feet 8 inches long, 5 feet 5 inches wide, and 9-16ths inch thick, showed the capacity of the establishment. The plates made are equal in quality to the best English, and are considerably cheaper.

J. P. Piedboeuf and Co., of Dusseldorf, had an exhibit of tubes for marine and stationary boilers, tubes and fittings for gas, steam, and water; also, special hydraulic press tubes.

Emil von Gahlen and Co., of Dusseldorf, showed samples of iron rivets of every description. The Dusseldorf, Eisen, and Draht Industrie had samples of their "cock" brand annealed fencing wire; also, wire nails, and different other kinds.

THE ITALIAN COURT.

There were two main sections of the Italian Court, one of which was to the left on entering the main building by the eastern portico. In the pavilion to the rear of this section was a magnificent display of the celebrated Venetian glassware and mosaics, exhibited by the Compagnia Venezia-Murano. The mosaics produced by the company are chiefly of the Venetian-Byzantine style, for church decoration. These are described in the Fine Arts division of the "Record." The collection of glassware in the Italian Court was unrivalled, and was arranged with the greatest taste. It illustrated the development of this branch of art manufacture from the twelfth to the fifteenth centuries, being, in many instances, reproductions of specimens of Murano ware preserved in the Slade collection in London, in the National Museum of Naples, in the Vatican at Rome, in the Castellani collection in the same city, and in the Museum at Bologna.

Even in the middle of the thirteenth century the glass manufactured on the island of Murano, which forms part of Venice, was highly thought of, and, amongst other qualities, it was supposed to possess the property of shewing to atoms if poison were poured into any vessel made of it. The first display of this glass took place at Murano in 1268. At the period of the Renaissance the Murano fabrics were eagerly sought after, and attained a degree of artistic excellence that no other city could rival. The real superiority of Murano glass consisted in this—that whilst artificers elsewhere had recourse to mechanical appliances in modelling and decorating their wares, the Venetian workmen trusted exclusively to their educated and artistic eyes and hands; and thus there was as much difference between their products and those of other glass-workers as there is between a panel carved by Gibbons or by Rogers and one which has been executed by machinery. The vitreous fabrics shared in the general decadence of art in Italy, and the works turned out in the seventeenth and eighteenth centuries were clumsy and *rococo*; but the last few years have brought about a revival in the glass manufactures of Murano.

There were two cases of glass exhibited in Melbourne, of so slight a texture and so light of weight that it looked as if it had been composed of a mere transparent film. There were mirrors framed in fragile flowers and leaves, lustres and candelabra, vases, tazze, centre-pieces, beakers, goblets, chalices, and table glasses. Some were enamelled in various colours, others overlaid with lace work; others embossed with curious ornaments, others had a thin leaf of gold introduced between two layers of glass, others were spunkled with turquoise, or agate, or gold; others were enamelled in imitation of precious stones, others were of the *paglioso*, or colour which belongs specially to Murano. Cavaliere Candiani sent articles of blown glass in imitation of marble and stone. The opal glass was very well represented, and many of the vases and fancy ornaments were made with delicate spiral stems branching out above, and ornamented with coloured flowers. There were numerous exhibits of glass beads, and Tommasi and Gelsomini had a case of fancy reticules, flowers and hats, made of spun glass.

The *chef d'œuvres* in majolica and antique porcelain are noticed in the Fine Art Italian section, as were also the cameos and ivory carvings; and this enables us to pass over at once to the show of jewellery, which was very attractive. SS. Olivieri and Sarfatti, under whose care the glassware was sent out, also had a number of other exhibits. Fronting the nave was a handsome case full of bonbonnières, frames, vases, &c., decorated with Venetian mosaics. Then there was a case of pink cameos and another of spun-glass articles, an enamelled gondola and a silver basket of filigree work, malachite ornaments and mother-of-pearl fancy articles; mirrors, ornamented with mother-of-pearl flowers; and inkstands, as boats in full sail, of the same material. Amongst the mosaics were two lovely flower vases, with a little stand on either side of mosaic work, clusters of forget-me-nots, daisies, and roses. Then there were carved paper-knives, the handles being inlaid with wreaths of daisies on a light blue ground. Giovanni Boncinelli and Sons, of Florence, had an array of show-cases, full of jewellery and mosaics, under their charge, besides one from Giojuzza and Giobertini, of Palermo, of real coral ornaments. Their best case, fronting the nave, contained chiefly jewel-boxes, frames, and other fancy articles, inlaid with mosaic, also, rings and bracelets; another case contained works in shells, lava, and cameos. There was a piece of carved lava, representing a peasant dance; and a small case was devoted to showing the entire process of cutting a cameo, from the first sketch on the bare piece of shell. Francesco Ciapponi and Co., of Rome, sent some beautiful cameos, being copies of classical subjects existing in the Roman museums.

Another handsome case in the front nave was awarded first prize. It was from Marriotti and Fantoni, of Florence, and contained old Etruscan necklaces, with cameos or mosaics

inlaid, turquoise ornaments, and narrow wrought-gold bracelets. Behind these exhibits was an enclosed platform of different weapons. Two cloth-covered crections were hung with sabres and foils, which obtained a first order of merit. Another prominent object was a brass topographical (eight-pounder) and a mitrailleuse. A few pianofortes were also placed in this division of the Italian Court from Carlo Roeseler, of Turin; Brizzi and Nicolai, of Florence, and Vittorio Giuliano, of Naples. In the central avenue, beyond the English, French, and German Courts, were situated the remaining sections belonging to Italy. They were ornamented by *fac-similes* of the coats-of-arms of one hundred principal Italian towns and cities, which were distributed throughout, and a few statues were also added for the decoration of this division. Fronting the avenue was a row of show-cases from Francini and Santamaria, of Rome. One or two of these contained very beautiful filigree work, in imitation of the old Etruscan, some necklaces, bracelets, and earrings claimed special attention. Francini and Santamaria brought out under their care a splendid show of coral from a house in Naples; but as this institution objected to any competition for their goods, their names were not given. Stefano Beletta sent filigree ornaments in silver and gold.

The bronze and art castings in the Italian Court were very choice and attractive. Pasquale Aquati, of Venice, sent out very handsome articles, amongst which were some antique bronzes, inkstands, figures, bells, and seals. There were also busts, a beautifully carved knight in armour on horseback, a finely chiselled bull, and other artistic objects. Don G. Palmieri, of Venice, sent some black bronzes, including a crucifix and candelsticks. De Poli Brothers, of Vittorio, sent a bell of bronze. Cavaliere Nelli, of Rome, sent a splendid display of artistic bronzes. Some of these represented gladiators and different figures in every kind of pose, birds on light pedestals carrying lamps, green bronzes of the lightest and most elegant designs, and of every conceivable shape and pattern. Pietro Tis, of Venice, had some plates of wrought metal in relief, and B. Zucchi, of Siena, sent articles in wrought and chased iron. There were several stands of terra-cotta figures and groups, mostly representing comical subjects, and ornaments of every kind in alabaster. Claudio Pochini, of Volterra, had a beautiful grey alabaster column with a basin at the top. Consiglio Rocchetti, of Venice, had two busts inlaid with coloured marble, representing a negro and negress. Guggenheim sent a magnificent carved-wood frame, the support of which was a wreath of laurel. An eagle stood at its base, and little angels were grouped around.

In a separate division were alabaster monuments, from Joseph Weiller, and marble tombstones. Evangelista, of Naples, exhibited a singular terra-cotta model for a gravestone. On the broad base of the monument a cross is laid and strewn with flowers. Buzzi Gilberto, of Milan, showed some garden furniture sculptured in cement. The chiselling of the buds and fruits and flowers was most artistically done. Galli Rizzardo had another set of the same description. Cesare Fontana, and Isidoro Sommaruga, both of Milan, exhibited two tower clocks with formidable works. There was a carriage cab from Macchi Brothers, of Varese, and a small "cabriolet-lord," from Emilio Trinci, of Pistoia. G. B. Mino and Sons, of Alexandria, sent some machines for the manufacture of goldsmiths' ware, F. Gavazzi, of Pradelpung, had two little pyramids of stones for sharpening; and Rosario, Ravasi and Co. sent some cement tiles for paving, and two cement tables made of pebbles, or, rather, of bits of polished stone cemented. Napoleone Fassi and Brothers, of Venice, sent a complete gondola, and one gondolina was shown in this section. Besides these were two show-cases containing sulphur. In 1878 the total amount of limestone produced in Italy was 260,335 tons. Bernasconi Brothers, of Forlì, had a collection of one hundred different kinds of Italian woods, and Ingegniero Cinto Giulio Pulla sent a case of every kind of sparkling mineral from Elba, with a corographic map of the island. Cavaliere Segismundo Brogi, of Siena, exhibited a large case of natural history specimens of stuffed birds and animals.

Beyond this division was a room with pillar supports, prettily draped, and surmounted by the Italian colours and coat of arms. It contained two carved bookcases, brackets, pictures, mosaic tables, terra-cotta groups, and frames of carved wood and gilt cement. A number of alabaster plates were exhibited with an embossed head in the centre on a black ground. The Italians had a good show of furniture. Marco dal Todesco, of Venice, sent a suite of inlaid bed-room furniture. A drawing-room suite from Antonio Rossetti, of Rome, was a novelty; the frames were made of highly polished bulls' horns, and covered with the hides of the same animals. The hair, unlike that of the common ox, was long, soft, and of a greyish colour. G. B. de Lotto, of Venice, had carved bookcases; a curious ornament was a bunch of grapes with cupids climbing round it, and one little cupid perched at the top. A. Martinelli, of Rome, exhibited a mirror of a unique design; the frame was ebony, richly carved, and there was a fine study in oils, painted on the mirror itself. The motto was—"Nature, Life, and Death." Lenora Brothers, of Turin, showed several cases of silks and damasks for furniture. P. A. Bergomi, of Monza, and Bartori Brothers, of Venice, were also exhibitors.

A large compartment was devoted to Italian wines and liqueurs. A large kiosk was erected in the centre with a railing round it, the roof and pillars being built up with wine bottles, and Bacchus, sitting astride a cork, quaffing a goblet of wine on the top of the trophy. Vermouth and Vin d'Asi were amongst the exhibits. Confectionery and different alimentary products

had a place in this division. A large case contained Bologna sausages, hams, cheeses, preserved vegetables, preserved meat, cheese, and butter, as well as condensed milk and olive oil. Another had samples of macaroni and different pastes; then there were samples of rice and wheat. Another case contained Italian hams in boxes, and salt meats. Gray and Revel sent "Chocolat à la Santé." Avvocato Cavaliere Giacomo Bellucci Tosi sent preserved fruits in vinegar. Perfumery was represented by essences, perfumed rice powder, and various extracts and perfumes. Eugenio Annibali had a special exhibit of "Della Lupa," a perfumed hygienic water. There was a very attractive case containing matches from Abbons and Romagna, of Moncalieri. F. Lavaggi and Sons, of Trofarello, also had a prettily arranged case.

Cesare Marchini, of Pisole, exhibited articles in fine straw, and a large collection of ladies' straw hats. N. di G. Aducci, of Forlì, sent a hammock, and Cavaliere P. Franz, of Milan, had some leather travelling articles. In minerals there was an exhibit of asbestos, by Domenico Ulich, of Turin.

Giuseppe Piacentini, of Messina, sent a variety of Sicilian and American ludes. Bloch and Sons, of Milan, showed some imitation leather for soles and ready-made heels. The Zambonis, of Verona, and Narizzano and Ghisa, of Genoa, were also exhibitors of leather. Twelve pairs of carriage lamps, from the factory of G. Savetiere, Palermo, embraced some specimens of splendid workmanship. Only a moderate display of textile fabrics was made, and the exhibits of hosiery and articles of clothing, including boots, umbrellas, and gloves, did not show much skill in their manufacture.

A fine show of raw silk was made by E. Santini, of Asolo. Alessandro Barhenzi and Co., of Florence, sent some artistic work in embroidery for covering chairs and cushions.

Some of the specimens of Venetian laces exhibited by M. Jesurum and Co., of Venice, were very beautiful.

Large show-cases of cigars were sent by the Italian Society for the manufacture of Tobacco, Rome.

A. and C. Binda, of Milan, and U. Carcano, of Mastianico, showed specimens of paper of various kinds, whilst Luigi Mandoj, of Bari, and Francesco Osenigo, of Milan, had samples of ink and printing inks. A large case of stung and wind musical instruments was shown by Alfonso Abbate, of Naples, and Giuseppe Pehtti, of Milan. There were very few books amongst the Italian exhibits, but different photographs were sent, and Carlo Ponti, of Venice, exhibited a megaleoscopic, with table and photographs. An interesting educational model was also shown of the gymnastic scaffolding of the central gymnasium of Naples. Medals of gold, silver, and bronze had been awarded it in the gymnastic congresses at Rome and Turin.

THE JAPANESE COURT.

The Japanese Court was ornamented tastefully with flags, and some Japanese writing figured along the front. The staple industries and manufactures of the country were well represented. Two large erections of cases, one at either end of the frontage on the central avenue, were devoted to tea and rice, samples of which were arranged round, under glass. In the centre of these was a splendid show of silk, in its different stages of preparation for manufacture. The Board of Agriculture sent a collection of cocoons, both white and yellow; and there was raw silk, undressed, reeled, and wound. There were also large show-cases of beautiful manufactured silks, materials for dresses; and bright designs of flowers and birds, and tapestries, for decorative purposes. Some handsome silk coverings were embroidered with flowers. One piece was ornamented with the stem of a tree, from which branches forked in all directions, with long delicately coloured leaves. The loveliest groups, and single birds, clustered about these. The dark-blue glossy plumage and white breast standing out with great beauty against the very light-blue background. Embroidered silk shawls were also displayed—waste silk fabrics, and photographs of every kind of machine and loom in use for silk manufacture. Silk and cotton sarapings were shown, and various cotton and hemp fabrics. The Board of Agriculture, Tokio, sent samples of woollen cloth, and there was a photograph of the Imperial Japanese Cloth Factory at Senju. Silk cravats and handkerchiefs, fancy neckties, and umbrellas were amongst the clothing, and some very curious articles of apparel made of fibrous paper, and of a silk and paper mixture. The paperhangings and artistic papers in imitation of leather were worth noticing. The crinkled samples especially were very prettily designed in different tints. Toilet soaps, Japanese lanterns and fans, dolls with the true native cast of feature, and other playthings were exhibited. There were some really pretty blinds of split bamboo, the notches being formed into a watered design, on which elegant sprays of flowers were painted. The tobacco leaves made a fine show, as well as cigars and cigarottes from Tokio. The collection of specimens of forest trees was most important; and different samples of ropes were sent made from a kind of palm-tree called the shimo. The Tokio Board of Agriculture sent a splendid assortment of seeds, of dried chestnuts, and of ginnan and fish, preserved fish, and venison,

sardines, kuzn, several products of the edible seaweed, and specimens of vermicelli, vegetable wax, glue, peppermint, and candles. Chemical products were represented by several acids, and the yuzen, or silk fabrics on which objects are produced by dyeing. The Tokio department sent a collection of minerals, and there were 112 specimens from J. Suganuma, of Shiga. Sulphur, which is one of the products of the country, was shown by several exhibitors, and there were samples of marbles, with a well-designed white marble table.

The *Argus* writes, that "a visit to the school exhibits in the Japanese Court is peculiarly suggestive, as showing the growth of western ideas in that remarkable nation, which has adopted European dress, manners, and institutions at a bound. On the walls are shown charts, illustrating object lessons in natural history and botany, besides the dial of a European clock, while a large collection of photographs introduces us to the interiors and exteriors of the museum, medical school, Tokio University, besides some of the principal educational institutions of Nagasaki and Jolligi. But one of the most interesting facts is that a normal school for the training of Japanese teachers has been established. Beginning in 1873 with 60 students, it has now turned out 250 'graduates,' some of whom are occupying responsible positions in the school-boards under local governments. The specimens of pencil drawings by Japanese art students are of a decidedly staid character, and all the faces are drawn with a most comical eastern smirk; but the exercises of students in composition are done with staid neatness in Russian, German, French, and English, the exercises in the three last-named languages showing fluency and idiomatic knowledge. The visitor's eye will be attracted by a curious circular coloured diagram, on which, in segments like sections of a circle, are represented interesting statistics about the school attendance of boys and girls."

The educational department compared various instructive objects for the training of infants, and decks with sons. The Japanese pictures were very curious, some of the figures being made to rise considerably above the background. The Japanese Court contained many specimens of lacquer-work. This art, they say, was known in Japan a thousand years ago, and attained perfection at the close of the thirteenth century. The exhibits display the distinctive native taste in their exquisite decorations. The gold lacquer is very expensive. One of the jewel-boxes looked like metal, the gold lacquer which encased it being so wonderfully polished and brilliant. There was an extra appendage to this one made of carved red lacquer, on a black ground, which gave it a rather singular appearance, but the value of this little nicemack was £25. Another was composed of two cross fans, a musical instrument being introduced at one corner. One little gold lacquered box was covered with fans, the fans themselves being most delicately carved, and having views, and sprays of flowers inlaid in silver. A beautiful tortoise-shell fan was exquisitely lacquered. It must be remembered that all the inimitable productions of the Japanese artists, both in lacquer-work and ceramic ware, are the result of months of patient labour, weeks being sometimes spent over one little spray of ornament, a flower, or the wing of a bird. The main feature of the court was its porcelain and enamel ware. At the commencement of the Christian era two centres of faience manufacture were established in Japan, and at the close of the seventh century a Buddhist monk revealed the secret of translucent pottery. The Japanese left the Chinese far behind them in the art of decoration and design. The Chinese gave a low place to their artists, making the art a purely mechanical one, and dividing the manufacture of the ornament among several workmen. The Japanese loved his art; his position was assured, and he inherited his skill from generations of artist ancestry.

There were several kinds of valuable porcelain. The cracked ware is esteemed most highly, a single specimen being often valued at a thousand ounces of silver. The Japanese assert that their ancestors, five-and-twenty centuries ago, worked in porcelain, and they are splendid imitators of nature; but they do not seem to comprehend creation. The *Argus* gives the following description of some of the porcelain decoration:—"There were berries in various stages of growth, from tenderness to maturity, seed-vessels drooping with overfulness, or bursting and scattering their contents upon the fruitful earth, or withering and shrivelling; birds on the wing, birds bathing, birds preening their feathers, birds posed upon one leg with half-closed eyes; insects and fishes, instinct with life, stamped with character, and full of motion; and the human figure, more often than otherwise, grotesque in position and humorous in expression. Look at their cranes—symbolical in Japan of longevity, as also are the pine, the turtle, and the bamboo—resting beneath the shadows of the broad, wrinkled, and ragged leaf of a water-lily, which is decaying, and even decomposed in places, and honeycombed by insect ravagers. A small frog has squatted upon a seed-pod, and various little birds are seen to be peeping and prying for food, with characteristic alertness of vision and vivacity of movement among the comforted stalks and flexible leaves of the aquatic flower, while the lily itself is represented in all stages of growth, from the tender bud, shut up in its green perianth, to the fully developed bloom; and thence again, through all the stages of decadence, until only a single petal hangs by a frail connection from the calyx, and even the seed-vessels are perceived to vary in aspect and texture from fullness to vivacity, from succulence to desiccation." It is impossible to describe the many lovely objects. Some of the porcelain had wonderful flower patterns, or peacocks' tails, in slight relief upon it. Others were perfect white ware with exquisite orna-

mentation, dragons on a smoked background, and various designs. Two immense dishes had a light blue ground, on which a bird was depicted flying down amongst grotesque monsters. The Kaga porcelain was of a deep red, with mythological subjects gilt upon it.

There was a small court devoted to Japanese ware, belonging to Mr. Singleton, quite apart from the one just mentioned. Here were two vases of Kioto porcelain, very finely carved and enrobed. The ware was white, and one mass of chiselling, so that it seemed uncertain whether it were porcelain at all, or some kind of soft white stone, which had acquired very much the same effect as tin-splash specimens. There was a collection of banksia ware, and two magnificent Satsuma vases were exhibited from the south-west province of the Japanese empire. The decoration was done in Tokio, the present capital, situated in the province of Musashi. It represented ancient mythological events that occurred on the introduction of Buddhism from India to Japan several centuries ago, and occupied one of the leading Japanese artists three years to complete.

Some kettles, made of a mixture of iron and steel, were nicely carved, and easily cleaned by washing them in tea water; and there were several magic mirrors of Japan. These, we are told, "have attracted the attention of many learned professors, with a view to explaining their peculiar properties. The peculiarity consists in the fact that any design in relief that may be on the back of the mirror is more or less distinctly shown on a screen, on which the reflection of the sun is thrown from the face of the mirror. It is a metal composition."

Returning to the principal court, we find the most gorgeous and beautiful display of Satsuma enamelled ware. Some of the latter were exhibited on porcelain tea sets, but the most expensive were on bronze jars and vases. Several enamelled vases were very beautiful. The ivory carvings and fans were very choice exhibits. Two magnificent flower-holders were made of great lengths of ivory, branches in carved wood spread round them.

The bronzes were very fine, one specimen being a wonderful carved mythological group. There were also inlaid works in bronze, and embossed ware in iron and bronze, some of these being very handsome. Embroidered silk drawing-room screens and cloth of gold were also very attractive features in the court.

MINOR COURTS.

CHINA.

The little Chinese Court occupied a space in the northern transept, but the display was very disappointing when the wealth and extent of the Chinese Empire and the ingenuity of her people are considered. They have not the cosmopolitan spirit of the Japanese, but prefer a monopoly of their arts and industries to progressive competition with foreign nations. The principal feature of the Chinese Court, and one which attracted the notice of every visitor to the main avenue, was a hexagonal temple, made by employees of the Oriental Tea Company to display their various samples of teas from Canton, Foo Chow, Amoy, Shanghai, and Hankow. The corners of the temple were adorned with bells, and handsome jars were arranged beside the six supporting pillars. Other exhibits of tea were shown, some in glass dishes, and a trophy was sent by the Ceylon and Foo Chow Tea Company. A few small tea-plants were also struggling through an unhealthy existence away from their native air. Grotesque drawings, with a very limited perception of perspective, were, however, interesting, as giving a graphic idea of the processes of tea preparation. A unique and really magnificent screen was exhibited; the frame-work, which was of ebony, elaborately and grotesquely carved, and the leaves, divided into squares and other patterns by the carved wood; beautifully executed porcelain paintings filled up the spaces. Other screens were enrobed in silk, and the brilliancy and beauty of the peacocks' tails were worthy of reproduction on European fancy work. Some of the tables were inlaid with porcelain, having scenes painted on them. One or two exquisite Chinese cabinets were displayed, and there was a writing table covered with similar grotesque gilding. The exhibit of porcelain was very indifferent, and although a few of the vases were old and rare, neither the shapes nor the designs were delicate or choice. The soapstone ornaments were pretty; and a case of ivory carvings contained some finely executed Chinese work on different fancy articles. The fans of white feathers were covered with designs in brightest colouring. Chinese silk was not forgotten. There were samples of the raw material as well as silk handkerchiefs, and specimens of China silk for dust-coats. At the entrance to the court a glass show-case contained very handsome crepe shawls, for which the country is justly famous. Brilliant and quaintly grouped flowers and birds, painted on white silk screens, set off by dark carved frames, and embroidered silk quilts, completed the display. There was a large collection of Chinese coins, both copper and bronze. Raw and manufactured products were represented by hemp and jute, and a grey goat-skin, with a robe of black dogskin.

In the north transept were spaces allotted on a small scale to several countries represented only by a few exhibits.

PORTUGAL, SPAIN, AND COLONIES.

A very striking trophy of fibres from Manila and Cebu, in the Philippine Islands, was exhibited by S. de Beer. The fibres were arranged in draperies and plaited festoons round a pavilion, on the top of which was a cone of fibres. Portugal had a show-case of decantered wines, of twelve different qualities. Two or three photographs represented peasants engaged in the vintage.

RUSSIA.

Russia was represented by a magnificent exhibit of her leather, which scented the air around. It was sent by Sokoff and Son, of Balausk.

SCANDINAVIA.

A few books and pictures, including portraits of the royal family of Denmark and Sweden, were amongst the Scandinavian exhibits. There was a pretty show-case of matches from Stockholm, and royal hunting hammocks from Molltorp, in Sweden. Norway contributed cod-liver oil and preserved fish, as also arrack punch, and several exhibits of pale ale. From Denmark came rennet and fish preserved; also, bitters, cherry brandy, table mead, and honey punch.

TURKEY.

The exhibits from Turkey consisted of carpets, and different nick-nacks from Jerusalem and Bethlehem.

NEW BRITAIN AND NEW IRELAND.

There was a large and curious collection of native implements and weapons from these islands.

WHITE ISLAND.

This island contributed a splendid exhibit of sulphur, both pure and in the ore. There was reef sulphur, black sulphur, sulphur in the lump, flowers of sulphur, refined sulphur, &c., and gypsum, which somewhat resembled pumice-stone in consistency. The sulphur exhibit was presented to the Melbourne Public Library.

THE NETHERLANDS COURT.

The frontage to the Netherlands Court was closed in by a partition of plaited brown merron, surmounted by the coat of arms of the Royal family of Holland. On either side of the shield was a lion, the crown being placed above, and, underneath, the famous motto of the Orange Nassau family—"Je maintiendrai." Flags were tastefully arranged, both outside and in the interior of the court; and at the other end the Royal arms were displayed again. All along the inner wall was ranged a great variety of imitations of wood and marble, painted on canvas. The exhibits were T. W. Kieffer, of Leeuwarden, P. van den Burg, of Schiedam, M. van den Burg, of Schiedam, and one or two others. Many of these canvases bore a perfect resemblance to the stone or grains of wood, and were an interesting feature in the court. There was also a guide for self-instruction in the art, sent out by P. van den Burg, of Schiedam. Books of instruction in architectural drawing, and several works and reports of societies and schools, were shown, also a collection of charts and maps, amongst which were three geological maps of Java, part of Sumatra, and the Island of Banca. A volume on the different kinds of cattle bred in Holland were illustrated by fifty-four coloured plates. Some chromo-lithographs of the *chefs d'œuvre* of the Dutch school of painting were well executed. On entering the court, two stands of revolving frames confronted the visitor, containing photographs of public works, in the centre of these was a beautiful piece of calligraphy, illuminated by the calligraph of H.R.H. the late Prince Henry of the Netherlands, being a complimentary address to the Queen of England. A glass shade on a pedestal, standing just beyond, contained some gold chains from the Netherlands Gold Chain Manufactory, of Amsterdam.

Holland has always had the highest reputation for her spirits. Messrs. J. de Kuyper and Sons, and Blankenbom and Nolet, of Rotterdam—the two most famous distillers of Geneva or Hollands in the world, exhibited delicate choice samples. There was also a choice collection of the renowned liqueurs of Wynand Poekm, of Amsterdam, so imitable by other makers. Erven Lucas Bols sent fine liqueurs; Stibbe Brothers had both bitters and liqueurs. Van Zuylenkom Levert and Co. obtained many prizes from former exhibitions for their liqueurs, bitters, and rectified spirits; and J. J. Bal, of Middleburg, had received prize medals for his white and red currant wines.

The distillery of the Netherlands Yeast and Spirit Manufactory, at the Delft, is one of the largest in the world; the samples of the spirit sent to Melbourne, distilled from maize and other grain, contained 95 per cent. of pure alcohol. Van Vollenhoven and Co. had an exhibit of their Falcon beer, and J. A. N. Schagen van Leeuwen and Co., of Delft, showed specimens of their aromatic vinegar, which no other make surpasses in strength and delicate flavour. There was a pretty case of rice starch from F. Henmann and Co., of Rosendaal, Antwerp, genuine Deventer cakes, from Klopman and Bierselman, who also sent Dutch glass butter in tins, guaranteed to remain fresh in the warmest climate for years. The Dutch are famous for their fine tobacco, and several of the most renowned firms contributed exhibits. Blockman Brothers, of Amheim, had delicate Havana's, A. J. Kuyvaan, of Amsterdam, had a show-case of cigars, some of which were of a surprising size, and prepared tobacco, the cigar boxes displayed by this firm were of various novel shapes. C. G. van der Post, of Gouda, showed samples of cigars and cigarettes.

Amongst the chemical products was an elegant carved, black, slanting show-case, on a stand, the back containing a mirror, the front and sides were open, whilst long glass tubes of lubricating oils were held in position by sockets above and below, and produced a good effect by their reflections on the mirror.

J. van Dekker had a display of laundry blue, of the brightest hues. The collection of paints sent by W. Leur and Co., of Schoten, and made with Dutch iron ore, included every variety of colour, and was of great interest.

The Royal Dutch Bent and Ground Glass Works, of Donbrecht, sent some beautiful specimens of window glass and glass tiles. The landscapes, or other devices ground in the glass, were most attractive. F. W. Braat, of Delft, exhibited two or three zinc statuettes; and at the further end of the court was a pagoda, with little steps all round, containing a picturesque display of harmless matches, from Hoogondyk, Fromberg and Co., of Apeldoorn. Textile fabrics were represented chiefly by the house of Veltman and Co., whose quilts were hung in folds round a couple of stands, and were made of cotton, cashmere, and silk of pretty hues and patterns. L. V. Lodeboer and Sons had splendid serges, cloths, and flannels; and B. van Lee sent druggets. The show-case of W. Swinkels, Helmond, was handsomely ornamented with gilding on black polished wood, and contained Turkey yarn of various shades of scarlet, which is largely exported to British India and America, to be woven into fabrics.

On either side of the entrance were exhibits of perfumery. A handsome delf case peculiar in form, and painted by hand in a Japanese style, belonged to the Maroon Neuve, of Delft, and contained a large variety of toilet requisites. J. C. Boldoot, of Amsterdam, sent samples of his excellent eau-de-Cologne, and Sanders and Co., of Leyden, had soaps of several qualities.

The mathematical instruments of B. Holsboen, consisting of a theodolite, spirit level, compass, and especially an ingenious and recently invented machine for measuring the velocity of a stream, were of great interest to scientists. The seamless hoop pipes of Dickers and Son, of Rotterdam, were made of hemp, round woven, and so strong that they could resist the pressure of from four to six atmospheres. Prukke Brothers, of Eibergen, sent capital samples of beltings and other leather works. There was a large collection of seeds and bulbs from the florist, E. T. Voute, of Zeist, which would, no doubt, have afforded valuable suggestions (owing to the Dutch having devoted a great deal of attention to floriculture), but the bottles of specimens had no labels or names attached.

T. Regout and Co., of Maastricht, exhibited iron and brass nails of excellent workmanship; and Rouppé van der Voort and Lewin, of Bois-le-Duc, had a handsomely arranged and very good exhibit of metallic capsules, tin-foil, tin and lead. Blocks of coal were shown from Java, and a figure cunningly carved out of the coal by a native. The only display from the islands of Borneo, Sumatra, Java, Banda, and the Moluccan Archipelago, was a collection of ores and minerals. It was presented to our museum through the courtesy of the Dutch Colonial Government, as also some sugar and spices from Java.

THE SWISS COURT.

The entrance to this court was in the form of the gable of a Swiss chalet, over it was the coat-of-arms of the Confederation—a plain white cross on a red ground, with the national motto, "One for all." On one side of the shield was the figure of a bear, and on the other a chamois—the two most important animals to be found in Switzerland. The coat-of-arms of the twenty-two different cantons forming the Confederation decorated the walls of the court. There were several paintings by Stuckelberg. The most noticeable, however, was one by Rudisahl of a valley with dark pines, the grass foreground of which was, however, rather blurred. Above rises the snowy mountain, upon the summit of which is reflected the exquisite glow called "The rose of the Alps." Three large stereoscopes contained an excellent collection of Swiss views photographed.

J. Fleck exhibited a great variety of the celebrated Swiss wood-carvings. There were alms-bells, chalets, rings, salad knives and forks, fans, paper-knives, little flower vases, brackets, frames, writing books, watch cases, &c. Several Swiss publications and pamphlets were sent, and Bonfantini, of Basle, had specimens of typography. There was a topographical map of Switzerland, and besides these were plans and charts of the Griesbach and St. Gotthard railways. J. Ganz, of Zurich, sent a very complete and handsomely finished magic-lantern, with a large collection of slides, amongst which were specimens of botanical and natural history objects. J. Kern, of Aarau, exhibited some mathematical instruments; and J. Trost and Co., of Zurich, had three very excellent pianos, which were now and then played upon by a girl in a pretty Swiss costume. Switzerland is renowned for her manufacture of musical-boxes, and there were seven exhibitors at the Melbourne Exhibition. Every variety was shown, ranging from £50 downwards. Some were beautifully finished, and had bells, castanets, and drums. Others were in imitation of Chinese music, another had only sacred airs, whilst some were in imitation of the flute or the harp. G. Daverio, of Zurich, sent a model of his patent roller mill, the whole milling process of which is conducted without stones. It had grooved rollers for cracking and granulating hard and soft wheat, smooth rollers for grinding and opening semolina. Amongst the alimentary products were numerous tins of Nestlé's food—which has acquired a world-wide reputation, and which is often preferred to milk as food for infants—and of his condensed milk. Peter Caillet and Co., of Vevey and Geneva, exhibited chocolate and milk-chocolate. A. F. Demmler, of Interlaken, had stomach and iron bitters, whilst J. Lecoq, of Geneva, sent peppermint extract. The stomach bitters of Demmler were made from a variety of Alpine plants. There were cases of cigars sent by Ormond and Co., of Vevey, and T. Kottman, of Solothurn. Of chemical products, there was an interesting glass case containing a variety of dyes and aniline, cards of silk being introduced to show their effect. The Swiss are famous for their embroideries and silk ribands. Dacenziger had some coloured edgings and insertion embroideries with a strawberry pattern, the fruit and flower and leaf forming a graceful design. Bally Brothers had some very fine embroideries, as well as a collection of ribands. Albert Arnold had specimens of lace curtains, and Blumer and Wild exhibited ladies' fancy dress goods. Wm. Reimer, and Bally and Schmitter, of Aarau, showed samples of elastic webs for boots. A very interesting show-case contained bolting cloths and silk gauze for dressing flour. A cylinder was shown in Egli and Seunhauser's case, covered with different textures of bolting cloth, so as to exemplify the mode of using it for sifting purposes.

Swiss watches are known to all the world, and of these there was a creditable show at the Melbourne Exhibition. Grojean, of La Chaux-de-Fonds, had a small case containing every part of the machinery of a watch. Droz and Perret, and the Longines Watch Co., also had a great variety of portions of watches. A. Bering and Co., of Leode, had some very handsome but plain gentlemen's watches. One of the largest firms employed in this industry in Switzerland is the Jura Watch Co., represented by M. V. Sandoz, whose exhibits were near the entrance of the court. This firm makes watches by machinery, and employs 1500 workmen in their three factories. Among the great variety of watches shown by this company may be singled out a sample of a gentleman's watch of the simplest construction. The case is made of nickel, and does not turn black. As many as two hundred of these watches can be manufactured in a day, and sold at a very low price. The Jura Watch Co. also had a very pretty small lady's watch, with a space inside for a photograph.

There were over forty exhibitors of watches and jewellery in the Swiss court at the Melbourne Exhibition, and it was estimated that the value of the exhibits was about £18,000 or £14,000.

The watch industry in Switzerland gives employment to nearly forty thousand men, chiefly in the cantons of Geneva, Neuchâtel, Vaud, Berne, and Solothurn, which produce annually half a million of watches. In the year 1877, 1532 cwt. of watches was exported. Messrs. Baume and Co., of Geneva, had a very handsome show-case of black and gold, in the centre of the court. These were hand-made, and of the best quality. Amongst them were keyless chronometers, keyless perpetual calendars, keyless chronographs, quarter repeaters (with independent centre second), &c. J. M. Badollet and Co. had a very attractive show-case containing the "smallest watch in the world," less than a threepenny bit, which looked quite large beside it, another little watch above being about the size of the coin. There was also a very handsome gold gentleman's watch in this case, which had a beautifully engraved coat-of-arms on the back, finished with different coloured enamelling. Some of the chains, which were artistically executed, belonged to Gay.

Patck, Philippe and Co., of Geneva, had some of the best exhibits. Amongst others was a very elaborate gentleman's chain and locket of old gold. There were some very small watches in this case, and boxes of pieces used in the manufacture of watches. Perret and Gay had a handsome show-case at the entrance to the court, containing massive gold chains of every size and description. Haas, Privat and Co. had two lovely little enamel clocks and two handsome jewel-boxes. F. Brown, of Geneva, had a great variety of chains, bracelets, and lockets.

Cartier and Amiez-Droz had an exquisite lady's watch, the back of it set with pearls and turquoises. Messrs Rutishauser and Douillon, of Geneva, had a show-case of eighteen-carat gold jewellery, rings, bracelets, lockets, &c., many of them being of most artistic workmanship and design. There was another exhibit belonging to L. Gostowsky, of Geneva, containing a very large pearl ring, also diamonds, sapphires, emeralds, turquoises, and rubies, set in a variety of ways as rings. Two amethyst hearts, with a little diamond colonet at the top, formed a beautiful ring.

THE UNITED KINGDOM COURT.

The sections in this court were more numerous than those of any other nation, and the total area allotted to it larger. The aggregate value of the exhibits was estimated at a quarter of a million sterling, and the display such as to excite the deepest interest in the minds of the visitors. When we say that every part of the United Kingdom was represented at the Melbourne International Exhibition, we have said all that need be said to show how intensely anxious the manufacturers and producers of that country were to see it made a success. They sent more goods to it, and goods of a much finer quality, than they sent to the Philadelphia Exhibition of 1876, and the collection was, consequently, of a more diversified and of a much superior character. In the nave of the main building the glassware of Messrs. Thomas Webb and Co., of Stombridge, was the most noticeable exhibit. There were also interesting specimens to be seen there of porcelain ware, electro-plate goods, furniture, models of steamships, and perfume. The great bulk of the British exhibits were to be found in the central annexe—pottery, upholstery, chemicals, hardware, carpets, softgoods, paperhangings, stationery, carriages, leather goods, liquids, stoves, weighing-machines, all grouped into classes. In noticing the exhibits in this court we must disregard to some extent the order in which they were placed, and take them as they arise.

BOOKS, STATIONERY, AND SCHOOL APPLIANCES.

A large strip of this court was occupied by books in glass cases and on shelves, by maps on partitions, by great wreaths of newspaper in rolls, by pens laid out in cases and diamonds on tables, and by packets of envelopes and notepaper. Blackie and Son, of Edinburgh, exhibited, as specimens of their lithography, portraits of public men, among which those of Daniel O'Connell and Sir Charles Gavan Duffy were, perhaps the most noticeable. William Collins and Sons, of London and Edinburgh, exhibited rich bound Bibles provided with metal clasps, memorandum-books, diaries, and a large and varied collection of school books. W. and A. K. Johnston, of London, covered the inner and outer walls of a tall screen with maps, and they also showed charts of the stars and illustrations of the elementary facts in physiology. W. and R. Chambers, of Edinburgh, had a large collection of educational works, as also had Gail, Inglis and Co., of Edinburgh, and H. W. Partridge of London, was well represented in that class of literature. A. N. Myers and Co., of London, showed school appliances, toys, and models, C. Smith and Son, of London, globes and maps; Ward, Lock and Co., of London, cheap and popular editions of much read books, and Trübner and Co., of London, bookcases, mounted on castors. Music in books and in sheets was exhibited by Weekes and Co., of London; and in the front building of the court Augener and Co., of London, had a case of music books and music holders.

The British and Foreign Bible Society took a conspicuous place among this class of exhibitors. In reference to this, the *Argus* said:—"An octagon standing near the line dividing Great Britain from France, in the British book and stationery department, central annexe, contains a remarkable collection of volumes. The Bible and portions of the Bible are here displayed in no less than 133 dialects. Some of the nations for whom these translations were made have been obliterated in the march of civilisation. These books remain as probably the only literary production in which the language is preserved. Some are in the most ancient and enduring dialects, which, having a living literature, independent of philanthropic assistance, live and may continue to live for centuries, as long as the human race endures. The lingual peculiarities of the most refined and most barbarous nations are here—English, French, German, Italian, Spanish, Greek, Hebrew, Russ, Syriac, Arabic, Persian, Hindostanee, Chinese—languages refined and altered to modern taste and uses, side by side with others that have for ages been in service to the human race, and still seem to have as vigorous a hold on the affection, sentiments, or habits of those to whom they are vernacular as they ever possessed. The institution to which this exhibit belongs is composed of a committee of 80 laymen, six of whom are foreigners resident in London, 15 of the remainder are Church of England men, the other 15 are members of what are known as the Evangelical denominations. The president is the Earl of Shaftesbury, and among a host of archbishops, bishops, and magnates, Dr. Moorhouse, of Melbourne, figures as a vice-president. The head office of the British and Foreign Bible Society is at 146 Queen-street, London, E.C. The Victorian Auxiliary

14 at No 17 Swanston-street. The home work accomplished in England has been the dissemination of 43 millions of copies of the sacred Scriptures. These range from the portly foho, furnished with the legal laundry register, down to such a minute and inexpensive testament as may be purchased for twopence and carried in the waistcoat pocket. In Wales the Cymric love of the old tongue has been enlisted in favour of the Bible, and over two millions of copies have been circulated since 1802, at which time the idea of the society was first conceived and developed, as a means of supplying the Welsh with the sacred Scriptures. The Rev Thomas Charles, of Bala, was the originator, but the suggestion of the Rev Joseph Hughes, "That if for Wales, why not for the empire?—why not for the world?" was the basis of one of the mightiest efforts ever made for the dissemination of class knowledge." During the first four years of the society's existence it issued a little over 81,000 copies, but in 1878-79 it issued 3,350,000.

Stationery was exhibited in this court in great abundance and in every variety. Peebles and Son, of London; Spicer Brothers, of London, Monckton and Son, of the Basted Mills, Kent; G. F. Baskbridge and Co., of Kent, Hudson and Keams, of London, T. H. Saunders and Co., of London; and a score of others, had specimens of their wares there, from webs of newspaper over three miles long down to the smallest notepaper, from the thickest cardboard down to the finest and thinnest tissue. Pens of all sorts and sizes were to be seen. Joseph Gullott, of Birmingham, showed a great variety of nibs, magna boninus, also monster barrels coloured in imitation of the shades of beetles or skins of caterpillars, Perry and Co Limited, of the same place, displayed pens and penholders, plain and fanciful, and B. S. Cohen, of London, exhibited pencils and pencils-cases. Among other things, also, the following were exhibited:—Bailey Bros., of London, showed stencil-plates, stamp printers, and inks; Cooper and Co., of London, inks, quills, parchments, and tags; M. A. Bond and Co., London, marking inks; H. Erhardt and Co., London, tinfoil paper; G. Waterston and Sons, London, wax, red and black, with specimen bottle seals; Urwin Bros., specimens on lithography and engraved work.

CHINA, PORCELAIN, POTTERY, AND EARTHENWARE.

No English maker of first rank in this description of goods was unrepresented at the Exhibition, and the exhibitors were assigned a place, for the most part, in the central avenue. Only a short time ago Continental porcelain used to take the first place in this description of wares, but that condition of things is now most unmistakably reversed. Much of Minton's china, and all the earthenware, as well as illustrated tiles for fireplaces and dados, were arranged on stands and upon shelves; but then art-porcelain was for the most part protected by glass. Their factory is at Stoke-on-Trent, and an enormous quantity of ceramic ware is now made there, under the superintendence and direction of Mr. Arnoux, their manager, supported by about 1800 artists and workmen. Their collection of porcelain and earthenware exhibited commanded great attention and one portion of it was thus referred to by the press.—"In the Minton's collection there is a copy of a candelabrum of rare merit, and said to be worth £100. All the colours—chocolate, black, &c.—have been laid on a buff ground. The harmonious effect is due to the employment of clays as naturally coloured. The designs are minute, and yet very neatly executed. Persian ware, of which numerous examples are shown on the stand in the middle of the space, may be noted for the sake of its glaze. The body takes a soft glaze of a rich colour, which would not stand on other ware, and the ground resembles porcelain. This central stand is chiefly occupied with majolica or Palissy ware, coated with a coloured transparent or opaque enamel, revived by the Mintons about thirty years ago. The noticeable objects are life-size peacocks, storks, and herons, intended to ornament gardens and greenhouses." Their vases were exceedingly beautiful, and on other articles the decorations were very artistic and elaborate. Next to Minton's collection, in the central annexe, was Wedgwood's, the famous potter of the last century, whose name is a household word, and whose former business is now carried on by his grandnephews. Wedgwood is well known as the restorer of the famous Portland vase, destroyed by a madman in the earlier part of this century, but put together again; but he is better known, perhaps, by what he called his jasper work; and best of all, undoubtedly, by his modern earthenware, which was exhibited on the shelves in the central avenue in great variety. Messrs W. Brownfield and Co. showed a large collection of china, majolica, earthenware, stone-ware, and parian in the central avenue, and several large vases of diverse shapes, with different body colours and various styles of decoration. Messrs Brown-Westhead, Moore and Co. had two very large pieces, one of which consisted of a group of tigers, moulded in a single piece, with the colouring faithful to nature, and the other a blue and white candelabra, standing nearly five feet high, and bearing half a dozen globes. This firm also exhibited vases in a great variety of forms, and with a wide range of decoration. Messrs Pindor, Bourne and Co. had a large exhibit facing the central avenue, the members of this firm priding themselves, as they do, on the fact of the subdued and neutral colours which prevail in their goods, being most in keeping with the approved modern style of the decorative art.

The exhibits of Messrs. Doulton and Co., of the Lambeth Art Potteries, London, were of almost endless variety, and comparatively new in the development of the ceramic art. For a time this firm confined themselves to the manufacture of salt-glazed stoneware, such as is employed for drain-pipes and various kinds of chemical vessels, but their operations have since been largely extended, and they now employ at their different factories 2000 hands, and turn out 15,000 miles of drain-pipes per annum. They also manufacture other wares, in addition to pipes, now known as Doulton ware, which is largely used in hospitals and for purposes of architectural decoration. So far as the exhibits of this firm went, they were in the highest degree satisfactory, but they could not, within the limited space at their disposal, show, on a large scale, the adaptability of their wares to architectural and other purposes. We are told, however, that there are large edifices in the streets of London of which the façades and interiors are "decorated almost exclusively with their terra-cotta enamelled bricks and tiles. The terra-cotta is said to be more durable than marble, while its weight and cost are about a third of the latter. Combinations of this material with Doulton ware have been employed with excellent effect for pulpits, &c. in churches, the terra-cotta ware forming the general body, while the Doulton ware is used for panels, balustrades, pilasters, &c., and thus variety and richness of ornamentation are produced. The terra cotta ware is of two colours—reddish and light buff—and is well adapted for many styles of architectural work."

IRON, STEEL, AND HARDWARE.

In the central annexe, not far from the western tramway entrance, were exhibits of iron and steel, and of hardware of different kinds, from the English ironmasters and manufacturers, of which the following is a summarised list.—Hangle and Sons, of the Netherton Ironworks, Dudley, had an important exhibit of best bar, tee, angle, and rivet iron; also, a series of chains, ranging downwards from one made of 1-inch rod, capable of supporting some hundreds of tons. The West Cumberland Iron and Steel Co., of Workington, exhibited specimens of steel, which, when tested, gave a tenacity of 84 tons to the square inch, and an ultimate elongation of 25 per cent; as also specimens of castings, made directly from the Bessemer converter; and of ores, slag, pig iron, coke, and rails. R. Johnston and Nephew, of Manchester, had a weldless wire rod, No. 1 gauge, $1\frac{1}{2}$ inches long, weighing 12 cwt. 4 qrs 20 lbs.; and galvanised wire cord for rigging, and barbed fencing-wire, with small projecting spikes. Ash and Lacy, of Birmingham, showed specimens of the Owl galvanised iron, of various kinds; and F. N. Muntz and Co., of West Bromwich, plates, bolts, spikes, and nails of Muntz metal for shipping purposes. The Patent Shaft and Axle Co. Limited, Wednesbury, exhibited chequered iron plates for floorings, railway wheels, with wooden centres, and cast steel tires and axles, bent cold by hydraulic pressure. Messrs. Lloyd and Lloyd, of Birmingham, had wrought-iron tubes, almost large enough to make the outside shell of a portable engine down to a comparatively moderate size. These were, also, other exhibitors, all with their specialties, and all deserving alike of notice.

Scales and weighbridges have become of great importance since the introduction of the railway system, and a great variety of these were to be seen at the Melbourne Exhibition, some of a very large size. Messrs. Pooley and Sons were noted manufacturers of weighing-machines of great capacity, so constructed as to allow of the safe passage of heavy goods engine up to 40 tons over them. Samples of these were shown at the Melbourne Exhibition, and attracted much attention. Messrs. W. and T. Avery, of Birmingham, had a fine collection of scales in the central annexe, and a show of weighbridges outside at the north end of the eastern machinery annexe. One of these shown out of doors had a capacity of eight tons. It was constructed entirely of iron, with the view of getting rid of the objection which some people have to timber. The platform consisted of a number of small plates, the largest of which did not exceed 3 cwt. in weight. The plates were supported on wrought-iron girders. The levers were of cast-iron, strongly trussed with wrought-iron, and were so arranged that there was very little rock to the platform when a cart or wagon was drawn on. The platform and levers were contained in a pit only 26-inches deep. The steadyard beam was covered over, to protect it from the weather. Weights were dispensed with, there being a counterpoise in three parts, to mark half-tons, quarters, and pounds. The poise cannot be moved without first pressing a spring to lift the knife edge out of the notch and keep it clear of the beam, to prevent wear. For weighing gold and other precious materials scales and weights were shown, some weighing to within the 1000th part of a grain.

Birmingham and Sheffield are noted for their hardware, and they were well represented at the Exhibition in this line. Thomas Pemberton and Sons, of Birmingham, had a fine collection of brass and bronze knockers, and finger-plates with door-handles and bell-pulls. James Cartland and Sons, of Birmingham, exhibited almost every kind of builders' and architects' brass foundry, adapted for all styles of architecture. John Walker, of Birmingham, showed some novelties in locks and lock furniture, notably his "Triumph Guard" and an improved sash fastener, "The Paragon." R. and C. Harcourt of Birmingham, had, as specialties, patent self-adjusting lock furniture; and Chatwood, of Bolton, exhibited specimens of his "Invincible" lock in all sizes.

T. and C. Clark, of Wolverhampton, had a very fine collection of holloware, both tinned and enamelled, for household purposes, and Archibald Kenrick and Sons, of West Bromwich, had one of the same kind, with nickel-plated ware and bronze. In furnishing bonnongery, George Wright and Co., W. Cubit and Co., and Morgan and Waide, all of Rothenham; D. Parkes and Sons, of Dudley, and Steele and Garland, of Sheffield, exhibited a great variety of articles. Musgrave and Co., of London and Belfast, exhibited ten of their slow combustion stoves and air warmers, and Harris, of Birmingham, two specimens of the eagle grill stove, a small cooking range. In Sheffield cutlery there was no end of exhibits, and they were as excellent as they were numerous. Among the exhibitors of these kinds of goods John Rodgers and Co. and George Wootenholm and Son must be mentioned.

Guns, rifles, pistols, revolvers, and other sporting equipments were shown by about ten different manufacturers, most of whom have acquired a world-wide reputation. Sporting guns to the value of £50, Martini-Henry rifles, hammerless "breach-loaders," and the "turning" gun, were among the number, and all were of the best description. There were also gun wads, cartridges, and gunpowder, from Eley Brothers and John Hall, of London; and the Kennall Gunpowder Co., of Penryn, Cornwall, exhibited goods of this description.

COTTONS, LINENS, WOOLLENS, AND FELTS.

An excellent display of cotton and linen goods was made by the Manchester, Belfast, and Paisley houses. John Haslam and Co., of Bolton, exhibited, at the intersection of the avenue, broads, satteens, velveteens, checks, striped, gay, and white shirtings, longcloths, twills, muslins, cambrics, and lawns. W. Crum and Co., of Manchester, had, on the other side of the cross avenue, an interesting display of prints, percales, satteens, and fancy cloths; and Crompton, Crowses and Co., also of Manchester, showed calicoes, comprising heavy mediums, double wairs, longcloths, sheeting, and twills. Booth and Fox, of London; Ferguson Brothers, of Cashle, E. Harrison and Co., of Bolton; Johnston and Fildes, of Manchester; and Swanson, Biley and Co., of Preston, were also represented. Barbour and Sons, threadspinners, of Lusham, occupied a frontage to the central avenue, and a great majority of the linens were grouped with Manchester and Yorkshire fabrics on the opposite side of the court, on the way to the western machinery-hall. The prominent threadspinners, besides Barbour and Sons, were T. Ainsworth, of Whitehaven; J. Harris and Sons, of Cocker-mouth, and Marshall and Co., of Leeds. A fine assortment of linens was exhibited by the Besbrook Spinning Co., of Armagh. Special attention was invited by this firm to the power-loom damask cloth, on which were to be found illustrations of La Fontaine's fables, after Gustave Doré. Sheetings, plain linens, towellings, handkerchiefs, and drills, constituted their leading lines. Besbrook is described as a model village, without drinking places or pawnshops.

The woollen trade was not so well represented as was expected, and the exhibits generally were so placed as not to afford a proper view of them. There was, notwithstanding a tolerable collection of West of England cloths although a deficiency in the quantity of the Yorkshire goods, as also in their variety. Hootch tweeds were only represented by one firm; and the Irish manufacture was restricted to one exhibitor only. Flannels were shown by one firm only, and the finer classes of merinos, adapted for ladies' dresses, were conspicuous by their absence. William Blyth and Son, of Chipping Norton, were more largely represented than any other firm, but their goods were evidently made more for wear than show. Randall and May, of London, sent a few samples of their drab West of England quon cloths, very strong, wiry, and closely-woven, well fitted for hunting suits and trousers. Stanton and Son, of Stroud, had some good grey and drab harrine tweeds, heavy Meltons and coatings, heavy drab Dover or box cloth, black and blue broadcloths, and coloured billiard and livery cloths. The only Scotch firm that exhibited was Hogg Brothers, of Solkirk, and they sent a very fair sample of their Cheviot tweeds. Mahony Brothers, of the Blarney Factory, Cork, sent a sample of their tweeds, some of them really good, especially those in dark colours. George Lawton and Sons, of Mosley, Manchester, sent a good collection of plain and fancy Saxony shirtings, and of cricketing flannels.

In felts, the only things to be noticed were the hats made of that material which was exhibited in the frontages to the north avenue. The exhibitors were Christy and Co., Lincoln, Bennett and Co., and Hargroves and Co., all of London; and their felt hats were intended for wear in a warm climate like this, having high crowns and good broad brims. Other felt manufactures exhibited call for no separate notice.

FURNITURE, CARPETS, AND PICTURES.

The largest assortment of furniture was shown in the north transept, near the entrance to the central annexe, by William Walker and Sons, of London. This firm had their allotment fitted up in the early English style, with furniture and decorations of the most recherché kind, and all so arranged as to admit of the closest inspection. Messrs Comnath and Sons, of London, had their allotment fitted up in the same manner, with furniture and decorations in the early English, Queen Anne, and Chippendale styles. Specimens of tapestries and silks

were to be met with in rich variety, and, though usually kept in one of the cabinets, could be inspected at any time by visitors. Messrs A. J. Arrowsmith and Co., of Bond-street, London, also had some novelties in the furniture line—a suite of oak, parts of which were richly carved, and a suite in walnut and olive. But their speciality was parquet flooring, and they showed many specimens of the designs of line which they had used in the decoration of public buildings, like the Royal Academy, Burlington Gardens. For this purpose every kind of wood is employed; but pear-tree, mahogany, teak, sycamore, and oak were those chiefly used, and the effect was very pleasing. The Hoon Chair Co., of Lancaster, had an assortment of their furniture in the main building, which was varied and interesting.

There was a very extensive assortment of carpets, twenty-five manufacturers having sent in exhibits. Kidderminster and Axminster, Halifax, Glasgow, Edinburgh, Kilmaeock, Rochdale, Shetfield, and Huddersfield being well represented. The whole of the wall space of the United Kingdom Court, and a portion of the wall space of the Victoria Court, were utilised for the purpose of exhibiting these articles; and they showed the vast strides this industry has made of late years in Great Britain. Messrs M. Whittall and Co., of Kidderminster, had a very large selection of velvet-pile and Brussels carpets, among which were to be seen many in the higher styles, such as Persian, Japanese, Indian, mediæval, and mosaic. One very handsome velvet-pile carpet for a drawingroom had a panel pattern, coloured specially for Australian use, the harmony in the colours and the general style of the work being well suited to this climate. Messrs James Humphries and Sons exhibited half a dozen Brussels and Wilton carpets, the Wilton (a velvet-pile), made somewhat similarly to tapestry, admitting of a great diversity of colouring and design. Messrs Tomkinson and Adams showed Axminster carpets woven without a seam, but for which the firm is now substituting the Royal Axminster, which is woven in breadth, and is far less expensive. Messrs Morton and Sons had Brussels, velvet-pile, and Axminster carpets, one of their best being a fine floral pattern, in which there was a delicate treatment of the various shades of drabs, and a blending of white. Messrs E. Webb and Sons, of Worcester, sent a novelty in the shape of a new carpet, called the "Worcester," made of horse-hair, woven, after the Brussels fashion, on a strong jute back, and is mainly intended for places in which there is constant wear and tear. Messrs John Croxley and Sons, of Halifax, had an exhibit worthy of the firm as the first to introduce the process invented for the manufacture of the best English tapestry and velvet-pile carpets. This process is now pretty well known, but it is too long to be described here. Messrs T. Tapling and Co., of London, sent in an exhibit unique in the carpet line, in which it was sought to produce by machine-weaving work similar to the hand-woven French tapestries, and at about one-tenth of their cost. The specimen exhibited represented Christ and His apostles, and the figures were of the life size, and stood out well on a mignon ground. The colouring was rich, and the design good, but time will be required to bring this machine work up to the perfection of the hand-made Gobelin.

From furniture and carpets to pianos the distance is not, metaphorically speaking, great, and they are closely allied to each other. Pianos form as much—in fact, a part—of the make-up of every well-appointed house as furniture and carpets. In the western transept, leading to the great annex, Messrs Brinsmead and Sons, of London, had an exhibit of pianos, which comprised—1. A concert grand, in solid oak case, bound with brass. 2. A boudoir grand piano, in burr walnut case. 3. An overstrung oblique, in burr walnut case. 4. A centennial oblique, in burr walnut case. 5. An upright non grand, with folding key-board, also in walnut case. 6. A model of the Brinsmead patent "perfect check repeater action" as applied to upright pianos. 7. Model of the same kind of action, combined with the action of the "tone-sustaining pedal as applied to horizontal grands." 8. Model of Messrs Brinsmead and Sons' latest patent—namely, their "tone compensator and recuperator"—together with model of their complete consolidated metal frame as applied to upright pianos. Messrs Brinsmead and Sons have made great improvements in their pianos during the last quarter of a century, and manufacture none now but of the first class. Their exhibit was an interesting and a very important one. Messrs Allan and Co. (as agents for the house of "Besson," of Paris, London, and New York) showed a well-furnished case containing a complete set of instruments for a military band, all of "Besson" manufacture. These consisted of helicons, bombardons, euphoniums, baritones, trombones (duplex and baby), alto and tenor horns, flugel horn, B flat cornets, F flat soprano cornets, B flat clarionets, B flat clarionets, bassoon, flutes, trumpets, bugles, and side-drums. All the instruments in this case are thickly gilt or richly electro-plated, and they are engraved by hand in fine designs. The valve actions have been made silent, so as to do away with "clicking." The whole contents of the case make a complete and very interesting collection. The well-known firm of Challen and Sons, of 20 Oxford-street, London, show four pianos of cottage and piccolo form, and a model of their "check action," which is to be found in each instrument. The quality of their instruments has been well known and approved here for many years past. They are all of admirable finish in their interior workmanship, and the cases are of strong and elegant construction, and are ornamented in the best artistic taste.

JEWELLERY, ELECTRO-PLATE WARE, AND WATCHES.

Messrs. Francis and Santamaria, of Hatton Garden, London, exhibited a large collection of shells, mosaics, and fancy jewellery, of great artistic finish, and Mr. V. Mobilio a well-selected collection of silver goods, comprising earrings, brooches, and chains, of the latest prevailing styles. Mr. S. Crammorc, of Birmingham, showed imitation jewellery, which might pass for the genuine article with many, and there were several other exhibitors of the same class of goods, all of which were excellent in their way. Messrs. Kilpatrick and Co., of London and Melbourne, had a fine collection of electro-plated ware, jewellery, and watches. Among their electro-plated ware there were handsome dinner service sets, comprising dish covers, cover dishes, soup tureens, and entrée dishes, elaborately ornamented with iron designs. Messrs. Nicoli, Nielsen and Co., of Soho-square, London, exhibited watches of the most complicated and wonderful mechanism, such as chronographs, minute-repetitors, and calendar watches. The collection of their watches, selected by Messrs. Bush and Drummond, of Melbourne, were remarkable for their excellence and variety. There were also among the exhibits keyless racing chronographs, with split seconds for timing two horses at one time in a race, and others with two observation hands, to mark respectively the minutes and seconds of a race. An ingeniously devised watch was made to strike on a gong the hours, quarters, and minutes, and to correctly indicate the time by the mere pressing of a slide without looking at the dial. Another keyless repeater was made to strike the hours, half, quarters, and half-quarters on the gong. An interesting piece of mechanism was that of the keyless hunting chronograph, with railway speed indicator, which enables a person to test the speed per hour at which a train is travelling. Mr. Victor Kullberg, of London, showed a case of chronometers, and of clock works, finished in the best style. Messrs. Gimson and Baxter showed various articles for watchmaking, and Mr. Daniel Buckney, of London, showed a choice collection of watches of every kind.

PERFUMERY.

In the perfumery section, in the eastern nave of the main building, Messrs. J. and E. Atkinson, of London, made an effective display of perfumes, powders, soaps, and lotions of all the most highly favoured kinds. Messrs. Napoleon Price and Co., of London, had also a very large collection of perfumes, the specialty of this firm being a fine perfume manufactured from *spinososa*, a South American flower of very rich fragrance, not used in the manufacture of perfumes until lately. In the northern transept Messrs. Piesse and Lubin, of London, had an exceptionally choice collection of perfumes, which have already largely come into use, and are in high favour. Other exhibitors were Messrs. Go-nell and Co., Messrs. A and F Peers, E. Rimmel, and the Crown Perfumery Co. All these firms sent exhibits, and they were very varied. In reference to the essential oils of Australian flowers, it has been remarked by leading perfumers that "some of them possess a sufficiently grateful fragrance to render them available for perfumery purposes. If such be the case it will be a great boon to perfumers, on account of their abundance and cheapness, for in the course of time the supply can become unlimited, and the price quoted for some of them now—namely, six shillings per gallon—is about one-fourth of the cost of the commonest essential oil used for scenting soap."

TELEGRAPHY.

In the eastern nave of the United Kingdom Court Messrs. McLean Bros. and Rigg, of Melbourne, had a case of telegraphic apparatus sent by Thalis and Sons, of London. Messrs. James McEwan and Co., of Melbourne, also had a fine collection of electric bells, made by Julius Sax, telegraph engineer, London, neatly fitted up on a stand in the east nave. These were intended for doors, offices, or hotel purposes, as also were the pneumatic bells made by C. E. Zimdars, which were exhibited on the other side of the same stand. A collection of specimens of telegraph cables was shown by the Telegraph Construction and Maintenance Co., London. It contained short lengths and transverse sections of 127 different cables made and laid down by that company between the years 1855 and 1878. The total number of miles of cable laid was 47,084. Deep-sea cables, shore ends of varying thickness, and many kinds of torpedo cables, were represented, the number of wires in the cores ranging from one to six.

LEATHER.

Although the leather industry takes third rank among the industries of the United Kingdom, only one exhibit of leather was sent to the Melbourne International Exhibition—namely, that of Messrs. P. S. Evans and Co., of the Avonside Tannery, Bristol, established nearly three-quarters of a century ago. With this exhibit there was sent a portion of the hide of a hippopotamus, which was from a little more than an inch to an inch and three-quarters thick, and which it took Messrs. Evans the full space of four years to convert into leather. On a first look at this specimen of leather it presented the appearance of a broad, thick board of mahogany, and it was very difficult to believe that it had once formed the hide of a living animal. Yet the leather thus manufactured serves a very important purpose, being

used for washers in heavy machinery, for which it commands a high price on account of its scarcity. The remainder of the exhibits of this firm consisted of sole and pump leather, for the manufacture of which they have long been famous. It is said that this arises from their never making any attempt to hasten the tanning process, but in always giving it time.

PAPERHANGINGS.

A good show of wall papers was made in the central annexe, and these have their uses in houses as much as furniture and carpets. The display of these articles was large and interesting, and the following are the names of the principal, if not the whole, of the exhibitors.—J. Allan and Son, of London; Carlisle and Clegg of London; William Cooke, of Leeds, the Darwen Paperstaining Co., of Lancashire, Heywood, Higginbottom, Smith and Co., of Manchester; Jifney and Co., of Islington, London; G and J B Potter, of Darwen, Lancashire; W Woollams and Co., of London, Wyhe and Lochhead, of Glasgow, Scott, Cuthbertson and Co., of London; and Brooks, Robinson and Co., of London and Melbourne. Some of the patterns were very beautiful, and their styles were, as in the case of carpets, much diversified. In both the object of the artists appears to have been to please, and not fatigue, the eye.

THE BRITISH INDIA COURT.

The Indian Empire was more fully represented at the Melbourne International Exhibition than at any previous one. Great pains were taken by the Indian Government, to which the success of the undertaking was mainly due, in selecting articles illustrative of the arts peculiar to every part of the country, which were, in many cases, of ancient origin and of excellent workmanship. One of the striking objects in this court was a show-case made of deodar wood, and carved in the style adopted by artisans of the North-West Provinces. It showed the architectural mode of ornamentation used by the Delhi natives in building. A drawing-room cabinet by Deschamps, of Madras, attracted considerable notice. It was made of the finest mahogany, with cunningly carved figures, illustrative of Hindu mythology, in sandalwood, in high relief. The carving was perfectly executed, and reflected the greatest credit on the Hindu workmen; and the sandalwood filled the court with its perfume. The display of furniture was very creditable. Several sofas were made of blackwood, the backs of the sofas being a mass of foliage carving, done in fretwork. There were some unique specimens of marble-top tables. The flowers had every appearance of being painted on them, but on looking closely into them they were found to be inlaid with Jasper, agate, and blood-stones. Carpets of every size and texture were hung on the walls. Most of those exhibited in Melbourne were from Mirzapur, Jhansie, Agra, Dasti, Allahabad, and some parts of Southern India, and were of good manufacture.

The brass work in the Indian Court was awarded first prize at the Melbourne Exhibition. It consisted chiefly of large dishes and water jugs, lightly burnished, and engraved with floral subjects, or embossed with mythological characters. Pottery, which existed in India three thousand years ago, was well represented. The designs were quaint and of ancient Eastern design, as neither models, colours, nor the mode of manufacture have undergone any change since the invention of the potter's wheel. Jewellery and silverware formed a conspicuous feature in the court. The Indian work is renowned for its delicacy and superior workmanship. The Delhi filagree jewellery was marvellously fine. Another pattern was the "Swanee," now become popular in England. A good many specimens of the silverwork from Cuttack and Trichinopoly were exhibited. In one of the show-cases were silver tea and coffee services, some of which were chased, others being in repoussé work, covered with floral decorations. Chinua Veeranna's exhibit of fancy articles from Vizagapatam was very beautiful, every object being of his own handwork. There were boxes of lion-horn and of sandalwood, finely carved, and ivory bracelets, and buttons, and card cases.

Other ivory goods came from the North-West Provinces, of Hindu goods, elephants with howdahs, Ganges boats with crews, native carts with bullocks, &c. One article deserving of special mention was a pair of elephant's tusks, heavily mounted in gold. There were a great many curiosities in the Indian Court—representations of the castes and trades of the people, musical instruments of every kind, old coins, a statuette of the god Dhurga, half a man and half an elephant in pure white marble, and a model of the Taj at Agra. The Indian Government sent a great variety of shawls, from the plainest cashmere to the celebrated Rampore chudda; one of which, in particular, was made of the finest under-wool of the cashmere goat, and beautifully embroidered, which, though of a large size, could be easily passed through a lady's ring when folded up. These shawls are of such even quality that, although very fine and delicate, they look as good after they have been worn for fifteen years as on the first day. The Indian silks exhibited were mostly of Oriental patterns without any of the usual

European gloss, and therefore are far more durable, as no injurious substance is introduced in their manufacture. There were shippers, caps, and babies' hoods, elaborately embroidered, indeed, the display of the different embroideries and of the net or muslin having beetles' wings worked on it with threads of gold, was most effective.

The grass mats, some of which were made of a fine kind which only grows in one spot in India, must also be mentioned. The kus-kus mats are made of the *Andropogon muricatum*, and are hung before doors and windows, when, if kept constantly wet, the hot air wafted through them diffuses a perfumed odour from their fragrant roots, and keeps the temperature cool, though it may be burning hot outside. Cotton is largely exported from India, and was exhibited in every form up to the finest cloth. The jute plant, as well as the fibre, the yarn, and the woollacks so much patronised in Australia, were also shown. Coffee brings in a mine of wealth to the Government and planters in India, thousands of acres being cultivated with this valuable plant. Endless specimens of coffee beans were to be seen. The Trichinopoly chocolate is well known, and there were some very good samples exhibited.

Tea is at the present moment a very important export from the Indian market. The Tea Syndicate of India have been making great efforts to open a market in Melbourne for Indian teas, and Mr Co-mo Newbary, who has analysed them, pronounces their strength and aroma to be better than those of the Chinese article. There were rows of bottles in the Indian Court containing different kinds of teas, moreover, in order to give visitors the opportunity of judging of their merits, the Commissioners dispensed cups of tea every afternoon in a pavilion adjoining the Indian Court. Preserves and pickles, arrowroot, and gums and oils were exhibited. B. H. Baden-Powell contributed samples of the hazel, oak, ash, box, maple, pine, common yew, elm, cedar, walnut, olive, and other forest woods. The curator of the Nagpur Museum sent sandstones, different limestones, samples of coal, soapstone, two slabs of marble, sixteen specimens of quartz crystals and slates, manganese ore, iron ores, fire-clays, and one small basalt slate from the Wardha district. The Bombay Committee forwarded decorative arms, as used by the Hindus, and a collection of toys. From Bengal came a large variety of painted clay figures. Bombe and Shepherd, from Calcutta, sent albums of photographs of Indian scenery, buildings, and characters.

Major-General J. T. Walker, R.E., F.R.S., Surveyor-General, exhibited maps, plans, and charts, on various scales, of different parts of India. In the grounds of the Exhibition was a Burmese thair or chapel of carved teak-wood. The carving was very elaborate, and the light, graceful erection was a great ornament to the gardens. Besides this exhibit, the Government of British Burmah sent Arakan tobacco, both in the leaf and in its manufactured state, with some samples of Arakan tea.

CAPE COLONY, SOUTH AFRICA.

The Cape sent water-colour drawings, chromos, and photographs of the scenery and natives. There was a collection of Zulu and other weapons and ornaments, amongst the former being assegais and spears. Furs and skins of the bek were exhibited, and a case of ostrich feathers, which was a curiosity, owing to the birds having been artificially hatched and reared on the estate of Mr. Arthur Douglass, of Hetherton Tower, Graham Town. Various samples of South African wines were shown, and some of Dönnenberg's Cape brandy. There was a very ingenious improved lychnopolis for cleansing and watering plants and extinguishing fires. But the most noticeable exhibit from the Cape was a magnificent set of hunting trophies of elephants, lions, antelopes, and other animals killed in Central Africa by Messrs. Churnside and King-Hall. The tusks of elephants and horns of different animals were mounted very handsomely in silver. Two tusks of enormous size, containing valuable ivory, were mounted so as to form the framework of a mirror, whilst others were designed in various shapes, some supporting candle sockets, others again containing flower vases, one little horn being the *point d'appui* for a toast-rack and egg-stand combined.

THE CEYLON COURT.

First and foremost amongst the natural products of Ceylon must be reckoned the cinnamon. The show of samples sent to the Melbourne International Exhibition was unrivalled, and better than any that had been exhibited before in any part of the world, the best being J. F. Drieberg's and Rajapakse's.

The next staple article of export was coffee. For many years Ceylon has commanded the coffee market at Mining Lane, and though, when a small sample is in request, it would be very possible to find finer specimens, no other country in the world can compete with Ceylon as to quality when it is a question of purchasing it in very large quantities. The value of the capital invested in coffee-growing is estimated at about nine millions sterling.

The little round peaberry coffee bean is the most expensive. This is occasioned by its rarity. It is considered a bad sign when a plantation gives a large average of peaberry coffee, as it shows that the trees are in an exhausted state. The berry presents a cherry-like appearance when ripe, of which so-called cherry-coffee these were samples in the Exhibition. A new variety has very lately been introduced into Ceylon by a planter who recognised the plant growing in a wild state in the bush in Siberia. This bean is very large, and is said to be of a superior kind, equal to the finest Mocha. Two or three samples of this kind were shown. Owing to the terrible disease which ravaged the leaves of the coffee-trees, and ruined so many planters, their attention was turned in another direction, and a large and constantly growing cinchona and tea cultivation resulted. In 1878 the amount of tea exported was 1600 lbs., whereas in 1880 it amounted to 1,000,000 lbs. The first sample of Ceylon tea was shown at the London Exhibition of 1861, when, to the amazement of the planter, who merely sent it as an experiment, it fetched the highest price and took the first prize. Cinchona bark was the next staple in value, one acre of five-year-old trees fetching from five to six hundred pounds. The export for this year will, it is estimated, amount to about £1,200,000.

The largest cultivation on the island is that of rice, yet as there is not sufficient grown for home consumption, it has to be very largely imported. Ceylon is the land of spices. The cardamum, a very strong spice, is much favoured by Spaniards. Sticks of vanilla were exhibited. One bottle was filled with Sang Lottans (*semecarpus* sp.) vulgarly called 'dhobies' nuts, which contain a thick black ink, used by native washerwomen for marking the clothes, and which is so good a dye that no boiling water will remove it. Many different nuts, with their extracted oils, were exhibited. Such were the citronella scented oil, the coconut oil (one bottle of which was thirty-five years old, supposed to be a cure for rheumatism). Besides these were bottles of castor oil, gingelly, &c. The coconut and palm trees were also represented; the former grows principally in the south, and the palm in the north, the fanankey or palmyra fruit taking the place of the coconut, being about the same in appearance.

Amongst the manufactured products were coils of con rope. When a ship is at anchor in a heavy sea, a spring of con rope over the cable will keep the vessel safe when the chain alone would sink her, the rope stretching so much that the chain is removed. There was a very curious black coral tree, which had been fished off the coast of Ceylon in thirty-two fathoms of water. It had more the appearance of petrified seaweed than of anything else, not being the work of the coral polyp. The Ceylon Government sent models of canoes and kattamarans, and of bullock carts, agricultural implements, &c. Two adzes of especial interest were exhibited. The adzes are most delicately inlaid with lines of silver. Under the head of minerals were exhibited numerous specimens of plumbago, which is the only ore of commercial importance exported from Ceylon. It is used for smelting purposes, to which use it is principally devoted, as it resists the action of fire better than any other known substance except asbestos. In 1878 81,635 cwt. were exported, at a value of £100,000.

The Government agent at Candy sent a variety of ancient Kandyan pottery, obtained as loot. There were several curiosities in the court, the most valuable being ornaments worn by some Kandyan ladies of high rank, and which were heirlooms that had been preserved for generations in the family of the chief. It was with great difficulty that their owners were prevailed on to lend them, and they were very heavily insured. The Kandyan drawings were very curious. They were representations of goddesses, which, being intertwined, formed drawings of elephants, vases, &c.

Eighteen carved figures were exhibited, representing different natives of Ceylon. There was the astronomer, the clumber of trees, the elephant keeper, the lascarren (soldier), the dhobie (washerman), &c. There were two skulls of Ceylon elephants, and some deer horns from Colombo.

The elephants' tusks were very fine, and there were numerous pieces of teeth. There are only four of these to every elephant, and they are of great size and strength.

Most people are acquainted with the Ceylon jewellery, from the P. and O. ships making Galle their port of call, and many have been taken in by the wonderful spurious imitations not only of sapphires and other precious stones, but even of tortoiseshell. One man, who makes the best imitation jewellery perhaps in the world, has made his fortune by the sale of it. There were uncut sapphires, cat's eyes, moonstones, aqua marina, topaz, and rubies exhibited. Emeralds are not found in Ceylon. The pearls were not so large as some of those found on our own coast, but the lustre was more brilliant. Some of these were preserved in boxes made of porcupine quills. There were some handsome tiger and cheetah claw ornaments, and the gold and silver chiselling was exquisite, the Cingalese goldsmiths being able to produce most beautiful work with the simplest appliances. The jewellery comprised bracelets, lockers, rings, and earrings.

The Ceylon furniture was represented by elaborately carved sofa, table, and chairs, in ebony. They were very heavy, and the carving of the hardwood was beautifully executed. Of textile fabrics may be mentioned some Kandyan cloth, pieces of chettadai, and samples spun cotton.

Ceylon lace is very durable, some of the patterns being very pretty, and it has the advantage of being inexpensive.

Next must be mentioned the collection of books, Cingalese old books, statistical reports, newspapers, and blue books, and the wonderful collection of photographs, which our photographers declared to be unrivalled. There were two albums containing photographs of ancient ruined cities in the interior of the island. One of these was Polonnaruwa. The ancient buildings were beautifully sculptured, and the corners and edges of walls and stairs were as well defined and cleanly cut as though they had been finished yesterday. Another ancient city was Anuradhapura, the walls of which extended sixteen miles on every side. There was a photograph of the sacred tree, Bo—a banyan which was planted a.d. 288. Another represented a newly discovered pavilion, having at the bottom of the staircase a sculptured semi-circular moonstone, which is by far the finest that has ever been discovered. It is seven and a-half feet across, and was buried for centuries, but is now restored in a perfect condition.

The maps of the hill country, of the railway from Colombo to Kandy, and of the geology of the island were very interesting. There are several lakes on the island, and all are artificial, one being thirty miles across.

In the centre of the court was a dagoba or Cingalese temple, answering to the pagodas of Burmah.

JAMAICA.

Samples of sugar and cigars were shown from this island, together with some fine mountain coffee. A stand of bottles, filled with rum distilled at Kingston, gave evidence that the product by which Jamaica is best known in Australia is still produced in large quantities.

THE MAURITIUS COURT.

The total area of the Mauritius is only 708 square miles, and yet the population in 1879 amounted to 357,380. The most important of its exports is sugar, this small island containing three hundred sugar estates, the largest employing nearly a thousand labourers. At the entrance of the court was a handsome trophy of sugars of different kinds, in large glass jars. Rum is another important export, and was represented by S. Baker and Co. and H. Mathu; whilst vanilla, which is largely produced, was displayed in bundles by several growers. There were large jars of cocoanut oil, which ranks next to rum in value of the amount exported, besides being in great demand amongst the Indian labourers. Of alimentary products there were as well some samples of tapioca, coffee, cloves, and honey. Mrs. C. Phipon sent some arrowroot focula, prepared without indigo line, and E. Baya contributed manioc focula, which is said to be the only starch they use in the colony. The manufacture of the fibre of the aloe, *fourcraia gigantea*, which is exported under the name of "Mauritius hemp," is one of the most rising industries in the Mauritius. It is prepared by island-made machinery, which destroys so large a quantity during the process of manufacture that the Government have offered a prize of 2500 rupees for a more perfect machine, hoping by that means to spur on the industry. The largest trophy in the court consisted of fibres from Mauritian plants and coils of rope made up from these. This was sent by the acting-director of the botanical gardens at St. Louis, Mr. N. Cantley. There was also a special bale of fibres of the aloe, *Trulser* was represented by a fine collection of at least forty samples, and a few colonial chairs, the seats of which were made of the vacca leaves. Some of the nuts of the *Coccoloba* palm were exhibited, which were curiously shaped like a double cocoa-nut. There were two exhibitors of cigars and tobacco, and beeswax occupied a place on the shelves. On entering this little court, a large case to the right attracted the visitors' notice, containing specimens of natural history, some of which were strange-looking fish and molluscs. The corals and madrepores were very beautiful. Paintings in oils and water-colours, and capital photographs, descriptive of the lovely scenery, adorned the walls, and several books and plans and maps printed in the island completed the display.

STRAITS SETTLEMENTS.

This little court was one of the least attractive in outward appearance of any in the Exhibition, though very instructive to those who cared to study the capacities and progress of Singapore. Considering how close this British colony is to Australia, the people of the great continent must of necessity take an interest in her welfare, and no one can help admiring the wonderful strides that Singapore has made within the last few years, till she numbers 120,000 inhabitants, and is called the Alexandria of the Eastern seas. Immediately to the right, on entering the court, was a case of ornaments sent by the Sultan of Selangor. These included

His Highness's belt, to which were hung the scabbard of his kris, his tobacco-box, and his betel-box. They were all of native gold, and the workmanship was a credit to the native workmen. Some real cloth-of-gold, intended for a sultana, was exhibited in the same case, and along the partition at the side of the court were hung different handsomely ornamented sleeping mats, such as are used by the rajahs. The Malay, both men and women, wears for his covering what is called a "sarong," and the rank of the wearer is determined by the quality of the material of which this is made. Several "sarongs," in different materials, were exhibited, as also some of the silken trousers worn by the Achinese, a Sumatran tribe. There was an old silk covelet made one hundred and fifty years ago, and a silk and gold thread shawl, from a loom at Belangor, thirty years old.

Muhammed Syed Inche sent one of the gold and silk necklaces worn by the children at Singapore, and a wrought silver knife scabbard, such as the Malay youths wear on their wedding day. Against the wall at the end of the "Staats" Court was a fine array of weapons used by Malays and by natives of Borneo, Java, Sumatra, and the Eastern Archipelago. A sheaf of Malay spears was arranged in the centre, but these weapons are hardly ever used now by the different tribes. They kill game with the blow-tube and the dart, and their enemies with the short dagger called the "kris." A very interesting collection of models of native boats and shipping was exhibited, including some well-built Chinese canoes, a very skilfully devised puna's prahu, trading junks, and other samples of Malay boat-building. N. P. Truvuon, Malacca, sent a very antiquated model of a native plough, and the Straits Settlements Government different models of Malay houses, all of which are raised from the earth and built on piles, the windows appearing to be merely narrow slits in the sides of the house. A collection of photographs, sent by the Government, gave one a good idea of different parts of the Settlements. There were two or three beautifully carved ivory ornaments set in ebony richly carved, and some baskets made of vegetable fibre, besides an exhibit of native musical instruments from the Maharajah of Johar. J. Fisher, of Singapore, sent different essential oils, such as citronella and expressed oil of mace. Amongst the special products of the Malay Archipelago are guttapercha, gums, indiarubber, mace, cloves, nutmeg, pepper, edible birds' nests, yams, seaweed jelly, teel seed, vegetable tallow, betel nut, and a singular product called "gambier." The guttapercha was very well represented by numerous exhibits, and there were beautiful copal gums, both light and dark, and leaves of isunglaes. Copra was also shown, and a high erection in the middle of the court consisted of every variety of wood specimens, some of them being very valuable for commercial purposes.

Rice, tapioca, paddy, and sago were shown, and preserved fruits, of various kinds. Tea, coffee, and rum, which are also products of Malaya, were only represented by two or three samples. Several large and curiously marked pieces of tin splash, as well as a collection of tin ores, showed the natural resources of the country. The natives in the interior are too heroic to allow Europeans to carry off the gold which exists there. The natives are learning to utilise the tin raised from the mines, and convert it into domestic articles. Some of these exhibited in the court of the Straits Settlements were very nicely carved.

FIJI COURT.

Although the space allotted to the Fiji exhibits was very small, it was conspicuous for its unique arrangements, and many visitors were attracted to the little court, notwithstanding its distance from the principal thoroughfares. The staples of the islands were well represented and ingeniously displayed. An immense strip of matting, made of the madi, or mulberry bark—named thus on account of its great resemblance to our mulberry tree—was draped across the court; baskets hung around of the same material, whilst the end wall was ornamented by a large case of photographic views, both of the scenery and inhabitants of the islands, around it being grouped a collection of native weapons, sent by Sir Arthur Gordon and the Government of Fiji. The centre of the court was devoted to a magnificent display of cotton, which is unrivalled in excellence, and successfully holds its own against that grown on a more extensive scale in older cotton-growing regions. Unfortunately the sudden changes in the market value of cotton tend to check its fuller development.

The Fiji Islands, being of volcanic origin, are luxuriantly fertile, and capable of unbounded culture. The area of the entire group is superior to the size of our West Indian possessions, inviting enterprise to open up many an avenue to commercial prosperity.

The soil is rich, even on the mountain tops, and tropical trees flourish, amongst which the cocoanut occupies a prominent place, as it yields support, and food, and clothing to the native population. A good many samples of the copra were sent to the Exhibition.

Cocoanut fibre is of use for many purposes, amongst which mats were shown, and baskets, and coir. There was a curious model of a Fiji church made of the fibre. Numerous samples of native trees were exhibited. The bark of one of these, called the natuan, is beaten out into

native cloth, and thus "tapa" was displayed in various stages. A large figure was dressed in some of the fine tissue-like fabric to represent a native lady in full dress. Strange to say, though so very fine, it is durable for wear. Some of the native dishes were curiously shaped. They were made of different woods. Bottles of nuts and oils were amongst the native exhibits, the latter comprising the diu-cocoa and candle nut oils, and the former the ivory-nut, another kind used for tanning, and edible nuts. Mace, nutmeg, and cinnamon testified to the richness of the island's spices; and there were bananas and ginger, edible seaweed and béchu-do-nut, guano and tumeric. Some prized grasses grow in Fiji, the lemon grass being used as a beverage by the natives, drunk as tea, specimens of the latter were shown at the Exhibition, as also several mats manufactured out of other native grasses and called "lotomaha."

One of the most important exports of Fiji is sugar, and a fine trophy of the cane was erected near the entrance to the court. All along the side were samples of manufactured sugar. The coffee and tobacco industries are still in their infancy, but the samples shown were of very fine quality. A coffee plantation of two-year-old trees yields from 80 lbs. to 150 lbs of good coffee, doubling itself within twelve months. The exhibits of arrowroot and tapioca were very creditable.

A remarkable feature of the Fiji Court was a magnificent display of coral. Some of the loveliest pieces were arranged on glass, with a mirror along the back, which added to their beauty. Pearl shells were also there, and a variety of sponges. One of the curiosities was a native headdress adorned with coloured berries and seeds; and lastly, a collection of native carpenters' tools, which were made of stone.

THE NEW SOUTH WALES COURT.

The oldest British colony in Australasia had its numerous exhibits in four distinct compartments. In the main building the finer descriptions of New South Wales goods were located between the areas assigned to the United States and India, machinery and railway appliances in the western machinery annexe, and also at the north end of the eastern annexe; while the bulk of the natural products and manufactures of the colony was displayed in a court having a frontage of one hundred feet to the central avenue of the main temporary annexe. This last-mentioned portion attracted the most attention, as containing specimens of the principal sources of the material wealth of New South Wales. Commencing with minerals, a lofty gilt obelisk represented the whole of the gold known to have been obtained in the colony to the end of 1879, the aggregate weight being 9,066,601 ozs., valued at £38,748,019. Around the base were specimens of auriferous quartz, some of which would yield an average of 8 ozs. to the ton. A smaller obelisk, silvered, showed the bulk of silver obtained from the chief silver mines, amounting to 681,701 ozs., valued at £161,572. A massive pile of cakes and tiles of copper from the Great Cobar Copper Co., with ores from that and other mines, evinced that copper mining is progressing rapidly, and the total output of that metal from the smelting works up to the end of 1879 realised £2,494,487. A handsome trophy built of ingots of smelted tin, encircled with chains and ribbons of the same metal, showed that the tiniferous deposits of the country are another of its mainstays, the sum of £3,144,287 having already been received for the aggregate production of the metal. A trophy composed of iron ore and pig iron, on which rested rails for railways and tramways, surrounded by pipes and other articles, cast or rolled at the Eskbank Works, Lithgow Valley, was also justly accorded a front position. The ores and hematites were rich, and the total output from the works to the beginning of 1880 was £54,151 worth. Two pyramids of kerosene shale exhibited products from the mines of the Australian Kerosene and Mineral Co., Joadji Creek, and the Hartley Shale and Oil Co. The shale of the latter company yields 160 gallons of kerosene to the ton, or 18,000 cubic feet of gas. Antimony, both crude and smelted, was shown in considerable quantities from the Macleay River district. The coal of New South Wales was well represented. The exhibits were mostly from the Newcastle district, and were in blocks, according to the various thicknesses of the seams—viz., Newcastle Coal Mining Co., 10 ft. 6 in.; Newcastle Walkend Co., 9 ft. 4 in.; Waratah Co., 10 ft.; New Lambton Colliery Co., 9 ft. 9 in.; Illawarra Co., 7 ft. 6 in.; Osborne Wallsend Co., 7 ft. 6 in.; Greta Colliery, 15 ft. The Purified Coal and Coke Co. had a model of their patent coal-washing machine, and samples of the coal prepared by it and of the purified coke made therefrom. The fine display of minerals included a large number of ores of copper, tin, iron, antimony, with those metals in the refined state; also, lead, silver, and bismuth ores, gold in quartz, asbestos, gems, and various other minerals of more or less economic importance, all arranged under the direction of Mr. C. F. Wilkinson, F.G.S., Government geologist. The Department of Mines, Sydney, sent a number of geological and mining maps, the most important being the geological map of New South Wales, constructed from the original plan by the late Rev. W. B. Clarke. The tallest trophy in the court was formed of granites, which reached from floor to roof, and there were likewise specimens of freestone for build-

ing and flagging purposes. Timber—another staple product of the colony—was displayed in a collection of 277 specimens, arranged by Mr. Charles Moore, F.L.S., director of the Sydney Botanic Gardens. Each specimen was labelled with its natural order, scientific name, local name, height of tree, diameter of its stem and habitat. In the collection were upwards of forty eucalypts, twenty acacias, besides many other myrtaceous and leguminous species. "A large proportion," said the *Age*, "are of very great importance for ornamental work, cabinetmaking, and the like, as the well-known cedar (*Cedrella Australis*) and the finely-marked *Abies* Hendersoni, and the Nuggum Nuggum of the aborigines, or for house-building and other economical purposes, as the various eucalypts and the *timber* of the Clarence and Richmond Rivers (*Gmelina Leichhardtii*), excellent for flooring and the decks of ships, as it never shrinks."

A collection of fifty varieties of the timber of the Clarence River district was sent from Grafton, and several other specimens of forest products were exhibited. Of the timber collection generally the *Age* remarked:—"Not the least interesting of the natural products of New South Wales is the splendid collection of timber which occupies the right side of the court. The wood is shown in the rough and polished, some of the specimens present a very handsome grain, and have all the appearance of being well fitted for making furniture. Of the durability of some of these woods, and their power to withstand the effect of water, some excellent illustrations are given. A portion of a pile of turpentine wood is shown, which has been for nine years immersed in sea-water. The section shows that it is as sound as the day it was first put in the water, the teredo navalis not having made the least impression on it. Another specimen is that of a non-bark pile, which has been exposed to the action of the air and sea-water for forty-eight years in Darling Harbour. This specimen is pierced in several directions by the teredo, but the boards are far apart, and there is good substance of sound wood left. Another pile of white iron-bark, which has been in damp ground for sixty-five years, still remains perfectly sound." The area of land under cultivation is steadily increasing, and cereals of all sorts can be grown in one part or other of the colony, according to the climate. Of these products, one large trophy in the shape of a cone formed of maize in the cob represented the growth of the Hawkesbury district, and in cases were shown the same product shelled from the Clarence River district. There were but three exhibits of wheat, those from Mr. James Connell, Donn-hill, Yass, and G. Faint, Spring Valley, Armadale, being (according to the *Age*) the most remarkable. The result of the manufacture of mazena and arrowroot was shown by some private firms. The Munn's Mazena Company, Merriabula, and Mr. A. T. Laurie, of Hawdon Vale, each had a selected exhibit of their best productions, and corn flour and starch were shown by Messrs. John Wado and Co., of the Coreet Mills, Dungog. The production of sugar in the northern part of the Clarence district has become a very important industry, and the works established on the Clarence River by the Colonial Sugar Refining Co. have secured to the proprietary a large business. The exhibit of that company was contained in a handsome glass case, and consisted of sugar in all its forms, from the raw state to the finest crushed lump. The case also contained samples of light pale and dark rum, all manufactured at the company's works from cane grown on the banks of the Clarence River. The wool-growing interest in New South Wales was represented not only at the grand display of wool, recorded in a separate article, but also by a collection of about three hundred samples of wool shown by Messrs. W. H. Chard and Co., of Sydney. It was displayed in two divisions, of washed wool and wool in the grease. There were also scoured and feltmongered wool, and samples from most wool-producing countries in the world. The Peel River Co. also exhibited specimens of their merino fleeces in the grease. The wines of the country were shown in the centre of the court, in an arbour, on the roof and sides of which a multitude of bottles were stacked, containing samples of the natural wines, blended or unblended, from twenty vineyards, with fortified wines and liquours from three of them. Leather was well represented by Messrs. Alderson and Sons, of Sydney. Their display consisted not only of leathers suitable for various trades and purposes, but also of goods manufactured therefrom. Thus they showed not only sole, wax tip, harness, stirrup, mill-belt, lacing, and other leathers, but also boots and shoes, leggings, harness, collars, saddles, trunks, portmanteaus, machine-belts, hose-pipe, &c. They had also bookbinding and harness leathers in great variety. Two or three other firms had smaller but very creditable displays of their productions. The court in the western nave of the main building was thus described by the *Age*:—"It is undoubtedly the most interesting, containing as it does what has been said to be one of the most complete collections of electrical instruments which have ever been exhibited in the colony. The credit of having brought such a valuable assortment together is due to Major E. J. Cracknell, Superintendent of Telegraphs, and commanding officer of the Torpedo Defence Corps of the colony. It is arranged on two large tables, and commences from the first instrument upon which a message was sent, to the latest development of the extraordinary applications of science. The instrument alluded to was that patented by Cooke and Wheatstone in 1838, and by means of it Tattle the Quaker, of Aylesbury, who murdered Sarah Hart, was arrested as he was making his escape from England. It is a peculiar contrivance as compared with the more recent improvements, and consists of five needles controlled by as many wires, and upwards of twenty keys, representing various

letters of the alphabet. The depression of one key directs two of the needles, or one, as the case might be, to the letter on a diamond-shaped frame, and although the process was extremely slow it was nevertheless accurate. The instrument is the property of the London Telegraphic Department, and has been lent to Mr. Chacknell Highton's single needle telegraph, which was patented in 1818, is also shown, and the fundamental experiment upon which all the later thought and work was based is represented in Oersted's magnetic needle, upon which the variations of electricity are determined. The manner of the discoveries of the chemical and magnetic generation of electricity is shown, and in addition to a variety of exhibits illustrating the improvements which have been made in the Morse and Wheatstone principles, there is a very interesting display of apparatus for the controlling of torpedoes, for the regulation of railway traffic, and for use in connection with the electric light. One of the most important exhibits is the Wheatstone automatic system, comprising transmitter, receiver, key galvanometer and perforator, on which an important message, such as a political address required for distribution to a number of stations, is first perforated upon a tape, which is then taken to a translator, which in turn transmits it at a rate up to two hundred words per minute. The other is Cowper's writing telegraph, which is the latest development of this science, and by which a message written in ordinary character at one end of the line is reproduced at the other with a thorough distinctness. Under the heading of railway apparatus, Messrs. Hudson Bros., of Medford, exhibited one of the ordinary sleeping carriages now in use on the long lines of New South Wales. The entrance was from a platform by a door at each end of the carriage. Inside it contained a lavatory, &c., and a press for holding mattresses and bedding when not required. Passing between these a second door opened into a large compartment or saloon having a central passage, with seats on either side, convertible at night into sleeping berths, as on board ship. The carriage was intended to accommodate forty passengers. It was well ventilated, and fitted to secure comfort for travellers, without any unnecessary expense being incurred. Alongside of this car a section of tramway was laid, with Gjedsted's improved tramway rails and chairs, and Evans's patent self-acting tramway points. A portion was also paved with dressed cubes of bluestone, between and outside of the rails, to illustrate the way in which crossings are formed at the intersections of streets, so that the hoofs of horses may not be caught and fixed in the metal. There were other exhibits of a tram-car, patent chilled tram-wheels and axles, phosphor-bronze bearings, &c., all illustrative of the tramways laid in Sydney, with their appliances. Machinery and apparatus were not shown in very large quantities in this court. Of agricultural implements there were specimens of the two-wheeled plough, harrow, corn-sheller, and catch-scoop. Of steam-engines, Mort's Co. had compound launch engines, S. Forster and Co., Dysdale and Roberts, and others, had exhibits of a similar class, and also of machine and other tools. The Australian Museum contributed a case containing stuffed specimens of the food-fishes caught in Port Jackson and other New South Wales waters. The most notable specimens were a Jew fish (*Sciaenops antarcticus*), 4 ft. 6 in. long, and weighing about 40 lbs.; a large rockfish (a species of *cosyphus*), an immense flathead, a black rock cod, and some immense conger eels; also specimens of the Murray cod from Lake George, where it has been introduced and thrives well. There were also three hundred specimens of fish preserved in spirits, with photographs taken from the finest live specimens. Some handsome stuffed Australian parakeet-birds, lyre-birds, bowen-birds, thrushes, &c., were also exhibited by the curator of the Australian Museum. The advancement of silk culture and the excellence of the raw material was indicated very clearly in an exhibit which comprised plain and figured silks made in Paris from cocoons raised in New South Wales. Messrs. Williams and Murray, of the Collingwood Paper Mills, Liverpool, manufacturers of paper for all purposes, exhibited reams and rolls of that material which they supply to some of the Sydney journals. They included the ordinary news and tened sheet, and some rolls of news were three and a-half miles in length. The display of vehicles was very small. Three buggies, built by Messrs. Hanning and Schimmel, were well constructed and serviceable, as were also some cars in varnished wood by Mr. H. Rastoul. In the centre of the court in the main building was a large drawingroom, in which was a display of elegant furniture manufactured by Mr. J. Lawson, of Sydney, and other handsome and substantial exhibits of furniture were shown by various cabinet-makers, whose work demonstrated the suitability of fine-grained colonial woods for cabinet work of all kinds. The Department of Public Instruction had forwarded a collective exhibit of the means and appliances for teaching, with plans, models, and photographs of public-school buildings, and samples of the pupils' work. Improved school desks and educational apparatus were shown by Messrs. Troughton and Boulton. A good and numerous collection of printing and bookbinding, also of photo-lithography, was supplied from the Government printing-office, Sydney; and other books and samples of printing, with admirable photographs, were shown by private exhibitors. Some good general and geological maps of the colony were sent by the Surveyor-General and the Department of Mines. The well-known Zigzag railway on the Lithgow Valley line, of which so little idea can be formed by those who have never travelled upon it, was presented to the public in a very pleasing manner by a model under a glass case. The contour of the valley, with its lofty, precipitous sides, were admirably modelled, and the line of railway, with

the viaducts by which it passes over gorges, and the tunnel by which it passes through a spur half-way up the steep side, were all shown with fidelity. The course of the creek along the bottom of the valley was well defined. The model was prepared and exhibited by the Department of Public Works. The fruits of New South Wales were not represented in quantity in a preserved state, but fine collections of fresh fruit were placed in competition at the horticultural shows held in the main building, and obtained full commendation for the excellence of their quality. Farm produce was also exhibited in like manner with a similar result. In the fernery, at the end of the central avenue of the annexe, was a fine collection of New South Wales ferns, collected by the director of the Botanic Gardens, Sydney; and in the principal court were other specimens of ferns, and a number of orange trees in various stages of growth.

THE NEW ZEALAND COURT.

The frontage of the New Zealand Court abutted on the main central avenue, between the courts of South Australia and Queensland. In its introductory remarks upon the court and its contents, the *Age* had the following commendatory observations:—"It furnishes a complete illustration of the material resources and the manufactures and attainments of the people of New Zealand. It is without any speciality, is thoroughly general in its character, and is ornamented with some of the finest specimens of art work which are to be seen in the Exhibition. The commission for that colony established local committees in the principal cities and towns, and they succeeded in collecting a valuable assortment of all that was worth exhibiting. These were confided to the charge of Dr James Hector, C M G., vice-president and executive representative, who, with Mr. Charles Callis, the secretary, has been most energetic in displaying them to the utmost advantage." Noticing the exhibits in the order in which they were arranged in the Catalogue, educational appliances claim priority. In a population which, at the time of opening the Exhibition, amounted to little short of half a million persons, of whom 52.00 per cent. were under twenty-one years of age, and 25.58 per cent. between five years and fifteen years of age, the number of children in 1878 of school-going ages was 105,235; and of those 62,886 attended Government schools, 14,611 private schools, and 9706 received home tuition. Of school apparatus and appliances used in the State schools the Board of Education forwarded a fair collection; and a set of reading tablets was shown by H. Hill, of Napier. Of appliances suitable for superior instruction, display was made of othological collections by Prof. J. von Haast, and of geological and mineralogical specimens, and sketches of New Zealand scenery, by Dr. J. Hector. His geological collection comprised 2500 specimens. The maps and geographical and cosmographical apparatus which were exhibited must be of service to teachers. The imitation of paper-making as a New Zealand industry was shown in brown and grey wrapping papers, manufactured chiefly from native grasses by the Mataura Paper Mill Co. and the Otago Paper Co., and also in paper bags made from those papers at a factory in Invercargill. Printing and books of good quality were included in this group, and also a violin and cello, and a set of bagpipes, all of New Zealand wood. The furniture and general cabinetwork placed in the court was highly creditable to the manufacturers. Guthrie and Larnach's Timber and Woodenware Factories Co. exhibited an ornamental hall door, a cabinet in which 8508 pieces of wood of numerous varieties had been inland, parquette flooring, &c. Other attractive articles were shown by G. Benasconi, J. Petherick, Waddell, McLeod and Weir, of Wellington, and other cabinetmakers, whose workmanship was enhanced in appearance by the beauty of the native woods they had used. Pottery was represented by specimens of earthenware, terra-cotta, vases, drain pipes, bricks, and fire-clay goods from several persons who have commenced the manufacture of such articles. Claret jugs and cups, made by B. Peterson and Co., Christchurch, from New Zealand silver, and a silver opeigne by M. Sandstein, represented the works in precious metals. In apparatus for heating were cooking and heating ranges, and for lighting, gasaliers, &c. In textile fabrics the most important display was made by the Mosgel Woollen Factory Co., whose tweeds, travelling rugs, blankets, hosiery, &c., were made of pure wool, and most favourably noticed for their quality and texture. These were subsequently recommended for the Emperor of Germany's prize. Of silk in cocoons or reeled there were a few exhibits, one being the produce of one thousand silkworms reared in Auckland. Clothing comprised hats of various materials, by V. Almaro, of Dunedin, and felt hats made from rabbits' fur, by G. Bertinshaw, of the same city. Boots and shoes in variety were shown by several manufacturers in Christchurch and Dunedin. Of Maori costume there was one suit, worked in peacock feathers, and another in pigeon feathers, both of beautiful design and finish. The products of the New Zealand forests, and of its trades appertaining thereto, are of great importance to the colony, as statistics show that in ten years the value of the timber exported was £388,088. The principal exhibit in this class was a trophy of all the valuable woods of the North and Middle Islands. It contained choice samples, carefully polished, of woods from Auckland, the Thames district, Nelson, Dunedin, Wellington, Taranaki,

Canterbury and Westland, Hokitika, Picton, Invercargill, Napier, and Otago, whilst kauri, jarrah, totara, rimu, fuchsia, yellow pine, towai, puriri, iewa-rewa, ake-ake, and whikau were amongst the varieties shown. Smaller collections of the timbers were shown by other exhibitors. The Colonial Museum of New Zealand had a collection of timbers, showing the results of experiments for determining their relative strength. The dimensions of the specimens experimented on were 1 inch square and 12 inches long, and the weight suspended from their centre at which they broke varied from 33 lbs. to 314·2 lbs. The Omatia Chemical Works had an exhibit of tanning, dyeing, and medical extracts, obtained from towai, rimu or red pine, rimu, pukatea, and supplejack. In this division there was also an exhibit of strong coal baskets, made from New Zealand supplejack, the larger sizes each holding 4 cwt. of coal. Bark, for tanning, likewise appeared amongst the exhibits in this class. Of the products of hunting, shooting, and fishing, were stuffed specimens of fishes abounding round the coasts of the southern part of the Middle Island, and at Stewart Island, also, of the kauri, kakapos, penguins, and other New Zealand birds. An excellent display of furriers' work was exhibited, comprising rabbit and hair skins, and muffs, collars, and other articles made from New Zealand bird skins and leathers. Of the spontaneous products comprised under this head, the principal exhibit was kauri gum, shown in large quantity and variety, as in 1877 the export was 262½ tons, valued at £118,318, and 1878, 314½ tons, valued at £182,975. The gum is now being extensively used in the preparation of varnishes, &c. Another spontaneous product shown was mineral oils, of which three distinct kinds are produced, each in a different district—viz., a valuable lubricating oil, from the Sugar Loaves, in the Taranaki Province; a true paraffin oil, from Poverty Bay, east coast of Auckland, and a superior illuminating oil, which burns in kerosene lamps, found at Waiapu, East Cape. The oil exhibited was petroleum, collected from a natural well near Poverty Bay. New Zealand flax (Phormium tenax), and articles made therefrom, were the chief exhibits in the class of agricultural products not used for food. The Colonial Museum of New Zealand forwarded samples showing the preparation of the fibre and its application to useful purposes; and exhibits of a similar class were shown by Messrs. G. Chumery and A. Robertson. Mr. W. R. King showed flax kits made by Morris; Mr. J. Seed sent 2½-inch rope and twine for reaping and binding machines; and Mr. T. Bevan, jun., had a display of 2-inch rope, horse halter, fishing and lead lines, twine, &c., all manufactured from the indigenous material. A sample of European flax fibre, grown at Otago, New Zealand, was shown by the Canterbury Agricultural and Pastoral Association, to lead to the opening up of new industries, as the production of linseed oil-cakes and linseed oil. In the chemical products division Messrs. Kitchen and Sons had an exhibit of candles and soaps made at the branch works in Wellington; and similar articles were shown by McLeod Bros., of Dunedin. Leather was scarcely represented, the only exhibits in the class being basils and parchment made from pelts. Agricultural implements were limited to single and double furrow ploughs and harrows, and in the same class some samples of bone manure were shown, and likewise designs for farm buildings. Of apparatus used for the preparation of food, Messrs. A. and T. Bart, of Dunedin, had an oval tube refrigerator and other appliances used by brewers. The same firm also exhibited pumps of various descriptions, a water engine, and lead and composition pipes. In another compartment were paper pulp and *papier-maché* manufactured from New Zealand flax. The carriages shown were a circular-fronted brougham, made at Christchurch, and a landau, from Dunedin. Riding saddles were sent from Invercargill and Christchurch. Under the heading of railway apparatus, Mr. J. Alves, Dunedin, exhibited a working model of his patent aerial tramway, with clip and hanger for 2-inch rope, as now working at a colliery near Dunedin. Mr. Alves also showed a model of his patent pit elevator and carrier, for raising stuff from a punt and afterwards carrying it to almost any distance required. A general plan of a wire rope railway between Dunedin and Roslyn was sent by Messrs. Reid and Duncan. A collection of the building stones of Canterbury, made by Professor von Haast, comprised seventeen kinds of lavas, sandstones, limestones, &c., from Oamaru, Waiapu, and other places. The Oamaru Stone Co. exhibited a stone column with capital, and an obelisk block of the Oamaru limestone. There were various marbles obtained from different places, that gave promise of the development of valuable marble quarries in the Middle Island. A specimen of the patent artificial Carthage flagging of Mr. C. O'Neill, C.E., Wellington, was laid at the main southern entrance to the Exhibition Building, where it was tested satisfactorily by the traffic over it of many thousands of persons daily while the Exhibition was open. The exhibits in matters pertaining to navigation were of much interest. A well-constructed model of Lyttelton harbour, indicating the works and improvements at that port, was exhibited by the Lyttelton Harbour Board. They include an area of 110 acres of water within the two breakwaters, and the wharves and jetties provide a total of 10,260 feet of berthage space. In four years 1,500,000 tons of clay, &c., have been dredged out of the basin, which now has a depth of water at the wharves varying from fifteen to twenty-three feet at low tide. The expenditure has been above £500,000, which will be increased by the cost of a graving-dock, now in course of construction, which when completed will be capable of docking a first-class ironclad. A plan of Wellington harbour was submitted by Captain J. Holliday. Immediately inside the entrance of the court from the main avenue were models of two of the

vessels of the Union Steamship Co of New Zealand, the "Rotomahana" and "Wakatipu." Models of sections of other vessels belonging to the company, with statistics concerning them, were disposed in the vicinity. A model of a Maori canoe, a boat with propeller, a canvas boat, models of five yachts, &c., were placed in juxtaposition, and with a life-saving vest, and a model of a wave-power machine for compressing air, completed the exhibits in that department. Of cereals, there were forty-six exhibits, several of whom showed from twelve to twenty varieties. Concerning those the *Argus* remarked—"Mr. E. H. Banks, of Christchurch, sends pearl barley, white Tuscan wheat, pea-flour, white field peas, winter tares, cocksfoot, horse beans, buckwheat, malting barley, white Tatarian oats, Prussian-blue peas, rape seed, Hunter's white wheat, eye corn, white Canadian oats, black or Cornish oats, linseed, Russian pearl wheat, purple-straw Tuscan wheat, and rye-grass seed. Other exhibits show flour, farina or potato flour, oats, peas, wheats and barleys innumerable, malt, oatmeal, bran, sharps, and semolina. Though the samples are in each case small, the collection does the greatest credit to the colony. Amongst the best got-up exhibits may be noted those of Messrs. Geo. King, P. Cunningham, and Royle, Stead and Co., all of Christchurch, and Mr. Thos. Harley's Nelson hops. The Canterbury district is by far the most largely represented, which is but natural, but the other provinces nearly all contribute a representative show." Of biscuits, there were five exhibitors, each making an appetizing display. Cheese, another staple product of New Zealand agriculturists, was shown in considerable quantities, nine producers having forwarded samples of their manufactures, one cheese weighing 112 lbs. All was made in the Middle Island, and chiefly in the southern districts. Hams and bacon were shown by three firms in Dunedin and two in Christchurch; and Mr. W. H. Mein, of Christchurch, had a fine assortment of preserved meats, comprising twenty-five varieties. The North Island contributed canned peaches, which grow there in immense quantities. Of sauces, syrups, jellies, preserves, coffees, and spices, there were also a number of exhibits. The fermented drinks were well represented by samples of ale and stout, in bulk and bottled, brewed chiefly from colonial malt and English and New Zealand hops. They were from twenty-two breweries at Christchurch, Dunedin, Invercargill, Oamaru, Nelson, and other places. There were likewise a few exhibits of wines from grapes grown in the Wanganui district, and of other fruit wines made at Nelson and Queenstown. Ferns, which abound in New Zealand, were shown in large numbers and variety both in the court and the fernery. Fine specimens of the nikau palm (*Areca sapida*), surrounded by mounds, in which small ferns were planted, were placed at the main entrance to the court, and others at the entrance to the fernery. A fine collection of seeds and seed cones, containing 801 sorts, was shown by Mr. T. H. Poits, of Christchurch. New Zealand is rich in metals and minerals, and the efforts made to exhibit specimens of that description of wealth at the Exhibition were successful. The New Zealand Commissioners had a gilt trophy constructed in the shape of a rhombic octahedron, the greatest diameter of the block being 18 feet, and the lines of the angles 12 feet. It represented the bulk of the export of gold from the colony from 1860 to the end of June, 1880, the solid bulk being 720 cubic feet, the weight 9,816,127 ozs., and the value £86,758,798. On the base of the trophy were marked the yields from the various goldfields as follows—

	Oz.	Value
NORTHERN GOLDFIELD— Auckland, 1852-1880	1,275,363	£1,674,162
CENTRAL GOLDFIELD— Nelson, Pictou, Wellington, 1857-1880	1,671,115	6,680,920
WESTLAND GOLDFIELD— Hokitika and Greymouth, 1866-1880	2,185,512	9,849,015
SOUTHERN GOLDFIELD— Dunedin and Invercargill, 1861-1880	3,964,437	15,309,702

"The Bank of New Zealand," said the *Age*, "has furnished a most attractive exhibit of specimens of alluvial and quartz gold, the former of which are shown on glass tablets. There are some small nuggets in the collection, which may be regarded as being a national exhibit. There are also other samples of copper and silver ores, and other deposits, which have been forwarded by private exhibitors." In coal there was a large display, which ranked but second to that in the New South Wales Court, and which furnished an excellent indication of the great value of that branch of mining industry to the colony. The Brunner Coal Co., Grey River, had a true section of the seam which has been worked for the past fifteen years. It is 16 feet thick, is a valuable steam coal, and yields 12,000 feet per ton of eighteen to twenty candle gas. The Coalport Heath Co. had a section from their 18-feet seam. From the Bay of Islands Co.'s works were brown coal for household use, and anthracite, for which there is a large demand in certain classes of factories. Other blocks from Patings, Westland, Kaitangata, Otago, the Nightcaps, and Invercargill, were also exhibited. Shale of an unusually rich character, which was mined at Orepuki, Southland, was also represented. Placed so as to form the lining of a portion of the machinery annexe, immediately behind the New Zealand Court, were the principal carved panels of an ancient Maori runanga-house, called matatua. It was

originally built by the Ngatipukeho tribe, for the purpose of representing therein all their ancestors. The grotesquely carved image on each slab was that of the ancestor of some tribe or sub-tribe.

THE QUEENSLAND COURT.

From a colony so extensive as Queensland, which has an area of 669,520 square miles, it was anticipated that a large and varied collection of natural and manufactured products would be displayed, and that expectation was fully realised. Its fertile soil and variety of climate allow the cultivation of all classes of vegetation, minerals and metals abound in all parts; timber of high commercial value grows in profusion, and other sources of wealth are not wanting. Manufactures are as yet limited in number, but some have been established, and specimens of their results were found in the court. The population of this vast province was under a quarter of a million in 1879, and a large number were children, for whose instruction provision is made in a State system of education. In 1879 there were 318 schools under the supervision of the Department of Public Instruction, at which 45,312 scholars were enrolled. In the class of exhibits illustrative of this subject the department and others showed models and plans of school buildings, desks and forms, maps and stands, and specimens of the pupils' work—as maps and drawings. In this group of exhibits were samples of papers made from the bark of tea-tree (the *Ficus macrophylla*), and other indigenous products suitable for paper-making, and utilised for that purpose by Mr. A. Macpherson, of Brisbane. In furniture and accessories were very ingenious articles in cabinet-making. Those of Mr. P. Thomle, of Fortitude Valley, comprised a tea-table inlaid with fifty varieties of Queensland woods, a jewel cabinet inlaid with thirty-four varieties, and book-case, chests of drawers, &c., all manufactured from native timber. "There are also several other specimens of local work in native woods" (said the *Age*) "which are also creditable, a one-pedestal dressing-table, with looking-glass, of silky oak and cypress pine, by Mr. J. Petrie, of Brisbane, and a Dutch wardrobe exhibited by Mr. J. W. Carey, being most deserving of mention. There is also shown a suite of furniture by Messrs. J. and J. Haslop, of Brisbane, in Queensland oak eboused, and upholstered in crimson and gold, which is attractive." A commencement has been made in pottery making, some serviceable articles manufactured by Mr. D. Fensom being shown, with fire-clay goods—as crucibles, retorts, bricks, &c.—made by Mr. A. Simpson, of Dalling Downs, and others. The group of textile fabrics, clothing, &c., included the following.—An assortment of blankets, serges, and flannels from the mill of the Queensland Woollen Manufacturing Co., at Ipswich. From the same town was a collection of silk grown by Mr. C. F. Chubb, with material in various stages of manufacture into piece goods. The principal penal establishment of the colony, at St. Helena, contributed boots and shoes and articles of dress for warders, convicts, police, &c., as examples of the utilisation of prison labour in that place. Under the head of raw and manufactured products, those derived from forests were prominent. The Director of the Botanic Gardens, Brisbane, sent a collection of Queensland timbers, comprising blocks of 227 distinct varieties, besides slices and scannings of many of them, and an assortment of walking-sticks. The importance of the timber trade is shown by the statement that the exports for the year ending 30th June, 1880, were:—Cedar, sawn, 12,000 feet; cedar, in logs, 2,731,800 feet; pine, sawn, 186,523 feet. The Queensland Government contributed an ornamental stand, with 143 cups on its shelves, turned and polished, illustrating the varieties of timber indigenous to the colony. Another stand contained 101 cups and 30 drops, similarly turned and polished, and showing a further series of varieties of timbers. The Director of the Botanic Gardens forwarded, likewise, a collection of barks for tanning or medicinal purposes, some being astringent, and others possessing most of the properties of gumme. A trophy of mouldings from the Hon. W. Pettigrew, and another of polished wood panels from the Queensland Government, were effective displays of native woods; as was also the collection of sixty varieties of new native timbers from North Queensland, sent by the Rockhampton committee. A trophy of turnery work, by Mr. H. Sturges, of Rockhampton, and specimens from other exhibitors, all tended to prove the value of these products. Leaves of one tree, used as a decoction in ophthalmia, and of two species of citron-scented eucalypts, used for stuffing pillows, as a preventive of fever, with samples of febrifuge bark, completed the display in this class. The exhibits of products of hunting, shooting, fishing, &c., were numerous. An interesting collection of ninety-five native birds, from the Norman River, was shown by Mr. T. A. Gulliver, of Thornborough; and the natural history specimens of Mr. A. Alder, Brisbane, were meritorious. At the frontage of the court in the main annexe the Commissioner erected a lofty pyramidal trophy, composed of the shells of the pearl oyster, obtained from the fisheries in Torres Strait, off the Queensland coast. The trophy was valued at £200. From the Queensland Museum there was a conchological collection, and another of stuffed animals. The Secretary of the School of Arts, Rockhampton, forwarded, in cases, a number of entomological specimens, found near there. Private

exhibitors sent a large number of other natural history specimens. A remarkable exhibit by the Queensland Government was that of a stuffed male dugong, supposed to be forty years old when caught. This strange marine animal yields an oil of great value to consumptive patients. Its hide, when tanned, forms leather of great thickness, and its flesh is wholesome and palatable. The aborigines were represented by the remains of three, long since deceased, of which the *Age* gave the following description:—"They are curious looking creatures, and constitute one of the sights of the Exhibition. One is by himself, and is compressed in such a manner with his hip bones under his head as to signify a rather irrelevant method of trussing to which he was subjected. The remains were found in 1876 at Trinity Bay, in the far north, and they were said by tradition to be those of Naada, a king under whose sway the tribe of the district prospered upwards of two hundred years ago. Near him are two others, whose career in the flesh was apparently more recent, although they no doubt walked the forest long before the emissaries of European civilisation first intruded upon the wildernesses which now flourish under the influence of a new dispensation. They come from Stevens Island, and are laid out on a rude framework of wood for the inspection of the latter-day inquisitives. Each of the three has been preserved in some mysterious manner which was only known to the natives." There were also some collections of native weapons and other articles, displayed upon the wall, and comprising spears and boomerangs, fishing nets, wooden swords and knives, some of them carved into strange shapes and with curious designs, showing that a rudimentary taste for art exists even among the lowly aboriginals of Northern Australia. Amongst agricultural products not used for food was a collection of 100 varieties of indigenous fodder grasses, from Mr F. Turner, Brisbane, and another from the Curator of the Botanic Gardens. The latter also exhibited a number of gum resins, and a collection of indigenous fibres, with cordage made from some of them, and a similar collection was sent by Mr. A. Macpherson. Tobacco in the leaf, and manufactured tobacco, were shown by several exhibitors; and there were a few samples of cotton, although it is not grown now to the same extent as formerly. In chemical and pharmaceutical products the essential oils, tinctures, &c., prepared at the Botanic Gardens from Eucalypti, eucalypta, acacia, &c., were conspicuous. Similar articles were sent by other exhibitors, and also dugong oil, and soaps of various kinds. In leather and skins there was a few exhibits, the chief being a collection sent by the Queensland Government. The list of alimentary products was varied. The Curator of the Botanic Gardens exhibited arrowroot of various sorts, tapioca, and cassava, with ground nuts, sweet potatoes, yams, ginger, &c. Thirty varieties of sugar-cans proved the interest manifested in the production of sugar. Rice and maize were shown by several growers, and a few samples of wheat and flour, oats and rye. A trophy of one ton of prepared arrowroot, in 1-lb. packets, was built up to a considerable height, and attracted much attention. Discs of excellent quality were shown in quantity by F. W. Wilson and Co., of Brisbane. In the class of meat and fish, a prominent feature was bœuf-de-mer. Mr. B. Skinner, of Fortitude Valley, had a lofty trophy of tins of preserved meats, which included turtle soup and potted dugong, and Stiller and Co. exhibited bacon and lard, prepared from the flesh of the same animal. Of fruits, a collection from the Botanic Gardens was set out at the horticultural exhibition, and contained several kinds grown in tropical climates. Preserved fruits and olives were shown by other exhibitors. One of the most important industries of Queensland is the growth and manufacture of sugar. In 1878 there were 16,581 acres of land under cane, and the yield therefrom was 13,525 tons of sugar, 570,801 gallons of molasses, and 216,395 gallons of rum. Since then the growth has been much increased, and in the year ending 30th June, 1880, the exports of sugar amounted to 284,340 cwt., and of rum to 86,259 gallons. The exhibit of sugar by the Curator of the Botanic Gardens was complete, there being 68 samples arranged, with their values and distinctive qualities stated. A number of other specimens were shown by other growers, manufacturers, and merchants. A collection of tea, coffee, spices, pepper, &c., was sent from the northern districts, where such plants thrive well. Of wines there were 18 exhibits, principally from vineyards in the vicinity of either Brisbane or Warwick, and of rum, seven exhibits, one being eleven years old. Exhibits in connection with mining industries, and of the products derived therefrom, were of a character suitable to the known metalliferous resources of the colony. From a heap of auriferous quartz obtained from the North Glanville Co.'s mine, at Gympie, a gilt obelisk arose, representing the bulk of the gold obtained in the colony between 1868 and 1879, the total weight being 3,477,679 oz., valued at £11,762,316. Another trophy denoted that between 1878 and 1879 there were found on the Palmer River goldfields 946,716 ozs., worth £3,918,500. Tin was displayed in a trophy built of ingots of that metal, smelted from ores obtained at Stanthorpe. Copper ore, and cakes of the smelted metal, from the noted deposits at Peak Downs, were also arranged. The Queensland Government contributed a varied display of specimens of metals and minerals which abound in the colony. Coal was forwarded by the Bowen Municipal Council, and Mr. A. C. Gregory supplied samples of coal from seven mines now being worked. The trustees of the Queensland Museum also sent a large collection of metallic ores, precious stones, marbles, gypsum, china, clay, salt, palæozoic and aluvial fossils, &c. There were also numerous private exhibitors of different articles included in this class, all valuable, as proving the richness of Queensland in such products.

THE SOUTH AUSTRALIAN COURT.

Nearly the whole of the display made by South Australia was in a court situate in the central avenue of the main annexe, between the spaces allotted to New Zealand and Western Australia, a small extra area in the western machinery annexe having been set apart for machinery. The sub-division of the area, and the arrangement of the various exhibits, were admirably made by the Executive Commissioner and his staff, and the court presented an appearance highly creditable to the colony. The most attractive feature was a bush scene which occupied a rectangular corner. In front was a hut built of rough split slabs, such as was the habitation of a pioneer in the earliest days of the colony. The walls of the corner behind were artistically painted to represent a succession of hilly ground culminating in distant peaks of mountains of great altitude, while a skilfully built piece of rockwork between the hut and the wall formed a rocky channel, down which a small mountain stream (of Yan Yean water) flowed, forming a succession of diminutive waterfalls. The interstices of the rocks were filled with earth, which extended on each side to the walls; and grass, ferns, and other plants were sown and planted therein. On either side of the running water were snakes, tortoises, lizards, wallaby, and other native animals, and on the bark roof of the hut were perched magpies. At the furthest corner from the hut were admirable models of a stalwart aboriginal with his lubra (wife) and child, all clad in rugs made from the skins of native animals; and behind was a wurley, or wind shelter, constructed of boughs broken from gum trees. At the foot of the man an opossum was lying, which he was supposed to have just speared, and the woman was about lighting a fire of sticks to roast it upon. The whole formed a faithful representation of aboriginal life, and contrasted admirably with the proofs of advancement displayed in all directions around. In reference to the exhibits, the most prominent and important to the colony were cereals, especially wheat. At the harvest in December, 1879, and January, 1880, there were nearly one and a-half million of acres reaped, yielding an aggregate of over fourteen million bushels of wheat. Large quantities of wheat and flour have been exported of late, and the value of the export of those productions for the year 1879-80 was upwards of £1,500,000, and the total value of the export of breadstuffs since it commenced is estimated at £25,651,892. Of the exhibits in this class the *Age* remarked—"They are in small bags, which have glass covers, and the exhibits of old red straw, white Lammas wheat, and the purple straw wheat—the latter of which secured the special first prize at the Sydney Exhibition—which have been forwarded by Mr. W. J. Venning, of Crystal Brook, and those of purple straw and white wheat which are forwarded by Mr. William Brook, of Woodchester, who is also a large prizeholder, are splendid specimens. The crops of Mr. J. H. Angus, of Collingrove, Mr. R. Paterson, of Smithfield, Mr. J. M. Perryman, of Koolunga, and Mr. Joseph Thyer, of Belah, are also represented. . . . Mr. Angus obtained a first prize in Adelaide, in February, with an exhibit which averaged 69 lbs. 1 oz. per bushel. The Commissioners show other cereals such as barley, oats, rye; Messrs. John Frains and Co., of Mount Barker, also show oats, and Messrs. John Primrose and Co., of Adelaide, have forwarded samples of malt. The brands of flour are no less celebrated than the wheat, and the names of W. Duffield and Co., of Gawler, and W. C. Harrison and Co., of Port Adelaide, have become as widely known as that of the colony. Each firm has specimens of the superfine and silk-dressed flour, and they are accompanied by others shown by Messrs. James Cowan and Co., of Adelaide; Christopher Fink, of Greenock; Giles and Smith, Adelaide; Mcgarvey and Co., Adelaide; W. Thomas and Co., Adelaide, and A. W. Webb, Lyndoch Valley. An interesting exhibit in this class was sent by Mr. M. Holtze, Government gardener, from Palmerston, in the Northern Territory. It consisted of hill rice, maize, Egyptian corn, four kinds of millet, arrowroot, and sugar-cane, all of which grow well in that part of the colony. A further evidence of the great importance of the production of wheat and flour was adduced in a series of photographed views of a number of flour-mills, the property of Messrs. John Dunn and Sons, millers and wheat merchants. The mills are situated in nearly all the principal towns of the colony, are driven by steam and water power, contain in the aggregate forty-two pairs of stones, and are capable of grinding upwards of 1800 tons of wheat per week. Biscuits made from South Australian flour were shown by the Commissioners, a collection of various kinds, made by the best biscuit bakers in Adelaide, being displayed in neat baskets, under a handsome glass case. Of other alimentary products there were six exhibits of excellent olive oil, the preparation of which is now an established industry. Preserved meats, prepared in the Parisian style, were shown by Mr. E. Bourbaud. Raisins and other dried and preserved fruits deserve special notice. Mr. Thos. Hady, vigneron, of Bankside, was the principal exhibitor. Every year he places on the market about twenty tons of raisins, six tons of currants, besides dried peaches, apricots, plums, prunes, apples, pears, and almonds. He also prepares almond and olive oil. The dried raisins and other fruits of the Hon. A. Hay and Mr. T. B. Robson were also very noticeable. As manufacturers of jam, the most attractive exhibit was that of Messrs. Geo. McEwin and Sons, of Glen Ewin, where they have an immense orchard. The firm made 392 tons of preserves in the season 1879-80. Mr. W. D. Terry, of Belah, had also a fine assortment of preserves. Other exhibitors displayed pickles, sauces, confectionery, cordials, liqueurs, bitters, &c., in great variety. Of ales and

porter there were two exhibits of each; and of spirits distilled in the colony there were samples of gin, rum, brandy, whiskey, spirits of wine, &c. The chief display of fermented drinks was, however, in wines, of which about 156 different kinds were shown in crystal decanters, arranged in form of a trophy. Amongst the old varieties unitated were Constantia, Frontignac, Muscatel, Madera, sherry, port, Burgundy, Hermitage, claret, and hock. The most prominent of the grape names were Shiraz, Cabernet, Riesling, and Verdelho. The majority of the vines produce sweet or full-bodied wines, but in the hilly districts claret and hock types prevail. In addition to a large home consumption, South Australia annually exports a considerable quantity of wine. The fresh seasonable fruits of the colony were shown in two stands: Shadocks, oranges, lemons, citrons, dates, loquats, apples, &c., were displayed in varieties, and the supply was renewed periodically while the Exhibition remained open. Another important product of the colony is copper, which is found in rich lodes in various places. In the days when the price of copper ranged much higher than it does at present, as much as £750,000 worth was exported in the year, but owing to the fall in the market the value of the export of this metal in 1879 was only £350,000. To bring this staple product prominently forward, a trophy of marketable ingots was erected at the entrance to the court. It was of considerable height, and contained about 16 or 17 tons of the metal. The Commissioners for South Australia had likewise a collection of 183 specimens intended to illustrate the nature of the ores obtained from the various copper mines of the colony. Another exhibit by the Commissioners was a collection of South Australian minerals, comprising 619 specimens, and including 207 pieces of native copper, cuprite, malachite, &c., and also 117 auriferous specimens from Balhannah, the Northern Territory, &c. The English and Antislavery Copper Co., whose chief smelting works are at Port Adelaide, had a fine display of copper in cakes, tiles, and ingots, as required in different markets, and also a number of articles manufactured from the smelted metal, to show its ductility, malleability, and purity. The copper ore smelted by this company in seven years was 87,239 tons, and the refined copper made therefrom 17,529 tons. The proprietors of the Wallaroo Smelting Works had another collection of specimens illustrative of the process of copper smelting as conducted at their works, the ores operated upon being mostly from the Moonta, Wallaroo, and other mines in Yorke's Peninsula. There were some smaller exhibits in this class from private exhibitors, all worthy of examination. In this class a number of samples of soil were exhibited in boxes ranged along the boundary of the "Bush scene." The boxes were in pairs, one containing the surface soil and the other the subsoil at the depth of about two feet, the exhibits being from nine or ten different districts lying widely apart. Of natural or raw products timber was prominent. The Conservator of Forests showed sixteen samples, accompanied with sketches and descriptions of the trees. Another collection of specimens was exhibited by Dr. R. Schomburgk, Director of Botanic Gardens, Adelaide. There were also samples of valuable tanning barks, chiefly mimosa or black wattle—long, as delivered by the strippers; and chopped or ground, as prepared for export. Of building materials—as freestones, flagstones, slates, limstone, gypsum, &c.—specimens were shown by the Commissioners for South Australia, and other exhibitors. Wool in small quantities was also placed in the court by three or four wool-growers, but the bulk was reserved for the special wool show. Amongst other products were silk cocoons, raw flax, sea-land cotton, beeswax, &c. The board of governors of the South Australian Institute had a fine collection of specimens of natural history, comprising numerous kinds of preserved reptiles, mammals, fish, and birds; fossil remains of extinct gigantic mammals, and a collection of corals from the Northern Territory. In manufactures established in South Australia, furniture and cabinetmaking was conspicuous. Mr. P. Gay, of Adelaide, had a table inlaid with 30,000 pieces of cedar, pine, stung bark, and gum, a chest of drawers inlaid with 17,000 pieces, and a Huon pine wardrobe, all showing excellent workmanship. Good specimens of cabinetwork and articles required in furnishing were shown by other exhibitors, some marble mantelpieces being especially noteworthy; and iron bedsteads of various kinds, proving that the making of these articles has been successfully inaugurated. The same mention may be made of an exhibit of knives, corkscrews, and other specimens of cutlery manufactured in Adelaide. Goldsmiths' and silversmiths' work was thus reported upon by the *Age*:—"The display which is made by Mr. Henry Steiner, of Adelaide, is certainly worthy of thorough inspection. The jewellery has been prepared in the most approved manner in elegant styles, and the work is declared to be of the best. Bracelets, brooches, and lockets are shown in variety; and among the pendants is a diamond cross estimated to be worth £370. Above are operges in silver, with the easily-recognisable sun-egg mountings, and the not so well known ostrich-egg ornaments, and around them are sporting trophies, claret jugs, tea services—principally in silver—and two gold racing cups of elegant designs. A casket of sterling silver is a handsome piece of work; and Mr. Steiner has also shown that in the mounting of cocoanuts a desirable adornment may be produced." Mr. Steiner was recommended by the Jurors for the Emperor of Germany's prize. Articles in tinned and japanned ware and galvanised iron were shown in considerable variety and of good quality, besides washing-machines, gas stoves, and numerous other articles required in households. Of portmanteaus, leather cases, and ornamental and fancy basketware, there were likewise creditable displays. The exhibits of

chemical and pharmaceutical products included salt manufactured from salt-lake water at Yorketown, both refined and refined. Aerated waters of all descriptions were exhibited by several manufacturers, also soaps (plain and toilet), stearine, and candles. An assortment of leathers and boot-uppers, with rugs, and skins of indigenous animals, represented the tanning industry. Agricultural implement makers showed strippers, corn-crushers, chaff-cutters, reapers, ploughs, &c.; and coopers made a good display of casks, vats, churns, cheese vats, grape mills, &c. Some good specimens of steam-made Manila rope, and rope made from New Zealand hemp, vouched for the establishment of that industry; and coachbuilders were represented by a landau, a barouche, a phaeton, and several buggies. Textile fabrics are not being manufactured in South Australia as yet, but efforts are being made to introduce such industries, and exhibits of flax and raw and reeled silk were made by the Adelaide Chamber of Manufactures and two silk-breeders. Boots and shoes of various sorts and qualities were the only exhibits in the class of clothing for both sexes. The industries in vogue among the aborigines were represented by a collection of native implements, ornaments, &c., from the Northern Territory, and exhibited by the South Australian Commissioners. The residue of the exhibits consisted of specimens of kindergarten and other work of children taught in model schools, some samples of printing and bookbinding, models of fruit, &c.; likewise samples of ladies' fancy work, arranged in a Ladies' Court.

THE TASMANIAN COURT.

The Tasmanian Court was entered from the central avenue, and adjoined the New South Wales Court. Though unencumbered in area, and deficient in some exhibits that might certainly have been expected to be there, it nevertheless contained a number of exhibits of interest, which attracted much attention, in addition to the staple productions, which were of paramount importance. Taking them in the order of classification, the first to claim notice was a case containing sixteen literary works, written and artistically illustrated by Mrs. L. A. Meredith, and nearly all devoted to the natural and social history of Tasmania. The cabinet-makers and joiners in Tasmania did not avail themselves of the opportunity afforded them to make a display of furniture manufactured from the beautiful timbers so suitable for that purpose. There were a few exhibits of the tops of small fancy tables, which, besides displaying the fine grain of the wood used, also served to show the artistic skill of various ladies in painting native birds, flowers, and other drawings with which they were ornamented. Of pottery some fair specimens were shown from the works of Mr. Cornwell, near Launceston. Basket-work in variety was sent by two firms, with samples of their raw material. The manufacture of woollen goods has been commenced, and to an exhibit of the products of that industry the *Age* referred as follows:—"One of the most valuable exhibits is that of Messrs. Bulman and Johnston, of the Waverley Woollen Mills, St. Leonards, which comprises tweeds, shawls, blankets, and flannels of good quality. There is also shown in the collection a roll of cloth similar to that of which the tunics of the Rifle Regiment were made. Some excellent woollen shawls also formed part of the firm's collection." In lace, embroidery, &c., a number of ladies proved their efficiency, their samples being very creditable to their ingenuity and assiduity. The extensive and almost exhaustless forests of the island constitute one of the most important sources of wealth to its inhabitants, as the good quality of the Tasmanian timber and its adaptation for house and shipbuilding, the manufacture of furniture, carriages, &c., is widely known. "The blue gum (*Eucalyptus globulus*), stringy bark gum (*E. obliqua*), white or swamp gum (*E. viminalis*), peppermint (*E. amygdalina*), beech (*Fagus Cunninghamii*), Huon pine (*Dacrydium Frankii*), cedar-topped pine (*Phyllocladus arborescens*), blackwood (*Acacia melanoxylon*), and silver wattle (*Acacia dealbata*)," the *Age* remarked, "are extensively used, and most of them largely exported, besides many other woods of an ornamental character, the annual value of timber exported amounting to over £70,000, and of wattle bark £40,000. The Commissioners exhibit specimens of timbers and veneers, the Royal Society veneers of Tasmanian woods. Various other exhibitions send timbers, including samples of railway sleepers, casks made of blackwood, gum from the Oyster Bay pine, and bark." A large trophy of the most valuable descriptions of timber was erected in the open air by Mr. J. E. Hiley, of Hobart, and was a good collection of hardwoods. In connection with the timber, mention should be made of a whaleboat built of Huon pine. It occupied the most conspicuous position in the court. Its length was 33 feet, and it was built by Mr. L. Macquarie, of Hobart, to the order of the Hon. A. Macgregor, M.L.C. It was fitted with harpoons, lances, ropes, and all other requisite gear for active service. Mr. Macgregor also exhibited sperm oil and spermaceti. Although whaling is not now embarked in to the same extent as formerly, there was £14,000 worth of sperm oil exported from Hobart in 1879. Staves of blackwood belong to the timber department, and how they are utilized in the manufacture of large and strong oil casks was shown by gigantic butts from the cooperages of Messrs. Johnston and Bragrove, of Hobart. Wood is one great source from whence the financial prosperity of Tasmania is derived, and many years since the wool-growers of the island formed flocks which have materially aided in perfecting sheep-breeding throughout the Australian colonies. The breeding of high-class

sheep is still sedulously carried on, and an excellent display in various classes was made by Messrs. W. Gibson and Son, G. W. Keach, J. Gibson, T. Paramore, C. Headlam, G. T. Thukell, and W. H. Gibson. In 1879 there were 7,385,002 lbs. of wool valued at £407,227, exported from the colony, and great numbers of valuable pure stud sheep form another valuable export. There are large districts well adapted for the growth of cereals, and several exhibits of that class showed that they could be produced in great variety and of excellent quality. Farmers displayed wheat, barley, oats, peas, and beans; and millers showed flour, oatmeal, pearl barley, split peas, &c. The hop-growing industry of the colony, which has its centre on the Derwent, near New Norfolk, is one to which especial importance was attached, and there was a large display of the products which are well known in both the English and colonial markets. In 1879, 548 acres were under cultivation, of which 738,616 lbs., valued at £46,164, was the value. The export amounted to 558,622 lbs., worth £26,512. "Messrs. Shoobridge Bros., of Valleyfield and Dushy Park, who were among the first to embark in the enterprise, have," says the *Age*, "presented the venture with considerable success, and their brands are highly thought of by the consumers. They forwarded a large parcel for exhibition. Near it were others from Mr. R. C. Read, of Redlands, W. C. Shaland, T. Allwright, R. Jeffery, Downie and Co., J. A. Moore, R. and T. Nicholson. All the exhibits were of last season's growth, and in that division, above all others, it might be said the collection was complete." Fruit is produced in large quantities in the colony, and there are several important preserving establishments at which jams and other preserves are prepared, chiefly for exportation. But although this has been regarded as one of the wealth-producing industries of Tasmania, upon this occasion the exhibits were very small, not one of the large manufacturers making any entries. Of dairy produce, there were some fair exhibits of cheese, hams, and bacon, placed at the special shows of those articles held in the Exhibition building. Of ales and beer, several samples, both in bulk and bottle, were sent from brewers at Hobart, Launceston, and Longford, prominent amongst them being the ale from Degraives' Cascade Brewery, which is situated at the foot of Mount Wellington, near Hobart. Other fermented drinks consisted of gooseberry wine, grape wine, and cider. In addition to timber, the island abounds with stone and other materials for building. Freestone abounds in many localities, as Hobart and its vicinity, Otlands, Ross, Brighton, and other places inland, and at Spring Bay on the east coast. The most noticeable exhibits of this material were a trophy prepared for the Commissioners for Tasmania, showing specimens from numerous proved quarries, and also blocks of marble granite and limestone, another trophy of freestone, from Teatre, near Brighton, exhibited by Mr. Ripon Shield, of Hobart, also a large block of limestone shown by Messrs. Pearson and Downie, of Spring Bay—stone much used in Victorian public buildings. Mr. Robinson, of Okehampton, exhibited grindstones, and also Devonian marble, quarried in Maria Island. Messrs. Lyell and Gowan, of Melbourne, had specimens of black marble and roofing slates, the latter from the quarry of the An-thalasian Slate Co., at Tam O'Shanter Bay, on the north coast of the island. Mining has been greatly developed in Tasmania of late years, and must be more so in the future, as the country abounds in metals and minerals. Gold has been mined for since 1870, and in 1879 about two thousand persons were engaged in gold-mining, and the value of the plant was £60,200. The yield of gold for 1879 was 60,165 ozs., of the value of £220,895. Tin is of equal importance to the Tasmanians, as immense deposits of the ore have been found; and the value of the tin and tin ore exported in 1879 was £200,178. It was first discovered in 1873, and the trophy of ingots of tin, from ore obtained chiefly from the Mount Bischoff Co's mine in the north-west, and smelted at Launceston, erected at the entrance to the Tasmanian Court, evinced the vast progress that has since been made in that branch of mining. Lodes of copper and lead, both rich in silver, are known to exist, with bismuth and other metals, but little has been done towards developing their extent. In connection with lead should be noticed an exhibit of shot that was placed at the entrance to the court. It was made at the shot tower of Mr. Jas. G. Mon, in Queenborough Glen, near Brown's River, a few miles south of Hobart, and was a sample of chilled, or hardened, as well as patent shot, of all sizes. Iron ore deposits are found at numerous places, but although coal and limestone abound, the smelting of iron has not yet proved a commercial success. Coal, both anthracite and bituminous, is found in nearly all the settled districts of the colony, and a few samples were exhibited. The aboriginal inhabitants of the colony, the last of whom died a few years ago, were remembered by the Commission, who showed a picture by Mr. Joseph Dowling, of Launceston, of a group of the natives of the different portions of the island, with photograph casts and busts of William Lanne, the last man, and Truganini, better known as "The Queen," the final representative of the race. Works of art, illustrating some of the beautiful scenery of the colony, were contributed by Mr. Piguent, of Hobart; Miss Piguent, Miss Kate Higgs, of Launceston; Mr. J. Higgs, Chisleigh; Mr. E. P. Beauchamp, Launceston; and other artists; and Mrs. Meredith, in addition to her literary works, had a water-colour painting, "Mountain Memory." Miss Emily Sherwin, of Launceston, contributed pencil drawings of heads; and Messrs. Winter, Anson, Burrows, Bailey, and Wherriett, of Hobart, and Zaromer, of Launceston, furnished a collection of photographs, including both portraits and scenery.

THE VICTORIAN COURT.

The Victorian people having organised the Exhibition, and being the hosts of the exhibitors from all other parts of the world, determined and successful efforts were made to render their display of arts, manufactures, and products worthy of the colony. The arrangement of their multifarious exhibits necessitated the occupation of a large space, and in the division of the available area the largest allotment was apportioned to Victoria. This, however, was scarcely sufficient, as every part of the floor was occupied with trophies, or cases in which the multitudinous products and manufactures of the colony were exhibited; and to arrange all those with due attention to classification, and leave free access for the visitors, was a task of extreme difficulty. It was accomplished, however, in a very satisfactory manner, as was stated by the daily journals.

That section of the Victorian Court placed in the northern portion of the west transept was devoted to a great variety of classes. Proceeding from the vacant space under the dome, on which one point of the court abutted, were exhibits of embossed glass, by Messrs. Brooks, Robinson and Co.; billiard tables and all appliances, from the manufactory of Messrs. Alcock and Co.; and a variety of jewellery, clocks, watches, and scientific instruments, from the establishments of T. Gaunt, Joseph Bros., Kilpatrick and Co., Denis Bros., Edwards and Karl, and other firms. Messrs. Moubray, Rowan and Hicks had a handsome display of costumes, and in the vicinity thereof were exhibits of clothing of all descriptions, and suitable for all classes of wearers. The woollen manufactures of the colony were well represented by the tweeds, blankets, shawls, flannels, shirtings, &c., from the Melbourne Woollen Mill Co., the mills of the Victorian Woollen and Cloth Manufacturing Co., the Albion Woollen Mill Co., the Barwon Woollen Mill Co., the Ballarat Woollen Co., the Castlemaine Woollen Co., &c. The Albion Company were recommended for the Emperor of Germany's prize. A large display of hats and caps of all patterns was made by Messrs. Sheldermine and Co. and L. Stevenson and Sons, and conspicuous amongst the exhibits of men's and youths' clothing were those of the Monster Clothing Co., the Beehive Clothing Co., E. Onkley, Cantor and Loel, and other firms. Messrs. Sheldermine and Co. were recommended for the Emperor of Germany's prize. The industry—yet in its infancy—of silk-producing was represented by several interesting exhibits. Stationery and bookbinding were displayed by the firms of Messrs. Sands and McDougall, W. Detmold, Cowan and Co., Ramsden's Paper Mills, &c.; and printing and books by Messrs. Munro, Firth and McCutcheon, McCarron, Bird and Co., Arnall and Jackson, &c. Messrs. Sands and McDougall were recommended for the Emperor of Germany's prize. The photographers of Melbourne also showed their productions in this part of the court, the firms exhibiting being Messrs. N. Carr, Foster and Martin, Grant and Cameron, Johnston, O'Shannassy and Co., J. W. Landt, and C. Nottleton.

Passing through the northern transept to the central avenue of the main annex, the largest portion of the Victorian court was situated immediately on the right or eastern side. The whole of the frontage to the main avenue was occupied by large, elegantly built trophies for exhibiting the products of a number of leading manufacturers. The first encountered was the lofty case of polished wood, glass-panelled, of Messrs. Swallow and Arnall, in which was displayed every variety of the biscuits and cakes made in their establishment at Sandridge. Messrs. Swallow and Arnall were recommended for the Emperor of Germany's prize. Behind this case, and extending eastward, was the handsome trophy case of Messrs. T. B. Guest and Co., J. H. Walker and Son, and C. T. Newman, filled with choice productions of similar character. Alongside of the basest trophies was that of the Victoria Sugar Co., whose works are situated at Yarraville, near Melbourne. Of this company's works and operations the *Argus* remarked:—"The refinery was erected at a cost of £210,000, and it employs 200 men and boys. The hold which the company has obtained on the market may be indicated by the fact that, whilst our home consumption and export trade is estimated at 750 tons per week, between 350 and 400 tons of that quantity is melted and refined in their works. The bulk of their sugar is consumed locally, but they do a considerable business with New Zealand, Tasmania, and South Australia." The exhibits of furniture were next in order, the foremost position being accorded to Messrs. W. H. Roche and Co. Their main exhibit was a square bed-chamber, furnished and decorated in the combined Renaissance and Adams' style. The floor was inlaid of blackwood and Huon-pine woods, forming an elegant piece of parquetry work. Messrs. Roche and Co. were recommended for the Emperor of Germany's prize. The outside of the walls was also decorated and furnished, so that each represented the side of a room fitted up and furnished in a costly manner. Of the value of the whole exhibit some estimate may be formed from the fact that 4390 was the cost of the parquet floor alone. Immediately in the rear of the foregoing were displays of useful and costly furniture made by Wallace Bros., Steinfield and Levinson, J. McEwan, and Cohen Bros. and Co.; and the dining and drawing suites shown by them were also very costly, and valuable illustrations of the enterprise, taste, and skill of Victorian manufacturers and their workmen. In this department also McLean Bros. and Rigg exhibited iron-framed chairs, elegantly upholstered, intended for use in theatres, concert-rooms, &c. Cases of chemicals and medicines next faced

the central avenue, one of Mr. J. Bosisto, M.L.A., being conspicuous, as showing eucalyptus and other oils and products of value, extracted from the indigenous trees and shrubs of the colony. Mr. Bosisto was recommended for the Emperor of Germany's prize. The peculiar trophies of the Apollo Stearine Candle Co. and Messrs J. Kitchen and Sons were next in order. They were each in form of a pavilion, the columns and canopies of which were of an elaborate character, and the whole richly ornamented architecturally, and with a number of statues, &c. The material had the appearance of pure white marble, but it was all modelled in pure stearine. Messrs Kitchen's trophy was, however, protected by a handsome glass case, the frames of which were cedar and blackwood. About one hundred descriptions of candles were shown, and a large variety of soaps, with oils, purified glycerine, and other products of the stearine industry. The Apollo Co dispensed with the use of wood, even for frames for the plate-glass, which were of stearine only. The structure was profusely decorated with statues, &c., and the various portions required nearly four hundred separate castings in stearine. The candles displayed were very numerous, embracing every kind made, and not only of stearine, but also paraffin, spermaceti, wax, ozokerit, and composite. Bottles containing crude glycerine, oleine for lubricating, oleic acid, and other products of this manufacture, were also placed about the case, and at one end thereof a smaller temple, modelled in various soaps, showed a large variety of excellent transparent glycerine and other soaps. In front of these trophies were the elaborately ornamented cases of Capper and Co and Lewis and Whitty, with blacking, blue, knife-polish, &c. In the same square the Rod Cross Preserving Co. made a grand display in and about an immense trophy enclosed in glass—pyramids of jams, jellies, pickles, and sauces, with numerous kinds of condiments, brought the well-known productions of the company prominently forward before the visitors. The manufactory of this company, situated in the suburban city of Prahran, is one of the most complete and extensive of the class, and is fitted up with machinery and appliances of the most modern and improved character. The quality and quantity of the articles produced are such that not only has the importation of pickles and preserves of other countries been most materially lessened, but large consignments of the company's manufactures are forwarded to other lands. Last year the company made and sold 20,000 cases of jams, besides jellies, marmalade, tart fruits, bottled fruits, candied peels, pickles, sauces, and vinegars. The fruit used is grown in the colonies, chiefly in Victoria, but large quantities, especially of raspberries, are brought from Tasmania. Employment is found for numbers of men, women, boys, and girls, in preserving and picking, in the manufacture of tins and cases, and in labelling, packing, &c. Exhibits of a cognate character were made by Cunliffe and Paterson, the Dunolly Fruit Preserving Co., T. Hoag (Lillydale), W. P. Brown (Melburn), and several others. In immediate proximity was the display made by Messrs. B. Harper and Co. In the centre, in artistically designed cases, were a variety of raw products, such as coffee beans, cocoa, rice in the husk, oats, maize, &c.; and at other parts of the allotted space were pyramids of handsomely-labelled tins and boxes of coffee, chicory, and cocoa, oatmeal, maizena, arrowroot, fancy packets of mixed spices, mustard, &c. The exhibits were so arranged as to show in each class the raw material and the various stages through which it passed in course of manufacture. In a smaller case in the vicinity the firm of Parsons Bros. showed more than one hundred varieties of the same kinds of articles, also illustrative of the manufacturing processes. A like display was also made by J. F. Mackenzie and Co.; the difference between the exhibits of Messrs Harper and the last-named firms being in the quantity shown, caused by the limited spaces allotted to the latter. The farmaceous preparations of the three firms were rivalled by G. Bencraft and Co.'s exhibits of pearl barley, oatmeal, maizena, brosemeal, groats, &c., and by maizena and starch from the Kensington Maizena and Starch Co.

The last frontage of the Victorian Court in the central avenue was that of the wine court. Here were ranged sample bottles of the wines produced in many of the colonial vineyards, those from the northern districts being shelved on the north wall, and the southern on the south wall. In the centre were trophies, that of St. Hubert's Vineyard being conspicuous for a ground plan of the vineyard and grounds plotted on the bottom of a section of a cask, and the surrounding landscape painted on the short staves. The wines stored in the court were samples of all classes produced in the colony, the principal being from the Dondigo Wine-growers' Association, the St. Hubert's, Rmu Creek, Echuca, and Chateau Tabbluk vineyards, and from the stores of Caldwell and Co., Dr L. L. Smith, A. Joske, &c. The entrance to the court was appropriately flanked by enormous vats, exhibited by C. Brache, a wine merchant. Great facilities were given by the Exhibition authorities to the producers of colonial wine. In addition to the court devoted to their industry in the main annex, there was a large bar in the cellar, at which the wines of those makers which had met with the approval of the Wine Committee were offered for sale. It was felt that the exhibition of wine in a bottle, or beer in a cask, afforded very little insight into the taste or quality of its contents, and that the only way to bring the wines produced in this country before the visitors to the Exhibition was to have them on sale, both in the wine-bars and the refreshment-room. The policy of the Commissioners was entirely successful; and there can be no doubt that the Exhibition did a great deal

to increase the reputation previously enjoyed by Australian wines. The verdict of the foreign exhibitors was uniformly very flattering. Some disappointment arose from the International Jury placing no Australian wines in the first class, although many of them had received gold medals at the recent Paris Exhibition. The explanation is very simple. The jury had before them samples of the finest vintages of France and Germany—clarets, burgundies, champagnes, and hocks—wines which can scarcely be termed wines of commerce, and are only met with on the tables of sovereigns and great financiers and they conferred the gold medals, with one or two exceptions, on these choice wines. Nineteen went to France and six to Germany, but none were awarded to Austria, Italy, Spain, Portugal, or to the products of any British colony. In the second rank were placed the bulk of the best foreign wines, together with six samples of wine from New South Wales, two from South Australia, and eleven from Victoria. The successful vinegrowers of New South Wales were Mr. A. Munro and Mr. J. Kilman; those of South Australia, Mr. Auld and Mr. Jacob, those of Victoria, Mr. B. Kurile, Mr. J. S. Johnston, Mr. Henry Best, Messrs. de Castella and Rowan, Mr. Carl Pohl, Mr. Albert Drolin, Mr. F. Grosse, and Dr. L. L. Smith, the latter obtaining the prize for a sparkling champagne called *Crème de Bouze*. This was the first occasion that Australian champagne was ever shown at any exhibition, and it demonstrated the fact that champagne may be successfully made in this country. Dr. L. L. Smith's *Crème de Bouze* was only beaten by one German sparkling wine—*Dietrich and Co.'s hock*—and in champagnes, by one brand of Roederer's and one of Chiquot's. The *Crème de Bouze* was placed in the same category with the champagnes of Pesse, Thurron and Co., H. Goulet, and Krug; with the sparkling hocks of Lang, Meyer and Coblentz, Kupferberg, Lauteren, and several other makers, and in a higher class than many French and German champagnes, including those of houses so well known as Pomeroy, Fils and Co., and Douchard Père et Fils. The wines of De Castella and Rowan, St. Hubert's, Lillydale, were recommended for the Emperor of Germany's prize, after a very keen competition with those of Mr. A. Munro, of Singleton, New South Wales, and Professor Reulaux, the Commissioner for Germany, decided upon awarding the glittering trophy to Messrs. De Castella and Rowan. In the rear of the wine court were the exhibits of ale and porter, the production of the most noted breweries in the metropolis and elsewhere. These were both in bulk and in bottles, the latter being on shelves down the sides of the court. The firms exhibiting were T. Aitken, Victoria Parade, Baynes and Hearn, Wanganatta; G. Ballson, Beechworth; Boyd and Head, Collingwood; P. Cople, Royal Mint Brewery; Fitzgerald and Perkins, Castlemaine; Hemmely and Co., Hornby, W., Williamstown; E. Latham, Carlton; McIndoe and Martin, West Melbourne; R. McCracken and Co., Marks and Co., Maldon; P. J. Martin, Australian Brewery, F. Tracylow, Williamstown; J. Tracy, West End; Victoria Brewery, Wanganatta; J. Wood and Son, Collingwood. At the rear of Messrs. Harper's exhibit were the confectionery trophies of the Victorian Confectionery Co., Dillon and Burrows, and Salvatore Jenza. Cunniff and Patterson, F. Mellon, of Dunolly, and others, showed jams, jellies, and other preserves; cordials, essences, spices, &c., by T. Macgregor and I. G. Dixon, vinegars from the Standard Vinegar Works of E. Guthrie, and also from H. Reed and Co. Dishes were in endless variety, whether for domestic or toilet purposes, or for use by mechanics and laborers, were shown by J. Zevenboom, Zevenboom and Thompson, A. Byss, and Patonius and Gibaud. Victoria abounds with animals covered with fur, and there was a fine display of rugs, mats, muffs, and articles of clothing manufactured from their skins. The principal exhibitions of these beautiful products of furriery were Mrs. W. H. Bailey, J. R. Clarke, J. L. Green, J. Krown, T. Lodge, G. Moss, M. Nettleburg, and J. Schotfeld and Co. The display made by tanners and curriers was worthy of that important branch of Victorian industry. Mr. D. Alton had a large collection of the different kinds of leather required for harness and saddlery, and also for belting, the principal being for black harness and brown and stained run leather, all made at his tannery in Flemington, near Melbourne. Brearley Bros. showed numerous kinds suited more especially for boot and shoe makers, and suitable for both heavy and fine work. These were made at their tannery on the banks of the River Barwon, below Geelong, where there are appliances for tanning an immense number of hides every week. Their list of exhibits comprised about twenty-five distinct kinds, including black and brown coach and bridle leather, waxed and grained kip, brown, black, and stained kangaroo leather, waxed calf, &c. Michachs, Hallenstein and Co., of Pootsray, had a similar assortment on view. There were also two tanned hides hung up to show how the skins were easily rendered valueless—the one by indiscriminate and inordinate branding, and the other by the careless use of the knife by the butcher. J. Dixon and Co., of Hotham, had a fine display of japanned, enamelled, coloured, and other leathers. J. B. Hayman, Collingwood, had a good and extensive assortment of leathers, made at his establishment. Equally praiseworthy collections were set out by other metropolitan and country tanners, including G. Cunnack, Castlemaine, and J. H. Abbott and Co., Sandhurst. A trophy erected by Wallis and Co., of Richmond, showed a variety of useful leathers, variously coloured, for bookbinding; calfskin for bootmaking, and a number of skins tanned with the hair on.

Intimately connected with the manufacture of leather is the boot and shoe industry, which is now carried on in Melbourne and the suburbs on a large scale, both in private houses and in

factories. The latter number nearly 100, and employment is furnished therein to about 8300 persons. The manufacture of those indispensable articles has most materially lessened their importation, that of the commoner descriptions of boots and shoes having literally ceased. The prices are very low, as the materials are produced in the colony. The industry being one of the most advanced in Victoria, the show made by the exhibitors was of a very superior character, and was thus referred to by the *Argus*:—"The exhibits in this class are placed near the leathers, and include some handsome cases of first-class articles. Fine collections of boots and shoes are shown by Messrs. J. Harris and Sons, of Flinders-lane, Mr. J. Coutie, of Elizabeth-street, Mr. J. Stoier, of Bourke-street, Mr. J. McQuinn, of Elizabeth-street; and Mr. T. Robinson, of Ryrie-street, Collingwood. Boots and shoes, including ladies' hessian, court, and jockey boots, are exhibited by Mr. John Rosier, Swanston-street, hand-sewn boots and shoes, including highly-finished boots, by Mr. Geo. Jeffries, of Little Flinders-street; ladies' and gentlemen's boots and shoes, by Mr. J. C. Ashford, of Buckingham-street, Richmond; courting and riding boots by Mr. P. Thomas, of Collins-street East; boots, shoes, and slippers by Mr. T. F. Nicholls, of Polytechnic-lane, Bourke-street; and ladies' boots and shoes, very prettily ornamented, by Mr. J. H. Wynne, of Leicester-street, Fitzroy. Plain and fancy boots and shoes, as also uppers, represent the firm of Messrs. McBean and Hickner, Smith-street, Fitzroy, and a nice assortment of boots and shoes for children and adults is shown by Messrs. Drew and Slatyer. Hand-made uppers for sea boots and ladies' riding boots will be found amongst the exhibits of Mr. H. Duncan, of Little Latrobe-street; and Mr. A. Dennis, of Post-office-place, has also a large and varied assortment of boot uppers. A further collection of substantially made boots and shoes, made by the inmates of the Deaf and Dumb Institution, is also exhibited." Harness and saddlery were well represented, and articles of costly and very ornamental workmanship, as well as others required for ordinary every-day use, were to be found in the display. Mr. D. Altson's glass case comprised sets of carriage harness for four horses, suitable for private coaches; buggy, waggonette, and Scotch dray-harness, saddles for ladies and gentlemen, racing and bush saddles, and sets of tackling for blood and Clydesdale entires. Another of his specialties was belting in rolls, some being eight inches wide and three-fourths of an inch thick, and other sizes down to the smallest size used for sewing machines. Of another belting exhibit the *Argus* thus reported:—"J. Munday, Geelong, exhibits a quantity of belt leather, tanned and made up at his own factory. The belts are arranged in graduated thicknesses and sizes from powerful three-ply belt fifteen inches across, up to the smallest belts in use. Round the sides are some immense rolls, and one, measuring thirty-six inches across, is the largest specimen in the Exhibition. Other exhibits of harness and collars were made by Gregg and Lord, W. Kermode, T. J. Potter, and Guthridge, Power and Co., all of Melbourne, and G. Kinnear, of Kilmoro. Whips of all descriptions, from the light ornamented riding and driving whips, to the long heavy stockwhips for drovers, were shown by J. Kingston, Kennon and Son, J. Tinning, A. Brooks, and other skilled manufacturers. Of leather trunks and portmanteaus, the largest exhibit was by Pausacker, Evans and Co., of Melbourne, who had a case containing all kinds of leather trunks, portmanteaus, and travelling bags in black and brown leather. They were all of the best material and well made, as were also those displayed by Jackson and McEwan, J. J. Leighton, J. Curtis, and other Melbourne tradesmen.

Amongst the most flourishing trades in Victoria are those of the coachbuilder and the cart and wheelwright, and a late estimate states that at least 1600 work-people are employed at the numerous establishments in Victoria for the manufacture of such articles, and that the value of the plant and buildings utilised in the trades is nearly a quarter of a million of pounds sterling. In the earlier days of the colony rough drays, carts, and waggonettes were the only vehicles made here, and all of a lighter description were imported. Gradually the manufacture of buggies and light conveyances, mostly of the American type, was essayed, and successfully; and now coachbuilding has attained such a position in all parts of the colony that importation of even the most ornate carriages has almost ceased, and most of the raw materials are produced here. The vehicles exhibited by Victorian coachbuilders were noticeable for the excellence of the materials used, the very superior character of the workmanship expended upon them, the adaptation in construction of the most modern improvements, and the general beauty of the designs. Comparison with carriages from European countries showed that in all the foregoing particulars Victorian coachbuilders and their artisans of all classes could compete on an equality with the best makers in the northern hemisphere. Of exhibiting firms, the oldest, Stevenson and Elliot, had a light landau on C springs, and the hood fitted with the firm's patent automatic section, which enabled it to be raised or depressed by one of the occupants while the carriage was proceeding on its way. They had also a full-sized brougham, elegantly trimmed in morocco; and a stylish Stanhope phaeton, a handsome, well-finished vehicle. This firm was recommended for the Emperor of Germany's prize. W. Gratch and Co., of Latrobe-street, exhibited four vehicles—a landau, with self-acting top and various modern inventions and contrivances; a family barouche, the sole representative of that class of vehicle shown by a Victorian coachbuilder; a full-sized family brougham; and a Stanhope waggonette, without top. H. Sawwells showed a Brott or skull phaeton, with extension hood; a light coal-box buggy of American pattern; a two-wheeled brougham on C springs, with double door and movable windows; an extension-top phaeton, to

carry four persons; and a business or pleasure waggon. F. Stuckland's exhibit was a Victorian phaeton with extension-top, handsomely painted and trimmed. Burton and Sons had a Victorian hansom cab, the doors and windows of which were entirely under the control of the person inside, it had also ventilating windows at the rear, and the driver's footboard was fitted with a small tread which works an effective break. D. White exhibited a ladies' angular driving phaeton, and also a Stanhops phaeton with lever hood. These were useful, elegant, and stylish carriages. The Victorian Carriage Co., St. Kilda, had a handsome double brougham, built after the most modern English style by tradesmen who learned their business entirely in the colony. Another exhibit was a dogcart, with high wheels and very light body. Other exhibitors in this class were—A. Sharpe, North Richmond; M. Williams and Sons, Collingwood; McDonald and Sons, Hotham; Ewing Bros., Franklin-street, J. Harvie, Richmond; Stephens Bros., Warrnambool, and Dickason Bros., Richmond, whose vehicles were all of similar descriptions to those enumerated, and equally deserving of meritorious mention for their intrinsic merits. A light racing sulky, with wheels constructed of metal, with light wires for spokes, like those of improved bicycles, was shown by the builders, J. Royal and Son, of Carlton, who had also a horse-reel with very light wheels of similar make.

Some of the most conspicuous trophies in this portion of the Victorian Court were those erected by five of the Melbourne tobacco manufacturers, and which were ranged in front of the principal refreshment bar. From an epitomised history of the growth and manufacture of this article published in the *Argus*, it appears that the industry was first started in Melbourne in 1853, the whole of the supply of raw material being then procured from America. In course of time farmers and others commenced to grow tobacco; and although at first the article produced was of little value, yet eventually the suitability of soil and climate and more careful cultivation so improved the products that manufacturers commenced to use them, and the colonial-grown tobacco is now largely patronised. Tobacco is grown in several parts of the colony, especially in the vicinity of the River Goulburn and other parts of the north-eastern district; also in the sheltered, warm valleys at the base of the Australian Alps, the alluvial flats of the River Ovens, and in Gippsland; and the annual production of dried leaf is now closely approaching one thousand tons. In the tobacco factories in operation employment is furnished for more than one thousand persons of both sexes and ages, and the value of the machinery in the factories is computed at over £50,000. The exhibiting firms were Dudgeon and Arnell, the Virginia Tobacco Manufacturing Co., Heinecke and Fox, Cameron Brothers and Co., and Moss, White and Co. Dudgeon and Arnell are a very old firm, and they use Victorian leaf very extensively in making aromatic twists, cakes in various sizes, qualities, and colours, and snuffs, plain, scented, and mixed. They employ about two hundred hands. The Virginia Tobacco Co. also manufacture largely from both Victorian and American leaf, and the quantities of cut tobaccos and snuffs that they prepare are very great. Heinecke and Fox, of the American Tobacco Works, commenced about nine years since, and have since then prepared over 2,250,000 lbs. of tobacco, in the form of tobaccos of various kinds, cigarettes, and snuffs. Cameron Brothers and Co. who opened their factory in 1876, have similar establishments in Sydney and Adelaide. In their trophy they displayed all varieties, shapes, and shades of pure manufactured and cut tobaccos, made from Victorian and Virginian leaf. This firm was recommended for the Emperor of Germany's prize. Moss, White and Co. displayed, in a lofty pyramidal case, an assortment of cake and cut tobaccos and aromatic tobaccos; also, cigars made from leaf grown at Havana, Java, Manila, and Sumatra; and numerous kinds of plain and scented snuffs.

Boatbuilders made no display of boats for general use, but near the tobacco trophies were several racing boats of very superior workmanship. Mr. James Edwards, of Prince's-bridge, showed a one-stroke eight-oared boat, fifty-six feet four inches long and two feet beam amidships. The skin was of Richmond River cedar, the timbers of English ash, and the fittings of Scotch spruce. The working portions of the slides were of lignum vitae. The boat was built for speed, and combined buoyancy, lightness, and the smallest possible resistance to the water obtainable in a racing boat which was capable of carrying eight 12-stone men and a 6-stone coxswain. Mr. Edwards also exhibited a four-oared racing outrigger of a first-class order, and a variety of swivel rowlocks, sculls, and oars. Mr. W. Greenland, of Prince's-bridge, had some very admirable exhibits; for instance, a sculler's outrigger with latest improvements, and a four-oared racing outrigger.

Ropes, cordage, and twine were displayed by several manufacturers, in trophies erected along the extremity of the court. Messrs. J. Miller and Co. had a fine show of these articles, conspicuous amongst them being a hawser of huge dimensions. All intermediate sizes down to thin sewing and parcel twine were to be seen, including superior samples of Manila ropes for yachts, hemp ropes, and cordage of most descriptions. There was also a large quantity of jute mats and matting. This firm was recommended for the Emperor of Germany's prize. D. E. McDougal and Co., of the Australian Rope Factory, had good specimens of ropes made from Russian hemp, others of material from Manila or from New Zealand flax, and comprising most kinds in use. They also showed twines in variety, with baliers and plough-lines and other articles used for agricultural purposes. Similar goods, with matting of New Zealand flax, were exhibited by J. McNulty, of Brunswick; and M. Donaghy, of

Geelong West, had fine specimens of twine, fishing-lines, ropes, &c., made of the same material.

The great number of Victorian manufacturers that require castings of brass and other metals has induced the organisation of factories where such articles can be produced, and the industry may be regarded as being in a flourishing condition. The most prominent display of brassfounders' goods was that of J. Danks, Melbourne. On a length of boarded wall were fixed brass castings in immense variety, and applicable as fittings for the supply of steam, water, gas, and numerous other purposes. Pumps were also shown in quantity, from the common iron lifting apparatus to the brass force and lift pump with single and double action, and the double and triple barrel pumps for deep wells. Sanitary-ware, as baths and lavatories, were also exhibited, and nickel and silver plated articles. Jenkins and Law had ironwork of superior quality, consisting of kitchen ranges, fenders, garden seats, chairs, hall-stands, &c. W. Hutchinson had a circular cast-iron staircase, with verandah pillars and fittings, balcony railings, and gates. The Victoria Rolling Mill had exhibits of rod, bar, angle, and saddle iron, tramrails, fish-belts, and agricultural and engineering forgings. The scrap iron in its various stages of manufacture into these articles was also shown. Other exhibitors displayed masons' and bricklayers' tools, sheepshears, cutlery for butchers and curriers, shoemakers' tools, pewter goods, non-corroding taps, self-heating gas iron; well-finished bolts, nuts, and screws; glassblowers' tools, firemen's implements, and an almost endless variety of manufactures of equally necessary and useful character.

In wirework, Greer and Ashburne exhibited thirty samples of Victorian-woven wire, suitable for mining, milling, and agricultural purposes; flywire in copper, brass, and iron, fine brass cloth, for paper-making; also, articles in which these wire-woven fabrics were worked up. H. McIntosh made a display of wire-work in an arbour, flower-baskets, bird-cages, dish covers, fire-guards, meat-safes, &c., also, wire-cloth and window-blinds. P. Young had similar exhibits, and a specialty in crimped wire-work. Other exhibitors in this class were Crook and Bust, W. and G. Bowley, and J. Jones.

The materials for making bellows being all produced in the colony, that branch of industry has become well settled in Victoria. J. Porta and Sons had a choice assortment of their manufactures, comprising a 44-in. blacksmith's bellows, double-action blast bellows, and round portable forges, with bellows under the fire-pen. They had also fancy articles in many devices, some richly mounted and illuminated, with a very large variety of ornamental and plain work, including a bellows for sulphuring vines. Harrop Bros had also an excellent collection of specimens of their manufactures, including smiths' bellows, double-action bellows, portable forges, &c.

Lamps of colonial manufacture were well represented in the Victorian Court. J. Paterson, of Melbourne, had a collection which included almost every kind of railway, ship, and carriage lamps, in which the latest improvements were adopted. There was also a lamp of very large size, intended for a lighthouse, and a number of very ornamental street lamps. J. W. Faul, of Sandhurst, had a number of large lamps, amongst which were a flashing lamp, lamps for the outside fronts of shops, and his "Comet" lamp giving a powerful light for workmen engaged in attending to crushing plants, mining machinery, &c. For river steamers it was said to be admirably adapted, having been used on the Murray River steamers since 1876.

Kitchen ranges and stoves occupied a very creditable position amongst the manufactures of iron, and many of the exhibits evinced great power of invention, as well as taste and skill in perfecting the goods from the designs. McLean Bros. and Rigg showed a large kitchen range, constructed with all improvements and appliances, and smaller economical ranges. F. Pullinger had a number of similar exhibits, adapted for club-houses, restaurants, private families, and shipping. J. Nicholson had strong range boilers. A. Goby's charcoal stove for general cooking claimed the merit of greatly economising fuel. Coalrane and Scott had a patent colonial oven, with movable fire-place. Other exhibitors in this class were Wallis Bros. and Co., T. Williams, and W. Harnwell, and from Geelong, J. Parker and E. Backwell. Patent gas cooking-stoves of numerous kinds were displayed by A. R. Walker, S. B. Jeans, Wallis Bros. and Co. Mr. Jeans had patent stoves of this class capable of cooking for one hundred persons, and portable water-heaters that could supply two gallons per minute for baths. A. R. Walker also showed an apparatus that in two minutes from the time of lighting the gas would furnish for a bath a stream of water heated to 150 deg. Fahrenheit. All the exhibits in this class attracted great attention.

Manufactures of tinware, plain and japanned, were shown in great variety. The pyramidal trophy of Hughes and Harvey contained tin and galvanised iron goods of a common class, arranged round the base; while above them were handsomely designed, well japanned, and artistically ornamented coffee boxes, grocers' canisters, syrup cans, ornate toiletware, &c. This firm also exhibited washing boilers stamped out of one piece of copper, dairy utensils in tin and brass, and Bessemer steel bonnet-boxes and travelling trunks. Alfred Shaw and Co. displayed a good assortment of grocers' canisters, toilet ware, coal scoops, watering cans, stamped tinware, coffee and teapots, candlesticks, hat boxes, travelling cases, cash boxes, &c. Similar goods were also shown on the stands of W. Radford and T. J. Connolly.

The Melbourne Lead Works were established in 1861, and can turn out fifty tons of sheet lead and fifteen tons of pipes per week. The exhibits consisted of milled or rolled sheet lead, rolled between two non cylinders weighing four tons each, on an iron frame 8 ft. wide and 84 ft long. Generally the finished sheets are about 33 ft. by 8 ft., and weigh from 4 lbs. to 6 lbs. per square foot. The pipes were of lead, tin, or a composition of lead and tin, for gaspipes, and there were lead tubing for bell-wires and lead wire. The piping is made by hydraulic pressure. The cost of these works was about £10,000.

Another industrial pursuit of great importance to Victoria as a wine-producing country, is that of the cooper. The materials for the manufacture of barrels, casks, and vats are to be found in immense quantities, but for the more important classes of work staves, &c., are imported. Concerning the display made at the Melbourne Exhibition, the *Argus* says:—"An admirable show is made by Mr. G. Bonetto, of Spring-street, of wine casks and vats, spirit casks and kegs, brewers' puncheons and hogsheds, beef and tallow casks, wash tubs, a variety of butter churns and tubs after the American style, choice vats, and every other description of cooperage. Rivaling this display is that of Messrs. Grady, Waring and Co., of the Phoenix Steam Cooperage, Prince's-bridge, who show huge oval casks bent by steam power and free from blisters, and of uniform thickness, as is illustrated by a sample stave. They also have brewers' casks and other specimens of their manufacture. Immense round casks and wine vats, made from the best American white oak, are contributed by Messrs A. and R. Caughy, Yarra-bank, the staves of which are 6 ft. 4 in. in length. Some excellent specimens of cooperage have also been forwarded by Mr. T. Webber, of Geelong." In proximity to the above, J. Perry had a unique trophy of bent woods. The exhibits were all specimens of work done at Mr. Perry's steam bending mills, and consisted of articles used in carriage building, wood for lances and saddle-trees, rims for circular saws and riddles, handles for spades, shovels, forks, picks, hammers, &c. Surrounding the foregoing were washing-machines of several kinds, all possessing merit; mangles, dairy utensils, and a great variety of other useful goods, as safety steps, rakes, trucks, washing-boards, &c.

The heat of the climate in summer renders the use of ice rather a necessity than a luxury, and there are two ice-making companies in Melbourne, which have constructed works fitted with the newest and best machinery for the supply of the large demand. Following in this there is a constant demand for ice safes and chests, which has been met by the Colonial Manufacturing Co., which exhibited a pyramid of safes, refrigerators, and cellars for club-houses, hotels, families, &c.

Glass-making has not been very long included among the established manufactures of Victoria, and the goods exhibited were chiefly of a common description. The Australian Glass Manufacturing Co., and Thomas and Richardson, of Hotham, had each considerable assortments of articles of general utility, such as lamp glasses and globes, tumblers, wine glasses, and decanters. The Melbourne Glass Bottle Works Co., of Emerald Hill, had a stand of green glass bottles, of the sorts required by jelly and pickle manufacturers, chemists, &c.; and G. Wilson and Co. showed patent stoppered bottles for aerated waters. As a branch of this industry S. Floyd had a lathe fitted up, at which the art of glass-cutting was shown, and fancy glass and philosophical instruments in glass were exhibited by Woodroffe's glassblowers.

The manufacture of stoneware and earthenware is also in its infancy in Victoria, but has somewhat advanced. Concerning them the *Argus* reported:—"The very superior samples of china and stoneware shown by the Yarraville Pottery Works will take most people by surprise. Large assortments of earthenware and terra-cotta work are shown by the Brunswick potteries. Mr. Linke Nolan (Gillbrook Pottery, Brunswick) has a collection of Cam, Rookingham, and Chesterfield ware, and amongst his terra-cotta work is a large fern fount, of an original design. Mr. A. Cornwell, Brunswick Pottery, is the exhibitor of another extensive display of glazed earthenware and of large terra-cotta vases and ornamental work. He also shows clays, raw and prepared, for the manufacture of earthenware. Pretty Parian marble ornaments, well-made stoneware tea-cups, and superior-looking tiles, will be noticed amongst the exhibits sent from the Bendigo Pottery. Glazed stoneware pipes, for water and agricultural purposes, are shown by several potteries. In this section of the court has also been erected a mosaic tile-work pavilion by Mr. H. A. Cawkwell, Malvern, which, on account of the quality of the tiles and the many patterns of mosaic work displayed, is well worthy of inspection." Seeds, fibres, and other vegetable productions were exhibited by the Director of the Botanic Gardens. There were 86 varieties of fibres, prepared from native and exotic plants growing in the gardens, some of them being dyed. Among chemicals and other extracts from native plants were samples of acetate of lime, acetic acid, wood vinegar, tars, potash, preserved olives and capers, olive and castor oil, coffee, arrowroot, &c. A collection of 1300 sorts was classified in show-cases, with 48 specimens of papers prepared from various plants, and 185 polished specimens of colonial woods. C. F. Crosswell had a large assortment of seeds of native trees, shrubs, and flowers; R. U. Nicholas and Co., garden, vegetable, flower, shrub, and tree seeds in great variety; A. Lincoln, grain and other seeds, and cereals in sheaf. A number of exhibitors displayed Victorian-grown hops, and others showed malt made from colonial barley. Wheat and other cereals, and flour of excellent quality, were also placed for inspection by numerous growers and millers.

One of the most important divisions of the Victorian Court was that devoted to the mining

interest, and the display made was calculated to give a fair idea of the extent to which that industrial occupation is engaged in, and of the results obtained therefrom. The Department of Mines exhibited a huge gilded dodecahedron, which represented the total amount of the gold found in Victoria up to 30th June, 1880. The total of the enormous bulk of gold was 498,100,000 ozs., and the approximate value £1,992,400,000. The department also displayed several geological maps of the colony of recent compilation, and a large and comprehensive collection of rocks, minerals, and fossils, illustrative of the geology, mineralogy, and mining resources of the colony. The collection was arranged under the direction of Mr. T. Couchman, C.E., secretary for mines, by Messrs. R. A. F. Murray, geological surveyor, and R. D. Duncan. It comprised specimens from the older igneous or plutonic rocks, newer igneous or volcanic rocks, metamorphic rocks, lower palaeozoic, upper palaeozoic, mesozoic rocks and coals, tertiary rocks, fossil fruit, minerals, and metals. An interesting part of the collection was a number of cores of metamorphic schist, basalt, silurian slate, sandstone, and shale, obtained by boring with the diamond drill for gold or coal in various parts of the colony. There was also a collection of *fac-similes* of large nuggets of gold found in Victoria, which included the Welcome nugget found at Ballarat in 1858, the gross weight of which was 2155 ozs., and was sold for £10,500; the Viscount Canterbury nugget, 1121 ozs.; the Precious nugget, 1717 ozs.; and numerous others. In the special exhibits were specimens of auriferous quartz, pyrites, failings, cement, and washdut, with samples of the gold obtained therefrom, with ores of tin, lead, copper, antimony, iron, and manganese. Coal samples from Colac, in the Western District, and from Moe, Kileunda, Strezlecki Ranges, and other parts of Gippsland, lignite from Lal Lal and Gippsland, with building stones, limestones, kaolin, infusorial earth, &c., were also comprised in the departmental exhibits.

Of the display made by others than the mining department, the first place must be accorded to the collection supplied by the Sandhurst School of Mines and Industries, of which Mr. Alexander Bayne is president. The following is a description of them:—A gilded pyramid, which has a base of 9 ft. square, and a sloping side of 26 ft. It represented what gold had been taken out of the Bendigo goldfield from its opening in 1851 until the end of 1878. Each of the four cubes on which the pyramid rested simulated the precious metal yielded by the district during 1879, equal to 172,251 ozs., or £680,016, whilst the pyramid itself represented 11,000,000 ozs., or 336 tons 14½ cwt., valued at £44,000,000 sterling. A number of cakes of gold represented annual and fortnightly yields of some of the chief Bendigo mining companies, of which the following were examples:—

	Ozs	dwt	grs.	Value
Great Extended Hustler's	71,598	15	17	£286,875
Garden Gully United	65,284	1	12	261,536
Johnson's Reef Gold Mining	19,950	10	0	79,802
North Old Clum	15,161	0	0	60,611
Pandora	17,819	10	12	69,278
Victory	20,597	12	0	82,890
Golden Fleeces	17,265	9	0	69,062
Garden Gully United (ten weeks yield to tributors)	35,702	18	12	142,812
Great Extended Hustler's (fortnightly yields from tributors alone), 2399 ozs., 3900 ozs., 4012 ozs. 10 dwts., 8146 ozs., 2936 ozs. 8 dwts				

There was a representation of a "saddle reef" on the model of an actual reef in the Sandhurst district, 28 ft. by 28 ft. high, and constructed of materials taken from the spot—viz., sandstone, slate, and auriferous quartz. The particular form of reef, although to be found elsewhere, was most characteristic of the Bendigo goldfield. The school also sent from its museum a very complete set of illustrations of mining appliances and processes, from the earliest forms up to the latest improvements; carefully constructed models of the alluvial "dolly," the bush, common, and saddle windlasses, and the Californian pump; the puddling-mill in very full detail; the horse-whip showing the arrangement of the pulleys, and other parts; which made carefully to scale, and of the proportions suited for most effective work.

Model of the poppet heads and engine or above-ground portion of the claims made from those in use at Bendigo; model of portion of the shaft and turn-table, together with plans showing the working of the claims by means of vertical and cross sections, of the Great Extended Hustler's, Pandora, and Catherine Reef companies' mines; working models of a crushing battery driven by the electric current from one cell of Smee's with the assistance of a small electro-magnet; of winding engine and of perpendicular pumping engine with battery and pumps attached, worked by compressed air; another of the Victory and Pandora steam engine, with pumping and winding gear attached; Davidson's safety cage, as used at the Garden Gully United Company's; the old safety cage; small battery with an arrangement to rotate stampers; a steam hammer; Hendy's "Challenge" American one-feeder, devised to save labour, as by its use one boy can attend to the feeding of many sets of stampers. Models of J. H. Seymour's patents were also forwarded, consisting of patent safety cage, cam, pump joint, pump crank, disc, and safety hook. There was also a full-size Middleton's safety hook, and samples of stampers, discs, &c., as used at Bendigo, together with specimens of the iron

from which they had been made. a set of miners' tools, showing the implements used in mining and drilling through stone; samples illustrating the treatment of pyrites.

A very interesting case prepared by Mr Hay Kirkwood illustrated the treatment of auriferous quartz; samples of stone from the various levels; samples of blanketings, tailings, pyrites, raw and roasted gold amalgam, retorted gold, and ingots of gold.

Some rich gold specimens from Heathcote; some large masses of auriferous stone, from six or seven hundredweight downwards, representative of the district; specimens of pyrites, auriferous and barren; and a variety of other museum specimens, illustrative of the district, such as Mr. S. G. Cole's collection of quartz specimens, Mr. Corrie's pyrites specimen, magnesite from Heathcote, infusorial earth from Talbot, and specimens of silurian fossils and dendrites from Bendigo, casts of Bendigo gold nuggets and plans of the Great Extended Hustler's, Pandora, and Catherine Reef United companies, complete the illustrations.

The exhibit prepared under the direction of Mr. V. Deives-Broughton, the deputy-master of the Melbourne Mint, furnished a fine illustration of the resources of that establishment, and of the extent and character of the operations there conducted. It comprised specimens of dust, cakes, ingots, and other forms in which gold is received for assay, &c. The assay department was fully represented by instruments and materials showing the routine of the gold bullion assay, and of the humid silver assay as there carried out in order to determine its value. Other specimens illustrated the refining process, by which the gold is cleared from the base metals. The subsequent operations of reducing the gold to the proper standard, by introducing a copper alloy, and then of coining it into sovereigns and half-sovereigns, were also shown. Of various cubes representing different metals, one showed the bulk of 284,420.011 ounces troy of pure gold, and another of 21,401.810 ounces of copper, which, fused together, formed the standard gold metal which sufficed for the coinage of 1,000,000 sovereigns. The processes of fusing, rolling into fillets, punching out blanks, and weighing them in an automatic balance, which sorts them into the three classes of light, standard, and heavy pieces, were also made plain, as well as the process of stamping and annealing. One of the most imposing of the Royal Mint exhibits was a pyramid of 2740 canvas bags, each supposed to contain 1000 sovereigns, and thus representing £2,740,000 coined and issued to the public in 1879. Another class of the numismatic exhibits of the mint consisted of a collection of specimens and models of coins and medals illustrative of the various stages through which the art has passed since the middle ages. There was also a collection of colonial and foreign coins and medals.

An important part of the Victorian Court was that contained in the eastern machinery annexe. There the exhibits of agricultural implements and machines were placed with machinery and mechanical appliances of numerous kinds and adapted for all purposes. Amongst the agricultural appliances was the display made by Mr. Hugh Lennon, of single and double furrow ploughs, vineyard ploughs, &c. including the well-known champion plough, which won the first prize sixteen years since, and a number of medals at agricultural shows held subsequently. In admirable contrast to this improved implement was a wooden plough with which Mr. E. Henty ploughed the first furrow at Portland, in 1884. Samples of the work done by Mr. Lennon's sub-soil and other ploughs were also shown, as well as harrows, scarifiers, horse hoes, and a variety of other implements. Mr. Lennon is also a maker of reapers, winnowers, and other agricultural machines, each claiming special points of excellence. These exhibits were recommended for the Emperor of Germany's prize. Mr. J. Dundas, of Parkside, showed a good collection of the chaffcutting machines of which he is such a successful manufacturer, and equally praiseworthy malt, corn, and maize crushers. His manufactures also included bark cutters and guindars, tobacco-cutters, dilling, slotting, and punching machines, tin-pressers, &c. These exhibits were recommended for the Emperor of Germany's prize. Ploughs, zig-zag harrows, reapers and mowers, and winnowing machines were the principal exhibits of Messrs. T. Henderson and Co. Reapers and mowers, stripping machines, winnowers, horse powers, were shown by Mr. J. Nicholson. Mr. R. Dodginton had a wheat-cleaning machine of peculiar construction, an improved smutting machine, a patent park-ester, and patent sheep-spooler for sheep washing. Ploughs, stripping, winnowing, and threshing machines, and seed drills, were amongst the exhibits of Messrs. T. Robinson and Co.; also their well known wool, cotton, and hop press. Mr. D. Edwards, besides ordinary ploughs, harrows, &c., had a wheelbarrow with seat for driver, and tines that can be reversed to suit different kinds of soils. He had likewise an improved soleless plough, and his "Edwards's Cultivator." Chaffcutters were shown by Swan and Co.; ploughs by J. Grant and Co.; Robinson and Sons a saw wool press, squatter's plough, and an earth scoop for excavating dams or tanks. A large number of cognate exhibits were shown by manufacturers in Ballarat, Geelong, and other places, all well designed and constructed. The display made in this section of the court well sustained the character of the manufacturers for intelligence and enterprise.

Of machinery for the supply of motive-power the list was very full. The engines fixed by Messrs. Wright and Edwards, to furnish the requisite power for displaying machinery in motion, were noticeable for their high finish and the smoothness with

which they worked, and were recommended for the Emperor of Germany's prize. The two heavy locomotives placed in such prominent positions in the eastern machinery annexe were admirable specimens of the skill of Victorian engineering artisans. One was a passenger engine from the Phoenix Foundry at Ballarat, and, with its tender, was most highly finished. The Phoenix Foundry Co have already supplied a number of locomotives to the Government for use on the Victorian railways, and which have given great satisfaction; and in June, 1881, they took a further contract for ten locomotives and tenders, for use on newly-constructed lines, at the price of £31,470. Just outside the building the company had a novel locomotive lorry, built for the purpose of conveying completed engines and carriages through the streets from their works to the railway. It was a long platform frame of strong boiler plate, mounted upon ponderous non wheels, the front pair of which steered the machine when in motion, being acted upon by very powerful steering-gear. On the platform was a small but compact boiler and engine, which not only imparted motion to the lorry, but also to a windlass by means of which the locomotive to be removed was drawn up an inclined plane on to a pair of rails on the platform; and when secured in that position, the steam lorry rolled away at a good rate with its load of thirty tons. The other locomotive shown of equally fine build and finish, and manufactured at the Government workshops at Williamstown, was recommended for the Emperor of Germany's prize. With this exhibit were also two superbly fitted and ornamented passenger cars, prepared for the use of H.R.H. the Prince of Wales, in anticipation of his expected visit. These were likewise built at the Government railway workshops. Without specifying in detail the multifarious machines exhibited, they may be briefly noticed as consisting of marine and stationary engines, adapted for every description of work to which they could be applied, with many other articles of great ingenuity and acknowledged excellence of workmanship. Of engines, there were those made by Messrs. Wright and Edwards, which, according to the *Age*, "though not made for exhibition, are splendid specimens of finished turning and compact mechanism." An exhibit of Messrs. David Munro and Co. was also thus referred to by the same journal:—"They show a stationary hoisting engine of their own make, with multitubular boiler, tank-bagged, and finished in the highest possible manner." The firm also exhibited a Victory self-adjusting windmill and pump. Other exhibits were enlivened by the *Age*, such as an improved high-pressure engine from Messrs. Humble and Nicholson's Vulcan Foundry, Geelong; the double-horse works of Mr. Geo. Munro, of Ballarat; a cylinder horizontal high-pressure engine of Messrs. Graydon and Co., Fitzroy; the 'stevedores' hoisting engines and steam-boilers of Messrs. McCall, Anderson and Co., of Melbourne. The miscellaneous collection of machinery shown by Messrs. David Munro and Co. was alluded to as most interesting and valuable. It comprised one of McCaughey's patent automatic earth-scoops, which with one man and two horses can remove from 150 to 200 yards of earth per day from the site of a dam; patent travelling self-acting circular saw-bench, suitable for any length of timber, light or heavy, post-boring machine, capable of turning out 180 posts per hour, bored in five or six places for wire or rails; winding and pumping machinery, patent safety mining cages, &c. In this section also were exhibited Woods' patent automatic railway brake, fitted on to the State railways shown by the Victorian Railway Department; also, a patent electric brake, of which Messrs. Milligan and Wheeler are the patentees. The brake exhibited by the Hon. J. Woods was recommended for the Emperor of Germany's prize. The manufacture of medals was carried on in this department by Mr. G. W. Hamilton, who exhibited a large press, made to his order, for the purpose of stamping, embossing, and striking medals from $\frac{1}{2}$ inch to 6 inches in diameter, and is the largest in any of the Australian colonies. The *Age* remarked—"It is made to take in a die 18 inches in diameter, and will be used for heavy plates. The press is four tons, or nearly five, including the bed. The screw is 7 inches in diameter, three threads, 5-inch pitch, and is 3 feet long. The wheel of this powerful machine is $1\frac{1}{2}$ tons weight, and the force that this screw would accumulate at the moment of striking would be something like 60 tons. There was some difficulty in getting the screw cut, as the pitch was a fast one, and the makers had to cut a shaft for the lathe to get the proper pitch. It is creditable to the colony and the makers that a machine of this kind could be turned out in such a satisfactory manner." Ford's rock drill and air compressor were also on view. It has been used with unquestionable success by the Rocky Mountain Tunnel Co., Beecworth; at the Waterworks Tunnel, Stawell; by the Melbourne Harbour Trust; the Port Victor Harbour Trust, South Australia; Cobarr Copper Co., New South Wales; Sydney Waterworks Tunnel, and the Victorian Government.

Passing on to the outside, on the ground to the north of the main annexe, the exhibits of the Victorian Education Department were located. The following description of them was given by the *Argus*:—"The Education Department appears as a most effective exhibitor, showing not only samples of school-books and apparatus, penmanship, maps, drawings, but even of school buildings and teachers' dwellings. The larger of these consists of a schoolroom 30 feet long by 18 feet in width, and designed to accommodate from fifty to sixty pupils. This room is fully equipped with a gallery, a table, desks, forms, easels, blackboard, notation frames, reading tablets, and, in short, with every appliance needed for school-keeping (not forgetting the

customary rolls and time-table). Attached are quarters, comprising a kitchen fitted with colonial oven, two bedrooms, a pantry, and a parlour, the largest room being about 12 feet by 13 feet. The front of the parlour and best bedroom is sheltered by a good verandah; and the whole structure, school and quarters alike, is built of the best pine, the outside and interior being so coated with a liberal allowance of paint as to ensure great durability. We were told by an expert that, with an occasional renewal of painting such a building in twenty years' time would show few signs of wear. Indeed, one must say that with such comfortable quarters the country teacher may be deemed well off—an airy, well-built, though small cottage is supplied to him at a very moderate rental (the building just described being rated at £12 per annum). A cow and a horse and buggy are usually among his possessions; and dwelling in a community of which he is not one of the least considerable persons, life may glide on with him very smoothly and happily.

"Close to this is one of the portable schools which it is customary to put up where only a building of the smallest size is required. This novel structure comprises a schoolroom about 2½ feet long, with a breadth of 11 feet, and two small dwellingrooms are attached to it, necessarily small—so small that the teacher can almost poke the fire and open the window without incurring the inconvenience of leaving his chair. The fire-places are made of iron pieces, easily put together, and backed with earth; while the chimney is a simple funnel indented at the top, and looking like a locomotive smoke-stack. The dwellingrooms are filled with exhibits of State-school work. Thus, one room is devoted to drawings, showing exercises in free hand, scroll practice, geometrical and machine drawing, and occasionally more ambitious attempts at buildings, landscapes, and figures. Drawing, though a nice subject, is taught in only a limited number of schools, and as two weekly lessons in a very large class are all the opportunities offered to any pupil, great excellence is not to be looked for, though probably not a few will be surprised at the touch and style acquired by many a child of twelve or thirteen years of age. In two other rooms appears an extensive exhibit of needlework done in the ordinary school course, being specimens of exceptional excellence in the way of darning, knitting, and plain sewing, many of the garments shown being of considerable merit. The walls of certain rooms are thickly covered with specimens of maps done by State-school pupils, and show great care and frequent excellence of execution and finish. A very large supply was sent in to the Education Department, but even for the selected maps it was impossible to find sufficient wall space for exhibition, many maps, some of great merit also, have therefore to be shown in portfolios and packets. The Victorian educational exhibit was thus of a twofold character. On the one hand, it showed what was being done by the Government in providing excellent apparatus and furniture, and in erecting suitable school buildings, which, although plain and even inexpensive when compared with the costly structures that prevail in Great Britain and on the Continent, are yet constructed with the most careful attention to every requirement of light, warming, ventilation, and decency, and of course with special adaptation to the wants of class teaching. On the other hand, there were excellent and honest specimens of the pupils' work in grammar, composition, dictation, arithmetic, geography, penmanship, and needlework."

The Victorian products exhibited in the temporary shows were of the highest quality and excellence, and in wools two champion prizes were awarded to Sir Samuel Wilson, who was also recommended for the Emperor of Germany's prize.

LADIES' COURT.

THE Ladies' Court at the Melbourne International Exhibition was generally full of visitors. It contained a great variety of wool-work, cones, worked chairs, ottomans, cushions, and other smaller articles; also, an interesting specimen of a Chinese woman's embroidery, brought away by a British soldier at the time of the looting of the Summer Palace at Peking. The subject was a few figures, worked on a dull background, of some Chinese women and children. On the walls were hung a number of wool-work pictures, some of which were of a very ambitious nature, one of them being a copy of the Descent from the Cross, by Rubens, and two others representing the Last Supper. Wool-work flowers were also to be seen in great abundance, under glass shades. There were glass cases full of nicely-arranged skeleton leaves, in a state of perfect preservation, with some bouquets of fish scales, and others made out of the cuttlefish, one or two having seaweed arranged amongst the flowers. Feathers of native birds were tastefully designed in garlands of flowers. Miss Anderson's feather picture of passion flowers, &c., around a white cross, was particularly graceful.

There were besides a great many painted flowers. One beautiful velvet cushion was exhibited by Mrs. Shann. The Misses Moore sent a satin border for a table cloth, painted with garlands of lilies, passion flowers, apple blossoms, and birds' nests amongst the foliage. Miss Chassie Cole, of Geelong, contributed several articles. The largest was a small three-

leafed screen, on which were painted groups of flowers from nature. A banner screen, under a glass case, with the most natural and artistically arranged wild flowers, was worthy of special mention, and the same lady had painted single flowers on a set of silk doyleys. Several albums were exhibited of leaves and ferns, "nature printed." Glass cases and shades abounded, filled with every variety of wax and paper flowers. There were Australian wild flowers, orchids, tuber roses, lilies, cacti, iohanas, fuchsias, tulips, passion flowers, snowflakes, camellias, variegated leaves, and bridal bouquets. Two show-cases were filled with fruit, very well modelled in wax. Bouquets of flowers were cut out of paper with scissors. Several tables had wreaths and groups of flowers painted on them, others were decorated with splashed fern leaves. Miss Nellie Boobier sent a show-case containing one large silk cushion, several small ones, a banner screen, a pin-cushion, and several smaller articles.

There was a handsome exhibit in the Victorian Court downstairs belonging to the ladies' department, and sent by Miss Josephine Bearley. It consisted of an entire bedroom suite, embroidered on crevel canvas. One show-case contained a number of cardboard fancy articles out with a penknife, the glove boxes, pocket-handkerchief case, &c., being prettily gilded with blue silk. Seaweed was to be seen arranged in every variety of form. One case was very curiously got up with grottoes, covered and surrounded by shells and seaweeds and corals. A few egg cases were ornamented with leather-work designs. There was a great show of leather-work frames, Miss Martha Borland and Miss Margaret Vearne having displayed special skill in the grouping of their flowers. A good-sized sideboard, having a mirror above and in each of the front panels, was decorated with an elaborate ornamentation of leather-work. One of the frames was entirely decorated with cones; another had different cones and acorns massed together all round it. A very pretty set of ornaments, made of rock melon pips, consisted of a smoking-cap and slippers, lined with blue silk, a necklace, bracelet, and a few other trifling articles. C. Haughton, jun., sent a beautiful miniature suite of drawingroom furniture, carved in bone, upon a flooring of different coloured mother-of-pearl, inlaid in a lozenge pattern. Miss Stillman exhibited a chess-table, etched and covered with grotesque figures. A few articles in fretwork were shown. It is needless to say that the usual feminine appointments abounded—such as cones, babies' hoods and capes, and embroidered clothes, little girls' silk dresses, pin-cushions, chair covers, screens, antimacassars, hand-sewn underlinen, and a variety of hand-made stockings and slippers. Some of these were embroidered. One small glass shade contained trimmed dolls' hats and caps. There was a curious specimen of ladies' work during the trimmings of the last century. The colours were very dull, but the drawing of the faces was far better than most of the more modern pictures in wool.

Hanging up in a small frame was a piece of bed curtain, taken off Napoleon's death-bed, and brought from the island of St. Helena by the late Mr. Beale. It was exhibited by his daughter. Another curiosity was sent by the Rev. Canon Vance, of Kew. It was a reproduction of Martin Luther's tankard, and the following extract accompanied it.—"This interesting relic of the great reformer is of ivory, very richly carved, and mounted in silver gilt. There are six medallions on its surface, consisting, however, of a repetition of two subjects. The upper one represents the agony in the garden, and the Saviour praying that the cup might pass from Him; the base represents the last supper, the centre dish being the incarnation of the bread. This tankard, now in possession of Lord Loudesborough, was formerly in the collection of Edkington, of Birmingham, who had several copies of it made. On the lid in old characters is the inscription, 'C M L, MDXXIII.'" A number of curious designs were made of the pith of rushes; amongst others, an ornamental flower stand and bride's cake. Mrs. Omond, of Geelong, sent a transparency, the only hand-painting on glass.

Some portion of the walls was decorated with a number of patchwork quilts. One of these, exhibited by Mrs. Van den Houten, was made from patches of dresses worn by Her Majesty Queen Victoria, Queen Adelaide, the Duchess of Kent, and other members of the Royal family in 1840.

A silk quilt, by C. Tilly, was made out of 10,555 pieces. S. A. Maybille exhibited a curious piece of work in floss silk upon perforated cardboard. It was a copy of the Lord's prayer in a quaint device.

Fancy articles made out of egg shells filled one of the show-cases. There were vases, jugs, tea pots, and other objects, with gilt stands, and all of them etched. There were a few specimens of tatting. Some of the lace work was very good; amongst others may be mentioned a set consisting of a point-lace apron, a handkerchief, and sleeves. There were two cushions, with shuttles, and pieces of lace begun, showing the way in which cushion-made lace is worked. F. Little, of Little Brighton, sent a point-lace veil, the *fas-simile* of that worn by the Princess of Wales at her marriage.

On the stairs was a large frame with a marvellously executed specimen of penmanship, exhibited by Mrs. S. Bartlett, of Richmond. In the centre was an account of Victoria, printed with the pen in every variety of way. All round were more etchings, ornamental designs, accounts of the geology of Victoria, printed finely with the pen, and tables of statistics, with the dates of important events.

THE WESTERN AUSTRALIAN COURT.

The exhibits sent from Western Australia were of great importance, not so much as indicating the progress made in developing the resources of that comparatively lately settled colony as because they displayed samples of natural resources that must eventually render that country great and highly prosperous. The collection was, therefore, creditable to the Western Australian Commissioners, and will no doubt serve to accelerate the progress of the colony. The most prominent production at present is lead, which is found in large quantities in the mines district about Northampton and on the lower course of the Murchison River, and is an important article of export from the colony. A display of this metal was made by Messrs. McLean Bros and Rigg, at the entrance of the court, in the form of a trophy of piglead, which had been shipped to Victoria in the ore, and smelted here by Mr. E. Hughes, of Footscray. There were exhibits of the ore in its natural state shown by Messrs. Crowther and Mitchell, who had a comprehensive collection, comprising also the ores of copper, plumbago, zinc, native iron, &c. As similar productions to those shown are to be found largely distributed throughout the entire area of this vast province, it may be assumed that the mineral wealth of Western Australia is inexhaustible. Samples of the lead manufactured at the lead works of Mr. J. McIlwraith were also exhibited near the piglead. Other exhibits in the mineral and mining section were made by the Government of the colony, who contributed a number of fossil rocks, and a geological collection; and also by Mr. J. S. Davis, who sent samples of fire-clay, pipe-clay, fossil loek, and non. Timber is another great staple product, of which there are valuable forests in the southern and western portions of the colony, estimated to cover an area of 86,000 square miles. The jarrah, the most valuable of these timbers, is to be found in all parts, although more plentifully in some; and it is computed to cover an area of 14,000 square miles. White gum, karrie, tuart, red gum, and York gum, five others of the principal eucalypti, also grow over large areas. "The Public Works Department of the colony," says the *Adm.*, "has sent various exhibits, showing jarrah timber in the rough; jarrah pile, dug out of causeway, Swan River, after thirty-five years' exposure; and a log of jamwood (*Acacia acuminata*). There are also from the Government a collection of specimens of the principal timbers of the colony, and a large show-table, and turned articles, made from native woods. A large quantity of the valuable sandalwood, and others of economic value, as well as barks, are shown by various contributors." Amongst these, Mr. M. C. Davies, of Bunbury, had a trophy of jarrah and karrie timber, for ship and boat building, harbour and jetty works, railway sleepers, &c., with specimens of piles that had been standing in sea-water for thirty-four years, and posts and rails that had stood twenty years, thus proving their durability. Another trophy was contributed by the Jarrahdale Timber Co. A collection of specimens of the principal timbers of the colony, prepared by the Convict Department, was also shown. Another industry of great importance is the pearl fishery, which was fully brought before the public by a trophy of pearl oyster shells, erected at the entrance of the court by Messrs. W. D. Moore and Co. The export of pearl shells in 1879 amounted to £39,400, and the total value of the shells exported from 1867 to the end of 1879 was £368,810. Considering that the population of Western Australia is little more than 30,000, and that out of a total area of 626,111,323 acres there were only 15,938 acres under cultivation, it could hardly have been expected that there should be a great display of cereals and farinaceous products. Still there were some good samples of wheat shown by six agriculturists, and of barley by three, while four others had fine silkdressed flour, ground in their mills. Fish abounds all round the extensive coasts, and must eventually add to the wealth of the colonists when utilised for commercial purposes. That a start has been made was proved by the Mandurah Fish Preserving Co., who had a collection of preserved fish prepared at their manufactory. Mr. Thomas, of Shark's Bay, also exhibited a oask of salted dugong, a fish of which large shoals are to be found round the northern coasts, and which, besides being eatable, also yields a valuable oil. The products of hunting, shooting, fishing, &c., were represented by opossum-skin rugs and other furs, sets made of swan's down and pelican feathers, with whalebone and oil, and other articles. Of preserved and dried fruit there were several creditable exhibits, including almonds and muscatel raisins. Wine was forwarded by six vigneron, the sorts being red Fontainebleau, white and dry muscat, sauterne, Don Pedro, verdeilho, red burgundy, and red hermitage. Ales and porter were shown by two brewers at Perth, both in wood and bottle; but it was stated that the hops were of Tasmanian growth, the malt English, and the sugar from Mauritius, thereby leading to the inference that the production of those articles had not been entered upon, although hops, barley, and sugar-cane would all grow in the different parts of the province. Sericulture has been entered upon, and some beautiful exhibits, showing the cocoons, and every process through which silk passes to the weaving, were displayed by the Government and others, and manifested that this industry, if cultivated, may be of great value to the colony in the future.

THE UNITED STATES COURT.

The United States of America occupied three distinct courts at the Melbourne Exhibition, one being in the nave of the main building, the main court being at the end of the central avenue close to the fernery, and the machinery being chiefly confined to the western hall. The American exhibits failed, unfortunately, to give strangers an adequate idea of the importance of the manufactures of that country, one reason for this being that a great many things went down in the "Eric the Red," a vessel chartered in the United States to bring the exhibits to Melbourne, but which foundered close to a dangerous part of the coast when nearly in sight of her journey's end. Another reason given for America not making a better show was that the depression in trade which began in 1873 had passed away, and with the revival taking place stock had become so low in most departments that goods could with difficulty be spared for exhibition purposes. One large exhibit, which was shown at Sydney, and intended for Melbourne also, had to be recalled to satisfy home demands. Then, again, no goods were sent out simply for show, the distance and expense rendering it inadvisable, so that only such things were exhibited as were considered suitable for the Australian market. All of them were noteworthy for their solidity and excellent make.

First of all may be mentioned the articles in the main building; and foremost amongst these was the show-case of the American Watch Company, Waltham, which was erected just under the dome. These watches received two first prizes. The Waltham watches attained such a fame, and became so widely circulated, that one of the Swiss Commissioners to the Philadelphia Exhibition warned his countrymen, in a lecture delivered on his return to the centre of the watch-making trade in Switzerland, that if they did not set to work to improve their manufacture, they would eventually lose all their markets. Every single portion of the Waltham watch, from the slender hair-spring to the outer case, is made by machinery, so that the regularity and precision are perfect; and any of the works of a watch could be transferred to another of the same size. Whereas in Switzerland there are about 40,000 workmen making forty watches on an average each per annum, the United States average is 150 watches, or three and a-half to four times more than can be produced by manual labour. The full exhibit consisted of the materials used in watchmaking, of movements of various grades fitted together in nickel frames, and, finally, of complete watches in silver and gold cases. There are six different sizes of watches made; and all watches of similar size have similar parts, which can be interchanged in case of repair or other contingencies.

Close to the handsome platform containing the Waltham exhibit was another show-case with Peabody-Martini rifles, from the Providence Tool Co. Behind these were the fashionable Vanity Fair cigarettes, and a large assortment of artificial teeth from H. D. Justi and S. S. White, of Philadelphia. There were two handsome black and gold show-cases from Messrs. Simpson, Hall, Miller and Co., of Connecticut, full of the most elegant electro-plate ware. There were jugs and basins for toilet use, tea services in antique and modern patterns, épergnes, candlesticks, and very pretty urns. In the centre of one of the stands was a prize cricket trophy of a punch-bowl and goblets, richly engraved. Then two little Cupids were driving swans, the figures being of silver, the birds of porcelain, and the reins of gold. Next to these was another platform, with a case of elegant appearance, containing every variety of looks and keys, sent by the Russell and Erwin Manufacturing Co. Under the wall of the western nave was an exhibit of cabinet organs. The Smith American Organ Co., J. Estey and Co., Foloubet and Co., and the Taylor and Bailey Organ Co. were the manufacturers. Turning to the largest section of the American Court, close to the fernery, a large platform first of all arrested the attention, forty-five feet by forty, upon which Messrs. Fairbanks and Co., of New York, showed their weighbridges and scales. St. Johnsbury, the headquarters of this business, is a model teetotal town, conducted on principles of profits to workmen as well as to shareholders. The workshops cover ten acres of ground, and the number of hands employed is 1100. Their weighbridges and platform scales were the inventions that procured the Fairbanks' factory the high reputation it possesses. Four different weighbridges were shown, from 25-ton capacity to three-ton (portable). The old weighbridges for carts, &c., were very cumbersome. The beam levers used to be placed high enough for the load to pass underneath. Fairbanks removed the levers to a pit underneath the platform, and their plan was followed everywhere. The main levers of the weighbridges exhibited were set in cast-iron frames, put together in sections and connected at the centre. Platforms 128 feet long can be laid down if necessary; all that has to be done is to lay down section to section until the required length is made up. The platforms are always constructed of timber. The levers were supported from a wrought-iron frame by loops, which allowed the platform a little play. Instead of being lowered away from the platform when not actually required to weigh a load, as was formerly the case, they are now kept always ready, and the jar which might otherwise be given to the mechanism of the beam by a train of trucks in motion is prevented by simple means. A movable loop over the free end of the beam fixes it down tightly, and allows no vibration. Before the modern combinations of levers were invented 56 lbs. in one scale had to be balanced by 56 lbs. in the

other; but in the 25-ton weighbridge of the present day the strain on the knife-edge does not amount to more than 250 lbs for a full load, and the counterpoises on the long arm of the beam are only a few ounces in weight. The form of the knife-edge in the Fanbanks' scales is worth mention. To be trustworthily, the pivot, or knife edge, should be hard and keen. But should the steel be tempered a little too hard it is liable to break, whilst if not hardened sufficiently it is apt to wear. Some years ago one of the workmen discovered a process by which the outer portion of the pivot could be carbonised, or hardened, and the internal part left soft and tough. Pivots are now made of soft Bessemer steel, carbonised or crystallised on the outside. A hard knife-edge and a fibrous body are thus combined in one piece. All scales are made by machinery, in certain definite sizes; equal sizes have equal parts, and equal parts are interchangeable. There were no less than forty different platform scales, besides counter scales and scales for scientific purposes.

Another distinctly American industry in its origin and development is the sewing machine. Thirty years ago a practical sewing machine was a thing unknown, and American ingenuity has been applied in solving the difficult problem. Walter Hunt, of New York, having been one of the first experimentalists in America at the present time exports annually upwards of 500,000 sewing machines. Itself a labour-saving machine, it is the result of the work of many other labour-saving machines. One of the leading American firms is said to use 1003 separate machines for special mechanical operations in its construction. A rotary-hook, for instance, is passed from machine to machine, passing through 128 distinct operations before it is ready to take its place in a finished machine. The needle also requires a series of mechanical processes before the common steel wire of which it is made is converted into the finished needle; amongst the operations it undergoes being those of cutting, grinding, "swaging," cutting to length, rough pointing, tipping, grooving, eye punching, burring, hardening, tempering, polishing, brushing, scouring, &c.

Almost in the centre of the court was the commodious platform containing the Davis sewing machines. The "Davis Vertical Feed" combined important improvements, whilst the "Light-running Standard" worked quietly and smoothly, and performed every variety of stitch. Most of these machines were being constantly worked, so that their capabilities might be easily tested by all who wished. This machine received a higher award as a domestic machine than any other sewing machine exhibited.

Some of the earliest and most important improvements were introduced by the Wheeler and Wilson firm, which began in the earliest days of sewing machine manufacture. They are the inventors of one of the best features of the most approved sewing machine. They claim for their rotary hook system that it is worked with much more ease and produces a better stitch than the vibrating shuttle, and that far more work can be done with less fatigue. Another improvement is the automatic under-tension apparatus for clamping the lower thread, and enabling the operator to regulate the lock of the two threads while the machine is in motion. There is also the independent "take-up," which draws up the thread when the needle is out of the material, so as to prevent the chafing of the thread between the needle and the material, and permits of the use of a tolerably large thread. All parts can be replaced by similar interchangeable parts, because for each part of the machine a standard gauge and standard model are kept, by which the working gauges are tested, and kept to the highest degree of exactness. This firm showed a very good collection of every style of machine. Messrs. Singer and Co. erected a Chinese-looking structure outside the building in which to exhibit their machines. Their principle is that of making a lock-stitch by means of a straight-eye pointed needle, and a longitudinally reciprocating shuttle. Of ordinary machines they had an excellent collection. One machine was manufactured with great strength, especially for leatherwork, and another for binding books, &c., which was not the least useful of the many exhibited by this firm. On the expiration of some of the earlier sewing-machine patents minor firms arose who manufactured sewing-machines on the principles that one or two firms formerly held as a monopoly, introducing slight variations or improvements in detail. A few of these were well represented. Messrs. Johnson, Clark and Co. had a "Home Companion" lock-stitch sewing-machine of very neat appearance, simple and compact.

There was a very handsome case of electro-plated ware facing the central avenue from Reed and Barton, of Taunton, Massachusetts. Two large vases had cupids painted on magnified butterfly wings. There were also numerous elegant tea-services and fancy articles, and a book full of designs of different patterns. Close to this was a very novel exhibit: a large oval case was surmounted by a handsomely carved frame enclosing a highly ornamented canvas show-board. On one side was painted a view of A. Fold and Son's tack and nail manufactory, Taunton, Mass., whilst on the other were the names of the exhibitors, the letters being prettily formed of American cut nails and tacks. The case contained samples of every possible variety of nails and tacks. Another case of cut nails and spikes was shown by Morris, Wheeler and Co., of Philadelphia, whilst the Globe Nail Co. had nails used for shoeing horses. Five hundred hands are employed in this factory, which is the largest of its kind in the world. H. Disston and Sons, of Philadelphia, had an attractive show-board, decorated

with saws of all descriptions, from the circular and crosscut down to the common hand and butchers' saws. Messrs. W. A. Ives and Co., of New Haven, showed an assortment of gimlets, augers, braces, and tapbores. The Yale Lock Manufacturing Co., of Stamford, Connecticut, had a case containing all sorts of locks; and Collins and Co., of Hartford, exhibited steel implements, including daggers, adzes, axes, hammers, &c. There were also fire-proof safes from Frothingham and Emory, and burglar-proof safes from Herring and Co. The exhibit of Rowley and Heiman, of Williamsport, Pennsylvania, was a very interesting one; they showed sweepstakes planer and matcher of a new design; it had solid steel head and steel matcher spindles, all running in Ellis's patent journal box, which is made in three parts, so that the journal can be kept tight until the box is worn out, thus preventing all tremble and jar of the shaft, which is very important where smooth work is required. A machine quite new to Australia was also shown—viz., a sand-papering machine. It is used for finishing and polishing sash doors, blinds, piano cases, furniture, or any flat surfaces. One great advantage of this machine is a suction fan attachment. The dust is drawn through hollow aims to the fan, and by attaching tin pipes is deposited in any required place, keeping the surface of the work and the shop free from dust. A hand-sawing machine was shown at work, and the easy manner in which it sawed out from a small block of wood a suite of furniture proved what a useful tool it would be in any wood workshop.

Two portable engines of special interest were exhibited amongst the American machinery, and presented many different features to the engines of the great English firms represented. The first of these bore the name "Eclipse" in large letters, and was from the factory of Frick and Co., Waynesborough, Pennsylvania. The boiler, which at the first glance appeared to be of the usual locomotive form, was very small in the barrel, and had a long single-riveted joint running from end to end (not a commendable feature). A water space extended across from side to side beneath the furnace, thus being quite a novelty in this colony. The boiler was not protected in any way from the cooling influence of the atmosphere, and must, one would think, suffer considerable loss of steam from this cause. The travelling wheels were of wood, with iron centres, and the axle of the hind wheels passed right through, the boiler openings being made in the water-space on each side of the furnace, and the axle being visible just below the fire-bars. Springs were provided at the points where the boiler is supported on the axle, which tended to mitigate the jolting experienced when travelling on rough roads; but, as these springs would permit a very undesirable oscillation when the engine was at work, screws were provided by which the weight could be thrown directly and solidly on the axle when desired. The front axle supported the smoke-box end of the engine by means of a ball and socket joint, and many parts connected with this axle which in an English engine would have been of wrought-iron were made of cast-iron. Probably the special character of American cast-iron permits its use here when English iron would be unsuitable, just as in America railway wheels are always of cast-iron, while in Europe they are uniformly of wrought-iron. The cylinder, crank-shaft, &c., were supported by a cast-iron frame, which simply rested on the boiler, and could be removed and placed on a foundation as a stationary engine if needed. This frame formed a trough to catch the oil dropping from the various working parts. The crank-shaft bearings were immensely long as compared with English practice, and the crank was fitted with balance weights—a commendable precaution hitherto neglected by English makers. The feed-pump was worked from the cross-head, and a large feed water-heater extended along nearly the whole length of the engine. There was but little bright work, both crank and connecting rod being painted, and this, with the absence of lagging from the boiler, gave the whole a rough appearance when compared with the British exhibits. At the same time, there is no doubt that painted surfaces are better adapted for out-door use than polished metal. The second engine was made by Williams Bros., of Ithaca, New York. It had an upright boiler, with double-riveted, longitudinal seams. The cylinder was vertical, and placed below the crank-shaft, to which it was connected by a cast-iron frame bored out for the cross-head. The slide-valve was worked from an eccentric, arranged in what appeared a very unmechanical way. The valve-spindle, instead of being directed to the crank-shaft, would, if produced, have passed several inches to one side, and the obliquity of the eccentric rod was disguised by attaching it to one side instead of the centre of the eccentric strap, but this in no way removed the cross strain and oblique and unfair action on the valve-spindle. Special arrangements were provided for heating the feed water. The road-wheels were of iron, and the weight of the engine was carried on massive spiral springs.

There were a good many exhibits of mowing and reaping machines, and other saws and tools of various kinds. The McCormick Harvesting Machine Co., Chicago, sent harvester and self-binders, combined reaper and mower, &c. The Johnston Harvester Co., of Brookport, also sent agricultural implements.

The Washburn and Moen Manufacturing Company, of Worcester, Massachusetts, exhibited some patent steel-barbed fencing. There is the largest wire manufacture in the United States. Belaying pins, oars, and hand-spikes were sent by De Graaf, Aymar and Co., of New York. The Stanley Rule and Level Co., of New Britain, Connecticut, exhibited a number of spirit levels, rules, and planes; and the Enterprise Manufacturing Company, of Philadelphia, an

assortment of hardware, specially coffee-grinders and irons, with ingeniously contrived handles for slipping off and on. The Abbott Downing Co. exhibited some buggies, and N. Magee had a little model harness factory in full operation, with every kind of harness-makers' tools. White's patent self-locking alarm cash-drawer received first prize. It was arranged on sixty changes, so that were any one to attempt to open it who did not know how it was set, a bell would ring in warning. D. K. Miller Lock Co.'s padlocks were shown, every one being different, although thousands are turned out. These padlocks are used in the United States Mail and Treasury Departments. E. Remington and Sons, of Ilhon, New York, had a typewriter on view. This clever machine was in a box containing rows of buttons marked with letters and numbers, corresponding to a circle of keys hung on to a cylindric drum above, the keys communicating with the buttons by wires. When one of the buttons is struck for a word or space it elevates the key and causes that again to strike against a ribbon drawn across the centre of the drum, which is chemically prepared, and writes off the desired letters on the paper which is laid over it. Carbon paper is used for manifolding, and there are various other contrivances connected with this machine, one of which keeps the paper straight as it shoves it along to receive the succeeding letters, stopping it at any desired length of line and returning it to the beginning of the next line. One of the most interesting exhibits under the heading of mining industries was from H. A. Ward, of Rochester, New York. Amongst the many American discoveries is an industry for the multiplication of casts of fossils, and Mr. Henry A. Ward, Professor of Natural Science in the University of Rochester, sent in an interesting museum of curiosities to the Melbourne Exhibition. This museum in miniature contained rock specimens, minerals, fossils, and skeletons. An ideal model of the plesiosaurus was shown in Mr. Ward's collection. On the walls of the court were casts of the fossil skeletons of the ichthyosaurus, a lizard-like sea animal, that lived long before certain English counties became dry land. The remains of the largest complete specimen shown here (9 feet 1 inch long) were found near Glastonbury, in England. This ichthyosaurus had a long head, a short neck, a large abdomen, four paddles, and a powerful finned tail. "When full grown," we read, "the ichthyosaurus may have reached a length of 40 feet." The species here represented (*I. intermedius*) is the most common, but has not been found over 9 feet in length. On one of the shelves was a cast of the head of an ichthyosaurus, the original of which is in the Melbourne Museum. The eye alone is 7 inches in diameter, and the head and muzzle 5 feet 1 inch long. On account of the effective manner in which they were displayed on the end wall, the casts of the ichthyosauri probably made a greater impression on the visitor's memory than the rest of the collection. The mastodon and dinotherium, belonging to a comparatively recent geological period, were represented by casts of skulls and jaws, teeth, tusks, &c. In one or two cases the teeth were almost as large as a child's head. One curiosity was the glyptodon, an extinct form of the armadillo. The body was hemispherical in shape, and covered with a multitude of thick, bony plates. The tail possessed a sheath made up of "prominent tubercles disposed in distinct whorls." The cast, measured along the curve of the back, was 11 feet long from head to tail, and the "fossulated trunk" 9 feet across. The original came from Monte Video. Fossil glyptodons have only been found in Central and South America.

Mr. Ward has ventured to give a "restoration" of the mammoth, from bones in the Stuttgart Museum. It is a shaggy giant, with curved tusks, standing as high as a house. Only a photograph was sent, as the annexe might not have been large enough to hold the animal itself. No one would have suspected that the skull-bone labelled "homo," on one of the shelves, was part of the head of a man. It was found near Düsseldorf, in 1867, and looked like a link between the ape family and the human race; and, indeed, its identity is not yet fully established.

The left hind foot of the hipparion was curious, as the supposed link between the one-toed horse of to-day and the three-toed horse of the upper eocene period. In the hipparion elegans the split bones and in small hoofs, hanging down like the spurious hoofs of the ox.

The skull and lower jaw of the diprotodon Australia were to be seen on the top shelf, belonging to a gigantic kangaroo, supposed to have been as big as a hippopotamus, now extinct. The original fossil is in the British Museum, and was found in a recent tertiary deposited on the Darling Downs, Queensland.

Among the casts of fossil remains of birds was the leg, 4 feet long, of the dinornis, an extinct inhabitant of New Zealand, where once lived ostrich-like birds, from 5 feet to 10 feet high. Some of the greatest curiosities were the casts of prints of birds' feet. It seems marvellous that the tracks of birds which flourished in the coal ages should be preserved in stone until now. Some thin deposit of mud must have filled up the prints when the bird passed by, and so preserved the impression! The cast of the footprint of the brontozoum giganteum, a three-toed creature, was in relief, instead of hollow. It was 18 inches long, and we are told that the impression left by the original foot would hold two quarts of water. The owner of the foot had a stride of 88 inches, or 12 inches more than the ostrich, and its weight has been estimated at from 400 lbs. to 800 lbs. The brontozoum was a biped living "by the shores of an estuary which deposited the sandstones of the Connecticut Valley." Tracks of

another strange animal, having toes and heels like a bird, and which used its tail like a kangaroo, were also printed on a slab. The pterodactyle, "the most extraordinary of all creatures yet discovered in the ruins of the primeval world," was provided with a large head, sharp teeth, and wings. It was represented in fossil casts on slabs, and also in ideal restorations, on a reduced scale, in company with the iguanodon, ichthyosaurus, and other uncouth forms. Amongst the molluscs there was a fine collection of fossil ammonites, long ago extinct—a fish with chambered shells rolled up in coils; some are as much as 31 inches in diameter. There were also a few groups of real fossils, some of them being fine specimens. These were called melanites, and bore some resemblance to a partly-crushed melon. The casts of the pentactinus, a plant-like animal which grew rooted to the rock, and had a pointed stem and floral top, were singularly pretty. Skeletons of species still extant in West India seas were also shown. It must be added that the foregoing account of Mr. Ward's museum has been taken from the sketch in the *Argus* of the geological illustrations.

Education in the United States Court was chiefly represented by some comprehensive works, edited by the famous Dr. Henry Barnard, of Hartford, Chancellor of the State University. There were curious records of backwoods schools in early days, and copious reports about past and present teachers. There was a *Medical and Surgical History of the Late War*, by the Surgeon-General of the United States; and a small exhibit of school furniture, consisting of three small single desks, with hinged, up-lifting form, of a simple and neat construction. Juvet and Co., of Canajoharie, New York, sent a novel globe, having within a clockwork adjustment, and above a graduated dial, the object being to show the position of the earth during its daily rotation. The globe is so fixed as to rotate only once in twenty-four hours; but it is not of much use for educational purposes. W. H. Page Wood Type Co., of Norwich, had a very handsome exhibit of wood types for printing, with specimen-book. C. B. Johnson sent printing inks, and Carter, Dinsmore and Co., of Boston and New York, sent inks and mucilage. J. A. Lowell, of Boston, had a very good collection of printed cards, some of them being engraved like the well-known sketches in *Harper's Magazine*. The Forbes Lithographic Manufacturing Co., of Boston, exhibited coloured label work and Albertype engravings. There were a good many cases of paper from different factories. The remaining exhibits may be briefly enumerated. Several firms sent folding chairs, rattan seats, and similar furniture. B. Hinckley, of San Francisco, showed spring beds; whilst the Woven Wire Mattress Co., of Hartford, sent wire mattresses. There was an ingenious American cradle, entirely encased in fine gauze wire, which would prove a splendid protection against mosquitoes. Harris and Co., of Boston, had an erection of every kind of weather vanes. Headley and Sons, T. B. Peddie and Co., and W. W. Winslip, of Boston, exhibited travelling trunks and bags. T. H. Hobbs, Brookmeyer and Co. sent glassware and oshandeliers. The St. Louis Stamping Co. sent specimens of granite iron-ware. F. A. Pullinger, of Philadelphia, showed pottery; and Scott Bros., of Philadelphia, had an exhibit of different floorcloths. There was a collective exhibit from Connecticut of glass, porcelain, silver-plated ware and granite, pocket cutlery, and bronzed ornaments. The Russell and Erwin Manufacturing Co. sent castings coated with other metals by galvanic action. There were several collections of fancy articles, celluloid jewellery from Purdy, Huntington and Co., of New York city, and crucifixes and other artistic carvings, in a little case, from J. B. Santifaller. The American Novelty Co., New York, A. S. Spence and Co., San Francisco, and the Philadelphia Novelty Co. sustained the American reputation for all sorts of ingenious contrivances for comfort and use.

Perfumery was well represented by Barclay and Co., J. Burnett and Co., Eastman and Bro., and Young, Ladd and Coffin, the first and the last being New York houses, the others from Boston and Philadelphia respectively. J. Burnett and Co. had also a show-case full of different extracts. W. H. Schieffelin, of New York, sent pharmaceutical preparations and syrups, with a separate case of soluble pills and granules. Several American houses sent drugs or medical specialties, amongst others being a case of botanic medicines from Cheney and Myrick, of Boston. These were very interesting when compared with Australian herbs, the preparation of which is not yet fully understood, many of the same plants being different in their action and qualities on Australian soil to what they are when found in other climates and lands; and when the herbs here are properly dried they will, no doubt, fill an important place in the medical preparations. Hauthaway and Sons and B. F. Brown and Co., both of Boston, exhibited their gloss and leather dressings. There were samples of corn and olive oil; some butter in sealed cans from Simpson, McIntire and Co., of Boston; tinned salmon from the Oregon Packing Co.; with canned fruits from the San Jose Fruit Packing Co., in California. There were very few samples of wines or spirits. Two firms sent whisky, and J. B. Wolfe, of New York, sent some of his aromatic Schiedam schnapps. There were several tobacco exhibits. A. Cameron and Co., of Virginia, obtained the first order of merit for manufactured and leaf tobacco. The Gutta-percha Rubber Manufacturing Co., of New York, exhibited some rubber belting. There were also two other rubber exhibits. Messrs. M. F. Whiton and Co., of Boston, presented for notice an erection of cordage, varying from three inches to six threads. Messrs. E. W. Holbrook and Co. sent a case of White Star kerosene wicks,

whilst the Vermont Merino Sheep-breeders' Association exhibited some samples of wool. Silk and silk fabrics were shown by Belding Bros., of Rockville and San Francisco. Madame Demorest, of New York, had a little stand of miniature paper patterns. Three New York exhibitors sent a collection of toys, and Milton, Bradley and Co., of Springfield, Mass., showed industrial toys and amusements. In addition to these exhibits must be mentioned Rathbone, Sard and Co.'s stoves, for which they obtained the highest award. The Western Electric Light Co. sent electric lights, and many people were attracted by the performances of Edison's electric pen.

REPORT OF SUPERINTENDENT

OF

JURIES AND AWARDS.

G. C. LEVEY, ESQ., C.M.G., SECRETARY.

SIR—I have the honour to submit to you the following report in reference to the department placed under my supervision.

The regulations issued by the Commission, upon the basis of which the examination and awards were to be made, were as follow, viz —

That no Commissioner who is an exhibitor or a member of any firm exhibiting shall take part in the selection or appointment of jurors in those classes in which he exhibits.

That each country or colony appointing a Commissioner be entitled to nominate a juror for every class in which it has exhibits, provided that each juror be not domiciled in Victoria at the time such nomination is made.

That no person interested, either as a partner or *employé*, in a house exhibiting shall be a juror in the classes in which such a house or person exhibits.

That the Commissioners place at the disposal of each jury a sum of money proportionate to the number of the exhibits upon which it will have to report, and the general importance of the work. Out of this sum the expenses and remuneration of secretary, reporter, or clerk, or of the officers performing the duties appertaining to those positions, and all personal expenses of the jurors, is to be defrayed.

That the Melbourne jury system of 1875 be continued, and that each jury be requested to name the exhibitors who merit recognition, and whether their reward should be first, second, third, fourth, or fifth class, leaving the Commissioners to decide whether the highest award should be a gold, silver, or bronze medal, or a first-class certificate.

The awards shall be based upon written reports adopted by the jurors.

The jurors shall be selected for their known qualifications and character, and shall be experts in the departments to which they are especially assigned; the British, foreign, and colonial jurors shall be appointed by the representatives of each country or colony exhibiting. The jurors for Victoria will be appointed by the Melbourne Commission.

Reports and awards shall be based upon inherent and comparative merit, the elements of merit being held to include considerations relating to originality, invention, discovery, utility, quality, skill, workmanship, fitness for the purposes intended, adaptation to public wants, economy, and cost.

Each report shall be delivered to the Commission as soon as completed.

Each exhibitor shall have the right to produce and publish the report awarded to him, but the Commission reserves the right to publish and dispose of all reports in the manner it thinks best for public information, and to embody and distribute the reports as records of the Exhibition.

Under these regulations it was hoped that foreign Governments would nominate jurors in the classes in which they were most interested; for, though these countries could not be expected to incur the expense of sending out jurors in every class in which they competed, yet it was anticipated that they would make appointments for those in which they were most interested, and that truly international representative juries would thus have been formed. Foreign Governments did not generally avail themselves of this most equitable regulation, and it was found that, with the exception

of the nominations by the French and Italian Commissioners, the juries would for the most part have to be chosen from residents in Victoria or the neighbouring colonies; it was therefore decided that the freedom in selecting jurors which has hitherto been accorded to Foreign Commissioners at International Exhibitions, as regards the residence of the jurors selected by them, should be continued at the Melbourne International Exhibition, and the Commissioners were requested accordingly to cancel the regulation regarding domicile; and at the same time it was decided that the position of juror should be an honorary one, excepting so far as personal expenses while in performance of the duties were concerned. This, combined with the necessary rule that a juror should have some practical knowledge of the class of exhibits coming under his examination, and also that he should not be interested, directly or indirectly, in any exhibit in the section to which he might be appointed, greatly restricted the number of those available for the duty, and made the choice of jurors a difficult task; for in a country like Victoria, the great majority of those who might be classed as competent judges on any subject were, with few exceptions, more or less interested.

The regulation that each country represented should have the right to appoint a juror in each class in which they exhibited was found to be unworkable, so soon as that compelling the appointment of persons not domiciled in Victoria had been repealed. To overcome these difficulties, a conference was held on the 25th September, 1880, between the visiting Commissioners and the Committee of Juries and Awards, consisting of the Hon. J. J. Casey, C.M.G., the Hon. Jas. Munro, and G. C. Levey, Esq., C.M.G. The Hon. J. J. Casey, C.M.G., chairman of the Committee of Juries and Awards, acted as chairman, and it was decided that the Foreign Commissioners should be allowed to nominate one-half and the Victorian Commissioners the other half of the total number of jurors, irrespective of nationality or place of residence, that the number of jurors should not exceed four hundred, and that no section should consist of more than twenty. The regulation reserving to the Victorian Commissioners the right to nominate one-half of the total number was considered necessary in order that they might hold the balance of power, they being responsible for the impartiality of the juries. In accordance with this arrangement, each Commissioner (other than Victorian) was requested to send in to a subsequent meeting, the number of jurors he desired to appoint, all being restricted to one in each class. This resulted in over four hundred claims being made; and to reduce this number, which was two hundred in excess of that fixed by resolution at the previous meeting, it was decided, at a further meeting of the conference, that the Commissioner for the United Kingdom and the Commissioners for India and the British colonies should be invited to meet and review their nominations. This was done, and their list was reduced from one hundred and eighty proposed nominations to one hundred, thus leaving one hundred jurors to be nominated by the Commissioners for Austria, Belgium, France, Germany, Italy, Japan, the Netherlands, Switzerland, and the United States. A recommendation was made to the Foreign Commissioners to meet, and, in the same manner, reduce the number of nominations submitted by them to a similar limit. After several meetings of the Foreign Commissioners, it was decided, at a meeting of the conference held on 30th October, 1880, that the various Commissioners representing Great Britain, British possessions and colonies, and foreign countries, should meet and jointly appoint two hundred jurors, with the understanding that each juror should be an international juror, irrespective of the country through which his nomination came. The difficulty being thus finally adjusted, the actual appointment of foreign jurors commenced, which was followed by the appointment of the Victorian jurors by the Executive Committee from names submitted by the committees in charge of the various sections.

The following regulations and classification was also adopted by the Conference:—

JURY REGULATIONS.

1. Jurors shall be selected for their character and their known ability to adjudicate in the departments to which they are especially assigned.
2. British, foreign, and colonial jurors shall be appointed by the representatives of each country or colony exhibiting.
3. The jurors for Victoria shall be appointed by the Melbourne Commissioners.
4. No Commissioner who is an exhibitor, or a member of any firm exhibiting, shall take part in the selection or appointment of jurors in those classes in which he exhibits.
5. No person interested, either as a partner or *employé*, in a house exhibiting shall be a juror in the classes in which such house exhibits.
6. Experts acting with jurors shall in no case compete for awards in the class in which they are acting.
7. The foreign Commissioners shall nominate one-half and the Victorian Commissioners the other half, of the total number of jurors, irrespective of nationality or place of residence.
8. The total number of jurors shall not exceed four hundred (400).
9. Two hundred (200) jurors to be elected by the foreign Commissioners, and two hundred (200) by the Victorian Commissioners.
10. The number of members in any jury shall not exceed twenty (20).
11. Commissioners shall have the power to name substitute jurors to act in certain specified classes, but such jurors and substitutes shall have one vote only.
12. In the event of the continued non-attendance of any juror, the authority that made the appointment may be called upon by the jury to name another juror or substitute.
13. Each juror shall receive a pass that will admit him to the Exhibition buildings, and a medalion to wear while adjudicating.
14. All expenditure of money by juries shall be arranged for through the Superintendent of Juries and Awards. The Commissioners place at the disposal of each jury a sum of money proportionate to the number of exhibits upon which it will have to report and the general importance of the work. Out of this sum the expenses and remuneration of clerk, or of the officer performing the duties appertaining to that position, will be defrayed.
15. Juries shall be called together directly after appointment and required to elect a chairman, vice-chairman, and appoint a clerk; also to arrange the division of the members into class juries.
16. Each class jury shall choose its own chairman and officers, and thereafter proceed to examine the objects which are classed in its section, and propose the order of award to the section jury of which it forms a part.
17. Class juries shall have the power to invite the co-operation of other jurors not members of the section, and to call in the aid of experts.
18. Experts shall be proposed at a full meeting, forming a quorum of a section or class jury, and must be elected by an absolute majority.
19. The names of all experts shall be forwarded to the Superintendent of Juries and Awards.
20. The chairman (or his deputy) of each jury shall convene meetings, preside over debates, and control the entry by the clerk of his jury of the propositions and resolutions, as well as the reasons for the same, in the minute-book.
21. The chairman shall have a deliberative as well as a casting vote.
22. The minutes of meetings shall be submitted by the clerk of each jury to the Superintendent of Juries and Awards.
23. Exhibits that are not the produce or manufacture of the country in whose court they are exhibited shall not be allowed to enter into competition as the produce or manufacture of such country; and an exhibitor who is not the manufacturer, producer, inventor, or designer of the article exhibited by him shall not be considered as entitled to an award.
24. Juries shall, if they consider it necessary, subdivide classes into special divisions, and make awards in such special divisions.
25. Collective exhibits shall, as a rule, be judged in their entirety as one. Should, however, an exhibitor desire otherwise, and supply the jury with due notice and the necessary information, his exhibit shall be divided, and parts judged separately, at the discretion of the jury.
26. In order to pass a resolution for awards, a quorum of not less than half the members, besides the chairman, or his deputy, shall be present at each section or class jury. Such decision must be carried by a majority of those present. The chairman shall have a deliberative and a casting vote.
27. When reporting the result of their examinations of exhibits, juries shall furnish a statement in writing giving the specific reasons for which each award shall have been made.
28. Reports and awards shall be based upon inherent and comparative merit; the elements of merit being held to include considerations relating to originality, invention, discovery, utility, quality, skill, workmanship, fitness for the purposes intended, adaptation to public wants, economy, and cost.

29. Each report shall be delivered to the Commission as soon as completed.

30. Each exhibitor shall have the right to produce and publish the report awarded to him, but the Commission reserves the right to publish and dispose of all reports in the manner it thinks best for public information, and to embody and distribute the reports as records of the Exhibition.

31. Awards shall consist of gold, silver, and bronze medals, and a certificate of honourable mention, together with a special report of the jurors on the subject of the award.

32. The Melbourne jury system of 1875 shall be continued, and each jury shall be requested to name the exhibitors who merit recognition, and whether their reward shall be first, second, third, fourth, or fifth class, leaving the Commissioners to decide whether the highest award shall be a gold, silver, or bronze medal, or a first-class certificate.

33. All appeals against decisions of juries shall be submitted to the Superintendent of Juries and Awards, who shall have the power to call in or consult with independent experts, and on their advice may refer back to the jury whose decision shall have been appealed against. The appellant must deposit with the Superintendent of Juries and Awards the fee to be paid to the experts. If the appeal is sustained the fee will be returned.

34. In the event of a jury and the experts failing to agree, the Superintendent of Juries and Awards shall submit the reports of the jury and experts, together with his own report, to the "Committee of Juries and Awards," whose decision shall be final.

35. The Superintendent of Juries and Awards may be present at any meeting of jurors, and shall collect and submit all documents intended for the consideration of juries, send out notices of jury meetings, stating the business of the meeting, inform the foreign Commissioners and exhibitors of the days upon which examination of their exhibits will be made by juries, and give all information and procure all assistance and appliances necessary for making awards.

SYSTEM OF GENERAL CLASSIFICATION.

CLASS 1—Jury I.—*Oil Paintings.*

Paintings on canvas, on panel, and on other grounds.

CLASS 2—Jury I.—*Various Paintings and Drawings.*

Miniatures, water-colour paintings, pastels, and drawings of every kind; paintings on enamel, earthenware, and porcelain; cartoons for stained glass windows and frescoes.

CLASS 3—Jury II.—*Sculpture and Die Sinking.*

Sculpture in high relief, bas-reliefs, chased and repoussé work. Medals, cameos, engraved stones. Niello work.

CLASS 4—Jury I.—*Architectural Drawings and Models.*

Studies and details. Elevations and plans of buildings. Restorations based upon existing ruins or documents.

CLASS 5—Jury I.—*Engravings and Lithographs.*

Engravings, coloured engravings. Lithographs executed with pencil and with brush; chromo-lithographs.

CLASS 6—Jury III.—*Education of Children, Primary Instruction, Instruction of Adults.*

Plans and models of orphan asylums, infant schools; system of management and furniture of such establishments; appliances for instruction suitable for the physical, moral, and intellectual training of the child previous to its entering school. Plans and models of scholastic establishments for town and country; system of management, and furniture for these establishments. Appliances for instruction books, maps, apparatus, and models. Plans and models of scholastic establishments for adult and professional instruction; system of management and furniture for these establishments; appliances for adult and professional instruction. Appliances for the elementary teaching of music, singing, foreign languages, book-keeping, political economy, practical agriculture and horticulture, technology, and drawing. Appliances adapted to the instruction of the blind and of deaf mutes. Works of upis of both sexes. Libraries and publications.

CLASS 7—Jury III.—*Organisation and Appliances for Secondary Instruction.*

Plans and models of establishments for secondary instruction. lycées, grammar schools, colleges, industrial and commercial schools; arrangement and furniture of such establishments. Collections, classical works, maps, and globes. Appliances for technological and scientific instruction, and for teaching the fine arts, drawing, music, and singing. Apparatus and methods for instruction in gymnastics, fencing, and military exercises.

CLASS 8—Jury III.—*Organisation, Methods, and Appliances for Superior Instruction.*

Plans and models of academies, universities, medical schools, practical schools, technical and practical schools, schools of agriculture, observatories, scientific museums, amphitheatres, lecture-rooms, laboratories for instruction and research, furniture and arrangement of such establishments. Apparatus, collections, and appliances intended for higher instruction and scientific research. Special exhibitions of learned, technical, agricultural, commercial, and industrial societies and institutions. Scientific expeditions.

CLASS 9—Jury IV.—*Printing, Books*

Specimens of typography; autographic proofs, lithographic proofs, black or coloured; proofs of engravings. New books, and new editions of books already known; collections of works forming special libraries, periodical publications. Drawings, atlases, and albums.

CLASS 10—Jury IV.—*Stationery, Bookbinding, Painting, and Drawing Materials.*

Paper; card and pasteboard; inks, chalks, pencils, pastels, all things necessary for writing-desks and offices, inkstands, apparatus for weighing letters, &c., copying presses. Objects made of paper, lamp shades, lanterns, flower-pot covers. Registers, copybooks, albums, and memorandum books, bindings, loose covers for books, cases, &c. Various products used in water-colour painting and tinting, colours in cakes, pastels, bladders, tubes, and shells. Instruments and apparatus for the use of painters, draughtsmen, engravers, and modellers.

CLASS 11—Jury I.—*General Application of the Arts of Drawing and Modelling*

Designs for industrial purposes designs obtained, reproduced, or reduced by mechanical processes. Decorative paintings, lithographs, chromo-lithographs, or engravings for industrial purposes. Models and small articulated wooden models of figures, ornaments, &c. Carvings. Cameos, seals, and various objects decorated with engraving. Objects modelled for industrial purposes, produced by mechanical processes, reductions, photo-sculpture, &c. Casts.

CLASS 12—Jury V.—*Photographic Proofs and Apparatus.*

Photographs on paper, glass, wood, stuffs, and enamel. Helio-graphic engravings, lithographic proofs. Photo-lithographic proofs, photographic stereotypes, stereoscopic proofs, and stereoscopes. Enlarged photographs. Colour photographs. Instruments, apparatus, and chemicals necessary for photography. Materials and appliances used in photographic studios.

CLASS 13—Jury VI.—*Musical Instruments and Publications.*

Non-metallic wind instruments: with common mouth-pieces, with reeds, with or without air reservoirs. Metallic wind instruments: simple, with lengthening pieces, with slides, with piston, with keys, with reeds. Wind instruments with keyboards: organs, accordions, &c. Stringed instruments played with the fingers, or without keyboards. Stringed instruments with keyboards: pianos, &c. Instruments played by percussion or friction. Automatic instruments, barrel organs, bird organs. Separate parts of musical instruments and orchestral appliances.

CLASS 14—Jury VII.—*Medicine, Hygiene, and Public Relief.*

Appliances, instruments, and apparatus requisite for anatomical and histological works. Plastic anatomical models. Instruments of medical research. Apparatus and instruments for dressing wounds and for simple surgery, general and local; anæsthetic apparatus. Surgical instruments grouped according to their purposes: instruments for amputations and dissection. Special instruments, gynaecology, ovariotomy, urinary channels, ophthalmology, dentistry, &c., electro-therapeutic apparatus. Apparatus for plastic and mechanical prosthesis, orthopedic apparatus, apparatus for restoring persons apparently drowned or suffocated. Trusses. Baths and hydro-therapeutic apparatus, gymnastical apparatus for medical and hygienic purposes. Plans and models of hospitals, various asylums, houses of refuge, poor-houses, lunatic asylums; arrangements and furniture of such establishments. Various apparatus for infirm persons, invalids, and lunatics. Accessory objects for the medical, surgical, and pharmaceutical services in hospitals or infirmaries. Chests and cases of instruments and medicines for military and naval surgeons. Means and apparatus for succouring the wounded on battle-fields. Civil and military ambulances. Appliances, instruments, apparatus, and all things requisite for veterinary surgery.

CLASS 15—Jury VIII.—*Mathematical and Philosophical Instruments.*

Apparatus and instruments used for mathematical purposes, and for illustrating practical geometry, land-surveying, topography, and geodesy, compasses, calculating machines, levels, mariners' compasses. Apparatus and instruments for measurement: verniers, micrometric screws, dividing machines, &c.; scales for scientific uses. Optical instruments. Astronomical instruments. Physical and meteorological instruments, &c. Instruments and apparatus

requisite for laboratories and observatories. Weights and measures of various countries. Coins and medals.

CLASS 16—Jury III.—*Maps, and Geographical and Cosmographical Apparatus.*

Topographical, geographical, geological, hydrographical, and astronomical maps, atlases, &c. Physical maps of every kind. Plans in relief. Terrestrial and celestial globes and spheres. Statistical works and tables. Tables and ephemerides for the use of astronomers and sailors.

CLASS 17—Jury IX.—*Cheap and Fancy Furniture.*

Sideboards, book-cases, tables, dressing-tables, beds, sofas, couches, billiard-tables, &c.

CLASS 18—Jury IX.—*Upholsterers' and Decorators' Work.*

Bed furniture, stuffed chairs, canopies, curtains, tapestry, and other hangings. Decorative furniture made of costly stones and substances. Composition ornaments and objects moulded in plaster, carton-pierre, papier-mâché, &c. Frames. Paintings and decorations for churches and houses.

CLASS 19—Jury X.—*Crystal, Glass, and Stained Glass.*

Drinking glasses of crystal, cut glass, plated and mounted crystal, &c. Table glass, Common glass-bottles. Window and mirror glass. Cast, enamelled, cracked, frosted, and tempered glass. Glass, crystals for optical purposes, ornamental glass, &c. Stained glass. Mirrors, looking glasses, &c. Venetian glass.

CLASS 20—Jury X.—*Pottery.*

Biscuit ware, hard and soft paste porcelains. Japanese, Indian, and Chinese porcelain. Fine earthenware with coloured glazing, &c. Earthenware biscuit. Terra cotta. Enamelled lava. Bricks and tiles. Stoneware.

CLASS 21—Jury IX.—*Carpets, Tapestry, and other Stuffs for Furniture.*

Carpets and rugs, moquettes, tapestry, tory, and velvet-pile, &c. Felt carpets, matting, &c. India-rubber floorcloth, &c. Furniture stuffs of cotton, wool, or silk, plain or figured. Horse-hair fabrics and leather cloths, moleskins, &c. Leather for hangings, for covering furniture, &c. Oilcloths.

CLASS 22—Jury IX.—*Paper Hangings.*

Printed paper hangings. Flock, mottled, veined paper, &c. Paper for covering, book-binding, &c. Artistic papers. Varnished and enamelled paper. Imitations of wood and of leather. Pasted or printed blinds.

CLASS 23—Jury VIII.—*Cutlery.*

Knives, penknives, scissors, razors, &c. Cutlery of every description.

CLASS 24—Jury XI.—*Goldsmiths' and Silversmiths' Work.*

Church plate, ornamental plate, and table plate; gold and silver toilet articles; writing materials, &c. Electrotyper. Enamels, cloisonné, champlevé.

CLASS 25—Jury II.—*Bronzes and various Art Castings and Repoussé Work.*

Statues and bas-reliefs in bronze, cast-iron, zinc, &c. Castings coated with other metals by galvanic action. Repoussé work in copper, lead, zinc, &c.

CLASS 26—Jury VIII.—*Clocks and Watches.*

Separate parts of clocks of large or small size. Watches, chronometers, pedometers; various timekeepers, &c. Timepieces and clocks working by springs or weights, regulators, metronomes. Astronomical clocks; marine chronometers; travelling clocks. Alarms, &c. Water clocks and sand glasses. Electric clocks. Tuner and church clocks.

CLASS 27—Jury XII.—*Apparatus and Processes for Heating and Lighting.*

Fire-grates, fireplaces, stoves, and hot-air stoves. Accessory objects for heating. Kitchen ranges and apparatus for heating and cooking by gas. Apparatus for heating by the circulation of hot water, steam, or heated air. Ventilating apparatus. Drying apparatus; drying stoves. Enamellers' lamps, blow-pipes, portable torches. Lamps for illuminating purposes, fed with various oils. Accessory objects for lighting. Matches. Apparatus and accessory objects for lighting by gas. Lamps for the electric light. Apparatus for the use of the electric and magnesium light.

CLASS 28—Jury XIII. and XXII.—*Perfumery.*

Cosmetics and pomatums. Perfumed oils, essences, extracts and scents, aromatic vinegar; almond paste; perfumed powders, pastilles, and scent bags, perfumes for burning. Toilet soap.

CLASS 29—Jury XIV.—*Leatherwork, Fancy Articles, and Basketwork.*

Dressing cases, workboxes, small articles of fancy furniture, liqueur cases, glove boxes, caskets. Cases and bags, jewel boxes. Purses, pocketbooks, notebooks, cigar cases. Turned, engine-turned, carved, or engraved articles in wood, ivory, tortoise-shell, &c. Snuff boxes. Pipes. Fancy toilet combs and brushes. Lacquered ware. Fancy basketwork, wickerwork for bottles, articles in fine straw.

CLASS 30—Jury XV.—*Cotton Thread and Fabrics.*

Cotton, dressed and spun. Pure cotton fabrics, plain and figured. Mixed cotton fabrics. Cotton velvet. Cotton ribbands and tapes.

CLASS 31—Jury XV.—*Thread and Fabrics of Flax, Hemp, &c.*

Flax, hemp, and other vegetable fibres spun. Linen and drills. Cambric. Linen fabrics mixed with cotton or silk. Fabrics made from vegetable fibres as substitutes for flax and hemp.

CLASS 32—Jury XVI.—*Worsted Yarn and Fabrics.*

Carded wool, worsted yarn. Mulinis de laine, Scotch cashmere, merinos, serges, &c. Ribbands and laces of wool, mixed with cotton or thread, silk, or floss silk. Hair tissues, pure or mixed.

CLASS 33—Jury XVI.—*Woolen Yarn and Fabrics.*

Combed wool and woollen yarn. Cloth and other woollen fabrics. Blankets. Felt of wool or hair for carpets, hats. Shoes. Woollen fabrics, unmilled or slightly milled, flannel, taitans, swansdown.

CLASS 34—Jury XVII.—*Silk and Silk Fabrics.*

Raw and thrown silk. Floss silk yarn. Silk fabrics: pure, plain, figured, brocaded. Silk fabrics mixed with gold, silver, cotton, wool, thread. Manufactures of floss silk, pure or mixed. Velvet and plush. Silk ribbands, pure or mixed.

CLASS 35—Jury XVI.—*Shawls.*

Woollen shawls, pure or mixed. Cashmere shawls. Silk shawls, &c.

CLASS 36—Jury XVII.—*Lace, Net, Embroidery, and Trimmings.*

Thread or cotton lace made with the distaff, the needle, or the loom. Laces made of silk, worsted, or mohair. Gold and silver lace. Silk or cotton net, plain or figured. Tambour embroidery, crochetwork, &c. Gold, silver, and silk embroidery. Church embroidery. Embroidery, tapestry, and other work done by the hand. Lacework and trimmings of silk, floss silk, worsted, mohair, horsehair, thread, and cotton; laces. Lacework and trimmings, real or imitation; lacework for military uniforms.

CLASS 37—Jury XV.—*Hosiery and Underclothing and Accessories of Clothing.*

Hosiery of cotton, thread, wool, cashmere, silk, or floss silk, pure or mixed. Elastic fabrics. Underclothing for men, women, and children, baby linen. Flannel and other woollen garments. Stays, scarves, gloves, garters, garters, braces, fans, sercens, umbrellas, parasols, walking-sticks, &c.

CLASS 38—Jury XV.—*Clothing for both Sexes.*

Men's clothes; women's clothes. Waterproof clothing. Men and women's head-dresses; artificial flowers and feathers. Wigs and works in hair. Boots and shoes. Children's clothes. Clothing peculiar to various professions and trades. Native costumes of different countries.

CLASS 39—Jury XI.—*Jewellery and Precious Stones.*

Jewellery in precious metals (gold, platinum, silver, aluminium), chased, filigreed, set with precious stones, &c. Plated and imitation jewellery. Ornaments in jet, amber, coral, mother-of-pearl, steel, &c. Diamonds, precious stones, pearls, and imitations.

CLASS 40—Jury XVIII.—*Portable Weapons and Hunting and Shooting Equipments.*

Defensive armour: cuirasses and helmets. Blunt weapons; maces, life-preservers. Side-arms: foils, swords, sabres, bayonets, lances, axes, hunting knives. Missile weapons: bows, cross-bows, slings. Fire-arms: guns, rifles, pistols, and revolvers. Accessory objects appertaining to every kind of small arms: powder-flasks, bullet-moulds, &c. Round, oblong, hollow, and explosive projectiles. Percussion-caps, priming, cartridges. Hunting and sporting equipments.

CLASS 41—Jury XIV.—*Travelling Apparatus and Camp Equipage.*

Trunks, valises, saddle-bags, &c. Dressing-cases and travelling-cases. Various objects. Travelling-rugs, cushions, caps, travelling-costumes and boots, iron-shod sticks, grapple-hooks,

sun-shades, &c. Portable apparatus specially intended for scientific voyages and expeditions; travelling photographic apparatus and instruments for astronomical and meteorological observations; equipment and implements for geologists, mineralogists, naturalists, colonists, pioneers, &c. Tents and camp equipment. Beds, hammocks, folding chairs, &c.

CLASS 42—Jury XIV.—Toys.

Dolls and playthings; dolls and figures in wax. Games for the amusement of children and adults. Instructive games.

CLASS 43—Jury XIX.—Products of the Cultivation of Forests and of the Trades appertaining thereto.

Specimens of different kinds of forest trees. Wood for cabinetwork, for firewood, and for building. Timber for ship-building; staves; cleft timber, shingles. Cork: bark for textile purposes. Tanning, coloring, odoriferous, and igenous substances. Products obtained from forests, charcoal and dried wood, raw potash, tannery; basketwork; strawwork, wooden shoes, &c.

CLASS 44—Jury XXII.—Products of Hunting, Shooting, Fishing, and Spontaneous Products. Machines and Instruments connected therewith.

Collections and drawings of terrestrial and amphibious animals, of birds, eggs, fishes, of cotacean, of mollusca, and crustacea. Products of hunting and shooting: furs and skins, hain, bustles, undressed feathers, down, horn, teeth, ivory, bone, tortoise-shell, manik, castoreum, and analogous products. Products of fishing: train oil, spermaceti, &c. Whalebone, ambergris, shells of mollusca, pearls, mother-of-pearl, opals, purple, coral, sponge. Vegetable products of the earth, obtained without culture: mushrooms, truffles, wild fruit, lichens used as dyes, food, and fodder; fermented sap, Peruvian bark; useful barks and filaments; wax, resinous gums; india-rubber, gutta-percha, &c. Traps and snares: fishing lines and hooks, harpoons, nets, bait, and fishing apparatus. Apparatus and instruments for gathering the products obtained without culture.

CLASS 45—Jury XX.—Agricultural Products not used for Food.

Textile materials: raw cotton, flax and hemp, scutched and unscutched, textile vegetable fibres of all kinds; cocoons of the silkworm. Various agricultural products used in manufactures, in pharmacy, and for household purposes; oleaginous plants; oil, wax, resin. Tobacco in leaves or manufactured German tinder. Tanning and dyeing substances. Preserved fodder, and substances specially intended for feeding cattle.

SUB-CLASS —, Jury XXI.—Wool, washed or unwashed.

CLASS 46—Jury XIII. and XXII.—Chemical and Pharmaceutical Products.

Acids, alkalis, salts of all kinds. Sea-salt and products extracted from mother water. Various products of chemistry: wax and fatty substances, soaps and candles; raw materials used in perfumery; resins, tar, and the products derived from them; essences and varnishes; various coloring substances, blacking. Objects made of india-rubber and gutta-percha; dyes and colours. Mineral waters and natural and artificial aerated waters. Raw materials used in pharmacy. Medicines, simple and made up.

CLASS 47—Jury XIII. and XXII.—Chemical Processes for Bleaching, Dyeing, Printing, and Dressing.

Specimens of threads and fabrics, bleached or dyed. Specimens of fabrics prepared for dyeing. Specimens of printed or dyed linen, of painted cotton fabrics, pure or mixed. Specimens of painted worsted or woollen fabrics, pure or mixed, combed or carded. Specimens of printed silk fabrics, pure or mixed. Specimens of printed felt or cloth carpets. Oilcloths.

CLASS 48—Jury XXIII.—Leather and Skins.

Raw materials used in the dressing of skins and leather. Raw hides, salted hides. Tanned, curried, dressed, or dyed leather. Varnished leather. Morocco and sheepskin; skins grained, shamoyed, tawed, dressed, or dyed. Prepared skins for glove-making. Skins and furs, dressed and dyed. Parchment. Gutwork. strings for musical instruments, gold-beater's skin, sinews.

CLASS 49—Jury XXIV. and XXV.—Agricultural Implements and Processes used in the Cultivation of Fields and Forests.

Plans of culture, distribution, and management of crops. Apparatus and works for agricultural engineering, draining, irrigation, &c. Plans and models of farm buildings. Tools, implements, machines, and apparatus used in husbandry, sowing and planting, harvesting, preparation and preservation of crops. Various agricultural machines worked by horse-power or by steam. Carts and other rural means of transport. Locomotives, engines, and horse-

powers. Manures, organic and mineral. Apparatus for the physical and chemical study of soils. Plans of different systems of re-planting, managing, and cultivating forests. Apparatus used in the cultivation of forests, and in the trades appertaining thereto, and in the manufacture of tobacco.

CLASS 50—Jury XXIV. and XXV.—*Apparatus and Processes used in Agricultural Works, and in Works for the Preparation of Food.*

Apparatus used in agricultural works manufacture of artificial manures, of drain pipes; cheese factories, dairies, apparatus used in preparing flour, feed, starches, oils, apparatus used in breweries, distilleries, sugar manufactories and refineries; workshops for the dressing of textile materials; silk-worm nurseries, &c. Apparatus used in the preparation of alimentary products and for the manufacture of vermicelli, macaroni, and for roasting coffee; mechanical appliances for kneading and baking, apparatus used in making pastry and confectionery. Machines for making sea biscuits. Chocolate machines. Apparatus for making ices and cool drinks; manufacturing and preservation of ice.

CLASS 51—Jury XIII. and XXII.—*Apparatus used in Chemistry, Pharmacy, and Tanning.*

Laboratory utensils and apparatus. Apparatus and instruments used in assays for industrial and commercial purposes. Processes and apparatus used in the manufacture of chemicals, soaps, and candles, essences, varnishes, and articles made of indiarubber and gutta-percha. Processes and apparatus used in gasworks, in bleaching, in glassworks and in china and earthenware manufactories. Processes used in the preparation of pharmaceutical products, in tannin, and in leather dressing.

CLASS 52—Jury XXVI.—*Machines and Apparatus in General.*

Separate pieces of machinery. bearings, rollers, slide-bars, eccentrics, toothed wheels, connecting rods, cranks, parallel joints, belts, funicular apparatus, &c. Gearing, spring and catchwork, &c. Regulators and governors. Lubricators. Machines for counting and registering. Dynamometers, steam gauges, weighing machines. Gauges for liquids and gas. Machines used for moving heavy weights. Hydraulic machines for raising water, &c.; nozzles (chain pumps), scoop wheels, hydraulic rams, &c. Hydraulic engines, water wheels, turbines, hydraulic lifts, centrifugal, steam, and other pumps. Accumulators and hydraulic presses. Steam engines. Boilers, steam generators, and apparatus appertaining thereto. Apparatus for condensing steam. Machines set in motion by the evaporation of ether, chloroform, ammonia, or by a combination of gases. Machines set in motion by gas, hot air, and compressed air. Electro-magnetic machines. Windmills and panemones. Air-balloons.

CLASS 53—Jury XXVI.—*Machine Tools.*

Travelling circular saw benches, self-acting, for breaking down heavy timber. Machines for boring timber used in fencing. Engines and tools for preparing wood for the workshop. Machines for making casks. Machines for cutting cork. Lathes, boring and planing machines. Flotting, drilling, and shaping machines. Screw-cutting engines and riveting machines. Various kinds of tools used in machine workshops. Tools, engines, and apparatus for pressing, crushing, working up, sawing, polishing, &c. Special tools and engines used in various trades.

CLASS 54—Jury XXXVII.—*Apparatus and Processes used in Spinning and Rope-making.*

Hand-spinning apparatus. Separate parts of spinning apparatus. Machines and apparatus used in the dressing and spinning of textile materials. Apparatus and processes for the subsidiary operations appertaining thereto; for drawing, winding, twisting, throwing, dressing. Apparatus for separating the qualities and numbering the thread. Materials used in rope manufacture. Round, flat, taping cables, cord and twine, wire-ropes, cables with wire core, rope matches, quack-matches, &c.

CLASS 55—Jury XXXVII.—*Apparatus and Processes used in Weaving.*

Apparatus used in the preparation of materials for weaving: warping mills, spooling (winding) machines. Card-making for the jacquard looms. Hand looms and mechanical looms for the manufacture of plain fabrics. Looms for the manufacture of figured and broadcast stuffs: damask looms, electric looms. Looms for the manufacture of carpets and tapestry. Mesh weaving looms for the manufacture of hosiery and net. Apparatus for making lace. Apparatus used in the manufacture of lace-work. High warp looms, and different modes of preparing the bobbins for weaving. Accessory apparatus: machines for fulling, calendaring, figuring, watering, measuring, folding, &c.

CLASS 56—Jury XXXVII.—*Apparatus and Processes for Sewing and for Making-up Clothing.*

Ordinary implements used by tailors and seamstresses. Sewing, quilting, hemming, and embroidering machines. Implements for cutting out materials and leather for making

garments and shoes. Machines for making, nailing, and screwing boots and shoes, and for the application of indiarubber.

CLASS 57—Jury XXVI.—*Apparatus and Processes used in the Manufacture of Furniture and Objects for Dwellings.*

Machines for cutting veneers, the mouldings and bendings of frames, the squares of inlaid floors, furniture, &c. Lathes and other apparatus used in carpentering and cabinet-making. Turning webs, vertical and circular saw frames, shingle cutters, &c. Machines for stamping and burnishing. Machines and apparatus for working stuoco, papier-maché, ivory, bone, and horn. Machines for pointing, carving, and reducing statues, for engraving, engine-turning, &c.: for making bricks and tiles; artificial stones, for sawing and polishing hard stones, marbles, &c.

CLASS 58—Jury XXXVII.—*Apparatus and Processes used in Paper-making, Dyeing, and Printing.*

Materials and products of the manufacture of pulps for making paper, of wood, straw, alpha, &c. Processes and products of the bleaching of wood fibre. Apparatus for making paper by hand and by machinery. Apparatus for pressing, glazing, watering, embossing, and ruling paper. Machines for cutting out, piling, stamping paper, &c. Apparatus for bleaching and dyeing, for the preparation of paper and tissues, for printing paper-hangings and tissues. Machines for engraving cylinders for printing. Materials, apparatus, and products of type-founding, stereotypes, &c. Machines and apparatus used in typography, stereotyping, copper-plate printing, autography, lithography, chalcography, pannoconography, chromolithography, &c. Machines for setting up and setting types. Printing of bank notes, postage stamps, &c.

CLASS 59—Jury XXXVII.—*Machines, Instruments, and Processes used in various Works.*

Coining presses. Machines for making buttons, pens, pins, envelopes; packing machines, brush-making machines, machines for making cards, capsules, for affixing lead seals to merchandize; for corking bottles, &c. Tools for, and processes of making clocks, toys, marqueterie, baskets, &c. Machines for binding books. Writing machines.

CLASS 60—Jury XXVII.—*Carriages and Wheelwrights' Work.*

Separate parts of wheels and carriages: wheels, tires, axles, axle-boxes, iron-work, &c. Springs, and various methods of hanging carriages. Different systems of harnessing. Brooks. Wheelwrights' work: waggons, tumbrils, drays, and other vehicles for special purposes. Carriages, public, state, and private carriages, sedan chairs, litters, sledges, &c., velocipedes.

CLASS 61—Jury XXIII.—*Harness and Saddlery.*

Various articles used for carriage horses and saddle horses; pack-saddles, saddles, bridles, and harness for saddle horses, beasts of burden, and draught horses, stirrups, spurs, whips.

CLASS 62—Jury XXVIII.—*Railway Apparatus.*

Separate parts: springs, buffers, breaks. Permanent way: rails, chairs, crossings, switches, fish plates, turn-tables, buoys, feeding cranes and tanks, optical and acoustic signals. Permanent way for trainways. Rolling stock: waggons for passengers, for carrying earth, goods, cattle; locomotives, tenders. Self-moving carriages, locomotives, for roads. Special tools and machines for the maintenance, repair, and construction of railways. Apparatus for inclined planes and self-acting planes; apparatus and engines for atmospheric railways, models of engines, of systems of traction, of apparatus appertaining to railways. Models, plans, and drawings of platforms, stations, and engine houses, and other buildings necessary for the working of railways.

CLASS 63—Jury XXIX.—*Telegraphic Apparatus and Processes.*

Appliances for telegraphs based on the transmission of light, sound, &c. Apparatus for the electric telegraph, posts, wires, stretchers, &c. Batteries and apparatus for sending and receiving messages. Bells and electric signals. Telegraphs for military purposes. Objects appertaining to telegraphy: lightning conductors, commutators, prepared paper for printing messages, and for sending autographic messages. Special apparatus for pneumatic telegraphy.

CLASS 64—Jury XII.—*Apparatus and Processes of Civil Engineering, Public Works, and Architecture.*

Building materials: stone, wood, metals, ornamental stone; lime, mortar, cements, artificial stone and concrete; asphalt; roofing tiles, bricks, paving tiles; slates, pasteboard, and felt for roofing. Apparatus and products of processes used in the preservation of wood. Apparatus and instruments for testing building materials. Apparatus for earthworks, excavators. Apparatus used in building yards. Tools and processes used by stone dressers

and cutters, masons, carpenters, tilers, blacksmiths, joiners, glaziers, plumbers, house painters, &c. Locksmiths' work; locks, padlocks, ratings, balconies, bannisters, &c. Apparatus and engines used in making foundations, pile-drivers and pile work, screw piles, pumps, pneumatic apparatus, dredging machines, &c. Apparatus used in hydraulic works connected with harbours, canals, rivers, machines used in reducing stones, quartz, or other hard substances. Apparatus used in the supply of water and of gas. Apparatus used in the maintenance of roads, plantations, and public walks. Models, plans, and drawings of public works, bridges, viaducts, aqueducts, drains, canal bridges, dams, weirs, &c. Light-houses. Public buildings for special purposes, buildings for civil purposes; mansions and houses for letting, workmen's towns, industrial dwellings, &c.

CLASS 65—Jury XXX.—*Navigation and Life-saving.*

Drawings and models of ships, graving docks, floating docks, &c. Drawings and models of vessels of all kinds, sea-going and for rivers. Models of the systems of ship-building adopted in the navy. Boats and barges. Materials for the rigging of ships. Flags and signals. Apparatus for the prevention of collisions at sea. Buoys, beacons, &c. Apparatus for swimming, diving, and life-saving exhibited in action, floats, swimming belts, &c. Diving belts, cork jackets, nautilus life-belts, &c. Submarine boats; apparatus for saving life at sea, rocket apparatus, life-boats, &c. Apparatus of all kinds used for saving life from fires and other accidents. Pleasure boats, yachts, &c.

CLASS 66—Jury XVIII.—*Materials and Apparatus for Military Purposes.*

Military engineering and fortifications. Artillery, gun-carriages, and weapons and projectiles of every kind. Military equipment, clothing, encampments, transport service, topography and geography.

CLASS 67—Jury XXXI. and XXXII.—*Cereals, Farinaceous Products, and Products derived from them.*

Wheat, rye, barley, rice, maize, millet, and other cereals in grain and in flour. Grain without husk, and groats. Pecula from potatoes, rice, lentils, &c., gluten. Tapioca, sago, arrowroot, cassava, and other fecula, compound farinaceous products, &c. Italian pastes, semolina, vermicelli, macaroni. Alimentary preparations as substitutes for bread, home-made paste, &c.

CLASS 68—Jury XXXI. and XXXII.—*Bread and Pastry.*

Various kinds of bread, with or without yeast, fancy bread and bread in shapes, compressed bread for travelling, military campaigns, &c. (See Disconts.) Pastry of various kinds peculiar to each country. Gingerbread and dry cakes capable of being preserved.

CLASS 69—Jury XXXI. and XXXII.—*Fatty Substances used as Food. Milk and Eggs.*

Fatty substances and oils good for food. Fresh and preserved milk; fresh and salt butter; cheese. Eggs of all kinds.

CLASS 70—Jury XXXIII.—*Meat and Fish.*

Salt meat of all kinds. Meats preserved by various processes. Meat and soup cakes, hams and prepared meats. Poultry and game. Salt fish, fish in barrels: cod, herrings, &c.; fish preserved in oil: sardines, tunny, &c. Crustacea and shell-fish: lobsters, shrimps, oysters, potted oysters, anchovies, &c.

CLASS 71—Jury XXXI. and XXXII.—*Vegetables and Fruit.*

Tubers: potatoes, &c. Dry farinaceous vegetables; beans, lentils, &c. Green vegetables for cooking, cabbages, &c. Vegetable roots: carrots, turnips, &c. Vegetables used for flavouring: onions, garlic, &c. Salads, cucumbers, gourds, pumpkins, melons, &c. Vegetables preserved by various processes. Fresh fruit; dried and prepared fruits, prunes, figs, raisins, &c. Fruits preserved without sugar.

CLASS 72—Jury XXXI. and XXXII.—*Condiments and Stimulants, Sugar and Confectionery.*

Spices, pepper, cinnamon, allspice, &c. Table salt. Vinegar. Compound condiments and stimulants: mustard, kari, English sauces, &c. Tea, coffee, and other aromatic beverages, chocolate and sweet acorn coffee. Chocolate. Sugar for household purposes: grape sugar, sugar of milk. Confectionery: sugar plums, bonbons, nougats, angelica, amised, &c., preserves and jellies. Dried and preserved fruits: cordons, lemons, oranges, pineapples. Fruits preserved in brandy. Syrups and liqueurs.

CLASS 73—Jury XXXIV.—*Fermented Drinks.*

Vin ordinaire, red and white. Sweet wines and still wines. Sparkling wines.

Jury XXXIVa.—*Spirits.*

Brandies and alcohols. Spirits, whisky, gin, rum, tafia, kirsch, &c.

Jury XXXIVb.—*Vermouth.*Jury XXXIVc.—*Cordials and Liqueurs*

Fermented drinks made from vegetable sap, from milk, and sweet substances of all kinds.

Jury XXXV.—*Beers.*

Ale, porter, cider, perry, and other beverages made from cereals.

CLASS 71—Jury XXIV. and XXV.—*Specimens of Farm Buildings and Agricultural Works.*

Examples of the farm buildings of various countries. Examples of stables, cattle-sheds, sheepfolds, pig-sties, and of premises for rearing and fattening such animals. Utensils used in stables, cattle sheds, kennels, &c. Apparatus for preparing the food of animals. Agricultural machinery in motion, steam ploughs, reaping and binding and mowing machines, hay-making machines, threshing, fanning, and dressing machines, &c. Specimens of agricultural works: distilleries, sugar mills, sugar refineries, breweries, works for the preparation of flour, fecula, starch; silkworm nurseries, &c. Apparatus for artificial hatching. Presses for wine, cider, oil.

CLASS 75—Jury XXXVI.—*Conservatories and Horticultural Apparatus*

Gardeners', nurserymen's, and horticulturists' tools. Apparatus for watering and keeping turf in order, &c. Large conservatories and apparatus appertaining thereto. Room and window conservatories. Aquariums for aquatic plants. Fountains and other means for ornamenting gardens.

CLASS 76—Jury XXXVI.—*Flowers and Ornamental Plants.*

Species of plants and examples of culture exhibiting the characteristic types of the gardens and dwellings of each country.

CLASS 77—Jury XXXVI.—*Vegetables.*

Species of plants and examples of culture exhibiting the characteristic types of the kitchen gardens of each country.

CLASS 78—Jury XXXVI.—*Fruit and Fruit Trees.*

Species of plants and specimens of products exhibiting the characteristic types of the orchards of each country.

CLASS 79—Jury XXXVI.—*Seeds and Saplings of Forest Trees.*

Species of plants and specimens of products illustrating the processes followed in each country for planting forests.

CLASS 80—Jury XXXVI.—*Plants for Conservatories.*

Illustrations of the mode of culture adopted in various countries, with a view either to pleasure or to utility.

CLASS 81—Jury XXVIII.—*Apparatus and Processes of the Art of Mining and Metallurgy.*

Boring apparatus for artesian wells and wells of large diameters. Boring machines and apparatus for breaking down coal and cutting rocks. Apparatus for blasting by electricity. Models, plans, and views of the mode of working in mines and quarries. Works for obtaining mineral waters. Machines and apparatus used for extracting ore, and for lowering and hoisting miners. Winding, pumping, and crushing machinery. Safety cages and hooks; signals and other appliances for lessening the danger in mines. Machines for draining; pumps. Ventilating apparatus; ventilators. Safety lamps; lamps for electric light. Apparatus for the mechanical dressing of ores and mineral fuel. Apparatus for compressing fuel into cakes. Apparatus for the carbonisation of fuel. Smelting furnaces. Smoke-consuming apparatus. Apparatus used in metal works. Special apparatus used in forges and foundries, electro-metallurgical apparatus. Apparatus used in metal manufactures of all kinds. Drawings of different classes of machinery used in mining.

CLASS 82—Jury XXVIII.—*Mining and Metallurgy.*

Collections and specimens of rocks, minerals, ores. Ornamental stones. Hard stones, refractory substances. Bathos and clays. Various mineral products. Raw sulphur. Rock salt; salt from salt springs. Mineral fuel, various kinds of coal, coal dust, and compressed coal. Asphalt and rock asphalt. Bitumen. Mineral tar. Petroleum, &c. Metals in a crude state: pig-iron, iron, steel, cast-steel, copper, lead, gold, silver, zinc, antimony, &c. Alloys. Products of washing and refining precious metals, of gold-beating, &c. Electro-metallurgy: objects gilt,

silvered, or coated with copper, steel, nickel, &c., by the galvanic process. Products of the working of metals. Rough casings, bells, wrought-iron, iron for special purposes sheet-iron and tin plates, iron plates for casing ships and constructions, &c. Sheet-iron coated with zinc or lead; copper, lead, and zinc sheets, &c. Manufactured metals blacksmiths' work, wheels and tires, unwelded pipes, chains, &c. Wire drawing Needles, pins, wire-ropes, wire-work, and wire-gauze, perforated sheet-iron. Hardware, edge tools, ironmongery, copper, sheet-iron, tinware, &c. Other metal manufactures.

After the nominations of jurors it was found that many gentlemen invited declined to act, and fresh appointments had to be made. Several of the leading residents from the neighbouring colonies, who had at first signified their willingness to do so, found that they could not protract their visit here a sufficient length of time to enable them to undertake these duties; thus further delays were caused, and it was not until nearly the end of November that the majority of the jurors were fully at work. The hot weather and the Christmas holidays made a serious break. Many of the juries adjourned until the middle or end of January, and then it was with difficulty that all the members could be brought together again, and several juries requested the Committee of Juries and Awards to allow them to strike off their roll the names of continued absentees, as otherwise they could not comply with the Regulation No. 26, determining the quorum necessary for making awards.

Great difficulty was experienced in finding jurors to act in some sections, especially in section 6—musical instruments. This jury was not formed till 8th January, 1881, two special meetings of the Conference being held to consider the protests of exhibitors against members nominated. This difficulty did not arise from any desire to appoint interested persons, or those who might favour the makers of one country more than another; but from the fact that nearly all who were qualified to act were more or less interested in some manner either directly or indirectly.

It is only fair to the juries that you should be informed of some of the most striking difficulties met with in making their awards.

A schedule form was issued to each exhibitor, requesting him to state the country or colony from which the exhibit came, the class in which he desired to place it, and the name of the exhibitor, the merits of the exhibit, and whether attention was specially claimed thereto in respect of originality, invention, discovery, utility, quality, skill, workmanship, fitness for the purposes intended, adaptation to public wants, economy, or cost.

The classification originally published by the Commissioners was necessarily an imperfect one; many classes of goods and products were named that were not represented in the Exhibition, while, on the other hand, many exhibited were omitted from the classification. Some juries were overloaded, while others had but little to do. The questions as to what class a certain exhibit belonged were endless. Exhibitors scheduled exhibits as belonging to a class, and the jurors declined to adjudicate on them, stating that they did not come into their section, according to their reading of the Exhibition classification; and, on the other hand, jurors of one section claimed exhibits scheduled to another. This led to some confusion, and no doubt annoyed exhibitors and the Foreign Commissioners who were looking after their interests. Still, from want of knowledge beforehand as to what would be the exact nature of the exhibits forwarded, it was impossible to have a perfect classification; and, in spite of all exertions, some exhibits were judged by more than one jury, and received a different degree of award from each. When such cases were reported to the Committee of Juries and Awards, it was decided that the highest award given should be the only one recorded.

Instances occur where it would appear that this rule has not been observed, but though different juries have given awards for the same exhibit, yet it will be noticed that these exhibits present elements, some of which fairly come within the province

of each jury recording its decision; to give an instance—maps were judged by Jury I. from a fine-art point of view for excellence of engraving, by Jury III. from an educational standpoint for accuracy and completeness of information, and by Jury IV. as publications and lithographic printing.

Most of the juries adopted a system of marks, arbitrarily limiting the number to govern the first, second, third, fourth, and fifth awards; and in most cases this was found to answer admirably, but in some it was found to give a minority of the jury the power to overrule the desire of the majority, by giving extremely low numbers: this was especially the case when the numbers given by the majority would barely suffice to place the exhibit within the limit given to an order of merit. I mention this simply because this system of marking by numbers or marks was said by those who had experience at other Exhibitions to have given satisfaction, and to have been adopted generally for exhibition juries, and was, therefore, recommended for the adoption of our juries. A fairer way, it seems, would be to decide, not by the number of marks, but by the votes of the individual members, based upon the marks entered by them in their note-books at the time of inspection. This plan was adopted by several juries who found themselves liable to be ruled by a minority.

Several of the foreign courts were not wholly prepared for adjudication till late in December, and, consequently, the work of juries in those courts was, to some extent, delayed; and schedules kept coming in long after the date fixed for their reception.

Many exhibitors entered a number of objects as "collective exhibits," and, at the same time, scheduled the separate items for adjudication either for the same, or, as in some instances, for different juries, claiming awards for each part as well as a collective award for the whole under Regulation 25; but this was found to be unjust, as items of the collection might obtain awards of different degrees of merit, while, if the collection as a whole was considered, it might be deemed worthy of a first degree of merit, and thus lead to confusion as to the actual merit of each portion of the exhibit. After due consideration it was decided that an exhibitor could not claim an award for both a collective, as well as for a part of the same exhibit, though all portions might be judged separately and receive distinct awards.

Some collective exhibits were made up by several manufacturers and entered to compete as a single exhibit, claiming the privilege under Regulation 25; but it was deemed unfair to allow combinations of this kind to compete with the exhibits of individuals: the Regulation cited was framed to meet the cases of individual exhibitors, not that of combinations.

Considerable embarrassment was experienced by the jurors owing to the paucity of information supplied by many exhibitors or agents in the schedules submitted for the guidance of the jury. In some cases the schedules contained nothing more than the name of the exhibitor and of the exhibit, whilst in others considerable pains were taken to recapitulate the awards gained elsewhere, whilst information as to the merits claimed by the exhibitor or the points upon which it was desired to be judged were not indicated; also, as economy was one of the elements of merit to be considered, it is to be regretted that exhibitors neglected, in many instances, to supply jurors with reliable information upon that point. In some cases houses of undoubted merit and world-wide fame, whilst consenting to exhibit, have done so in an apparent half-hearted manner, so that their exhibits were surpassed, both in extent and quality, by younger and less known competitors. This, as jurors were called upon to decide the merits of the exhibits under their examination, and were precluded from allowing commercial reputations to influence their decisions, when unsupported by the exhibits themselves, resulted in such houses necessarily and justly taking secondary positions in the awards.

Some exhibitors showed articles specially made for exhibition, while most others exhibited from their trade stock, and to have given the highest award to those who

displayed objects so exceptionally manufactured, and a second or third award to ordinary first-class trade articles, would have been manifestly unjust. In nearly every class several first-class awards will be found. Where only one is named it has been because it was considered a trade exhibit, and to have been so far in advance of all others that none could be classed with it. The juries, therefore, were not called upon to single out that which they might deem the best, nor which class should receive the gold, silver, or bronze medal; this latter question being left to the Commission, according to the regulations.

Many of the juries were assisted in forming their decisions by practical tests outside those made at the time of inspection. Among the articles thus specially examined were printing and writing inks, watches and chronometers, building cements, washing machines, ship and signal lamps, chemical and pharmaceutical products, reapers, harvesters, strippers, mowers, &c.; fire engines, rock-borers, telephones, sporting guns and rifles, blasting compounds, railway brakes, tea, and sewing machines.

The system of appeal from jury decisions, provided for by the regulations, has been fairly successful, but has entailed an immense amount of labour and expense through the difficulty of finding experts competent to criticise or alter the awards of the jury, and has led to delay; in some cases no experts could be found who felt qualified to review the jury decisions. Where the Committee of Juries and Awards experienced a difficulty in deciding between juries and experts upon appeals, the matter was referred to the committee upon that section of the Exhibition; and where the report of that committee differed from both jurors and experts, their report was referred back with the recommendation that they should confer with the experts, and bring in a joint report, upon which the Committee of Juries and Awards acted; four hundred and eighty-one appeals were received, of which two hundred and forty-seven were sustained by the experts and Committee of Juries and Awards. I cannot say that I would recommend this system to be adopted again at any future exhibition, and would suggest, in lieu thereof, that no appeal be allowed except back to the jury in instances where the exhibit had been overlooked or unfairly treated.

Several exhibits admitted after the date fixed for final reception, were examined by the juries, and included in their awards; but the awards have not been passed by the committee, except in the case of exhibits received as duplicates of those lost in the "Sorata" and "Eric the Red."

In awarding the degrees of merit the jurors were requested to make no special awards, but to follow as closely as possible the system of awards adopted by the Commissioners of the Melbourne Exhibition of 1875, at the instance of the late Sir Redmond Barry and yourself, which was, that juries were desired to examine and make an award on each exhibit, fixing a degree of merit by a known standard; one exhibit was not to compete with another, but every one was to be judged by itself on its own merits; and that not only was the best to receive the first reward, but all first-class exhibits were to receive this distinction. This, though perhaps unfair to the best exhibit, was considered to be the most equitable way to make the awards, for jurors had but a very short time in which to form an opinion on mechanical and manufactured articles, and many that might appear best during the currency of the Exhibition or the period of test might fail in more extended trials.

Each exhibition seems to have had its own system of distribution of medals. Philadelphia gave a bronze medal for all first-class awards, accompanied by a special report or a certificate; at the Paris Exhibition a certain number of gold, silver, and bronze medals, and honourable mentions, were allotted to each jury for distribution, and as each country exhibiting was represented on the jury, the tendency was to divide the gold medals amongst the countries exhibiting, with but little reference to the individual merits of the exhibits as compared with one another.

The Commission having decided to award gold, silver, and bronze medals, the Committee of Juries and Awards distributed the medals in the following manner:—Gold—1st. For application of new and useful principles, for the production or improvement of useful machines, or showing great skill in manufacture, invention, or design of exhibit. 2nd. For objects of art. 3rd. For manufactures, products, and industries of high merit. Silver and bronze medals and certificates to be given to exhibits of lesser importance than above. Only awards of first order of merit in each class are given a medal, and all similar exhibits taking first awards in any class or division receive the same description of medal; in some of less general importance a certificate is given, and not a medal. This plan of distribution is, I believe, novel, though based on the system adopted by the Intercolonial Exhibition of 1875; it is gratifying to hear it commended by nearly all the foreign Commissioners and exhibitors as one of the most fair and just adopted at any International Exhibition, and one likely to form the basis of jury regulations at future exhibitions. There may be differences of opinion as to the distribution of gold, silver, or bronze medals; many, no doubt, would consider that important branches of industry like agriculture should have been awarded gold medals for its most valued products, such as wheat and other cereals; but if cereals received this award, a similar one would necessarily have to be given for flour, biscuits, bread, rice, pastes, coffee, tea, cocoa, and all like important alimentary substances. After due consideration, it was decided that these products would be fairly rewarded by silver and bronze medals, according to what was considered their relative importance. By several the Commission have been criticised for giving a gold medal for such articles as billiard tables; but when the merits of a billiard table are taken as a manufactured article, and are considered apart from its use, I think it will be acknowledged that it deserves its award. It was decided that all Government and public exhibits having no trade object, and all exhibits of which the exhibitor was not the producer, and where such producer could not be ascertained, should receive a certificate in place of a medal. One exhibitor, though receiving a first order of merit in several classes, should not receive more than one medal, but should receive a separate certificate for each award. Each exhibitor receiving an award of whatever class will be given a certificate, and each certificate will bear upon it a statement of the award and the exhibit for which it was granted.

I regret that the reports of the juries are on the whole so meagre, and, in many cases, altogether wanting, but it must be remembered that the juries were honorary, that they worked day after day for several months, and that after their adjunctions were completed it was almost impossible to keep them together to adopt a descriptive report.

In addition to the thirty-eight juries before mentioned, it was found advisable to appoint several special juries to undertake the inspection of exhibits, which, though classified, were felt by the juries to which they had been assigned to be so distinct from the remainder of their exhibits as to necessitate separate juries. These were printed music, boots, vermuth, spirits, cordials, and the exhibits of lady amateurs; and juries were appointed whose awards are included with those of the other juries.

In many cases the juries completed and handed in their reports before the appeals had been decided, consequently first-class awards were subsequently given to exhibits not mentioned in the reports, and to prevent injustice to such exhibitors it has been decided to append to the jury report in such cases extracts from the reports of the experts.

Mr. G. Manley Hopwood, F.C.S., &c., was appointed chemical expert, and at the same time acted as secretary to the Chemical and Pharmaceutical Jury, Section 13 and 22. Mr. Hopwood had charge of the laboratory of the Department of Agriculture, and, through the courtesy of the honourable the Minister of Lands, was permitted to conduct the analyses required by the jury, thus saving the Commissioners

10

11

12

an outlay which would have been heavy. Mr. Hopwood's notes as chemical expert are published with the jury reports.

The work of the department has been materially facilitated by the labours of an efficient and painstaking staff of jury clerks, who have given every satisfaction by the manner in which they discharged the arduous duties devolving upon them.

Through the courtesy of the press of this city, a valuable and continuous assistance was afforded the department by the facilities given in conveying information to exhibitors, as to the awards made by jurors; by this means our work was materially expedited, and the clerical labour lightened. Before publication each award was first passed by the Committee of Juries and Awards, and subsequently by the Executive.

At an early period of the work the representative of His Imperial Majesty the Emperor of Germany, Dr. Rouleaux, Royal Professor, &c., announced that he had been commissioned by His Imperial Majesty to present to the most meritorious Australasian exhibit a valuable service of plate. The selection of such exhibits as were deemed worthy to compete for this additional honour were placed by him in the hands of the various juries under the following regulations for the awarding of the Emperor of Germany's Prize at the Melbourne International Exhibition, 1880-1:—

1. His Imperial Majesty's prize, consisting of a silver table set of seven pieces, to be awarded to an exhibitor of one of the Australasian colonies as an acknowledgment of the efforts in promoting art and industry shown by the high qualities of the goods manufactured by the exhibitor, and brought to the present Melbourne International Exhibition.

2. In order to secure an impartial judgment, based upon close and learned examination, His Majesty wishes that the adjudication of the said prize should be pronounced by the Royal Commission for the Melbourne International Exhibition, in accordance with a proposal made by the jury of the Melbourne International Exhibition, which proposal has the consent of the chief commissioner for the German Empire, Professor F. Reuleaux, Privy Counsellor.

3. The proposal of the jury is to be issued at a general meeting of the chairmen or their representatives of the thirty-six jury sections.

4. Each section of the jury is entitled to present a candidate for the prize in a written report, showing the claims upon which they are based, and witnessed by the members of the section. This report is to be handed to the superintendent of juries and awards.

5. Any jury section not wishing to name any candidate for the prize, will declare this in a special report, which also is to be forwarded to the superintendent of juries and awards.

6. As soon as all the reports of the sections are collected, the superintendent of juries and awards will call a meeting of the chairmen of those sections who have presented candidates, at which meeting the commissioner of the German Empire must be present.

7. This meeting will discuss the different claims of the candidates, and conclude upon the final presentation, which must have the approval of the commissioner for the German Empire as the representative of His Imperial Majesty the Emperor William.

8. The result of the before-mentioned meeting is to be placed in the hands of the President of the Melbourne International Exhibition, in a written report, confirming the presentation. This report to be accompanied by a copy of the minutes of the meeting at which the final decision took place, which are to be signed by the superintendent of juries and awards, the secretary of the meeting, and the commissioner of the German Empire.

9. Immediately after receiving the report, the President will communicate the result of the transactions to the Commission of the Melbourne International Exhibition and to the exhibitor who has been honoured with the award.

10. The formal delivery of the prize is to be carried out by the Commission for the Melbourne International Exhibition, by handing over a diploma to the receiver of the prize, in which diploma the reasons and claims for the award are to be declared. The forwarding of the objects which represent the prize will not take place before the closing of the Melbourne International Exhibition.

The following were those nominated for this award by the respective juries, viz.:—

4. Sands and McDougall, Melbourne.—Account Books, Engraving, &c.

9. W. H. Roake and Co., Melbourne.—Furniture.

11. H. Steiner, Adelaide.—Gold and Silversmiths' Work.

13 & 22. J. Bosisto, Melbourne.—Eucalyptus Preparations.

18 & 22. Cuning, Smith and Co., Melbourne.—Mineral Acid Manufactures.

15. T. Sheldermine, Melbourne.—Felt Hats.

16. Albion Woollen Mills, Geelong.—Worsted and Woollen Goods.

16. Mosgiel Factory Co., Dunedin.—Worsted and Woollen Goods.
 20. Cameron Bros. and Co, Melbourne.—Manufactured Tobacco.
 21. Sir Samuel Wilson, Melbourne.—Wool.
 24 & 25. Hugh Lennon, Melbourne.—Agricultural Implements.
 24 & 25. John Buncke, Melbourne.—Agricultural Implements.
 26. Wright and Edwards, Melbourne.—Steam Engines
 27. Stevenson and Elliot, Melbourne.—Carriages.
 28. Hon. J. Woods, Melbourne.—Woods's Automatic Continuous Brake.
 28. Department of Railways, Victoria.—Locomotives and Railway Carriages.
 30. Jas Miller and Co., Melbourne.—Hemp, Rope, Twines.
 31. Swallow and Ariell, Melbourne.—Flour, Biscuits.
 34. De Castella and Rowan, Melbourne.—Wine.

A meeting was convened of the chairmen of the juries nominating candidates to consult with and advise Professor Reuleaux in making the award. The merits of the various exhibits in this competition were fully explained by these gentlemen, and, after reviewing them, the Professor announced that the prize would be given to Messrs. De Castella and Rowan, as that exhibit in his opinion possessed the highest merit under the conditions named. The Executive have decided to give to each of the candidates for this prize an emblazoned certificate, setting forth the fact that they were selected for this honour by their respective juries. This and the Champion Prize for wool, awarded to the Hon. Sir Samuel Wilson, are the only instances where anything that might be termed special prizes were awarded.

The following schedule shows the relative number of awards and medals, with their respective degrees, allotted to each Court, the total awards being 9671, and the total number of medals 3008, whilst that of exhibits was upwards of 15,000.

TOTAL AWARDS .. 9671

In conclusion, I have to express my indebtedness to the gentlemen who, at very great personal sacrifice, undertook the laborious and responsible duties of jurors, which were in every sense honorary. It is mainly owing to the unremitting attention, as well as the ability and impartiality displayed by these gentlemen, that the awards of this Exhibition have given such general satisfaction.

I have the honour to be, Sir,

Your obedient servant,

J. COSMO NEWBERY,
Superintendent of Juries and Awards.

----------------	-------------------	------------------

The jury have not made any report upon the exhibits in Classes 1, 2, and 4. The following is the report on Classes 5 and 11.—

Sir—Your jurors, in submitting their awards, respectfully desire to offer the following remarks:—

The exhibits generally will indicate the enlarged scope given to the art diffusing processes of lithography and engraving by the successful introduction, almost within the last decade, of machine lithographic printing; also, in the extensive adaptation of photography as an adjunct for which Victoria fairly claims the merit of pioneering the practical use.

Your jurors found some difficulties or defects of arrangement in the cataloguing of the exhibits (reasonably incidental to their varied, complicated, and technical character), and have adopted a classification under seven headings, which they trust may be acceptable.

Of oleographs and chromo-lithographs there is a good display upon the walls of the various courts; but Messrs. Seitz, Hölzel, Reiffenstein, and Jan Leendertz, exhibit well-filled folios, which it is hoped visitors have not neglected. The low price at which some excellent works of this description are now obtainable was noted. Considering the worthy response made by British artists in forwarding so many choice original works to the Exhibition, your jurors were a little surprised that well-known English chromo-lithographers were not prominent exhibitors.

There are good exhibits of some of the best works of English, French, and German art engravers. Your jurors regret that the British collection was so poorly placed, being hung upon one of the staircases, where proper inspection was almost impossible.

All interested in wood engraving, or in drawings and sketches for this old, favourite, and increasingly popular art, will feel under obligation to the *Graphic* proprietors for their exhibits of many of the original sketches for familiar engravings. Our colonial artists have herein been favoured with opportunities by which they will doubtless profit. The few other exhibits in this speciality are mostly colonial; and in awarding their degree of merit your jurors have felt that, as examples of skilful engraving, they were entitled to such place. Our engravers have not the advantage of following, and so measurably sharing in the praise awarded to such highly talented artists as are occupied in drawing for the leading pictorials of the world.

Your jurors desire to award honourable mention to Mr. Smith, of Gertrude-street, Fitzroy, who has exhibited a combined type and lithographic printing machine in operation. This is the first time any such machine has been shown in Melbourne.

The maps were mostly catalogued as educational exhibits, and dealt with as such by the jurors in that section; but as their production occupies so large a place in the arts of lithography and engraving, your jurors felt bound to judge them in regard to their artistic merits. Such adjudication of the maps issued by the Ordnance Department was requested by the British Commission.

Altogether, it seemed incomplete and unsatisfactory, if many of these exhibits, forming as they do most elaborate specimens of art-execution, were judged merely from the school-teaching standpoint. However, from the published awards of the Educational Jury, we are glad to notice that there is much agreement between their own and our estimates of merit.

Of illuminated addresses, Messrs. Hamel and Ferguson have a large exhibit. The other illuminations to which a first award has been given have probably been seen by few; their good, pure style is remarkable.

Photo-lithography is now introduced, and commonly used in each of the Austro-Hungarian colonies for the reproduction of Government maps, &c. Very excellent specimens of a newer process, called "photo-electrotyping," were noticed; but your jurors had no means of determining its general practicability.

For the Jury,
F. MCCOY.

JURY SECTION II.

Class 3.—Sculpture and Die Sinking.

Class 25.—Bronzes and Various Art Castings and Repoussé Work.

JURY.

James Smith, Chairman, Victoria.
H. Byron Moore, Great Britain.
H. Kowalski, France.

E. P. Cecchini, Italy.
C. M. Rosenthal, United States.
Dr. Seelhorst, Germany.

T. C. Sutton, substitute for H. Kowalski.

EXPERTS APPOINTED TO CONSIDER APPEALS AGAINST JURY DECISIONS.

W. Slight. | Stephen Thompson. | R. Curtis.

Sir—I have the honour to submit, as chairman of the Jury No. 2, appointed to examine exhibits in Class 3 and Class 25, the following report:—

In sculpture no work of conspicuous excellence has been sent in for exhibition, a satisfactory explanation of which may probably be sought for in the fact that the great value of a true masterpiece, and the risks of mutilation or complete destruction to which it would be necessarily exposed during a long sea voyage, would combine to deter the owner or executant of such a work from sending it so far as Australia.

The plastic art of the mother-country is represented by the late J. H. Foley, R.A., and by Messrs. Woolner, R.A., Marshall Wood, D. W. Stevenson, the late Charles Summers, and others; that of Belgium by MM. Braun, Comein, Ludwig, and Wiener; that of France by MM. Aizelin, Barrias, Chevalier, Gantierin, Itasse, Louis Rochet, Sanzel, and De Vasselot, and by Madame L. Bertaux; that of Germany by MM. Begas, Hartzler, and Schulz; and that of Italy by about seventy sculptors, of whom the more prominent are the following:—SS. Dupre, Monteverde, Tabacchi, Romanelli, Pagani, and Rossotti. With respect to the sculpture of an inferior character, of which the exhibits are somewhat numerous, it may be asserted with regret that much of it bears the same relation to the nobler achievements of this branch of art in Europe, as the genre pictures of the "little masters" do to the best works of Rembrandt, Rubens, or Vandyke. A feeble prettiness, an effeminate softness, and an attempt to express, in marble, forms, substances, surfaces, incidents, and emotions, which are either beneath the dignity, or do not fall back within the legitimate scope and object of the sculptor's art, characterise a good many of the figures and groups exhibited, some of which might be appropriately classified as art-manufactures, instead of claiming to be adjudicated upon as artistic creations; and these defects have been rendered all the more obvious by reason of the statuary itself having been brought into juxtaposition with two such splendid examples of antique sculpture as the cast of the Hermes of Praxiteles and the Barberini Fawn exhibited by the German Government.

In bronzes the Latin nations maintain their accustomed pre-eminence; although it must be acknowledged that Germany is making good her title to compete with them successfully in the production of the beautiful objects which come under this general designation. The most impressive work of the kind—the only one on a large scale—is the "Cain" of Signor Dupre, a replica of the bronze statue in the Palazzo Pitti, Florence; and, while a first prize has been awarded to the artist who modelled it, great praise is due to the founder, Signor Tognozzi-Moreni, for the admirable manner in which he has executed his share of the work. The house of Barbedienne, in Paris, is still *facile princeps* in the fabrication of bronzes intended for household decoration; and whether as regards original designs, or reduced copies from the antique, its efforts to popularise this branch of art entitle it to be regarded as a benefactor to every country in which its productions find a market. Next in point of merit to these are the exhibits of M. Boulenger, of Gay, Lamsille and Co.,

of the Foundry Company of the Val d'Osne, and of MM. Blot and Dionard, Ranvier and Louise. These include art-castings in zinc and other metals, issued at such prices as to bring them within the reach of all classes of society.

Germany is also distinguishing herself in each of these departments of industrial art; and special attention may be directed to the excellent bronzes exhibited by F. von Miller, of Munich, and by A. Lange and Sons, of Glashutte, Saxony; and to the choice and varied collection from the factory of Count Stolberg, at Ilseburg, of reproductions in metal of articles of antique, mediæval, and renaissance design and workmanship, selected from the treasures preserved in public museums and private collections on the continent of Europe. The bronze and other exhibits of Messrs. Czarnikow and Basch, of Berlin; of S. Elster, of the same city; of R. Biehweiler, of Hamburg; of E. G. Zimmermann, of Hanau; and of the late Einsiedel factory, at Lauchhammer, attest alike the sedulous cultivation of the arts of design in Germany, and the technical skill and aptitude of the artisans engaged in the respective works.

The Italian exhibits of this description are not so numerous as might have been expected from a country which gave the world such famous artists in bronze as Bonnano, of Pisa; Uberto and Pietro, of Piacenza; Ghiberti, of Florence; Giovanni, of Bologna; Verrocchio, Cellini, and Sansovino. But the works of Tognozzi-Moreni, the Brothers de Poli, Tis, and Cavaliere Nelli, indicate that the methods of the renaissance still survive in Italy, and that her artists and artificers have not lost the technical skill which was bequeathed to them by their forefathers.

For delicacy and dexterity of workmanship, combined with high finish and a scrupulous attention to the minutiae of detail, the Japanese bronzes and artistic metal work generally compel a warm tribute of admiration; and, while exception may be taken to the grotesqueness of some of the designs, and to the intense realism of much of the ornamentation, it would be ungenerous not to extol the extreme skill and the thorough conscientiousness displayed in the workmanship of these fine exhibits.

The Exhibition contains some admirable specimens of what has been aptly called "the master art-craft of the world"—namely, enamelling. Naturally enough, India occupies a foremost place in this respect; and the damascene work executed by Kutub Din and Shail Din, of Sialkot, in the Punjaub, deserves particular mention, as illustrative of the skill and artistic feeling with which the *Luft* process is pursued by the artificers of the East. There is much good *bidri*-ware also exhibited by other than the fabricators of it. From the venerable East to the young West is a great geographical stride; but it is due to the American Watch Company in the United States to report that the enamellers and engravers in their service are accomplished masters of their craft, and that both in elegance of design and harmonious combination and arrangement of colours the watch-cases exhibited by this Company rival the best productions of the kind in the Exhibition; to which, it must be added, Germany has likewise contributed numerous very choice examples; notably those of the joint exhibit of Berlin firms, comprising S. Elster, E. Laue, R. Lehmann, and R. Otto. Among these are various tazze and other objects, which are simply exquisite, and will stand the test of the most fastidious criticism. The painted enamels displayed by M. Soyer, in the French Court, are conspicuous for brilliancy of surface and translucency of colour, and for the faithful reproduction of various well-known pictures, by almost imperishable pigments, on an equally durable basis. The effect produced is very striking, because the paintings resemble stained glass in the apparent transparency of the tints, while the glaze is akin to the finest porcelain. The other French enamels deserving of special mention are those of M. A. Boulenger, of Paris. It is gratifying to be able to state that a Victorian enameller, Mr. J. R. Rowland, has exhibited some works of this kind, which are most creditable to his taste, skill, and technical knowledge, and which justify the expectation that this branch of art-industry will domicile itself in Melbourne.

Italy and India have both distinguished themselves by the carvings in wood, and by the specimens of ivory inlaying in teak and ebony, which they have contributed to the Exhibition. The articles shown by the Chevalier Panciera-Besarel, G. B. de Lotto, M. A. Guggenheim, and the Orfanotrofio, of Venice, by G. B. Gatti, of Rome, and J. Cattaneo, of Milan, demand the warmest commendation. Of the work technically known in Italy as *intarsiatura* there are some very fine specimens by the Chevalier Gatti, including a table, coffer, crucifix, and a frame enriched with ivory medallions of remarkable beauty. Equally good of their kind are the exhibits of F. Lund, of Bremen. A table of teak, inlaid with ivory, by Atta Bassi Golam Hosein, of the Punjab, is also a production which may be singled out for special eulogy.

Italy worthily maintains her old pre-eminence in regard to the fabrication of mosaics and the cutting of cameos in stone, shell, and lava. The Compagnia Venezia-Murano, the Società Minerva Veneziana, the Chevalier Bedendo, and Signor Testolini, of Venice, and Signor Turantoni, of Rome, exhibit some excellent specimens of the Byzantine method of composing or copying pictures for the purposes of mural decoration, or of imitating natural objects on a smaller scale for personal adornment, by means of glass smalts, possessing unnumberable gradations of colour, superimposed upon, and firmly attached to, a basis no less durable than the skillfully adjusted overlay. Of Roman and Florentine mosaics, composed either of exceedingly minute *tesserae* in low relief, or of an inlay of pieces of stone or shell upon a smooth marble surface, the examples are numerous and beautiful; the more artistic of the exhibits being those of SS. Bedendo, Falcini, Ciapponi, Boneinelli, and Mariotti and Fantoni. The cameos of G. Bissenger, of Paris; of R. Otto, of Berlin; and of SS. Francati and Santamaria, Olivieri, Siotto, and Ciapponi, in the Italian Court, may be grouped together as reaching a high standard of excellence.

In conclusion, your jury desires to express its opinion that the exhibits upon which it has had the honour to adjudicate, and to the examination of which it has devoted no little time and attention, cannot fail to have educated the taste and enlarged the ideas, while contributing to the enjoyment of the tens of thousands of persons who have visited the Exhibition; and that a desire will have been created in numberless minds for the acquisition of such household adornments, the gratification of which will necessarily stimulate commerce, and promote a more extended and mutually advantageous interchange of commodities between the Australian colonies and the various countries represented in the International Exhibition.

I have the honour to be, Sir,

Your most obedient servant,

JAMES SMITH, *Chairman*.

The experts appointed to consider appeals recommended additional awards, in which the jury concurred.

The expert upon Die-sinking, Engraving, &c. (Mr. W. Slight), reports:—

"I have the honour to make the following report on specimens of die-sinking exhibited by Messrs. Stokes and Martin:—These dies are cut for stamping metal, for which the highest skill is required. In these specimens such skill is fully exhibited, the work being sharp, clean, and well defined.

"I have the honour to submit the following as the result of my examination in engraving and embellishment of watches:—American Watch Co., Waltham: From the most elaborate designs to the most simple, the same class of work is maintained throughout, the engraving being of the highest order. Swiss Collective Exhibit: The embellishment of these watches is very good commercial engraving, &c., but cannot be considered first-class from the standpoint of high artistic finish."

JURY SECTION III.

EXPERTS APPOINTED TO CONSIDER APPEALS AGAINST JURY DECISIONS.

Professor M. H. Irving, M.A.

Professor H. M. Andrew, M.A.

J. H. Thompson, M.A.

Sir—The jury for educational exhibits desire to call attention, in the first instance, to the great difficulties under which they have laboured in performing the task allotted to them. With rare exceptions, the educational exhibits have not been catalogued, scheduled, or arranged in any proper order. Thus, for instance, the ordinance maps exhibited by the British Government are entered in the catalogue under the heading of Fine Arts, are placed in one of the picture galleries, and were not scheduled until the jury had published their first award. Other excellent maps and works have been entered with a little more propriety under the head of Printing. In several cases exhibits of the same class from the same country were in two, or even in three, parts of the building, and the work of comparison has thus been rendered madly difficult. On the other hand, it has seemed as if many exhibitors thought themselves entitled to claim an educational award for whatever was discarded by other juries. Models of fusible plugs and engine governors, sham jewellery, lamp-shades, prospectuses of mutual improvement societies, a perambulator, specimens of bar-iron, and half-a-dozen slabs of fossiliferous stone, have been among the incongruous objects which the jury were requested to classify. In many instances a single schoolboy's map or a single volume on elementary education, either of which might have figured with propriety as part of a collective exhibit, have been sent in for a separate award. The jury have not regarded it as any part of their functions to examine and report upon the merits of any particular book. To deal individually with the many hundred volumes sent in would involve the labour of months, or even years. The task of classifying the publications of large firms according to their aggregate value has been as much as they could attempt, and has been sufficiently severe. While they have been forced to exclude incongruous matter, the jury regret very much that the legitimate competition for international awards has not been wider. Germany, Switzerland, Sweden, Canada, and the United States are among the countries from which much that was instructive might have been expected, and that have contributed no collective exhibits of their national systems. Even in the Australasian group of colonies, South Australia, Western Australia, New Zealand, and Tasmania cannot be said to have competed. The same observation applies to publishing firms. The great English houses of Austin, Longman, Macmillan, Parker, and Livingston, to mention no others, were unrepresented. Nelson, whose books have been deservedly selected for our State-schools, does not figure in the catalogue. The eminent German firms of Perthes, Grote, Duncker and Humboldt, and Trulmer have sent nothing to the Exhibition. So, again, the competition in maps has been strangely limited. The excellent ordinance maps of the Austrian Government have not been sent, though a large geological map has been forwarded

from the State Department at Vienna. Dufour's map of Switzerland and Munch's of Norway are only two among many maps of proved excellence which have not come before the jury. They regret this, especially in the former case, as the map was to hand, though not for exhibition in the Swiss Court.

Among the national exhibits submitted, the first place is unquestionably held by that of the French Government, although for reasons of convenience the jury have placed it in alphabetical order in the first class. The French Government have sent plans of their schools, specimens of the work done by pupils in primary schools and of that done by students in the training-schools, reports of the educational conferences, specimens of the subsidised educational journals, and large collections of the scientific books subscribed for by the French Government, and of the models used and of the work done in industrial schools. No other country, except Victoria, has submitted to so severe a test; no other country at the Exhibition can compare with France for the work shown. The exhibit of the city of Paris, which naturally resembles that of the French Government in its main features, though it takes a less extended range, may conveniently be classed along with it. Belgian exhibits a very extensive series of reports, which testify to a very gratifying educational improvement, especially of late years, admirable maps, and a good selection of school furniture and appliances. The Victorian exhibit is, as might be expected, remarkably full. Its weakest feature is the construction of the school buildings and the character of the school appliances. Rooms without ventilation, long benches without backs, and of course not capable of adjustment to the pupil's height, tottering blackboards, and indifferent maps, are matters that call for reform; but fortunately, also, that admit of speedy reform. On the other hand, the instruction given, which was severely tested by two *exa voce* examinations, appeared very meritorious for so young a country; and the exhibits of school work had the stamp of genuineness and common sense.

Among the collective exhibits that have been placed in the second class, that of Japan claims the first place from its great completeness; and the progress made in so short a time, by a country that had no national system only a few years ago, is of a kind to inspire the most sanguine hopes. Both here, however, and in the case of the London School Board, the jury were compelled to consider the want of originality a serious blemish. In the case of Japan, the systems and the school appliances seemed to be alike copied from foreign models. In the case of the London School Board, not only was this the case, but it was apparent throughout, in school furniture, maps, and diagrams, that the best models had not always been followed. In the case of Japan, the pupils' work exhibited, though good, was not of any peculiar excellence; and the London School Board did not exhibit any work at all. The exhibits from New South Wales consisted of plans of schools, of specimens of pupils' work, and of school furniture. While there is a general resemblance between the systems of all the Australian colonies, that of New South Wales does not yet seem to be quite as fully developed as that of Victoria; and the specimens of school work shown (excellent of their kind) gave the impression that the industrial training in the schools was artificial and exotic in its character. In the case of Queensland, the school appliances were particularly good, and the jury may notice with special praise a ventilating window of a principle long known in England, but which has not been brought into common use in these colonies.

In classifying professional and special schools, the jury desire to call attention to the very complete manner in which this branch of education has been represented in the French Court. In the two instances of the school of Limoges for painting on china, and of the school of Besançon for clock-making, the jury have had the incidental advantage of seeing the result of these schools in the industries of their respective countries. In every instance the French schools have exhibited models or photographs, or specimens of the work done in them; while the schools of other

countries have, as a rule, only exhibited the reports or the appliances of their school work. The fourteen places out of twenty-two which France holds on the class list have, therefore, been won at the cost of a severer test than any other country has submitted to. The jury regret very much that the competition in this department has not been greater; and in particular that no specimens of work done, except in one instance by a few photographs, were exhibited by the five technical schools that have competed from various parts of Germany.

The maps exhibited by different Governments occupy special ground. A Government can produce without regard to expense, and, as a rule, only attempts to map its own country, of which it has exceptional knowledge. The English Ordnance maps, which preserve the most various local names, and exhibit even the sites of ancient fortifications, are instances of excellent work of one kind; and the French and Belgian military maps, which show the differences of configuration and level on a very minute scale, deserve special mention in another way. Among the maps of private exhibitors, the jury may mention with special praise those of Arlaria for fulness and accuracy, those of Hachette for clearness of design and accuracy, and those of Keith Johnston for general excellence. The large map of Africa, exhibited by the King of Belgium, ranks by itself as a successful attempt by an amateur to produce an encyclopædic survey of all that is known about African geography.

Before quitting the subject of maps, the jury think it will not be out of place to express a hope that one result of the Melbourne Exhibition will be to popularise a knowledge of the commoner facts of Australian geography in Europe. At a time when good official maps of most parts of the Australian colonies are in existence, it is disheartening to find that some of the largest European publishers exhibit maps that seem to be based on productions twenty, or even forty, years old. It seems incredible that anyone should be found to represent the Middle Island of New Zealand as still peopled only by Maories; to omit Ballarat and Sandhurst from a map of Victoria in which Belfast and Alberton figure; to substitute Perth for Launceston in Tasmania; and to couple Wellington with Adelaide as the chief towns of South Australia. Yet these blunders, and many others, occur in the maps of a publisher whom the jury have found it impossible to classify; and errors of this kind, though less serious, have affected their estimate in more instances than one.

In classifying school appliances, the jury have found it comparatively easy to award the first places. Such exhibits as the collections of Ravaisson and Delagrave, Schroder's geometrical models, and Waid's palæontological casts, speak for themselves. In the case of Sterling's school seats and desks, and the kindergarten exhibits of Meyer, it may seem as if the first class was awarded for small exhibits; but each was distinctly best of its kind in principle and workmanship. On the other hand, in the case of Hammer, whose exhibits are of unequal value, the jury were governed in their award by the merit of the best work exhibited; and recognised the fact that a private firm is bound to supply what its customers ask for, and not merely what is on the best model.

With respect to school books, the jury desire to repeat that they have only attempted to classify according to the educational value of collective exhibits. They have left typographical excellence to the jury for printing; and it may accordingly happen that works which they have put in the third class for their intrinsic value will deservedly receive a first class for beauty of paper and clearness of type. Provided the nature of the award is clearly specified in each instance, the jury see no reason to object to this in the case of books; but even here, and after every precaution, the system of classification by two juries is liable to abuse, and the jury beg to express their hope that in no case will maps reported on by themselves be allowed to receive an award as pictures or books.

At the request of the jury for fine arts, the jury for educational exhibits have consented to examine the work of the various schools of design. They have had no hesitation in placing the Mechanics' Institute of Sydney in the first class by itself for variety and excellence of exhibits. At the same time, they think it right to note that the students who compete from Victorian schools are generally, so far as they can ascertain, younger than those of Sydney; and while this in no way detracts from the excellence of the Sydney results, it may serve to explain why the work done in Victoria is generally inferior. Unfortunately, the Victorian schools labour under another and more serious disadvantage in the want of good models and designs to copy from. The jury venture to express a hope that the Department of Education will see its way to supply the schools of design with good photographs of the best antique and modern models in sculpture, architecture, and painting. So long as the pupil is set to copy engravings in weekly papers, or coarse and inaccurate lithographs, so long will it be useless to look for real and solid improvement. The German exhibits of school appliances are especially rich in the direction of industrial designs, the French in the department of art; and from what the French Government has given, and from what it may be possible to buy, it ought to be possible to form collections that should leave nothing to be desired.

In conclusion, the jury beg to call the attention of the Commissioners to an exhibit of "Victorian Year-books" from the Statistical Department. The jury have deemed it better not to classify these, as, although the department exhibits them, the credit of producing them is entirely due to Mr. Hayter, who was one of the jury. Under other circumstances, the jury would have had no hesitation in awarding them a first class for originality of conception and general excellence of execution. And they desire to point out that it has been the custom in other exhibitions for the Commissioners to make a special award when the jury was precluded in this way from placing an exhibit in the class it would naturally take.

I have the honour to be, Sir,

Your most obedient servant,

CHARLES H. PEARSON, *Chairman.*

JURY SECTION IV.

EXPERTS APPOINTED TO CONSIDER APPEALS AGAINST JURY DECISIONS.

James B. Wilson	Charles N. Beere	J. Noone.
-----------------	------------------	-----------

Sir—The jury appointed to adjudicate upon the manufactures comprised in the above classes beg to submit the following report upon the various exhibits examined in carrying out the work devolving upon them :—

There have been forty-six meetings, attended upon nearly every occasion by all the jury, and in some instances the whole day has been devoted to the work.

In the examination the jury became convinced that there were very many exhibits of special merit coming within their cognisance to which justice could not be done under a system of awards that was necessarily limited to the terms 1st, 2nd, 3rd, 4th, 5th, and honourable mention; they therefore resolved, with the concurrence of the executive head of the Exhibition, to submit a detailed report with their awards, which should in some measure overcome the difficulty that presented itself.

In order to a systematic arrangement of their labours, the jury classified the exhibits under the following heads:—

- A.—Printing Paper.
- B.—Paper, other than Printing.
 - 1. Hand-made papers.
 - 2. Writing papers generally.
 - 3. Fancy stationery papers and envelopes.
 - 4. Wrapping papers and bags.
 - 5. Miscellaneous, including blotting, tissue, copying, tracing, waterproof, and cigarette papers, tin-foil, and vegetable parchment.
 - 6. Bookbinding materials, millboards, marbled papers, fancy papers, box-making papers.
 - 7. Card, enamelled papers, surface papers, bristol boards, drawing and plate papers.
 - 8. Telegraph tapes.
 - 9. Filtering papers.
- C.—Paper-making Materials.
- D.—Printing, Publications, Stationery, &c.
 - 1. Stationery requisites.
 - Account books.
 - 2. Bookbinding.
 - 3. Publications.
 - 4. Printing.
 - 5. Artists' and drawing materials.
 - 6. Printing type, electrotypes, stereotypes, woodbury type, litho. stones.
 - 7. Lithographic proofs, black or coloured; proofs of engravings, photo-lithographic proofs, photo-typographic proofs, embossing.
 - 8. Writing ink, wax, pens, pencils, penholders, office cement, &c.
- E.—Printing Ink.

The exhibits coming under the above-mentioned heads were—160 in papers, 38 printing and writing inks, and 440 in the other classes; making a total of 638.

A.—PRINTING PAPER.

The jury were agreeably surprised at the high-class papers exhibited from Europe and America, as well as from the local manufacturer; and their appreciation of them is evinced by the awards given.

The printing papers worthy of special merit were those of—

Grosvenor, Chafer and Co., London, who exhibited paper of various descriptions, embracing light and heavy news, white and coloured printing, which showed evenness of texture and careful manufacture.

G. Olmer, Paris, exhibited a superior class of papers for news and book-work at moderate prices.

P. Adams, Buckland, Conn., exhibited one sample of toned book-paper, which has been used by the Commissioner to print the United States official catalogue. This paper is excellent in every respect.

The Albion Paper Company, Massachusetts, also displayed good samples of printing papers, which were tough, of good stock, free from clay, and moderate in price.

J. Pfeffer and Co., Ghent, exhibited some very cheap paper, suitable for news and poster work, of good colour, and free from blemishes.

Fialkowski Bros., and Twerdy, Bielitz and Biala, showed white and coloured printings; the latter were of superior quality, both in colour and material, and very low in price.

Ramsden and Co., Melbourne, also had well-made papers for news and book work; also coloured printings, which were pure in colour, and free from clay.

The Joint-Stock Company, Schloglmühl, were exhibitors of printing papers, both white and coloured; these latter were superior both in colour and quality, and moderate in price.

There were five exhibitors of web-printing paper—viz., Peebles and Co. and Spicer Bros. in the British Court, Kübler and Niethammer in the German Court, M. Kink and Co. and the Joint-Stock Co (Schloglmühl) in the Austrian Court, and Williams and Murray in the New South Wales Court. In all these papers there was evidence of good reeling, and in those of the Austrian Court the cores had been extracted without interference with the reel—a great advantage when shipping. To show the advance made in this important industry, in the Exhibition of 1873 there was not a single exhibit of printing paper in the reel; and whilst in the report of the Exhibition of 1851 it is remarked, with an air of incredulity, that a roll of paper for hangings was exhibited supposed to contain 2400 yards, at the Melbourne Exhibition there is one roll of printing paper containing 9722 yards, or over $5\frac{1}{2}$ miles in length.

C.—Before passing on to the balance of the papers, we would remark that the jury recommend J. Pfeffer and Co., of Ghent, for a first award for their excellent and instructive exhibit of sorted rags for paper-making. This exhibit, ranging from the coarsest gunnybags to the best linen rags, all carefully cut and graded, showed plainly how this firm, by careful and systematic attention to the selection of the material, supplied an important trade want.

B.—PAPER, OTHER THAN PRINTING.

T. H. Saunders and Co., London, had hand and machine-made writings and blottings, in all of which they stood high. The products of this firm were noticed for their strength, colour, and finish, and well commend themselves both to experts and the public as really first-class goods.

Spicer Bros., London, exhibited hand and machine-made writings, envelopes, and blotting paper, all of excellent quality; also surface and plate paper. Their exhibits were characterised by evenness of texture and uniformity of colour, and were good samples of their well-known manufactures.

Blanchet Frères and Kleber, Rives, exhibited hand and machine-made writings and drawing papers. These were of a high class, and show that they still maintain the character of the papers which secured for them recognition at the Exhibition in 1851, and that the countrymen of Montgolfier, Didot, and Robert, keep in the van in paper-making.

The "Société Anonyme du Marais," Paris, exhibited a large sample-book of specimens of the papers manufactured by them. They rank in hand-made drawing, and plate papers. As the specimen-book of this company, handsomely gilt and bound in morocco, has been presented to the Technological Museum,

Victoria will possess samples of paper manufacture that may fairly claim to be unsurpassed, and which will form not the least valuable souvenir possessed by the colony of the Melbourne International Exhibition.

A. Pirie and Sons, Aberdeen, exhibited a grand collection of machine-made writings, as well as fancy stationery papers, envelopes, blottings, and drawing papers. Their exhibit of machine-made imitation hand-made papers closely approach all the excellencies to be found in hand-made papers. They displayed great taste in their repp papers, both in design and tint, as well as in the excellence of material and finish.

Monckton and Co, Basted, Kent, exhibited a good collection of machine-made writings and plate paper, of fine quality.

G. F. Busbridge and Co, East Malling Mills, exhibited their specialty, "vat papers," which, though not equalling hand-made papers, yet possess in a high degree their characteristics.

An exhibit of thin machine-made writings of a foreign character was made by Messrs. L. Avril and Co, London; these were well-made and tough. They also exhibited copying, tissue, and cigarette papers, all of which were of superior quality.

Hudson and Kearns, London, showed legal papers, of good quality and finish, which were good imitations of hand-made papers.

F. Schöller and Bausch, Domitz-on-Elbe, exhibited machine-made writings, card-board, and drawing papers. Their Government document papers, with the Imperial arms water-mark, were very good.

F. H. Schöller, Düren, also exhibited in the same classes, and ranked equally high; this firm and F. Schöller and Bausch are branches of the same proprietary, but in different towns, and their manufactures have an identity of character.

Some writings and excellent tissue papers, well made and tough, were exhibited by H. A. Schöller and Sons, Düren.

A large variety of excellent writings are shown by Hösch and Schleicher, Düren.

A bank post paper, of superior quality, was exhibited by Steinbach and Co., Malmédy. It was thin, very tough, and well glazed, and was suited for foreign correspondence.

The Holyoke Paper Company, Massachusetts, exhibited their "American linen papers," in note and letter sizes. These papers were loft-dried and animal sized; they are of prime quality, light weight, tough, and pure in colour.

Crane Brothers, Westfield, Mass., also stood high with machine-made writing papers.

O. Goodall and Sons, London, kept up their well-earned reputation by their exhibit of fancy stationery papers and envelopes; as also of drawing and Bristol boards, in both of which the goods shown merit the highest commendation. They also showed playing-cards and menu cards, which displayed artistic taste of a high order, and great care and delicacy in printing. The colours were good and bright; the outlines sharp and well finished. The designs, both of papers and packages, deserved to rank as fine art; their Japanese, Pinfold, and other fancy note papers, were commendable for beauty and excellence.

In fancy notepapers, &c., Austria made an excellent show. The exhibit of Thayer and Hardtmuth, Vienna, consisted of notepaper and envelopes in unique designs and colours, some of which were evidently intended for the Eastern trade; all were turned out in first-class style. Some of the hand-painted designs were gems in their way. Their designs in embossed papers, both of monograms and of crests, plain and in colours, were exceedingly well executed.

F. Plentl's Sons, Graz, exhibited a great variety of pressed fancy notepaper and cards to match. Those worthy of special mention were the Edelweiss, Alpine flora, Garden flowers, Carrier pigeon, Swallow, Cupid's envoy, Knight emblem, Rhine flora, Alps, and Little Puss papers, most of which were hand-painted with con-

siderable taste. They were packed in neat boxes containing five assorted colours, or with the colours in distinct boxes; the "grey foncé" and "dull white ribbed" were very chaste. Both these firms put up their papers in boxes of fanciful designs, some of which were highly ornamental.

PLAIN AND FANCY CARD-BOARD BOXES.—There were three exhibits in this class. G. Wenderoth, of Cassel, and Frame and Co., Melbourne, both produced excellent articles, the ornamentation being by choice specimens of chromo-lithography, plain and embossed, and displayed great taste in the arrangement; the finish of the goods of both these houses was first-class, and the lids fitted perfectly. Randolph and English, Richmond, Virginia, exhibited a large collection of plain card-board boxes, in the shape of pill and puff boxes, and a useful novelty in the way of "grease-proof" boxes, suited for druggists and others for putting up ointment, &c.; their nests and boxes were well finished, and the lids fitted accurately.

Schmied's Sons, Great Ulmsdorf, exhibited a good assortment of various descriptions of wrapping papers—light, tough, smooth, good in colour and low in price.

Bird and Hollingworth, Massachusetts, showed some excellent samples of wrapping papers from Manila hemp and other stock; their specialties were an "anti-rust" paper for packing cutlery and other polished steel goods, and cartridge packing paper of good quality.

Ramsden and Co., Melbourne, exhibited first quality wrapping papers, which were exceptionally free from clay. These were made from good stock, and were of very fine colour.

Davis and Royle, London, A. Jack and Co., and A. W. Schnickrafft and Co., Melbourne, exhibited paper-bags for grocers and confectioners. These goods were commendable for make and quality; the English exhibit was low in price.

Petersen, Emil, Berlin, displayed a very choice collection of bouquet-holders, lace papers, &c.; also a number of finely executed models of animals, &c., in paper, embossed and coloured. The large paper-lace bouquet-holders of this firm were unequalled in the building for size and beauty.

Caillault and Levasseur, Paris, exhibited confectioners' fancy bags, coraque papers, and lace papers for bouquets, &c. The collection of this firm contained a number of good designs in chromo-litho. work, tastefully executed.

Ellissen, Röder and Co., Theresienthal, exhibited a fine assortment of tissue papers of every gradation of tint, exceedingly even in colour, and the paper well made; they also exhibited writing-paper.

H. Erhardt and Co., London, showed tin-foil, tin-foil paper, and parchment paper. These materials are now very much used by manufacturers, and the samples from this firm showed the extent to which this industry has attained; the tin-foil especially was rolled out to the attenuation of the thinnest tissue-paper. An effective plan for reducing the cost of manufacture of tin-foil is employed by them, by using lead for one side of the sheet; the foil is made equally as thin, whilst only requiring half the quantity of tin.

Some samples of book-binders' cloths and imitation leathers, also box-making papers and cloth, were exhibited by E. Villeneuve in the French Court, all of which were first-class specimens.

Germany was well represented in book-binding and box-making materials by an exhibit of A. Dessauer, Cassel, who showed four volumes of samples of marbling, suitable for these industries. This exhibit was highly interesting, and showed an extent of artistic taste in arranging the designs, as well as careful manipulation, together producing material which has been rarely equalled. These volumes should, if possible, be secured for the Technological Museum, as they would prove of great interest in an educational point of view.

In the United States Court, Case Brothers, Connecticut, and W. O. Davey and

Sons, Jersey City, exhibited tar-boards and mill-boards, which were first-class products and well suited for the purposes intended.

The Scott Paper Company, Philadelphia, exhibited with their other manufactures a water-proof paper, highly useful for many purposes, such as wrapping, wall-papering, and case-binding.

Grosvenor, Clatter and Co., London, were exhibitors of chart and plate papers of first-class quality; they also had a creditable display of hand-made and machine-made writings and blotting-paper.

Guerinand et Cie., Vaison, exhibited an assortment of cheap drawing paper, suitable for chalk and pencil sketching in elementary classes, where a cheap, yet suitable material is desirable in order to encourage free-hand work. This paper is well suited for the purpose, and is largely used in the schools in France.

G. Olmer, Paris, exhibited a good assortment of drawing and plate papers, of superior quality.

Hochstein and Weinberg, Berlin, showed enamelled papers and cards of various descriptions, all displaying high finish, and perfectly adapted to trade requirements.

Eichmann and Co., Arian, exhibited boards, drawing-papers, and surface-papers, which were first-class productions.

There were two collections of telegraph paper tapes, one of the "Joint-Stock Company," Bantzen, and the other of J. Pfeffer and Co., Ghent. These exhibits were put to a practical test, and the jury have awarded the first order to the "Joint-Stock Company," for their blue paper, which was first-class in every respect; their white was also very good and firm. Of the tapes of J. Pfeffer and Company, the blue and green were good, well made, and fine textured.

MISCELLANEOUS COLLECTION OF EXHIBITS OF THE JAPANESE GOVERNMENT.—This display was unique, and well worthy of high commendation. If toughness is the *sine qua non* in writing-papers, the Japanese should bear the palm, for their papers possessed this feature to a much greater extent than any other paper in the Exhibition. They also exhibited a variety of manufactures from paper, such as d'oyleys, pocket handkerchiefs, table napkins, table cloths, serviette, and other papers; some of these were neatly ornamented by hand-painting in water colours; others were printed upon from wood blocks in colours, in quaint designs. They also exhibited a fine description of leather-paper suitable for book-binding, pocket-books, &c., and which was a close imitation of leather, while being actually stronger than that material. This paper showed the graining of leather on the outer side, and yet was perfectly smooth upon the inner, thus securing the retention of the graining after being pressed; it did not crease upon being folded; and it can be produced at anything below the price of leather, should supersede it in ordinary book-binding and other similar manufactures.

The Fusiyama Company, Japan, represented by its manager, Mr. T. A. Singleton, also exhibited a large collection of paper of various qualities, some of which were highly interesting as showing a distinct branch of manufacture.

Anton Schmidt, Great Ulmsdorf, exhibited an assortment of filtering paper of several grades; the best sample was well made, filters rapidly, and was generally good.

D.—PRINTING, PUBLICATIONS, STATIONERY, &c.

Under the head of Stationery Requisites have been included various miscellaneous office furnishings and stationers' hardware.

W. and T. Avery, Birmingham, exhibited letter balances of excellent design and pattern, suitable for office or private use; the higher grades displayed elegance of form and beauty of chasing, combined with great accuracy; these goods are first-class.

S. A. Daniel, Birmingham, showed a large assortment of copying presses, of various sizes, also lever embossing stamps. They were all high in class and low in price; the parts fitted accurately and were well finished.

J. S. Downing, Birmingham, exhibited an assortment of cabinet goods and stationer's hardware, consisting of stationery cases, inkstands, letter balances, one of which, his ready patent letter balance, was a useful article, doing away with the trouble in connection with weights; also safety ink bottles, combined memo. calendar and pen rack, letter clips of neat designs, and date cases; a very useful article exhibited by this house was a combined stationery case, inkstand, and book rack, as was also their revolving shutter stationery case.

Fairbanks and Co., New York, exhibited postal letter balances, with both double and single beam, and possessing that beauty and accuracy of finish for which this description of goods from the United States is justly famed.

A. Dubourgnet, Paris, exhibited an extensive assortment of inkstands and letter balances of tasty designs, both in ordinary plated ware and Japanese and Egyptian bronze. Their fountain inks were pretty articles for the library or office table; a Louis XV. inkstand, with globe in centre, and another with a bronze group in centre, were both useful and ornamental. They exhibited also walking canes combining ink and pen receptacles.

Rubber stamps were exhibited by W. T. Clark, Melbourne, embracing a great variety, from the small crest or monogram to stamps for printing directly on tin cans; these latter obviating the trouble and expense attending the use of labels. He also exhibited a useful novelty in the shape of a self-inking pocket rubber stamp, which should prove of general demand. All these goods were well finished.

An excellent assortment of first-class work in account books, at extremely low prices, was exhibited by König and Ebhardt, Hanover; these books were wire-sewn, and in other respects showed good workmanship, and the ruling was of a superior character. They exhibited novelties in books, bound in moleskin and pigskin; also interleaved indices. The firm also showed lithographic and general printing, consisting of excellent specimens of Government securities, bonds, debentures, show cards, &c.

J. Williams, of Adelaide, exhibited some good work in account books and ruling. The finish of his work was especially noticed, also that his books opened freely, and were well sewn. He also showed general bookbinding, lithography, and embossing, in which he made a creditable display.

The largest exhibit of this class in the Exhibition was that of Sands and McDougall, Melbourne. It occupied four large show-cases and several smaller ones, and consisted of account books, publications, electrotypes and stereotypes, chromo and general lithography, embossing, engraving, and a fine assortment of fancy repp, cream-laid, blue-laid, and other envelopes. The account books of this firm were of an especially excellent character; they were well sewn, opened flat, and the paging was unexceptionally good. In publications they exhibited principally their Australian diaries, which compare favourably with those of well-known English publishers; and their scribbling diaries are not excelled anywhere. The exhibits of electrotypes and stereotypes were very good. The engraving, embossing, chromo and general lithography, consisting of seals, monograms, cheque forms, scrip, acceptance and other forms, the Australian copybooks, as well as the annual presentation chromos of the Art-Union of Victoria, are all excellent. The jury have recommended Messrs. Sands and McDougall for the Emperor of Germany's prize, as the most meritorious colonial exhibit coming under their examination.

W. Detmold, Melbourne, had a very large exhibit, comprising every description of bookbinding, envelopes, marbling, and machine-ruling. The account books embraced a wide range of first-class commercial work; the sewing was excellent; the books opened well; the head-bands were hand-worked upon the books; the

ruling and printing of headings were well done; the marbling on the edges chaste, yet bright in colour. The ordinary bookbinding consisted of elegant editions of popular works, upon which high-class work, all executed by hand, was displayed. The covers for illuminated addresses and a medallion case were of excellent workmanship.

Blackie and Sons, Glasgow, exhibited a fine collection of their well-known works. They ranked for bookbinding, printing, and publications. The binding of Brown's "Bible," and the editions of "Burns" and the "Ettrick Shepherd," were meritorious; the tooling and gilding were chaste and artistic. Their publications, besides the above, included a very extensive school series, and a series of cheap classics; also the "Imperial Bible," "Imperial Gazetteer," "Imperial Dictionary," "Old Glasgow," and many others; the printing and embellishment were choice. The lithography and black and coloured engravings of their books were admirable, and the bindings embraced inland morocco, smooth and grained morocco, tree calf, half-calf and morocco, and ordinary cloth binding.

A superior collection of books, illustrating excellence in binding, printing, and publishing, was shown by the Oxford University Press. The Oxford Bibles, and the works issued by the Clarendon Press, were sufficient in themselves to carry their own commendation. The case contained a good selection of Bibles and prayer-books, and the classical productions of the Clarendon Press. The superiority of the typography, with the elegance and quality of the bindings and mountings, were sufficiently marked to strike the most casual observer. Taking into consideration the excellence of the paper and printing of their works, the prices were reasonable.

Engel et Fils, Paris, exhibited a collection of the highest class of ornate binding. Their principal exhibits were an elegant edition of Dante, "*L'Egypte*," "*La Forêt*," "*Musée de Deux Mondes*," "*Faust*," "*Atala*," and the binding did justice to the high-class productions of the best printers of Paris. The firm excelled in block-cutting and tooling, whilst the smallest detail was in keeping with the general excellence of the works; the end papers were tasty, and of new and chaste designs.

D. Appleton and Co., New York, exhibited a collection of works, competing in bookbinding, printing, and publishing. The books of this firm were all of first-class merit. "*The American Cyclopædia*" and "*Picture-que America*" are two works issued by them which claimed special mention; the typography is clear, and the wood cuts and steel engravings were carefully and elegantly printed.

T. Richards, Government Printer, Sydney, exhibited an extensive and very instructive collection in the New South Wales Court. The cases contain account books, ordinary bookbinding, printing, electrotypes, stereotypes, woodbury type, specimens of type-founding, lithographic and photo-lithographic proofs. These exhibits stood high in every class; the morocco extra binding and general binding displayed variety and neatness in designs, skilful and substantial work, in general keeping with the class of work bound. The ruling and paging of the account books and registers were first-class; but the binding was deemed by the jury too ornate for general purposes. The specimens of type and material were of good quality, and the type well made; the special type for cattle brands was well cast. The printing was commended for the excellence of the work, especially in the "*Notes on the Exhibition, 1879*."

There were four exhibits of albums in the German Court. A. Foerster, Berlin, showed a choice collection; he claimed a specialty in the binding, in which the mats are each hinged on leather, thus securing durability. There was affixed to each board of some of the albums a brass stop, which prevents the binding being strained by careless handling. The bindings, in leather and plush, were of excellent quality, and embraced novel and appropriate designs.

Under publications, "The British and Foreign Bible Society" exhibited a large collection of the Scriptures in every known tongue. The exhibit was up to the general and well-known excellence of the books issued by this Society.

The "British Mercantile Gazette," London, is an excellent publication, well edited, and replete with matter of importance to the trading community.

An extensive collection of educational and general literature was exhibited by W. and R. Chambers, of Edinburgh, comprising their "Journal," "Book of Days," "Encyclopædia" (which keeps so well abreast of the times that upon turning up the item "Victoria" we found mention made of the present Exhibition), "English Literature," "Information for the People," Killo's Bible, "Miscellany," and many others. All this exhibit was from ordinary stock, and, taking into consideration their cheapness, the printing and binding were very good.

The "Graphic" proprietors exhibited the entire process of producing a high-class illustrated newspaper, and somewhat astonished the uninitiated with the multiplicity of labour necessary to the completion of an ordinary weekly issue. This exhibit invited special recognition for its educational features. The inner wall was decorated with original sketches made for illustrations; whilst on the outer wall was shown, in the likeness of the Duke and Duchess of Cornwall, the various printings necessary for producing a good chromo-engraving. On the table in front were shown the box-wood, with the subject drawn on it ready for the engraver; the engraved blocks, with the electro-plate taken from it. Stereotype plates taken from a page of type, together with the moulds, were to be seen. They also exhibited materials for paper-making, paper, and a large pile of finished work in the form of monthly and weekly editions of the "Graphic."

A small but meritorious exhibit was made by W. Patterson, Edinburgh, who, in addition to his well-known "Guides," showed a superb edition of "Burns," in six vols., Molière's "Dramatic Works," and a "fine art" edition of Sir David Lindsay's "Scottish Heraldic Manuscript;" the letter-press and the illustrations were well done.

Trübner and Co., London, were represented by an excellent collection of literature, which has been presented to the Public Library. This firm is well known for its high-class productions, especially for works upon the history, religions, languages, and literature of India, China, and the East. The exhibit embraced "Hebrew and Christian Records" (by Dr Giles), "English Rule in India," Thorburn's work on "Afghanistan," "Early Records of British India," "Problems of Life and Mind," and many others.

Sampson Low, Marston, Searle, and Rivingtons, London, exhibited a good selection of their works, including a large folio edition of the Gospels, with Buda's illustrations; Guizot's "Histories," "Prince of Wales's Indian Tour." The publications are commended for their first-class character.

A good display of popular publications, comprising cheap dictionaries and hand-books, was made by Ward, Lock and Co., London; they also showed an edition of Doré's "Gift Book," Beeton's "Encyclopædia," Haydn's publications, and Doré's "Guinevere." The works were well printed and neatly bound.

Eugène Behn, Paris, exhibited a collection of cheap books and maps, chiefly educational, and which are used in most of the public schools and colleges in France. The prices of these works were surprisingly low.

Another large collection of educational works was that of O. Delagrave, Paris, including maps, atlases, &c. This house ranked high for its scholastic publications, some of which are intended for the higher branches of education. He exhibited "Tableaux D'Histoire Naturelle," "Diet. de Biographie," "Le Livre de la Ferme," "Rome au Siècle D'Auguste." These were all well printed and illustrated.

A good collection of books, principally of a scientific character, was exhibited by Gauthier-Villars, Paris, who both prints and publishes. He is the printer for all

the leading observatories in France, as well as the "Ecole Polytechnique" and the "Société Météorologique." The printing, especially of tables and mechanical and scientific drawings, was excellent, and the productions were generally of high merit.

Hachette et Cie., Paris, exhibited a large collection of *éditions de luxe*, including the excellent work "Les Saints Evangiles" (illustrated by pen-and-ink etchings by Bida), Dante's "Inferno," and a number of works illustrated by Gustave Doré. Special note was made of the superb edition of "Le Tour du Monde," published at a heavy cost; also, "Roland Furieux," "L'Italie," "Don Quichotte," "Les Bords de l'Adriatique," and "L'Inde des Rajahs;" many of the works of this firm were also included in the exhibit of "Le Cercle." The bindings of their books were of unexceptional merit.

A special feature in the French exhibit was the works printed and published by D. Jouaust, Paris. These were of a distinctive character, being beautifully printed, and the number issued limited. Every book was printed on a special paper in two tints, illustrated with pen-and-ink etchings by the best artists, and bound in vellum. The principal were—"Physiologie du Goût," "Œuvres de François Villon," "Pensées de B. Pascal," "Œuvres d'Horne," "Bibliothèque Muséale de l'Opéra," "Le Livre d'Or du Salon de Peinture," "Psyché," and numerous others, ranging from five francs to one thousand francs per volume.

Another firm exhibiting educational works was that of E. Mon et Cie., printers and publishers, Paris. Their works comprised history, literature, political and social economy, philosophy, travels, fine arts, religion, medicine, laws, &c., the printing and binding of which were superior. In their case was to be found "L'Inventaire Général des Richesses D'Art de la France," "Chefs d'Œuvre de Shakespeare," "Voyage autour du Monde."

J. Rothschild exhibited high-class scientific works, with illustrations, many of which were hand-painted. This collection is one that fortunately has been secured for the Public Library. The work "Forestier de France" was profusely illustrated by engravings, coloured by hand, whilst the letterpress was of equal merit.

LE CERCLE DE LA LIBRAIRIE, Paris.—In the exhibit of the "Cercle de la Librairie" thirty-six different firms were represented, each one publishing a special class of books, either scholastic, literary, or scientific. There were over seven hundred volumes in the collection. The following were the principal works:—"Don Quichotte," "Les Fables de La Fontaine," "Roland Furieux," "L'Enfer" (par Dante, illustrated by Gustave Doré), "Les Saints Evangiles" (illustrated with pen-and-ink etchings by Bida). This work is the finest of the kind yet published. It cost the proprietors one million francs, and occupied over twelve years to prepare before the first volume was issued by the publishers, Hachette et Cie. A collection of the well-known Jules Verne's works—"Tour du Monde en 80 Jours," "Voyage au Centre de la Terre," &c., &c.—and illustrated by the best artists, were exhibited by Hetzel et Cie. Firmin-Didot et Cie. sent "Jeanne d'Arc," "La Sainte Vierge," "L'Ornement Polychrome," and several other works, most beautifully illustrated with coloured plates, and very carefully printed. One of the most remarkable works was published by Berger-Levrault et Cie., of Nancy; it is entitled "Nécrologie des Spinaliens Morts pour la Défense de la Patrie." The text of this book was printed in silver, on a black ground, and was very prettily ornamented. "Saint Vincent de Paul" and "Le Costume au Moyen Age," both illustrated, the former in colours, were from Dumeoulin et Cie. "Histoire des Peintres de toutes les Ecoles," illustrated by wood engravings, is published by H. Leconte. A very interesting collection of illustrated publications on engineering and architecture is shown by Ducher et Cie. and J. Baudry, the latter having contributed a copy of "Les Appartements de S. M. l'Impératrice au Palais des Tuileries," which contained some very fine drawings of decorative work. Many architectural works of importance, showing the different styles, were exhibited by

Vve. Morel et Cie., and included a collection of "L'Art pour tous" and "La Sainte Bible," in two volumes, illustrated by Gustave Doré. "Missale Romanum," in Latin, and splendidly illustrated with steel engravings, was sent by the well-known firm of Alf. Mame et Fils, of Tours, along with several devotional and general literary works, all of which were beautifully printed. A work on string instruments, in three volumes, and illustrated with pen-and-ink etchings, and bound in vellum, was furnished by J. Claye, of Paris. "Les Amateurs d'autrefois," "Amsterdam et Veneise," illustrated with wood engravings; "La Vie de David d'Angers," "Voyage autour du Monde," by Comte de Beauvoir, in which there is an interesting account of Australia, and many other works, were from Plon et Cie., Paris. Some children's reading-books, well illustrated, were exhibited by P. Dnerocq et Cie. Illustrated works on natural history, and "Le Dictionnaire de la Médecine," published by J. B. Balliere et Fils, and some very interesting literary and poetical works by the best authors, were contributed by A. Quantin, Paris. The printing and binding of all the above works were also of a very superior character.

A. Le Vasseur, Paris, justly deserved mention for the excellence of his exhibit, in which was found "Dictionnaire Universel d'Histoire Naturelle," par C. D'Orbigny, in twenty-eight volumes; "Concile Œcumenique de Rome," in eight volumes; "Le Règne Végétal," in seventeen volumes; "Dictionnaire Universel du 19me Siècle," in six large volumes, with a supplement; "Dictionnaire Encyclopédique de la Conversation," in sixteen large volumes.

Some high-class books, with etchings and steel engravings, executed in an unexceptionally good style, were exhibited by L. J. V. Willen, of Paris.

Vilmorin-Andrieux et Cie., of Paris, the well-known seed house, exhibited a series of albums of fodder plants and flowers, mounted on boards and canvas. These have been lithographed in outline and hand-painted, and are valuable additions to the library of the botanist, as well as being of importance to those engaged in pastoral pursuits. The following report on them has been made by Baron von Mueller, K.C.M.G., Government Botanist:—

Melbourne, 25th February, 1881.

To J. Cosmo Newbery, Esq., Superintendent of Juries and Awards. Sir—In accordance with your request, I have inspected the atlases by Mons. Vilmorin of economic grasses and vegetables, and that of flowers, in the Exhibition, and beg to offer the following report:—One atlas consists of nine plates of pasture and lawn grasses, and thirty of select vegetables, each plate containing several sorts of grasses or varieties of vegetables, correctly named, all splendidly coloured, mostly by hand-painting, and all of natural size, and original. The leading sorts of grasses and kitchen vegetables grown in France (and, indeed, in use in most other parts of the globe) are there illustrated in very faithful representations, and in a very showy manner. The second atlas contains fifty plates of flowers, twenty-one of which are of bulbous and tuberosus plants, arranged in bouquets, and comprising the leading species of flower gardens, grown in the open air in France, and generally elsewhere. Each bouquet occupies a plate, and consists of many miscellaneous species, painted by hand in gorgeous tints. The nomenclature is correct, as in the other atlas. The size of the plates is large double folio; the impressions are lithographic; the paper and typography are good in both atlases; and together they represent several hundred objects. These works are, *a priori*, intended as a pictorial display of the most prominent plants, of which seeds (correct as regards species or variety) can be obtained from the great firm of Vilmorin and Andrieux, of Paris. These atlases, which are brought out in France, serve, however, any cultivator or plant or seed trader as reference, and, particularly that of the flower bouquets, would form even a splendid festival gift anywhere. I am aware, from my own literary experience, how much care must be bestowed on the issue of such magnificent works, and what a large expenditure their preparation involves. I may add that these literary productions are under process of continuation. If it is my province in mere reporting to give a definite opinion of these pictorial exhibits, I would remark that, taking all circumstances into consideration, they are deserving to be placed in the first order of merit among articles of their particular class.—I have the honour to be, Sir, your obedient servant,

FRED. VON MUELLER.

P.S.—A portion of the plates of one copy of the work is exhibited in frames on the walls of Vilmorin's space.

Strofer, Munich, exhibited an edition of "Faust," profusely illustrated. Both letterpress and illustrations were very good, and the work was of such a character as to deserve special mention.

Cav. E. Dalmazzo, Turin, exhibited a Polyglot Dictionary in English, French, German, Italian, Modern Greek, and Arabic, and, with the dictionary, showed some of the stereo moulds and plates. This work is a valuable compendium; and the typography, embracing as it did such a variety of type, was a creditable production; it is comprised in two moderately sized quarto volumes.

Garnet Welch, Melbourne, exhibited his handsome volume, entitled "Victoria in 1880." With the exception of the paper, this was the production of colonial artists and workmen, and did credit to the colony.

Howard Lockwood, proprietor of the "Lockwood Press," Duane-street, New York, ably represented the printing and publishing enterprise of the United States. He exhibited printing, publishing, and photo-typography. The exhibit included the "American Stationer," the "Paper Trade Journal," the "Musical and Dramatic Courier," the "American Mail and Export Journal," the "Millers' Journal," the "Stationers' Price Book," and "Lockwood's Directory of the Paper Trade, 1880." The "American Mail and Export Journal" is a high-class trade medium; the illustrations were good. It is carefully edited, well printed, and meets an evident want in commercial circles. The "American Stationer" is a useful publication for those in the trade, and is superior to any other similar publication. The "Stationers' Price Book" is an annual; and, as a work for immediate reference, it is valuable to those in the trade. The "Musical and Dramatic Courier" was illustrated with vignettes of stage celebrities, well printed, and well posted with items of interest to those for whom it is intended. The photo-typographic exhibit was a copy of this paper, and, though reduced to one-ninth, every letter was as clear and distinct as the original letterpress. The "Directory of the Paper Trade" is an annual and useful publication as a work of reference to those connected with the trade. The specimens of job printing of the "Lockwood Press" embraced circulars, posters, books, &c., in English and German. The finish and style in all cases, whether letterpress or illustrations, displayed tasteful design and superior workmanship, whilst the prices were exceedingly low.

O. and C. Merriam, Springfield, Mass., exhibited their "Webster Unabridged," the standard dictionary of the United States. This work contained nearly two thousand pages, and over three thousand engravings; the illustrations and printing were such as place it in the first rank of English lexicons.

A superior specimen of American publications was exhibited by Houghton, Mifflin and Co., Boston, in an edition of Longfellow's poems, in two quarto volumes, profusely illustrated, printed on toned paper; the illustrations were by first-class artists, and executed in the high-class manner for which American publishers are now famed. The binding was an excellent specimen of careful and artistic work, and thoroughly in keeping with the other parts of the production.

McLaughlin Bros., New York, exhibited illustrated toy-books, for which they received awards in publications and printing. They displayed great variety, many attractive novelties: the colours were bright, the illustrations artistic, and the letterpress clear and distinct; whilst the prices were exceedingly low.

Jan Leendertz, Amsterdam, showed a large folio volume of reproductions of the old Flemish masters; it was a work exhibiting the excellence which this early home of high-class printing still maintains.

Amongst these excellent exhibits of printing not already commented upon, was that of Sir J. Canston and Sons, London, printing upon iron tablets. The slow plates, for which the firm has letters patent, were illuminated in the best styles of chromo-printing, and are eminently calculated to serve the purpose of advertising mediums—attractive, and at the same time durable.

The "Patent Enamel Company," Birmingham, exhibited enamelled iron tablets, suitable for church, street, architectural, railway, and general decorative work.

Unwin Bros., London, exhibited some excellent specimens of printing on zinc tablets, which were suitable for window and other advertising, being durable, reversible, and flexible. They also exhibited some specimens of reproductions of Caxton's and other early printers, in which the paper, type, and illustrations were all closely imitated. Their chromo-lithography, embracing calendars, society certificates, menu programmes, window cards, labels, &c., were all executed in the best styles.

A display of good printing was made by Chaix et Cie, Paris, who exhibited a number of useful works, such as railway guides and other similar handbooks. They also exhibited some excellent printing, indicating careful work and exactitude of register, in railway scrip, and other descriptions of public bonds. The establishment is very extensive, and combines type-founding, ink manufacture, binding, &c.

The United States Public Printer, Washington, exhibited a work, in three large volumes, entitled "The Medical and Surgical History of the War of the Rebellion," which was well illustrated; in the printing care and skill had been displayed. The exhibit under this head of the "Reports of the United States Bureau of Education" was also of great merit.

A small but chaste and well-executed exhibit of colour printing, displaying both skill and excellence in workmanship, was made by Matthews and Warren, of Chicago.

Kelly and Bartholomew, New York, exhibited the "American Printer," a high-class serial publication, which was a splendid sample of the perfection attained by typography in the United States. The designs upon the covers, and the illustrations and letter-press of each number, were unsurpassed.

There were no British exhibits of artists' and drawing materials. Pitet Aincé, of Paris, made a very creditable display of brushes and artists' materials. The articles shown by them substantiated the reputation of this house, which has had a growth of fifty years.

Rocher Prost et Cie., Paris, had a fine display of inks, colours (both moist and dry), palettes, calanets, and tonists' boxes and accessories, of superior quality and finish. The house has been established nearly a century, and the class of goods is such as will enable them to compete, both in price and quality, with any other manufacturer.

A. W. Faber, Berlin, exhibited a small collection of artists' materials, which were of first quality.

J. T. Buxton, Melbourne, had a large display of various items included under this head, comprising crayons made from Victorian clays, easels of original designs, palettes, stretchers, models, colour boxes, and drawing-boards, all of which were equal to the best class of goods to be procured in the ordinary market.

H. W. Caslon and Co., London; W. Wollmer, Berlin; A. and F. Vanderborcht, Brussels; and H. Titchener, Melbourne, exhibited a good display of the various styles of printing type and printed specimens of type; regular in quality, fine faces, evenness, and good finish. G. Bruce Son and Co., Albany, New York, and Mackellar, Smiths and Jordan, Philadelphia, exhibited, in addition to the ordinary type, specimens of fancy and ornamental lettering, consisting of interlocking penman type, imitation of engraving, and beautiful borders, displaying great variety, coupled with beauty of design. The wood letters and borders exhibited by W. H. Page, of Connecticut, and C. Furse, Melbourne, represented the material employed in the production of large posters and job printing generally. The American samples were mostly cut on rock maple and birch, end grained; the major portion of the Victorian is cut on selected kauri, which is found to stand as well as any of the imported woods. The borders are made to scale, so that they will join without any chance of spoiling the design. In the two-colour letters, the

size of the blocks for both the inner and outer were exactly the same, so that perfect register is secured without trouble.

An exhibit of composition for typographic rollers and litho. rollers with French skins was shown by Clais and Gallice, Lyons; they employ improved material in the manufacture, and claimed that their rollers served for more than a year without requiring renewing, as well as resisting heat and changes of temperature.

C. G. Roeder, Melbourne, exhibited a good collection of bookbinders' tools and blocks, which displayed first-class workmanship and mathematical exactitude in cutting. He also exhibited some excellent rubber stamps, for desk and pocket use.

Amongst the New Caledonian exhibits there were some excellent samples of lithographic stone, which differed but little, except in colour, from the German, as it had, like them, the property of absorbing grease, and so preserving the drawing during the operation of printing.

A. J. Azzopardi, of Melbourne, showed an extensive and interesting exhibit of electros and stereotypes, illustrating the process employed; the use of wax moulds facilitating the reproduction of the finest lines with clearness and distinctness. The electros were planed at the back by steam machinery, so as to secure exact uniformity of height, which is of great advantage when they are worked with ordinary type; perfect cohesion is secured between the backing metal and the copper shell.

Besides those already mentioned, the following exhibits were worthy of special observation—W. and A. K. Johnson, Edinburgh, atlases and maps. The well-known excellence of these publishers, embracing all the commendable features in this class of work, was maintained by their exhibit. The printing and colours were good and permanent, the maps were well and strongly mounted and varnished, while the prices were extremely low.

Maclure and Macdonald, London, exhibited excellent work in chromo-litho. and general commercial litho. printing, consisting of illustrated show-cards and window advertisements. Every description of work executed by this firm was first-class, and possessed more than general excellence.

F. Appel, Paris, exhibited a series of twenty-eight chromos, a number of lithographs, and some oleos. on tin, and a superior exhibit in oleography, entitled "Miscel Portugais." The whole of these exhibits were executed with great care and taste, the colours were worked accurately, and many of the exhibits equalled hand-paintings.

Some excellent productions in framed oleographs were exhibited by Jeannin Fils, Paris, which were cheap.

A large display of oleographs and other chromo-lithographic work was made by Germany, some of them being of considerable merit. Some scenery, principally alpine and forest, in oleo., framed, were exhibited by E. Gaillard, Berlin; these claimed to be reproductions of oil paintings; they were quoted at very cheap prices, and were creditable productions, in which the over-colouring generally noticeable in this class of work was avoided.

H. Schött, Rheydt, exhibited some excellent specimens of fancy, enamelled, and embossed papers in chromo-lithography, which were commendable productions.

G. Seitz, Wandbeck, exhibited a number of works in chromo-litho. which were both cheap and good, comprising water-colour imitations, oleographs, flower devices, and land-scapes. The "Year in Flowers," and the water-colour imitations, were worthy of special mention.

A large collection of oleographs was exhibited in the Austrian Court by E. Hölzel, some of which were of great merit; the prices quoted were very low, and the work was executed in first-class style. Some sepias were exceedingly well done.

The "American Bank Note Company" exhibited coloured engravings of bonds, coupons, share scrip, bank and Government notes, and postage stamps, all well executed and artistically arranged.

J. A. Lowell and Co., Boston, displayed steel-plate engraved cards, printed by the "dry printing process," suitable for programmes, menus, and business purposes. The delicacy of shading brought out by this process was unsurpassed anywhere, and displayed general artistic and mechanical excellence.

Forbes Litho. Company, Boston, exhibited coloured lithographs and label work which were both cheap and good. Their large theatrical posters were excellent specimens of chromo-lithography.

L. Prang, Boston, showed a number of specimens exhibiting the perfection of chromo-litho. work; one subject shown necessitated forty-five different printings, the skill which was necessarily displayed in the accurate registering of such work, and the gradations of tint resulting, were extremely meritorious.

E. Whitehead and Co., Melbourne, exhibited specimens of engraving and embossing, such as visiting cards, ball programmes, menus, invitation notes, embossed initials and monograms, which were excellent for design and workmanship.

A large exhibit of chromo-litho and general litho. work was shown by C. Troedel and Co., Melbourne, embracing portraiture, landscapes, &c., all of superior merit.

The jury took special care in testing the various exhibits of writing ink, and also the printing inks. The awards made show, in their opinion, the relative worth of the different exhibits, taking into consideration their various merits and prices.

L. C. Stephens, London, exhibited a security ink, which had the property of resisting to a considerable extent the action of detergents. The "Très Non" combined ink was an excellent copying ink. The scarlet and brilliant red were good inks.

Lyons and Co., Manchester, exhibited a remarkably fine scarlet ink, which threw no deposit, and showed great permanency of colour. Their blue-black threw but little deposit when exposed, and the blue-black copying was a good commercial ink.

Toiray-Maurin, Paris, exhibited an excellent sample of copying ink, and their insurance and polygraphic copying inks facilitate the reproduction of a great number of copies with suitable paper. They also exhibited an extra double black ink and a universal writing ink, all of good quality.

Antoine Fils, Paris, exhibited black, combined, copying, and new red inks. Their blacks were good commercial inks; the red and copying were also good.

Carter, Dinsmore and Co., Boston, exhibited excellent samples of copying, "combined copying and writing," and black and coloured writing inks. The writing fluid for book-keeping was commendable for being a good colour, flowing freely, and throwing no deposit when exposed. The violet, black boudoir, crimson, and carmine were all excellent inks.

C. Brandsauer and Co., J. Gillott and Sons, and D. Leonardt and Co., Birmingham, were all exhibitors of steel pens which were unsurpassed for finish, flexibility, durability, and cheapness.

Baignol and Farjon, Boulogne-sur-Mer, were exhibitors of steel pens, pencils, and penholders. The excellence and cheapness of this firm's manufactures secured for them a well merited position.

G. Schwaubäuser, Nuremberg, showed the largest and best assorted collection of pencils, from the finest drawing pencils to ordinary carpenters' and school pencils. They were of good even quality, and free from gritty particles.

The exhibitors of sealing-wax claiming mention were Waterston, Sons and Stewart, Edinburgh; Blackwood and Co., London; and Toiray-Maurin, Paris.

Aikin, Lambert and Co., New York, made a fine display of gold pens, penholders, and pencil-cases. The pens were specially pointed, and possessed many features of superiority over the steel goods, durability and consequent economy being not the least. The designs were chaste, and the ornamentation artistic.

D. Mackinnon and Co., New York, exhibited the "Mackinnon Pen." The principal feature of this pen was the fountain or supply of ink contained in the holder, enabling an immense amount of work to be done in less time and with less fatigue than ordinary; and though not suitable for stenography, it must prove a great boon to all other classes of constant and rapid writers.

An exhibit of a useful and efficient compound, termed "Puzzoline," was made by "The Puzzoline" Company, Boston. This material possesses great strength and other features of superiority over the general run of this class of goods.

Zuccato and Wolff, Great Britain, exhibited a machine for the rapid multiplication of copies of writing, termed the "Typograph." This was an ingenious process by which a paper stencil was produced, and from it a large number of impressions could be printed in a permanent black ink; it was superior to the composition paste process, as it was more rapid and cleanly, and secured the production of many more copies, whilst it did not require renewing. The cost was low, considering the merits of the machine.

E—PRINTING INKS.

C. Lorilleux, Puteaux, Seine.—Their strong bookbinders' ink was very fine, and the No. 1 black machine ink was excellent.

H. D. Wade and Co., New York, submitted a number of samples. Their book ink, job black quick drying, and extra fine book, were superior inks. The rose lake was extra good and very bright; the Oriental blue and cardinal carmine were also extra good; the deep bronze blue, lake, carmine, extra fine red, and geranium scarlet were all very suitable inks; the deep blue, orange yellow, regal green, and yellow gold size were good.

Janeke and Schneemann, Hanover, exhibited a very fine sample of black ink; also a good sample of black machine ink. The brilliant lake and geranium lake were extra good; the light chrome yellow was excellent; the dark silk green, light silk green, and carmine violet were good inks.

The Government Printing Office, Japan, exhibited six samples, which were quoted at very low prices. The black was extra good; also, the deep carmine, the light carmine, red, and light green were very superior.

F. T. Wimple and Co. exhibited some samples of light and dark varnishes, which were of good quality.

In lithographic inks, C. Lorilleux, Puteaux, exhibited good black and coloured, which printed well. P. Orsenigo, Milan, exhibited good blacks, all clean working.

N. Cooke, Melbourne, exhibited some fine coloured litho. inks, which were well made, and worked freely.

J. FERRES,
Pro Jury.

EXPERTS' REPORTS.

PUBLICATIONS.—Dmoud, Paris.—The enterprise of this gentleman entitles him to rank in the first order of merit. The publications all belong to the higher order, such as engineering and architecture; in fact, nearly all the higher professional branches.

PRINTING.—McCarron, Bird and Co., Melbourne.—Their artistic printing will bear a favourable comparison with that shown by any other firm receiving the first order of merit; and I would respectfully suggest that they receive a first order of merit for artistic printing.

Mason, Firth and McCutcheon, Melbourne.—For general, job, and commercial printing they are entitled to a first order of merit.

PENS.—Perry and Co., Great Britain.—This exhibit I recommend should be raised to the first order of merit.

ACCOUNT BOOKS.—Cowan and Co., Melbourne.—I recommend that this exhibit should be raised to first order of merit. The paper ruling and paging are perfect, and as good as any shown.

PHOTOGRAPHIC MOUNTS.—I have examined the card mounts exhibited by Mr. Fox, Melbourne, and believe them to be equal to anything of the sort imported. I consider that he is entitled to a first-class award.

JURY SECTION V.

Class 12.—Photographic Proofs and Apparatus.

JURY.

J. Noone, Chairman, Great Britain.
J. Hicks, Victoria.
R. Russell "
L. Radinger, Austria.

Idem. G. Magliano, Italy.
E. Klingender, Victoria.
H. Kowalski, United States.
E. Cecchini (substitute), Italy.

EXPERTS APPOINTED TO CONSIDER APPEALS AGAINST JURY DECISIONS.

I. Thomson.

L. Hart.

Sir—The jury appointed to examine and report upon the exhibits in Section 5—Photography—have the honour to report as follows, viz.:—

We have divided the exhibits into five sections—

- (a) Landscape photography, including photographs of buildings.
- (b) Portraits taken direct, neither coloured nor tinted.
- (c) Coloured and tinted photographs.
- (d) Enlarged photographs, whether portraits or landscapes.
- (e) Heliotypes.

The jury have decided upon awarding three orders of merit in each section.

The number of the photographs exhibited is very large, most of the exhibitors submitting photographs in several classes. This, together with the fact that they are scattered throughout the building, has entailed a large amount of work upon the jury. The Australian colonies and New Zealand are the largest exhibitors. India and Japan are well represented. England and the continent of Europe have sent a large number of exhibits. The United States of America are represented by two exhibitors only. A great number of photographs from all countries are of a very superior quality.

J. NOONE,
Pro Jury.

REPORT OF EXPERT ON ALBUMENISED PAPERS.

I have the honour to inform you that I have examined, and practically tested, the various albumenised papers for photographic impressions exhibited by G. Rother.

I consider them to be equal to any papers in the market as a whole, and the violet-blue, for special landscape work, superior; giving clean, brilliant, and well-toned prints. No. 3, for portraits, also deserves special notice for its fine lustre and agreeable tone.

JURY SECTION VI.

Class 13.—Musical Instruments and Printed Music.

JURY.

L. Caron, Chairman, France.
G. Gerlach, Germany.
A. Giammona, Italy.
W. Anderson, Victoria.
L. Michaeels, Belgium.

C. Planket, Victoria.
L. Moonen, Switzerland.
W. E. Kephley, Great Britain.
T. Morant, United States.
J. Siodo, Austria.

SUB-JURY FOR PRINTED MUSIC AND MUSIC INSTRUCTIONS.

P. Lema, Chairman. | H. Kowalski. | L. Michaeels.

EXPERT APPOINTED TO CONSIDER APPEALS AGAINST JURY DECISIONS.

W. R. Blazey.

In the system of awards for pianos adopted by the jury, two distinctions only were made—Grand Pianos and Cottage Pianos; and the awards made under the heading of "Concert Grands" were held to include the several sizes of grands which a maker might exhibit. An exhibitor of both descriptions could thus get two prizes, but not more.

The awards were based on the inherent merits of the instruments under each of the following headings:—

Quality of material, finish, &c.—Action.—Tone.—Touch.

GRAND PIANOS.

BLÜTHNER.—In this piano the American system of cast-iron frame and over-stringing has been introduced. The tone is very powerful and rich; it is also very regular throughout the entire scale, and does not lack that sweetness so often wanting in full and deeply-toned instruments. All makers are striving by different means to sustain the sounds. The *sostenente* in the treble of this instrument is equally produced by a duplex scale on the aliquot system: over the strings struck by the hammer is stretched another string, which vibrates by sympathy with the others, and thus continues the vibration imparted to them. Mr. Blüthner, who has tried this system with two and three strings, has wisely returned to his first essay, with only one string. The pianos are well constructed, and the action, which is an excellent repetition mechanism, is well made. A semi-grand piano exhibited by them maintains fully the reputation of this celebrated maker. First award.

BORD (Paris).—In the semi-grand and short grand of this firm we have an instance of a maker placing the economy or cost of production on a par with the qualities which we generally expect to find in a piano. To give a good piano at a low price is a problem which every maker tries to solve. Mr. Bord has obtained a first award for cheapness combined with quality. He has adopted the cast-iron frame and the overstrung system, and is enabled to give at a low price an instrument that meets the requirements of those who wish for a good but inexpensive piano. The tone is sweet, sufficiently powerful for the largest hall; the action, by Schwander, of Paris, is well made, and another quality in favour of this instrument is its lightness. First award.

BRINSMEAD, J., AND SON, London, exhibit a concert grand of good tone, fine treble, sweet medium, and powerful bass. This instrument has been played upon during the whole of the Exhibition, and has borne well the strain placed upon it by its frequent removals from one part of the building to another, and maintained the reputation of the makers for solidity of construction. Like the French makers, Messrs. Brinsmead have retained the old system of wooden instruments and parallel stringing. The innovations due

to American, and adopted so completely by German manufacturers, have to be considered from different points of view, viz., solidity of construction, sonorous tone, and economy of cost. They, as well as the French makers, do not ignore the advantages to be derived from the American system, and if they have not adopted it, it is possibly because they suppose that the vibration is greater and the sound travels further in the piano entirely constructed of wood than in that of iron. This firm also exhibited a semi-grand and a boudoir grand, which fully maintained their reputation. First award.

CAMPO FRERES (BRIDEN), Brussels.—This firm has retained the French quality of tone in its pianos, although it has adopted the cast-iron framework and the overstrung system. The action of the semi-grand instrument is well made, and by the direct action of the hopper all friction is reduced to a minimum. The touch is light and agreeable, the tone even, and the quiet, neat appearance of the cases makes those instruments especially recommendable. First award.

ERARD.—The concert grand instrument of eight octaves is remarkable for its tone, which is mellow, soft, and powerful at the same time, besides being even or regular; its quickness and elasticity of touch, due to the well-known repetition action, give the performer a most complete command over the instrument, and the keyboard is exceedingly well regulated. French makers have shown great hesitation in adopting metal frames and the overstrung system introduced by the American makers, and although Messrs. Erard have used metal bars in the construction, they have employed the ordinary system of stringing. A duplex scale has been introduced in the treble. The utility of this system of prolonging or doubling the string so as to obtain a greater resonance may be open to discussion, but as American and German makers employ it, Messrs. Erard have, no doubt, introduced it in this piano by way of experiment only. A good player can, however, produce new effects by aid of the third pedal, which commands the *sostenente*. The semi-grand piano, richly ornamented with gilt brass ornaments, as well as the cottage, magnificently decorated with gilt bronze fittings and marble columns, are splendid specimens of the high artistic finish which this firm is able to give to the exterior of their instruments. First award.

GREAUER.—Semi-grand piano of average fair quality. The tone is powerful, but metallic, as in almost all iron-framed instruments; the treble, however, is sweet. The action is good, as also the touch. Second award.

HERZ, H.—The concert grand piano of this maker is a very powerful instrument, constructed according to the plans long since adopted by him, and which have established his fame. The tone is clear and brilliant or soft and sweet at the will of the performer, and can be modified by the touch, which is exceedingly delicate, the keyboard being well regulated throughout. M. Herz, like many other makers, seeks to impart to his instruments the *sostenente*. In this piano he has obtained, by a judicious arrangement of the sounding-board, and a careful attention to the action of the dampers, a well-sustained sound throughout, without any of the extra appliances of other makers. The instrument is of solid construction and excellent finish. First award.

HERZ PH. (CANUT, MORITZ, ISER AND Co).—The pianos of this firm, also of wood, and with parallel strings, like those of other French makers, have an excellent quality of tone. The touch is good and the keyboard well regulated. The sustaining power is also great, and, like the older firm of H. Herz, Messrs. Canut, Iser and Co. have employed none of the new appliances of other makers, and have more isolated the sounding-board so as to give the sound a greater length of vibration. The action shows improvements, notably in the diminution of the length of the leverage by a judicious division of the centres. First award.

HOFMANN.—Extra short boudoir grands; cast-iron frames, and overstrung. The action is of the ordinary Vienna make. The tone is clear and sharp. The

sounding-board, being suspended, insures a good vibration. A little more evenness in the tone would, however, be desirable. The cases are well made. Second award.

HOLZL.—Short grand piano of fair quality of tone. The touch is good, the action of ordinary make; the construction is fair. Second award.

IBACH, Barmen.—Semi-grand piano. The quality of the tone of the bass is good, but somewhat metallic; the treble is not so powerful. The action, which looks like Schwander's, works well. Second award.

KAPS.—The piano exhibited by this maker is a short grand, of excellent quality of tone. It is overstrung on the American principle, and Mr. Kaps has not feared the metallic quality which the introduction of the iron frame and broader division of strings might give him. He has also introduced the resonator in the treble, a kind of air chamber over each string, continuing the sound after the hopper has left the strings. The action, by Hermann, of Hamburg, is a very good one. First award.

OESER, F., Vienna.—The short grand piano of this firm is made entirely on the American principle; the tone is powerful but somewhat metalho, though it is even. The action is simple, the touch good, and the price low. First award.

SCHIEDMEYER AND SONS.—Semi-grand piano, also made entirely on the American principle; powerful tone, somewhat metallic. The touch is rather firm, but the action is well made, and the workmanship highly commendable. It is, altogether, a well-finished piano. First award.

SEILER.—Short boudoir grand, the tone of which is also rather short. The touch is ordinary; but the price of the instrument is very low, and this has been taken into consideration. Second award.

THIBOUT (Vve.), Paris, has, like Bord, entirely adopted the American system, and has also endeavoured to compete with that firm for cheapness. The tone of this piano is low and deep. The action, by Rohden, is well made, the touch agreeable, and the workmanship very fair. A cast-iron frame is used, and the instrument is overstrung. Second award.

WESTERMAYER exhibits a semi-grand of very fair quality of tone and touch. In this instrument M. Westermayer has introduced an invention of his own. A bar under the keys may be raised or lowered by means of a screw, and thus diminish their fall at the performer's will. The utility of this system has not been clearly demonstrated, and the use of common hempen string for the return of the hopper must be subject to the divers atmospheric changes of a climate like that of Australia, and is open to objection, from being likely to get soon out of order. The sounding-board being quite detached from the iron frame, an increased amount of vibration is produced. Second award.

COTTAGE PIANOS.

AJELLO, London.—Double overstrung instrument; well constructed. The tone is even, and tolerably good. The repeating check action, by Schwander, of Paris, is well made. Third award.

AUCHER FRERES, Paris.—These pianos are of wood, with straight or semi-oblique strings, bars of iron to bear the straining of the strings, &c.; the tone is fair, the touch agreeable, the action, by Schwander, of Paris, well made, and the cases neat and artistic without being gaudy. Originality for the folding keyboard was claimed, but this invention is well known and adopted by so many French makers as to be hardly worth notice, unless it is as a specimen of workmanship in accurate adjustment. Second award.

BRINSMAN, J., AND SONS, London.—The pianos of this firm are well constructed. Their patent action is greatly simplified by diminishing the number of centres,

repeats well; the sounding-board covering the whole surface of the instrument, has greater elasticity; the vibration of the strings is greatly increased, and the tone improved thereby. An improvement on the system of compensating bars is also introduced, the strings passing over them on to the bridge of the sounding-board; a pressure bar, which can only be regulated by means of a series of screws, controls the pressure of the strings so as to diminish or increase the tone at will. The touch of these instruments is most agreeable. First award.

BLUTHNER.—A large pianoforte, in a handsomely carved oak case. The tone is sweet and pure, the touch excellent. The power of this instrument is greatly diminished by the fact of the case being made of oak, which wood when used solid, as in this piano, and not as a veneer, prevents the vibration, and concentrates the sound much more than in a piano of veneered pine. First award.

BISSE, Berlin, shows a good instrument, carefully made on the American principle. The tone, which is very powerful, possesses sweetness, and the touch is excellent. The case, in walnut, is panelled, and handsomely carved. First award.

BRIZZI AND NICCOLAI, who show a fair sample of their make, have adopted the overstrung system, but, in other respects, they have retained the principles of the European makers. The piano is well constructed, the action is good, and the tone and touch of the kind that has hitherto characterised this firm. First award.

BORD, Paris.—The quality of the tone of these pianos is good, the touch light. There being no iron in their construction they are more transportable, the cases are in the simple, but neat, French style. Their cheapness is also a recommendation. Second award.

BOISSELOT, Marseilles, exhibits pianos the touch of which is agreeable; the action is good, but the tone somewhat woody. They are made on the ordinary French principle. Second award.

BERRENS, Antwerp.—Four instruments were exhibited by this maker. The best of these had its wrest-plank unglued, and could not therefore be judged with complete fairness; the others were of fair average quality. Fourth award.

CAMPO FRERES (BERDEN), Brussels, show four pianos, tolerably well constructed. This firm manufactures its own actions and keyboards. The touch of their pianos is elastic; the tone is even throughout, and not disagreeable, and the cabinet work of the cases is neat and plain. Second award.

CLOSE, Melbourne.—The jury, without making any award to this instrument, which was composed of foreign materials, consider it a creditable essay.

CHALLEN AND SON, London.—In these pianos cheapness has been combined with a good quality of tone, and a light, agreeable touch. The double overstrung model is built on the new principle, with a cast-iron frame. The action is well made, and the cases, constructed carefully so as to resist the changes in a variable climate like that of Australia, are not without elegance. First award.

DASSEL, Berlin, has a piano made on the American system, with a cast-iron skeleton frame, wood wrest plank, but covered by a plate of brass, agraffe, &c. The instrument has a good appearance, though the case, with its carved trusses, looks rather heavy. The tone is deep but metallic, and the touch will, no doubt, lose its roughness when the piano has been played on some time. Second award.

DÖRNER, Stuttgart, also exhibits an instrument of the generally accepted system—cast-iron skeleton frame, &c. This maker is progressing, on the whole; and although the tone of his piano might be more equal, the action, a check repeater, is well made and finished, and the touch fair. Second award.

DEBAIN, Paris, exhibits good pianos of the usual French type, and low in price. Third award.

FEARD (Vve.), Paris.—These instruments undoubtedly take high rank for artistic decoration, for few manufacturers have, like this firm, made the handsome exterior a specialty. The piano in the style of Louis XIV. is a marvel of artistic taste. Of the other four pianos exhibited, a grand oblique, of 7 $\frac{1}{4}$ octaves, was considered by the jury as deserving a first award for its full and even quality, the brilliancy of its tone, its perfect action, and the excellence of its touch. As in their grand piano, this instrument is entirely of wood, and without overstringing. First award.

ECKERMANN, Hamburg.—Instruments of the ordinary kind, with skeleton frame, wrest plank, covered with a brass plate. The tone is full in the treble, somewhat poor and metallic in the bass, and the breaks are distinguishable where the iron bars occur. The case is well made, as also the action, by Hermann. Second award.

ECKE, Berlin.—Overstrung piano, cast-iron frame; wooden wrest-plank, covered with a brass plate, for which there seems to be little utility. The action is by Lexow. The tone is subdued, and might be more even, and the bass is somewhat indistinct. Third award.

FOSTER, Loban, shows a large instrument, in an architectural case that seems rather top-heavy. The tone is even, but not so full as might have been expected from such a large instrument, the quantity of wood used in the case no doubt preventing the vibration. The frame is in cast-iron, full-sized, and the strings are crossed. The action, by Hermann, could have been better applied, yet the touch is not disagreeable. Second award.

GEHRHARDT, Berlin.—Cheap instrument; good action, by Lexow. Third award.

GERSTENDERGER, Liegnitz.—Tall instrument, high frame, great length of string. Third award.

HERZ, H., Paris.—This maker exhibits some excellent upright pianos, of moderate price, the actions of which are carefully finished. The quality of the tone is remarkably sweet, clear, and brilliant. M. Herz is one of the French makers who have preferred securing solidity in the disposition of the wood to adopting the American system. Like all French instruments, the outward appearance of the cases is that of simplicity and neatness; nothing is sacrificed to show. First award.

HERZ, PH. (CANUT, MORITZ, ISER AND Co) —All these instruments are of wooden construction. The action is simplified, the tone sweet and mellow, but the upper notes lack brilliancy. What these instruments lack in power they possess in the delicacy and lightness of the touch. French makers, as a rule, have always preferred to soften down the tones of their instruments rather than go to the other extreme. The instruments are solidly constructed, and the same improvement in the isolation of the sounding-board, introduced in the firm's grand pianos, is also employed here. First award.

HUNDT AND SON, Stuttgart, have an overstrung piano. The case in black, or what is termed "early English" style, is neat. The instrument is not so large or high as those of most German makers; the tone is good, but there seems to be an excessive use of metal, which materially interferes with the vibration. The action, by Keller, is excellent. Second award.

HÜLLING AND SPANGENBERG, Zeitz, have a very neatly made instrument, of fair tone and touch; the action is well finished, and the general appearance good. Second award.

IVORY AND SONS, London.—Bichord and trichord instruments. The cases, in mahogany, veneered with walnut, are solidly constructed. Third award.

IBACH, Barmen.—Very tall instrument, of powerful but metallic tone in the bass, and inferior in the treble. The touch is fair, and the cases elegant. Third award.

IRMLER exhibits a piano of fair touch and good double action. The piano is made on the American system. Second award.

KANHAUSER, Stuttgart.—Iron piano of the ordinary average kind. Third award.

KNAKE, Münster, shows an ordinary piano. The case is fine, but the action and touch are not equal to other instruments that have gained this firm their reputation. Third award.

KUHLE, Berlin.—Well-made iron instrument. Third award.

LINDNER UND SOHN show progress in the construction of their piano, which is of fair average tone and touch. The system of double bolts is specially commendable. First award.

MAND, Coblenz.—This instrument has very clear upper tones, a good bass, and an evenness throughout. The action, made by Hermann, has precision, and facilitates the touch. The American overstrung system and a cast-iron skeleton frame, with four bars, is employed, wrest plank of wood, agraffes, &c. It is altogether a well-made instrument. First award.

MAYER, Munich, exhibits a piano of average merit. Second award.

MOLA, Turin.—Cheap instrument; straight trichord, with French action. Third award.

NEUFELD, Berlin.—Tall, overstrung piano; cast-iron plate; Hermann action. Third award.

NEUMANN, Hamburg.—The high piano of this make gives a great length of string to the bass, but it has not improved their tone to the extent that could have been expected. Power is obtainable, but at the expense of sweetness. The frame, of very strong cast-iron, has a wooden bridge let into it, and the sounding-board is kept independent of it. The action is by Isermann. Third award.

PFAFF, Berlin.—This is a cheap piano, with Hermann action. The skeleton frame in cast-iron covers the wrest plank, but leaves several openings for the wrest pins. The soft pedal raises the hammers, and shortens their distance from the strings by nearly one-half; and the hopper, striking the string with diminished force, produces a softer tone. In M. Pfaffe's piano the hopper makes a noise when falling back on the wooden bar. The tone of this overstrung system is better than its touch. It has not, however, kept in tune well. Third award.

QUANDT, Berlin.—Iron piano, of the ordinary kind, Bermann action. Third award.

ROESLER, Turin.—Trichord instrument, similar to Mola's. Third award.

RÖHMILDT, Weimar, who, though established in 1845, never exhibited in any European Exhibition, exhibits a piano the sound-board of which is solidly constructed with several wood crossings, independent of the cast-iron frame. A system of air resonant chambers has been introduced in front of the strings below the action, and repeated behind the instrument, but it has very little, if any, effect, and the jury could not ascertain its positive utility. Third award.

RUCH, Paris, exhibits two pianos—one in walnut; the other in pearwood, stained in imitation of ebony, and in the Louis XIII. style. The strings are half oblique. The tone is of fair average quality, the upper notes somewhat woody, but the construction of the instrument is good and the price low. The action is by Schwander. Second award.

ROSENERANZ.—This old firm has a good and cheap piano, on the overstrung principle. A full-sized cast-iron frame, covering the wrest plank, is used, being different to most of the German manufacturers, who have abandoned it, and content themselves with the ordinary wood wrest plank resting on the smaller

and lighter skeleton frame. The action of this piano is good; the tone and the touch are fair. Second award.

SCHIEDMAYER AND SONS.—The cottage piano of this firm is a large overstrung instrument of good appearance and elaborate finish. The tone is mellow and regular throughout, the action well made, and the touch agreeable and elastic. A cast-iron skeleton frame is employed. First award.

SCHIEL, Cassel.—Large instrument, of superior make, excellent quality of tone, and agreeable touch. The frame is in wrought-iron, which has an advantage over cast-iron, that it offers greater resistance to the tension of the strings, and is not so brittle. The action, both glued and screwed in all essential parts, and united to the keys, is tolerably well finished. First award.

SCHWECHTEN, Berlin.—This firm exhibits a piano which is solidly and well constructed. The tone is clear and sweet in the uppers, and the bass very powerful. The action, by Isermann, of Hamburg, is a very fast repeater, and of great flexibility. First award.

SCILLING, Stuttgart.—Overstrung piano, of full tone and good construction. Second award.

SOUFFLO, Paris.—Exhibit an upright piano strung on a new system. The plan resembling an inverted fan, the bass strings obliquing to the left and the upper strings to the right; this necessitates an outward case considerably broader than those of ordinary pianos, and it is less elegant. The construction is solid, and the action is exceedingly well finished. The tone is clear, but has not that full, deep power of the German instruments. Second award.

SCHLAKE, Hanover.—High and large instrument. Cast-iron skeleton frame, with side uprights, to give additional support to the wrest plank; overstrung; tone, very fair in the medium. Third award.

SCHMIDT, Berlin.—Overstrung iron piano. The action by Hermann is good; the tone and touch are fair. Third award.

TROST.—This is the only Swiss maker exhibiting. Mr. Trost has adopted the American system, cast-steel frame and overstringing. The action is German, and well made; the quality of tone, of the usual deep metallic kind, is full, and not without sweetness; the cases are solidly constructed, and altogether this firm sustains its character as being one of the best in Switzerland. First award.

THIBOUT (VVE), Paris, exhibits a good instrument, with iron frame. The tone is full and deep, and approaches the characteristics of the German instruments. The action is by Rohden, and the touch very fair. Second award.

TRAU BROTHERS.—Solidly constructed wooden instrument; the only one of the kind in the German Court. Third award.

VAN HUYFE, Antwerp.—This instrument is well constructed. Fourth award.

WEATHERILL, Melbourne.—Instrument constructed of foreign materials, the case of colonial woods. The manufacture of pianos in Australia is yet in its infancy, but Mr. Weatherill has imparted a sweet tone to his instrument. Fourth award.

WESTERMAYER.—Piano of good tone and fair touch. The action, by Fisher, is made according to the system which the exhibitor has introduced in his grand pianos, already criticised. Repeats well. Third award.

ZETTER AND WINKELMANN exhibit an instrument of very large and high dimensions; the tone is deep, but metallic and uneven; the touch is firm. A full-sized cast-iron frame occupies nearly the whole surface, though it does not cover the wrest plank. The system of regulating the action of the hoppers to produce soft tones is not an improvement, as it is likely soon to get out of order. In other respects the instrument is good. Second award.

ACCESSORIES.

GEHRLING, Paris.—Models of actions made by him, and used by different pianoforte manufacturers. These comprise all the different systems in use in France and Germany. They are well finished, and cheap. The felt hammers are generally mounted by Kneip, of Paris. First award.

CORBEEL, Paris, exhibits a very fine keyboard of limewood, the best to prevent warping; each key is covered with the finest quality of ivory, cut and shaped in one piece, and not in two, as is generally seen. The sides and front of each key are also lined with ivory, and a screw let into each side allows it to be regulated perfectly without the necessity of twisting or turning the key pins. First award.

ESTEVE, Paris.—Harmonium reeds of the ordinary kind, the broad reeds even extending to the upper C₂ of the four-foot tone, the curved reeds, and the *harpe colienne*. All these different reeds are stamped out of hammered copper, and fastened by hand on to a cast brass framework; each reed is thus independent of the other. This is the system that is used by all the great harmonium makers—Alexandre, Mustel, Debain, &c., &c.—and has a great advantage over those made on the German principle—viz., several octaves of reeds, all fastened on one brass plate, that broken ones can be removed or replaced more easily; that glued over the pan chambers they vibrate more freely, without any loss of wind, and that the slightest deviation which may affect one reed does not necessarily affect the whole set. They are well curved and accurately voiced; those of the *harpe colienne* are very fine and carefully tuned. First award.

CHURCH ORGANS, HARMONIUMS, AND AMERICAN ORGANS.

BARNETT SAMUEL AND SONS, London, exhibit harmoniums of powerful tone, the quality of which approaches more that of the Stuttgart make than the French. They are well suited for accompanying large numbers of voices. First award.

BURGER AND Co, Bayreuth, show a fine carved oak harmonium in an upright piano-case, having four sets of reeds, and the percussion action invented by Martin, of Paris; good quality of tone. There is also a smaller instrument, with two and a half sets of reeds, of fair tone. Second award.

DEBAIN AND Co., Paris, exhibit two instruments; one with five sets of reeds and knee *grand jeu*, another with only two and a half sets. The quality of these instruments is the same that has characterised this firm's make during the lifetime of M. Debain. Their tone is powerful—too powerful, perhaps. All the mechanical parts are exceedingly well made, and the construction is very solid. First award.

FULLER, Melbourne, exhibited an organ of very fair quality of tone; the jury were not, however, able to test it fully, owing to some defect in the wind chest. Fifth award.

MOLA, Turin, reedy-toned instrument, with percussion action. Third award.

PELOUBET, PELTON AND Co. have a variety of styles. One instrument, especially, with two keyboards and German pedals, appears well made, and has a handsome case; there are separate coupling pedals, and a blower at back, as in most instruments of the kind. Second award.

STEINMAYER, Dettingen.—Three small instruments, well made; the cases (panelled) are very solidly constructed; the tone is fair. Second award.

SMITH, Boston, has a good collection of organs, fair in construction and moderate in cost. The cases are elaborate. Although these instruments have the reedy quality of tone inherent to the American organ generally, the touch is agreeable, and they speak very freely. Mr. Smith is one of the makers who has upheld the high standard of this kind of instrument. First award.

TAYLOR AND FARLEY show a large number of organs of fair make. Second award.

BARREL-ORGANS, ORCHESTRIONS, AND PIANOS.

DEBAIN, Paris.—**MECHANICAL PIANO.**—This is the ordinary piano, on which is superposed a mechanism resembling the old hamoniphone, with pianoforte hammers attached, striking the strings according to the previously arranged annotated boards (planchettes), which are fitted on the top plate of the mechanism, and have the same effect as the barrel in other instruments when a handle is turned. When the piano is to be used alone, the mechanism can be raised by a simple contrivance, and the keys and ordinary action employed in the usual manner. Second award.

GAVIOLI, Paris, exhibits some small portable instruments that can be placed on a table or chair, and the quality is above the average. An instrument calling for special notice is a harmonium and barrel-organ combined, formed of the usual barrel mechanism, but with a keyboard and treadles added, so that it can be played either with the hands or by turning the handle. First award.

GIULIANO exhibits a mechanical piano. Third award.

HEINE.—The instrument of this maker is also a fine one. The tone is very fair; the workmanship and mechanism good. Second award.

IMHOFF AND MÜLLE.—**ORCHESTRIONS.**—The instrument exhibited by this firm possesses a good quality of tone, and there is precision in the attack of the notes, the wires opening the valves being well regulated. The barrel notation is tolerably correct, though one of the movements was taken rather slow; the mechanism is excellent. First award.

IVORY AND Co., London, have exhibited a piano with organ attachment, producing the effect of the "harmonioorde." It is the old form of Robinson's attachment modified, the organ or harmonium portion being on the suction principle. The quality of the organ is superior to that of the piano, but the utility of this combination must be doubted, because the effect is far from pleasing, and no music is ever written for it. No award.

MOLA, Turin.—In addition to the percussion harmonium already mentioned, this maker exhibits a small mechanical piano, but it was too much out of tune for the jury to decide on its merits as fairly as they could have wished. Fourth award.

BRÜDER AND SONS.—This is a large instrument for hall or street use, very powerful in tone, well made. Second award.

MISCELLANEOUS INSTRUMENTS.

The RAJAH SOURENDRO MOHUN TAGORE, Calcutta, who contributed some interesting papers on Hindoo music to the Social Science Congress held in connection with the Exhibition, has forwarded for exhibition a large collection of the musical instruments, ancient and modern, of the Hindoos.

Hindoo instruments can be divided into four classes:—

1. With gut or wire strings—rubab, tamboura, sitar, sarungee, vina, ganoon, &c., played either with plectrums or the bow.
2. Covered with skin—mridung, dholkee, tublas, dacca, daph, nuggara, &c.
3. Percussion instruments—munjeera, zhanij, curtar, &c. (cymbals and castagnets belong to this class).
4. Wind instruments—surnar, banslee, torey, &c.

Nearly all these are represented in this collection.

In Europe, makers have become clever by dint of studying the laws that regulate the emission of sound. In India, on the contrary, the manufacture of instruments is left to cabinetmakers, who are generally ignorant of the simplest elements of music, and have no means of finding proper proportions. The drums are covered with sheepskin, new and unprepared. The neck and body of the sarungii

are often cut in one single piece; the "belly" covered with skin, instead of thin wood. The flutes are mostly pieces of bamboo such as nature has formed them. Still, this collection is curious from many different points of view, and the instruments are finished in better style than many we have seen; and the exhibitor is to be highly commended for having furnished such an interesting collection. The jury award honourable mention.

MALAJARAJAH OF JOHOR, Straits Settlements.—Native drums and tambourines. Honourable mention.

VIOLINS AND OTHER STRING INSTRUMENTS.

BAILLY, P., Paris, exhibits two violins. One is a copy of Stradivarius, of excellent tone and good proportions, and well constructed. The other, which is superior to the first, is a copy of Maggini, very carefully made, well proportioned, and of rich and mellow tone. Second award.

BROWN, J., Melbourne.—Several violins exceedingly remarkable for finish. Third award.

BROWN, W. J., Melbourne.—An exceptional award was made to this exhibitor for the careful execution of repairs to a collection of instruments by great masters belonging to Mr. Reed. First award.

BEAR, R. L., Melbourne.—Well-made banjo. Third award.

DOW, W. H., Melbourne.—This maker shows two violins and a tenor of exceedingly creditable make. The tone is mellow and regular. First award.

DIENER, J., Graslitz.—Instrument of fair quality (violin). Third award.

GRANDINI, Paris, exhibit four violins of clear and powerful singing tone. One in particular was remarkably good for its low price. Others showed the same relative excellence. First award.

HUTTL, Vienna.—Instrument of fair quality (violin). Fourth award.

HAUGHTON, C., Melbourne.—Banjo of good make. Second award.

HAUGHTON, J. T., Melbourne.—Banjo of good make. Second award.

JAMES, J. W., Melbourne.—Copy of an Amati. Good construction and fair quality of tone. Second award.

LUTZ AND CO., Vienna.—Instrument of fair quality (violin). Fourth award.

LUTZ AND CO., Vienna.—Instrument of fair quality (guitar). First award.

MARRIOTT, J. W., Melbourne.—Banjo of good make and finish. Second award.

PEACOCK, T., Melbourne.—Five violins; colonial woods have been used for the sides and back, and seem to be well adapted for the purpose. One of these instruments, in particular, has a pure, clear, and full tone. Second award.

PLACHT AND CO., Vienna.—Violin of good average quality, third award; and for guitar of good make, second award.

TIFFENBRUNNER, Munich.—Violin of good quality. Second award.

WOLFF BROTHERS, Kreutznach, exhibit a very complete collection of string instruments—a quartette set of excellent make and clearness of tone, some mute violins, violas, &c. There were also specimens of copies of the great masters of great purity of tone. First award.

- ZITHERS.

HASLWANTER, Munich.—Well made zither. Second award.

KIRCHNER BROTHERS, Vienna.—Zither, of good tone and well finished. First award.

KIENDL, Vienna.—Zither of good tone, well finished. First award.

TIFFENBRUNNER, Munich.—Well-made zither. Second award.

WOLFF BROTHERS, Kreutznach.—Well-made zither. Third award.

HARP.

ERARD (Vve.), Paris, are now almost the sole makers of Europe. The excellent finish of the handsome instrument they have exhibited is most remarkable; the mechanism approaches perfection, the ornamentation is simple and elegant in the extreme. First award.

WOOD INSTRUMENTS.

BESSON, of London.—This firm, also established in Paris, is of French foundation, and shows some well-turned flutes, clarionets, and bassoons, of excellent quality of tone. First award.

BREINL, Graslitz.—Flute of good average quality. Second award.

GRANDINI-GERONIMO, Paris, already mentioned above, have a very fine exhibit of fluted clarionets and fifes, exceedingly well finished, pure in tone, and moderate in cost. First award.

JOMSONICK, Berlin.—Clarionet of good make and tone. Second award.

LECOMTE, Paris.—In addition to an excellent silver flute of tolerably mellow tone, this maker shows some clarionets equal in finish and pure in tone as those of any other maker. First award.

LUTZ AND Co., Vienna.—Well-made clarionet. Fourth award.

PELLITTI, Milan.—Excellent exhibit of flutes, clarionets, and oboes. A flute in F attracted the attention of the jury in particular. First award.

RUGGERO, Naples.—Excellent clarionets and bassoons. Second award.

UHELMANN, Vienna.—Clarionet of pure tone, good make. First award.

WALLIS, J., London.—Good collection of flutes, clarionets, and fifes, of excellent make. Second award.

BRASS INSTRUMENTS, &c.

ADATTE, Naples.—Complete set of brass instruments, of good quality of tone. First award.

BARNETT SAMUEL AND SONS, London.—Metal fifes and flageolets, nickelled. Second award.

BESSON, London and Paris, exhibits a complete set of brass instruments of most excellent make. All the instruments are pure in tone and well finished. First award.

FUCHS, D., Vienna.—Complete set of brass instruments, good finish, excellent quality of tone. First award.

HUTTL, Vienna.—Complete set of brass instruments, excellent quality of tone and finish. First award.

LUTZ AND Co., Vienna.—Complete set of brass instruments, well made, and of good quality of tone. First award.

LECOMTE AND Co., Paris.—Complete set of brass instruments. Excellent construction, purity of tone, and clearness. First award.

PLACHT AND Co., Vienna.—Complete set of brass instruments, well made, good tone. First award.

PELLITTI, Milan.—Complete set of brass instruments, of good quality of tone. First award.

SANTUCCI, Verona, shows cornets and baritones of good quality of tone and good workmanship. First award.

TOMSCHIK, Brünn, exhibits cornets and trumpets of excellent tone. Second award.

UHELMANN, L^{te}, Vienna.—Complete set of brass instruments of excellent make and finish, good quality of tone. First award.

INSTRUMENTS OF PERCUSSION.

PLACHT AND Co., Vienna.—Big drum, cymbals, side drum, well made. First award.

ROSATI, Pistoia (Italy).—Cymbals. First award.

MUSICAL BOXES.

The exhibits of some of the most noted makers have been grouped into a collective exhibit in the same manner as the Swiss makers have done with their watches and exhibits of jewellery; Messrs. Bremond, Conchon, Langdorff, Metert, Petite and Co., Mittendorff, Nicole Frères, Perrelet and Co., being awarded collectively for quality of tone and good construction, First award; and for special improvements in mechanism, First award.

HELLER, Berne.—Musical boxes of good quality. First award.

VIOLIN AND OTHER STRINGS.

BARNETT SAMUEL AND SONS, London.—For strings made of colonial gut. First award.

GRANDINI-GERONIMO, Paris.—Good violin and violoncello strings in silk and gut. Second award.

KIRCHNER, Vienna.—Good zither strings. First award.

PLACHT AND Co., Vienna.—Good collection of strings. Second award.

RUFFINI, Naples.—Excellent quality of strings. First award.

TREVISAN, Bassano.—Collection of good violin strings. Second award.

OCARINA.

FIEHN, Vienna, who introduced Metzculini's invention into Germany, has a good show of various sizes. Second award.

BAGPIPES.

GLEN, J. AND R., Edinburgh, show the best-finished bagpipes, and of good resonance. Second award.

GILMORE, R., Melbourne.—Good instrument, of colonial woods. Second award.

SIMPSON, A., Southland.—Colonial wood bagpipes. Fourth award.

For the Jury,

L. MOONEN.

JURY SECTION VII.

Class 14.—Medicine, Hygiene, and Public Relief.

JURY.

Dr. Robertson, Chairman, Victoria.
A. Roberts, Great Britain.
Dr. Jamieson "
Dr. Woinarski, Austria.

Dr. Renzio, Italy.
Dr. Magnin, France.
Dr. Gray, Victoria.
Dr. Girdlestone, Victoria.

SUB-JURY FOR DISINFECTANTS.

Dr. Jamieson.
Dr. Magnin.
M. Bonies.

J. Kruse.
Expert—G. Munley Hopwood, F.C.S.,

C. W. Maclean "
F. J. Pirani, M.A., C.E. "
R. E. Josephs "
John Munro "
Joshua A. Kay "

EXPERT APPOINTED TO ASSIST THE JURY IN CLASS 23, AND TO CONSIDER APPEALS AGAINST JURY DECISIONS.

E. Morey.

The jury have now the honour to submit their report of the exhibits that have come under their review, and of the awards that have been made:—

CLASS 15.—MATHEMATICAL AND PHILOSOPHICAL APPARATUS.

This class was very well represented in the Exhibition, especially in the German, French, British, and Victorian Courts; and interesting exhibits of mathematical instruments were to be found in almost all the foreign courts.

Germany showed a fine collection of surveying instruments, from the highest class geodetic theodolite to the smallest mining theodolites and compasses.

Ordinary forms of theodolites and levels, of excellent workmanship, were shown largely in the British Court, and also in those of France, the Netherlands, and Victoria.

The exhibits are referred to below in the order in which they were examined.

KRAFT AND SOHN, Vienna.—An exhibit of well-made and superior drawing instruments for technical, mechanical, and mathematical purposes. The designs were found good and practical. Prices very moderate. Third award.

MOULY, J. V., Brussels.—Anemometer, or apparatus for measuring the velocity of wind, air drafts in mines, ventilators, &c.; well made, but presenting no novel features. No award.

ARROUT, L., Paris.—Aneroid barometers, with metric graduation; very superior and well-constructed instruments. Fourth award.

BALSBROCK, AINE, Paris.—This was an exhibit of levels, sextants, and a small transit instrument. All the instruments were excellently made and well designed. The transit instrument of about two and a-half inches aperture was fitted with a well-divided circle, and was conveniently mounted. Second award.

BERNADAC-DOMINIQUE, J. B., Paris.—An exhibit of spectacles and spectacle lenses of various grades of workmanship. Prices remarkably low. No award.

COLLOT, A., Paris, exhibited standard measures of capacity, weighing balances and weights. All of these were made on the metric system, very substantial, and workmanship fair. Fourth award.

EXTREME, L., Paris.—This was a small exhibit of very cheap scales and weights for druggists, dispensing chemists, jewellers, &c., somewhat crude in form. Fifth award.

GUTHARD, S., AND Co., Paris.—This was an important exhibit of aneroid barometers and manometers, or pressure gauges of various forms and for varied uses. Among them was some delicate manometric apparatus, by which the depth of water in tanks and reservoirs is indicated on dials in the offices of factories. Third award.

HARDY, E., Paris.—The jurors examined a portion only of this exhibit—namely, a gyroscope and anemometer. These were excellently made, and of good design. Fourth award.

HERVE-CUON, Paris.—This exhibit was one of clocks, with aneroid barometers and thermometers attached. For award, see Report, Class 20.

ISELI, R., Paris.—A very good exhibit of barometers, thermometers, levels, and other mathematical instruments. The meteorological instruments were not of the highest class, but moderate in price. The surveying instruments were very well made, of a good design. Optical parts excellent. Fourth award.

LEMAIRE, A., Paris.—A very fine collection of opera and field glasses of all kinds, and binocular telescopes. All these were of a high order of merit, and among them were opera glasses of beautiful design and finish. The optical qualities of all that were tried were found unexceptionable. First award.

MARTIN, A., Morez, Jura, France.—An exhibit of spectacles and lenses of every description. Very economical in price. Third award.

MORET, BAILLY, AINE, Paris.—An important exhibit of spectacles and lenses. Prices extremely moderate. Third award.

NAUDET AND CIE., Paris.—The aneroid and holosteric barometers in this exhibit were excellent, and moderate in price. Some were graduated on the metric system. Second award.

PICRE, A., Paris.—This exhibit was a simple apparatus for reflecting the rays of the sun on a blackened vessel, and illustrating the utilisation of solar heat. It consisted of a hollow conical reflector, in the centre of which was placed a vessel to hold

water or other fluids. When the hollow cone is presented to the sun's direct rays they are reflected in a condensed form on the vessel, which soon becomes heated sufficiently to boil water within it. No award.

RADIGUET ET FILS, Paris.—Parallel and optical glass, of various kinds, such as that used for mirrors, sextants, and philosophical apparatus. Surfaces very true and well polished. Third award.

REDIER AND Co., Paris.—An exhibit of very superior aneroid barometers, with ricked sector movements. Workmanship excellent, and prices very moderate. Third award.

VUILLET, C., Morey, Jura, France.—Spectacles of various qualities and descriptions, and very low in price. The lenses were well finished, and the frames strong and durable. Third award.

BERNADAC AND CROUS,—A similar exhibit to the above. Fifth award.

SOCIÉTÉ DES LUNETTIERS, Paris.—This was a somewhat extensive and varied exhibit of spectacles, optical apparatus, drawing and other mathematical instruments, levels, &c. The jurors especially commended this exhibit for the very economical production of excellently made apparatus and instruments of all kinds. First award.

FLIL ET FILS, Paris.—This was a somewhat unique exhibit of homogeneous optical glass from these well-known makers in blocks and discs for prisms, telescopic object-glasses, and other scientific purposes. Some of the blocks exhibited were of extraordinary density, and of a very high refracting power. Those intended for telescopic object-glasses were of wonderful purity and uniformity of density. First award.

BÄMBERG, K., Berlin.—A very good exhibit of a few well-made optical instruments, theodolites, levels, and compasses. These instruments generally were of a good practical form, moderate in price, and well finished. Second award.

WASCHLAPP, J., Berlin.—This exhibit consisted of two or three sextants (prismatic) and some fluid binnacle compasses; all excellently made, of good design, and well finished. Third award.

MEISSNER, A., Berlin.—A high-class exhibit of levels, theodolites, sextants, prismatic circle and sextant stand. The levels had all azimuth motions and a novel mode of vertical adjustment. The graduation of the sextants and theodolites was especially good and clear. The sextant stand is of a peculiar and somewhat complicated construction; it is intended for use in determining the eccentric errors of sextants, and is similar to the stands used for this purpose at the Seamen's School, Hamburg. Both the design and workmanship was highly commended. Third award.

HARTNACK, Dr., Potsdam.—This was an exhibit of three achromatic microscopes and accessories from this well-known and celebrated maker. The optical portions of these instruments were of the highest order of merit. The stands were well made and finished; the forms, however, although strong and steady, were somewhat clumsy. First award.

SCHIECK, F. W., Berlin, exhibited six microscopes of good construction. The optical parts were excellent, and the price of the apparatus very moderate. Third award.

SCHMIDT AND MANSCH, Berlin.—An exhibit of a saccharometer, spectrum apparatus, microscope, &c. These instruments, both in the optical and mechanical parts, were very well constructed and finished. The cost moderate. Second award.

DÖPFEL, P., Berlin.—Some drawing and physical instruments, of good construction. Fourth award.

STUCKRADT, P., Berlin.—An exhibit of a series of standard weights in platinum and gun metal, from a milligramme to twenty kilogrammes. The weights were good in form, and admirably finished. Second award.

REIMANN, L., Berlin.—A small exhibit of cheap and excellently made chemical balances. Second award.

PICHT GERR AND CO., Rathenow.—This was a very important exhibit of opera glasses, spectacles, lenses, and optical material. The prices were moderate, and optical work good. Second award.

STOLLNREUTHER AND SOHN, Munich.—An exhibit of a peculiar kind of portable balance of the steelyard form, and of standard weights, of excellent construction, intended for the use of inspectors of weights. The weights ranged from one gramme to twenty kilogrammes; also a set of crystal weights. Second award.

BREITHAUPT AND SOHN, Cassel.—This well-known firm exhibited specimens of their theodolites, levels, and other surveying and measuring apparatus, all of first-class construction and workmanship, and reasonable in price. The most important item was a large astronomical theodolite, of beautiful design, and requisite construction in all its details. A mechanical mode of reversing the telescope and horizontal axis in its bearings, as well as the perfection of the graduation of the circles, was much commended by the jury. First award.

FRENDEL, O., Cassel.—This was an exhibit of six instruments, comprising a theodolite, a tachymeter, compasses, and levels. They were all of the German form, well made, convenient for use, and economical in price. Third award.

HAHN, A. AND R., Cassel, exhibited repeating theodolites, compass, sextant, &c., of very good design, and excellently made. There were several new features in these instruments to facilitate their adjustments and use; a peculiar form of micrometer, engraved on glass, for facilitating accurate and rapid reading of the graduated circles, also attracted the attention of the jury, and was much commended. Third award.

MITTELSTRASS GERR., Magdeburg, showed a small exhibit of cheap apparatus, consisting of a splancton and a case of drawing instruments. Fourth award.

OTT AND CORADI, Kempten.—Exhibited some excellent mathematical and surveying instruments, presenting some novel features in the adjustments and in the stands. They also exhibited one or two forms of polar planimeter, pantograph, and elliptograph. Most of these instruments were of good design and excellent construction, more especially in the case of the levels and theodolites. Second award.

RICHTER AND CO., Chemnitz.—This firm exhibited a number of cases of drawing and mathematical instruments of excellent design, and presenting several novelties. A form of drawing pen with sapphire points, and a very peculiar and useful form of dotting pen, were especially noticed by jury. The prices were also very moderate. Second award.

RIEFLER, K., Munich, exhibited a number of cases of drawing and mathematical instruments of somewhat novel design, beautifully finished, and very perfect in all the details. The joints and modes of fitting adopted were much commended. The prices also for such high-class instruments were considered very moderate. Second award.

VOIGTLANDER AND CO., Brunswick.—This branch of the well-known firm of opticians exhibited a number of excellent binocular and ordinary telescopes. The optical parts of these were of the highest order of merit, and scarcely to be excelled in brilliancy and definition. The cases were principally in plain black leather; some of them are constructed of aluminium, and therefore very light and convenient for use. The prices, however, were considered by the jury to be rather high. Second award.

ELSTER, S., Berlin.—An exhibit of standard measure of very good construction. Fourth award.

CESARA GIACOMO, Milan.—A small exhibit of drawing instruments of ordinary form. Fifth award.

D'AMICO, ANDRONICO G.—A form of what is commonly known as the chromograph. No award.

GIUSTI, A., Venice.—An enlarging lens of considerable dimensions, intended for condensing sun-light for photographic enlarging. The glass used had too much colour. Fifth award.

PONTI, C., Venice.—This was an exhibit of a megascope and a large binocular telescope, mounted in a somewhat unique style, but wanting in steadiness and optical excellence. Fifth award.

HOLDSBOER, B., Aulheim. This was an exhibit of two excellent Y levels, with agate stud bearings, of very superior make and finish, and of good practical form. Also a flavimeter, with an electric attachment, arranged to ring a bell immediately the current varies complete a certain number of revolutions. Third award.

KERN, J., Aarau.—A small exhibit of beautifully finished mathematical instruments by this well-known maker. The form of the instruments was of the ordinary type, and presented no novel features: the workmanship and design throughout were, however, very good. Third award.

JUVET AND CO., New York, exhibited some globes of novel construction, styled "Time Globes." They consist of well-made celestial and terrestrial globes furnished with interior clockwork, by which the diurnal rotation of the earth is represented. Second award.

AVERY, W. AND T., Birmingham.—In the extensive and important exhibit of this well-known firm were a number of chemical, assay, and other balances for scientific use. Among these were especially noted a peculiar balance styled "A Net Weighing Platform Machine," a set of inspector's standards for both weights and measures, and some excellent chemical balances, remarkable for the economy in cost combined with good design and workmanship. First award.

BAIKER AND SONS, London, exhibited an excellent collection of compasses—ship, pocket, and prismatic—aneroids, surveying instruments, &c. These were all of good design, and well made, of very good quality, and extremely moderate in price. Second award.

BESS, T. O., London.—A very good exhibit of metallic hydrometers and saccharometers, of the Sykes and allied forms. The workmanship in these instruments was unexceptionable. Third award.

DOLLAND AND CO, London.—This firm exhibited a few surveying instruments, such as theodolites, levels, &c., and some binoculars and hand telescopes; moderate in price and well made. They also showed a very fine astronomical telescope, of four inches aperture, mounted on a very neat and convenient equatorial mounting. The optical qualities of this instrument were tested and found excellent. Both the design and work in this telescope were much commended. Second award.

HARLING, W. H., London.—This maker exhibited a fine collection of high-class drawing, mathematical, and surveying instruments; economical in cost, and unexceptionable in workmanship. Third award.

HUSBANDS, H., Bristol.—An important exhibit of surveying instruments, microscopes, telescopes, &c. Some very well-made theodolites, of the Metford pattern, and levels of the Froude-Metford type, were shown. All excellently made, and presenting some novel features in appliances for adjustment, as well as convenient forms of known adaptations. Some first-class microscope stands, and very superior objectives, were also shown. There was a high class of workmanship apparent throughout this exhibit. First award.

RABONE, J., AND SONS, Birmingham.—An exhibit of steel tapes, rules, levels, &c.; well made, and low in price. Third award.

STANLEY, W. P., London.—An excellent exhibit of first-class drawing and mathematical instruments, comprising eidographs, pantographs. Collection of fluid colours, and all accessories for architect and survey draughtsmen, including several novelties.

among the separate instruments. The scales were especially commended, and the instruments generally displayed the best workmanship and finish. Second award.

WOOD AND CO., Liverpool.—An exhibit of theodolites and levels of the ordinary form, very well made, and economical in price. Third award.

BARTON, R., Melbourne.—This was a very interesting exhibit of a peculiar dividing and ruling machine, originally invented and used for ruling fine lines on polished metallic surfaces, producing what is known as the "iridescent ornament," used some years back for buttons, known at the time as "Barton's buttons." The apparatus, which has been in abeyance for a number of years, has been set up afresh by the exhibitor, who has worked out *de novo* the method of producing the iridescent ornament of which some beautiful examples are exhibited. The machine has also been fitted for engraving and ruling on glass, and some fine specimens of micrometers and minutely graduated tubes were also shown. First award.

CRISP, H., Ballarat.—A small exhibit of some electrical apparatus, such as induction coils, somewhat rough in construction. No award.

GAUNT, THOMAS, Melbourne.—This was a combination of three exhibits, forming a large and important display of various kinds of philosophical apparatus, including theodolites, levels, barometers, thermometers, microscopes, telescopes, and numerous specimens of chemical and philosophical appliances in glass. The workmanship throughout was very creditable, and furnishes a good example of the progress made in these branches of manufacture in the colonies. For microscopes, Fifth award; for survey instruments, Fourth award; for barometers, thermometers, &c., Fourth award.

JENNINGS, J., Melbourne.—An excellent exhibit of spectacles and eye-glasses of all forms. Fifth award.

RASCHE, W., Melbourne, exhibited a polar planimeter of Amsler's form. No award.

TROWBRIDGE, J. F. AND E. F., Melbourne.—A case of microscopic slides, and objects very neatly mounted and labelled. No award.

WOOD, W., AND CO., Melbourne, exhibited an improved aneroid barometer, with a special indicator to show whether it is rising or falling; also, a binoptic prismatic lantern for producing dissolving views with one light, and very compact form of triple oxyhydrogen dissolving lantern, with convenient form of "dissolving gas taps," by which the oxygen is turned off one lantern and on to another, leaving the hydrogen still burning. These lanterns were all excellently made, and the improvements referred to were very effective. Fourth award.

STOWE, L., Wellington, New Zealand, exhibited a very ingenious and cheap calculating machine, adapted only for adding numbers, for which purpose, after a little practice, it was very efficient. In calculations where numerous and long additions are required, this little apparatus will enable the work to be done with the minimum of fatigue. Fifth award.

WHABER, H., Brisbane.—A small collection of spectacles with frames and holders, manufactured by the exhibitor. The style and workmanship were both very good. Fifth award.

CLASS 23.—CUTLERY.

PIAULT, J., Paris.—This was a very fine exhibit of table cutlery of every description. The designs of the handles were excellent, especially those in ivory, which were most elegant and tasteful. The steel was found of the finest quality, with highly finished surfaces. Very moderate in price. First award.

BATISSE-DUMAS, Paris.—A small exhibit of cheap household cutlery. Good material, and well tempered; useful, and very low in price. Fourth award.

VITRY, A., Paris.—A collection of well-made scissors, moderate in price. Fourth award.

DITBERT, J. E., AND Co., Nonstadt.—An exhibit of pocket knives of considerable merit, from the most complex to single-bladed. All well made and finely finished; material excellent. Fourth award.

HENCKELS, J. A., Solingen.—This was a fine collection of cutlery, of various kinds, principally of knives and scissors. The pocket cutlery especially commended. Second award.

ELBERFELDER JOINT EXHIBITS, Elberfeld.—A collection of various kinds of cutlery, the material of which was excellent. Third award.

LECOULTRE, J., Sentier, Switzerland.—A small exhibit of razors of a peculiar form. The blades were thin leaves of very fine steel, excellently tempered; these blades are in strong steel backs in handles, and to each handle several blades are fitted. The thinness of the blades renders grinding unnecessary. Third award.

NORTHFIELD KNIFE COMPANY, Connecticut.—This was a small exhibit of well-made, useful, and durable pocket knives, made of excellently tempered material. Third award.

BLYDE, J., Sheffield.—An important exhibit of assorted cutlery. The pocket knives and scissors particularly were of excellent design, quality, and finish. Third award.

EVANS AND WORMULL, London.—A small collection of well-made and finely-finished pocket knives, scissors, and table knives of a high class. Second award.

JOHNSON, CHRISTOPHER, AND Co., Sheffield.—This was a very fine and extensive exhibit of almost every form of cutlery. The great excellence of workmanship, degree of finish, and good material apparent throughout this exhibit, was much commended by the jury: First award.

READ, T., Birmingham.—A small exhibit of table knives, the steel blades of which are plated in a peculiar way, styled by the manufacturers "Arcanum plating." The knives have a nice appearance, proof against corrosion by the ordinary acids of fruit and other food, while they retain the keen edge of a steel blade. Second award.

YORRILL, R., AND SON, Sheffield.—A small exhibit of very excellent scissors, of tasteful design and exquisite finish. Third award.

RODERS, JOSEPH, AND SONS, Limited, Sheffield.—A splendid exhibit of all kinds of cutlery of the highest excellence. The pocket and table cutlery was finished in a manner which the jurors considered could scarcely be excelled, and every portion of this extensive and varied exhibit was found to possess the same evidence of high-class manufacture. First award.

WARD, F., AND Co., Sheffield.—A capital exhibit of cutlery of various kinds, well made and finished, from the best material; good in design, and durable. Fourth award.

WOSTENHOLM, G., AND SON, Limited, Sheffield.—An exhibit of pocket, hunting, and table knives, scissors, razors, and table cutlery of very great excellence. The finish and quality of the material throughout was of the highest merit; the designs also were much commended by the jury. First award.

DONCE, J. AND R., Sheffield.—A portion of the exhibit of this firm consists of cutlery for the table, pocket, &c. It was found to be well made, strong, and of first-class material throughout. Third award.

MESSER-INDUSTRIE-EXPORT Co., Westin.—An exhibit of somewhat rough made cutlery, of very good material, and exceedingly low in price. Fifth award.

WHITE, J. B. AND T., Melbourne.—A small exhibit of very well-made sheep shears, of excellent material and very fair finish. Fourth award.

WRAGG, G., Melbourne.—A collection of butchers' and other knives, of a strong and durable description. Very fair finish. Fifth award.

CLASS 26.—CLOCKS AND WATCHES.

The exhibits in this class, which included watches, chronometers, and clocks of all kinds, were somewhat numerous, and many of them were found to be very extensive, and of very high order. The variety of the horological apparatus exhibited made it desirable to adopt a classification which, while it facilitated the determination of the awards, would also indicate more clearly to the public the various kinds of horological manufacture here placed before them.

The keen competition that has taken place at former exhibitions between different makers and different countries in the perfection and economy in the production of watches and chronometers has been repeated at this exhibition; and the jury at their first meetings made arrangements for obtaining the co-operation of the Observatory for carrying out a complete series of timing trials of any watches or chronometers that might be submitted by the exhibitors for such competition tests. The Government Astronomer having undertaken to have these trials made at the Observatory, the various exhibitors were informed accordingly, and between fifty and sixty watches and chronometers were sent for competition by eight exhibitors. A report by Mr. E. J. White of these trials, with the results, will be found at the end of this report.

As regards the horological exhibits generally, the jury were much struck with the great progress indicated, more especially in the economy of production, precision of workmanship, even in the cheaper forms, and in the great excellence combined with moderate cost of many of the highest-class productions. They also note with great satisfaction that very important progress in the Australian colonies, more especially in Victoria, is indicated by numerous and creditable specimens of workmanship in the Australian Courts; and in one class—viz., turret clocks—the colony of Victoria takes well-deservedly the only first award.

The largest exhibitors of watches were the American Watch Company, Waltham, Mass., U.S.A., and the Swiss State collective exhibit. Very important and high-class exhibits were sent by Nicole, Neilson and Co., of London; A. Lange and Sohne, Dresden; Baume and Co., Switzerland; Kilpatrick and Co., London; Buckney, London; Kullberg, London; Savoye Frères, France; Associated Manufacturers of Besançon, France, and others.

In clocks, France and Germany exhibited the most largely, and both countries were represented by an extensive display from numerous exhibitors of almost every variety of clock; Austria, also, had a very important exhibit; America exhibited a few calendar clocks only; while the Great Britain and Colonial Courts were remarkable for the absence of any but isolated exhibits of this class.

The inspection of the exhibits occupied the jury twenty-five meetings, extending over several weeks, the attendances at which were always full; and there were seldom more than two or three of the jurors absent at any meeting, and at many the whole number were present.

The classification adopted by the jury was as follows:—

1. Marine chronometers.
2. Pocket watches, ordinary, chronometer, and complicated, such as repeaters, chronographs, &c.
3. Turret clocks.
4. Astronomical regulators.
5. Regulator clocks.
6. French clocks.
7. German clocks.
8. Cuckoo and musical clocks.
9. Calendar clocks.
10. Miscellaneous exhibits of clocks, watches, and materials.

In judging the exhibits in this class each jurymen took notes at the inspection, giving marks under several pre-arranged heads—such as *workmanship, design, cost, &c.*—and after the examinations were completed each one gave in his marks for every exhibit he had inspected, and from the total number given in by the members of the jury, divided by the number of jurymen present at the examination, the award number was arrived at in each class, except in the cases of the marine chronometers and pocket watches submitted for trial at the Observatory, where certain numbers deduced from the result of the trials were added, and the awards made as a special class.

It will be noticed that, acting upon this decision, the number of first awards given in this class is limited to such exhibits as stand first in the combined inspection and test marks, and really possess higher value as compared with similar awards in other classes.

The exhibits examined and adjudicated upon by the jury in this section are here given, according to the classification adopted.

1.—MARINE CHRONOMETERS.

Only one exhibit of this class entered for competition—namely, Victor Kullberg. Mons. Rodaut, of Paris, exhibited one very excellent specimen; but as two others exhibited at Sydney were injured in transit, the one exhibited was withdrawn from competition. Thomas Ganut, of Melbourne, exhibited a marine chronometer, made at his establishment, as a specimen of workmanship, but did not put it in competition as a time-keeper.

KULLBERG, VICTOR, London.—The marine chronometers here shown were of the highest order of merit, not only for originality—their special feature being the beautiful new compensated balance, the invention of the exhibitor—but for their good design and splendid workmanship. Three of these were submitted to the trial tests at the Observatory, and the results will be seen by reference to the tables in the appendix. First award.

2.—POCKET WATCHES AND CHRONOMETERS.

SWISS COLLECTIVITY EXHIBITION OF WATCHES.—To this collection thirty-two Swiss watch manufacturers contributed specimens of their work. It formed an extensive and splendid exhibit of all kinds of pocket watches, and contained specimens of nearly every kind made for the various markets of the world. Among them were found watches whose price at the factory is only a few shillings, as well as the most elaborate chronographic, calendar, and repeating watches; also specimens of the most minute as well as the largest ever made. A very large proportion of the work of these watches is made by machinery, except in the case of the more complicated forms; and some of the contributing firms have adopted a system of strictly uniform patterns and measures of parts, so as to secure what is known as “interchangeability”—that is, that similar parts of the same class of watch are so exactly alike that they can be changed from one watch to another. Although there were several kinds of escapement in this collection, the lever appears to be fast superseding all others, even among the Swiss manufacturers, who so long retained the horizontal form of escapement. In these watches what is known as the “straight line” form of lever escapement seemed to find most favour. It was claimed for this exhibit that the watches were low-priced, compared with their quality; and from inquiry the jury found the factory prices to compare very favourably with most of the other exhibits of this class. Several novelties of adaptation of recent improvements were noticed among this collection, more especially in connection with the chronographic and split seconds mechanism and stem-winding gear. There were some fine specimens of complicated watches in this exhibit; the mechanism

of the single, double, and other chronographs was considered by the jury to be specially good. Among such watches may be named some extremely complicated examples, perfect triumphs of fine workmanship, such as chronographs with perpetual calendar and phases of the moon; repeaters, striking hours and quarters, hours, quarters, and five minutes, and hours, quarters, and single minutes. The jury was much struck with the artistic designs of the ornamental cases of many of the higher class of watches, as well as the high finish and exquisite workmanship in the cases themselves generally. In the collection of watch material and parts of watches, the jury specially noticed a collection of balance springs of all forms—flat, cylindrical, spherical, overcoil, &c.—tempered so peculiarly that they did not lose their elasticity when heated almost to a dull red heat. Six watches from this exhibit were submitted to the timing tests at the Observatory, one of which took the first place among watches for time-keeping qualities. First award.

AMERICAN WATCH COMPANY, Waltham, Massachusetts.—This company showed a very extensive and splendid exhibit of pocket watches of various kinds—all, however, with the English lever form of escapement—with or without compensated balances, both key and stem winders, some of the higher grades being made with a new form of compensated balance, known as Woerd's, after the inventor, who is the mechanical superintendent of the factory. The jury noticed among these watches several points claiming attention—among them a special chronographic attachment, which is capable of being applied to any watch of the company's make of the fourteen size at a small cost; the chronographic seconds-hand works on a dial fixed at the back of the watch. The simplicity and apparent efficiency of this form commended itself to the members. They also noticed watches with water-tight and dust-proof cases, and several effective and improved forms of eccentric and micrometric regulators. The decoration of many of the cases was found worthy of note, especially as regards the engraving, enamelling, and chasing. The fine construction of cases styled "Bassine," with extremely accurate and dust-proof joints, was highly commended. The special features claimed by this exhibit were that in the manufacture of these watches every piece and part is made in the Waltham factory, that they are all perfectly interchangeable, and that machinery and instruments are used in the construction by which the utmost precision of form and size is absolutely obtained, whereby the company claim to produce a better performing watch at a lower price than in any other way. The jury carefully examined into these various points, and found the claims, as regards interchangeability, precision of form, &c., as well as economy of production, to be established. As regards performance, the trial tests at the Observatory furnish satisfactory evidence of their excellence in this respect. The exhibits of parts of watches, springs, &c., enabled the jury to form a very clear estimate of the finish, &c., of the various grades of these watches, and they found that while the parts of all the grades are the same in form and size, the degree of finish, exquisite and perfect in the first grades, diminishes gradually to the lower grades, where, however, the quicker moving and more delicate parts still retain an excellent practical finish. It is worthy of notice that in these watches—so far, at least, as the movements are concerned—there is a general and even quality throughout all the grades. Specimens of economical railway guards' watches were among this exhibit, which attracted the attention of the jury for their integrity of workmanship, finish, and apparent durability. The jury was much struck with the lowness of the factory prices of these watches compared with their high quality; and they also noted that the gold cases were all of 18-carat gold, and the silver of sterling quality. The advantages accruing from the adoption of a fixed and universal system of interchangeability of parts by a factory producing so many watches as this company appears to do, is of the greatest importance if carried out in its entirety; and although the system appears to have been in practice with some of the Continental makers, especially the Swiss, for some time past, it does not appear to have reached such a general

system as it has with the American Watch Company. The jurors were shown that all parts of watches made by this company can be obtained everywhere in a perfectly finished state, and ready to replace at very small cost any similar damaged or worn part in any Waltham watch. In consideration of these various points, and of the high place these watches took in the Observatory timing tests, the jury awarded to this exhibit a first award.

LANGE AND SOHNE, Glashutte, near Dresden.—This firm sent a small exhibit of their well-known and exquisitely made watches, comprising ordinary watches, chronographs, and repeaters, mostly stem-winders. A noticeable feature was the strength and smoothness of action in the stem-winding mechanism in these watches. The lever escapement is used throughout, with some noteworthy specialities in details of construction—for instance, balance staff without shoulders, a very simple repeating mechanism, and a good form of up-and-down indicator for going barrel. Many of the watches are made dust-proof by the use of a well-fitting dust mug. The jurors were highly pleased at the high finish, good design, and general integrity of the watches in this exhibit. Six of these watches were submitted for time-test at the Observatory, and, as will be seen by the appendix, performed excellently. Second award.

KILPATRICK AND Co., London.—This firm exhibited a small collection of fine English-made watches, both ordinary and complicated, of a high class, as well as a collection of cheap watches, manufactured by the English Watch Company. The latter were very low-priced, strong, and durable. The jurors' attention was especially attracted by a very high-class keyless chronograph, repeating hours, quarters, and minutes, of very great excellence and splendid finish. Four of the highest class watches of this exhibit were submitted to timing trials at the Observatory, the results of which will be seen in the appended report. Three of the cheap silver watches of the English Watch Company were also tested, but being uncompensated, and not very closely adjusted, their performance was not satisfactory. Second award.

BAUME AND Co., Geneva.—This was a large and important collection of watches of various kinds and high-class workmanship. Some chronograph watches in this collection were of great merit, and the stem-winding mechanism strong and safe. The jury noted some specialities in the centre second mechanism, in the construction of the joints of the cases, and in other details, which were highly approved of. Six of these watches were submitted to the Observatory timing trials, and gave excellent results, as will be seen by reference to the appendix. Third award.

NICOLE, NIELSEN AND Co., London.—This well-known firm exhibited a small but choice collection of pocket watches, both ordinary and complicated, consisting of chronographs, double and triple chronographs, perpetual, calendar, and other special forms, with complete sets of parts of watches in their several stages of manufacture. Among the chronographs was one styled "Triple chronograph," as it marks the time of two consecutive observations, and the interval elapsed between the first and third. The calendar watches were beautiful specimens of complicated work. The finish and general quality of these watches was highly commended by the jurors. Six watches from this exhibit were submitted for time tests at the Observatory, and the results are given in the appendix. Second award.

KULLBERG, VICTOR, London.—A small exhibit of very high-class watches, of exquisite workmanship. The points which most attracted the attention of the jury were the high finish and well-made and heavy compensation balances. The prices were, however, considered somewhat high. Three of these watches submitted for time test at the Observatory maintained the high reputation this exhibitor has obtained as a maker of marine chronometers. Third award.

BUCKNEY, D., London.—A fine collection of watches of various grades, pocket chronometers, chronographs, ordinary watches, railway guards' watches. In some of these watches, which were of the highest order of merit as regards finish and workmanship, were some points claiming originality, and well worthy of notice.

One of these is a very simple and good method of transposing the stem-winding from barrel to hands, and another an arrangement for preventing overbanking of the lever. The performance of six of these watches submitted to the timing tests at the Observatory is given in the appendix. Second award.

SAVOYE FRERES, Paris.—A collection of ordinary and complicated watches of very high merit in workmanship and design. As none of these watches were submitted for the time tests, the jury cannot report upon their actual performance. Fourth award.

BESANCON COLLECTIVE EXHIBIT, France.—This was a somewhat large and very interesting collection from the well-known factories at Besançon, in France, where a very complete horological college and training institution has been established. It was an excellent exhibit of watches of various forms, with movements and parts of watches and watch-making tools, the work of students in the institution. A marked tendency to adhere to old forms was, however, apparent in this exhibit, although the workmanship and finish in the best watches was of the highest class. Among the complicated watches were some independent centre watches with two trains, chronographs and repeaters characterised by most excellent workmanship. No watches from this collection were submitted for time test. Fourth award.

3. TURRET CLOCKS.

There were five exhibits of this class in the Exhibition—one in the Victorian Court, two in the German, and two in the Italian Court.

GAUNT, THOMAS, Melbourne.—This was a fine specimen of the new English form of turret clock (with Denison's gravity escapement), lately constructed for the Emerald Hill Town Hall. It comprised going and hour-striking part, with leading-off and striking gear, and has been utilised in the Exhibition for working a large dial in the main avenue, and striking the hours upon a large thirty-hundredweight bell. There was a new form of maintaining power mechanism in this clock, invented by its designer, Mr. C. W. Maclean, which is simple and safe, and transfers the exact weight power to the train while winding. The design and style of workmanship were excellent, combined with precise fitting and durability of all the parts. First award.

BEYES, F. A., Hildesheim, Germany.—Two excellent and well-made turret clocks, one with going, hour-striking, and quarter trains of the ordinary form, with Graham's dead-beat escapement; the other with going part only, with a peculiar form of remontoire. The workmanship and design were very good. Second award.

FONTANA, CESARE, Milan.—This exhibit was a three-part turret clock, of somewhat primitive design and fair workmanship. Fifth award.

SOMMARUOGA, ISIDORO, Milan.—A two-part turret clock, indifferent both in design and workmanship. No award.

4. ASTRONOMICAL REGULATORS.

WHITE, W. J., Melbourne.—A well-made clock, with Denison's four-leg gravity escapement and mercurial pendulum, with iron jar and steel rod, going a month without winding. Fine steel wire is used instead of silk or catgut for the weight. The case, a very good one, was made of Australian wood—viz., blackwood and Huon pine. Second award.

5. REGULATOR CLOCKS.

LAZARUS UND ROSENFELD, Gablonz, Bohemia.—This exhibit consisted of clocks with long pendulums, known as Vienna or German regulators. They were excellently made, of good design, and very economical in price. Second award.

BECKER, GUSTAV, Freiburg.—A collection of clocks of various forms. The long pendulum wall clocks, or regulators, were especially tasteful in design, the movements excellent, and well finished. The prices were very moderate. Second award.

6. FRENCH CLOCKS.

There were thirteen exhibits in this class, all in the French Court, and they formed a grand collection of all varieties and grades of this kind of clock.

BROCCOT, P., Paris.—This well-known maker exhibited an excellent collection of clocks, both simple and complicated. Among the latter were chime clocks, perpetual calendar clocks, &c. The designs were most artistic, and workmanship of the first class. All these clocks had the Broccot patent suspension of the pendulum. First award. To a second exhibit of special complicated clocks, of very high class, the jury gave a third award.

RODANET, A. H., Paris.—This exhibit contained a marine chronometer, made by the exhibitor (who is chronometer-maker to the French navy), but not entered for competition, and several forms of clocks of excellent style and work. Third award.

GAY, LAMAILLE AND CO., Paris.—Marble, bronze, and gilt clocks, alarms, and repeaters. A very extensive exhibit of various forms of high-class French clocks. The movements were all of the usual French form, and well made. The principal feature of this exhibit was the great variety of marble and metal cases in which the works were placed, and the good design apparent throughout. The prices were also very moderate. The jury noticed in some of the carriage clocks a simple, ingenious contrivance for preventing the star-wheel being jerked out of position while striking when travelling, the invention of the exhibitors, which is commended for its simplicity and effectiveness; and also, in the case of heavy clocks, a very simple and useful arrangement for starting the pendulum, which the exhibitors style a pendulum starter. Second award.

QUINET AND RICHARD, Paris.—This was an exhibit principally of carriage clocks, of which there was a somewhat large and important display, all of exquisite finish, good design, and moderate in cost. Third award.

DIETTE, FILS AND HOUN, Paris.—An important and miscellaneous exhibit of carriage and other clocks, alarms, &c.; very good design and finish, and low in price. Third award.

REDIER AND CO., Paris.—Among the miscellaneous exhibit of this well-known firm there were a number of excellent clocks of various description and design, excellently made, and moderate in price. Third award.

ROLEZ, J., Paris.—A collection of marble clocks, very moderate in cost and well made. Third award.

HERVE-CUON, Paris.—A collection of clocks, combined with aneroid barometers, thermometers, &c. Among them some very novel designs, with high-class workmanship and finish. Third award.

MERCURY AND JURSY, Paris.—This exhibit showed the application of porcelain and china decorations in clock cases. Fourth award.

BOREL, F., Paris.—An exhibit of very cheap portable and marine clocks, night clocks, &c., with interchangeable parts. Fourth award.

JARY FRERES AND CO., Paris.—This exhibit was from a firm who manufacture rough work for other clock makers, and was interesting in showing how cheaply moderately good clocks and watches can be made. Fifth award.

SAUTREUR, LABITTE, Paris; E. DESSIAUX, Paris; E. GUIGNON, Paris.—These were three exhibits of the cheapest form of French drum clocks, useful and durable. Fifth award.

7. GERMAN CLOCKS.

In this class were included clocks not only of the usual German forms, but also the American form of clock manufactured in Germany, of which there were some large exhibits.

LAUTER, A., Carlsruhe.—This was an exhibit of clocks in artistically designed cases of inlaid work, in metal and wood; the movements themselves were not made by the exhibitor, but were from the best firms in Germany. Second award.

JUNGHANS GEBR., Württemberg.—A large exhibit of clocks, made by machinery on the American system. The movements were strongly and well made, and the cases, quite after the American style, well finished. The factory prices were very low. Second award.

WINTERHALDER AND HOFMEIER, Schwarzenbach.—This was an exhibit of excellent clocks of the German form, both with long and short pendulums, in handsome cases, and with well-finished works. Third award.

HAAS, JULIUS, Württemberg.—This was also an exhibit of clocks made on the American form; all the movements well and strongly made; cases well finished, of the usual form; cost very moderate. Fourth award.

SCHWEIGER, AUGUST, Tryberg.—An exhibit of cabinet clocks, regulators, works for fancy clocks, and miniature clocks. Both the movements and cases of all these are well designed and finished. Fourth award.

8. CUCKOO AND MUSICAL CLOCKS.

WEHRLE AND Co., Furtwangen.—These clocks were well made, with elaborately carved cases. The movements good and fairly finished, and the musical parts very perfect. Third award.

HETTICH, GORDIAN, Furtwangen.—Four cuckoo and bird clocks, good in every respect, and low in price. Third award.

BONTEMIS, B., Paris.—Two clocks with mechanical singing birds attached. This firm is well known for the manufacture of the singing bird mechanism rather than of clocks, which appeared here only as an adjunct to the musical machine. Third award.

MAURER AND HÖFLER, Eisenbach.—The chief features in this exhibit were a clock with musical-box chimes, and one or two cuckoo clocks. The cases were very well and tastefully made, but the works of the ordinary type. Fourth award.

9. CALENDAR CLOCKS.

ITHACA CALENDAR CLOCK COMPANY, Ithaca, New York.—A collection of calendar clocks made in the American clock style. The clocks themselves were good ordinary American clocks, with the calendar mechanism, which is very simple, and so arranged as to require the minimum amount of power from the clock for its operation. Provision is made for leap years; cost very moderate. Second award.

10. MISCELLANEOUS.

THOMAS GAUNT, Melbourne.—A miscellaneous but important exhibit, illustrative of the stage at which clock and watch making had arrived in Melbourne. Some excellent hall quarter clocks and marine timepieces were shown with first-class workmanship. An excellently finished marine chronometer, a lever watch, and parts of watches were also exhibited, as well as several watch cases in different stages of manufacture. There was also a capital specimen of a railway station clock, well made and durable. This exhibitor also showed a novel piece of horological work, a racing chronograph clock invented by himself; it had a three-foot dial showing ordinary time, and a contre seconds hand, moving by steps of quarters of a second, which can be started and stopped by an electric current. The jurors highly commended the whole of this exhibit. Second award.

SCHAEFFER AND BUDENBERG, Manchester.—A portable watchman's chronographic clock; each time an appropriate key is inserted, a register is made on a revolving paper disc; it is intended that the requisite keys should be kept in various parts

of an establishment where a watchman is required to visit, so that a record of the time of his visit is made by inserting the key. Third award.

BRADLEY AND HUBBARD MANUFACTURING Co., Connecticut.—Travellers' clocks. Fourth award.

WURTEMBERGISCHE UHRENFABRIK, Solingen.—An exhibit of recording clock for railway trains, showing time of starting and stopping trains; also forms of Burk's watchman's chronographic clock. Fourth award.

DENIS BROS., Melbourne.—A watchman's, or tell-tale clock, of peculiar construction, designed by the exhibitors, and two lever watches made in their establishment, which the jury found to be of very creditable workmanship and finish. Fourth award.

MEYERS, W., Melbourne.—A clock with chronometer escapement and compensated balance, striking hours and quarters; well and substantially made, a very fair specimen of clockwork. Fourth award.

Among various exhibits examined by the jurors, but for which they have given no award, the two following are especially worthy of notice.

WATERBURY WATCH COMPANY.—A very cheap form of watch of simple construction, with duplex escapement, and stem winding. The factory price is about seven shillings.

TAMAN, A., Brussels.—A central regulator clock for controlling subsidiary dials for railways.

The jury also desire to record the following exhibits, for which no award has been given, but which are deserving of mention.

MAUDSLEY, J., Geelong.—Model of proposed new form of compensation for chronometer balance.

BOSCH, G., Melbourne.—Lever watch movement, stated to be the first made in Melbourne.

THUTHENER, H., Melbourne.—Skeleton clocks and cases.

SOLOMON, SOLOMON, Melbourne.—Improved escapement for carriage clocks, which obviates the use of a contrate wheel to change direction of motion in escapement.

ROBT. L. J. ELLERY, Chairman Jury 8

The following statement as to the mode of testing the watches sent to the Observatory has been drawn up by Mr. White, the chief assistant, for information of Jury 8 :—

"The watches were received at the Observatory on December the 8th, 9th, and 10th; at this last date they were all placed in the rack, and the first comparison was made on the 11th, at ten a.m. The chamber selected for the trials was the standard bar-room in the basement of the Observatory, which, from its equable temperature, and freedom from both dust and damp, was exactly suited for the purpose. For holding the watches in a vertical position a board was fixed to the inner wall of the room; this was covered with soft woollen cloth, against which the backs of the watches rested; on this board were fixed several horizontal strips of soft pine, containing V-shaped notches, bevelled inwards, which formed very secure holdfasts for the watches in any position of the pendant. For the temperature-testing a double box was prepared, the outer bottom being of iron, and the inner top of glass; a gas jet under the former raised the temperature, without allowing the products of combustion to enter the inner box, in which the watches rested horizontally on cloth-covered shelves; and a box filled with ice placed on the top of the glass cover reduced the temperature, without allowing the aqueous vapours to penetrate the inner box, which at this stage contained a box of quicklime, to absorb any condensed moisture. All the comparisons were recorded in ink on the paper sheets of the barrel chronograph in the transit-room, wires from which were led to a spot near

where the watches were placed ; to these were attached a few feet of flexible covered wires, at the end of which was the recording key, thus allowing the observer to stand in any part of the room with the key in his hand. To prevent any error of personal equation, the comparisons were all made by one observer, '*Mr. Gilbert*,' and to avoid any error of eccentricity in the watch dials, the time was always taken when the seconds hand was at zero ; one of the watches was without a seconds hand, so the exact minute had to be estimated, and as the same minute could not always be taken, the error of eccentricity in this case may be considerable. The comparisons were generally made at about ten a.m. of each day, the order of procedure being as follows :—The watches were first wound, the mean-time clock was then attached to the chronograph, and compared with the standard sidereal clock. The observer then went from watch to watch, standing always exactly in front, so as to free the results from the effects of parallax, and pressed the key at the completion of each minute ; the number of the minute was written down immediately after on a sheet of paper ; when the series was completed the mean-time clock was again compared with the standard sidereal clock, the sheet was taken off the chronograph, and the times read off. The open-face watches were always compared as they stood in the rack, but the hunters had to be removed, as all had to be for winding ; but the greatest gentleness was always used. The watches were kept for three days in each position and temperature, in the following order.—Pendant up, pendant right, pendant down, and pendant left ; then *face down*, *face up*, *face up* in refrigerator, and, lastly, *face up* in the oven. The mean temperature of the room during the trials was 61°·6 Fahrenheit, ranging from 59°·4 to 65°·6, that of the refrigerator was 48°·6, and that of the oven 87°·1. The marine chronometers were tested similarly to the watches, except that they were always kept in a horizontal position.

"In working out the results of the testing, the following plan was adopted :—From the series of daily rates for each watch the two extreme ones were taken ; the greatest difference was also taken between any two consecutive daily rates, while the watch was in the same position or condition ; to twice this latter number was then added the difference between the two former ones ; the sum was considered the ordinal number representing the merit of the watch, as the best watch would come out with the lowest number. The watches were then arranged according to these numbers, beginning with the least ; and to the first of these watches was assigned the highest number of marks for timekeeping, 500 ; to the next 495, and so on by steps of five to the end of the list. For each exhibitor, or collective exhibit, was then taken out the number of marks attached to his best watch, and added to the marks he had obtained for the other points of excellence as given by the jurors after personal inspection.

"It will be seen from the list that three of the watches were uncompensated for temperature ; also, that very few of them had fuzees. As the comparisons were made at nearly twenty-four hours intervals, they would not show the periodic variation due to want of isochronism in the balance-spring. If the comparisons had been made at twelve hours' intervals, it might have been a little in favour of the fuzee watches.

"In deciding to accept the marks for the best watch of each exhibitor, instead of the average of all his watches, it was considered desirable to have sent in cheap as well as expensive watches."

TABLE OF RESULTS—OBSERVATORY EXAMINATION OF WATCHES.

Number of the Watch.	Maker.	Extreme Daily Rates during the whole of the time the Watches were under trial.			Difference between the preceding and following observations.	Gravities differentials between two observations.	Ordinal Number of Month.	Mark's.	Description.

MANY CHRONOMETERS.

The watches 25438, 10612, and 25439 were not compensated for change of temperature; if we leave out, therefore, the rates while in the oven and refrigerator, the ordinal numbers will be respectively 696-39, 249 47, and 188 37. Watches 152312, 14330, and 25439 stopped while under trial, so their series of rates are not complete. Unless stated otherwise, the watches had the ordinary compensation balance.

CORRESPONDENCE CONCERNING EXHIBIT BY AMERICAN (WALTHAM) WATCH COMPANY.

Observatory, Melbourne, March 7th, 1881.

Memo. to the Superintendent of Juries and Awards.

In consequence of the letter from the representative of the Waltham Watch Company, which you referred to me in December last, wherein he complains of the condition of certain watches sent in for competitive trial, &c., after the trials were completed, I had the said watches examined by an expert, in order to see if the statements of the writer were borne out by facts. The result substantially confirmed Mr Manson's letter. The report of the expert is appended, as well as copies of correspondence connected therewith.

ROB. L. J. ELLERY, *Chairman Jury 8.*

Melbourne, December 11th, 1880

J. COOPER NEWBAY, Esq., Superintendent Juries and Awards, Melbourne International Exhibition

Sir—In reply to your two circulars of December 1st and 3rd, calling for watches for timing tests, in accordance with resolutions passed by the judges on horology, we beg to advise having complied therewith, and have sent to the Observatory six watches, which represent our regular stock goods, such as are turned out at our factory every day, and have received no other than the customary finish of its grade. Having made nothing specially for this Exhibition, we think it not improper here to remind you that by reason of same we are placed at a real disadvantage when we come to compete with manufacturers whose watches have been *specially prepared* for timing tests, and *rated* at observatories before sending, thus allowing extraordinary advantages to our competitors.

It would have been fairer to us, and a much more practical test (of the inherent merit for time-keeping qualities) had the judges selected from exhibitors such watches as they might consider representative of each peculiar style of manufacture, and thus preclude the possibility of such manifestly unfair competition. Among the watches sent to Observatory are our first, second, sixth, and lowest grades, and in this connection we regret to say that our first-grade watches, with new compensation balance, met with an accident on the way out. On opening cases, I found glass broken, winding pinion pendant and crown piece out of order; balance and escape-wheel clogged with parchment, in extracting which I have reason to believe the pivots were bent and balance thrown out of poise, which unfortunate occurrence may tell seriously against the time-keeping properties of this grade for such tests as those mentioned in your circulars herein referred to. Unfortunately for us we have only two first-grade watches at this Exhibition, and cannot replace them in time for these tests.

It may not be amiss to here state that the writer was acting under instructions received from the mechanical superintendent of American Watch Company, who wrote, when sending the watches, thus:—"We don't want these watches opened at the back, except to take out the paper that stops the balance, and shall not be responsible if they are meddled or interfered with in any way. We are willing to trust them on their own merits for competition in time and adjustment, in temperature for new compensation balance." You can see from this extract that I had no alternative, and, not being a practical watchmaker myself, am compelled to submit them in their imperfect condition rather than not compete for timing tests. We trust, however, you will be good enough to advise the jury of these facts, and oblige,

Yours faithfully,

D. MANSON,

Representative American Watch Company, Waltham, Mass.

From the Government Astronomer to D. Manson, Esq., Representative American Watch Co.

Sir—Having received from the Superintendent of Juries and Awards your letter to him relative to two watches, Nos. 670,077, 670,010, which you submitted for tests at the Observatory, will you kindly state if you will allow these watches to be examined at the Observatory by any competent person we may select?

R. L. J. ELLERY,

Government Astronomer.

Government Astronomer's Office, Melbourne, 5th January, 1881.

Melbourne, 5th January, 1881.

R. L. J. Ellery, Esq., F.R.S., F.R.A.S., Chairman of Jury on Horology, Melbourne International Exhibition,

Sir—In reply to your favour of the 5th, re examinations of watches, would say we are quite willing that you should call in any experts whom you think competent to examine the said

watches, and satisfy yourself and the other members of your jury that our watches were out of order when sent to the Observatory for tuning tests.

Yours faithfully,

D. MANSON,
Representative American Watch Company, Waltham, Mass.

Melbourne, 2nd February, 1881.

R. L. J. Ellery, Esq., Government Astronomer, Melbourne.

Sir—As it is my intention shortly to return the two gold Waltham watches, which I examined at the Observatory, I now beg to state that they were far from being in good order—that is, for timing tests. They must have had very rough usage, as I found some small pieces of broken glass and some fluffy hairs inside the movement; I also found the centre pinion pivot out in one of the watches, apparently from want of oil.

The cause of the variations, however, was owing to the balance being out of poise, caused by the rough usage before mentioned. I have now cleaned, oiled, and adjusted them, and hope to get a good even rate. I do not think they will rate as well as the best pocket chronometer did at the Observatory trials, for the Waltham watches (with the lever escapement) are not so delicately pivoted, being made for sound wear, and fit for horseback riding; and I think it simply wonderful, the perfection arrived at for a watch intended for every-day use.

Your obedient servant,

R. Mcgregor.

CORRESPONDENCE AND DOCUMENT RELATIVE TO AWARD TO THE SWISS COLLECTIVE EXHIBIT OF WATCHES.

Observatory, Melbourne, 12th May, 1881.

Sir—In reply to your letter of to-day, I have the honour to state that it would be entirely contrary to the intentions of the jury on horology to give any award to a single maker or company, of the "*Swiss collectivity*," as distinct from the "*collectivity*" as a whole, because the marks for personal examination of the exhibit were (at the request of the Swiss Commissioner), in accordance with the schedule of entry, and by an unanimous decision of the jury, given for the whole and not for any part of the exhibit. I cannot therefore recommend giving the award, or any prize, to any watch, or part of the exhibit.

But as I understand the regulations do not admit of giving gold medals for first awards in the case of collective exhibits, I think there can be no objection to the adoption of the last proposition in your letter—namely, giving a gold service medal to the head or representative of the associated exhibitors, and the first award of the jury to the collectivity, in whatever shape is admissible inside the regulations.

I remain, yours obediently,

ROB. L. J. ELLERY.

The Secretary of the Melbourne International Exhibition.

The Swiss Commissioner, Mr. Eugster, having expressed dissatisfaction at the decision of the Executive with respect to the distribution of medals to collective exhibits, the following memorandum of the case was prepared for the information of the Executive Committee by Mr. J. Cosmo Newbery, Superintendent of Juries and Awards:—

The jury gave an award of the first order of merit to the Swiss collective exhibit of watches, instead of giving the award to the most meritorious makers. This was done at the request of the Swiss representative on the jury, who objected to the different exhibits being taken separately.

Objections were made to this award by other exhibitors, and when the Committee of Juries and Awards were considering the scheme of distribution of medals, it was decided that a gold medal should be given for watches of the first order of merit, and the jury were asked to name the makers in the Swiss collection who were deserving.

Mr. Eugster objected to this course, and asked the committee to give the medal to the collection.

The matter was discussed on several occasions, and it was shown that if Mr. Eugster's request was complied with, each of the thirty-two firms who had contributed to the collective exhibit might claim the award.

It was also pointed out to the committee that it was unfair to individual exhibitors in the Swiss and other courts who exhibit separately, to give an exhibit composed of watches made by thirty-two different manufacturers, an award similar to that given to firms or persons showing only their own watches.

Mr. Eugster was then informed that a gold service medal would be given to the president, or head of the association; but this he declined to receive. The committee then decided to send the gold medal to the Swiss Government, to be given by it to the person who made up the collective exhibit for his services.

A similar course is to be followed in the case of the Swiss collective exhibits of musical instruments and jewellery, which will receive silver service medals.

The Executive then appointed a sub-committee to deal with the case of Mr. Eugster, the Swiss Commissioner, which reported that Mr. Eugster, when asked to state his grievance, had objected to the presence of others than Commissioners, and, when informed that the Executive had invited Messrs. Manson and Ellery to be present, had withdrawn from the room, when the meeting closed. No further action was therefore taken.

EXPERTS APPOINTED TO CONSIDER APPEALS AGAINST JURY DECISIONS.

R. Curtis.

F. W. Barnard.

SIR—We have the honour to report that we have carefully examined the whole of the exhibits in the Melbourne International Exhibition in Classes 17, 18, 21, and 22, numbering four hundred and thirty separate exhibits, and have made awards thereon. Owing to the regulations and instructions issued by the Executive, we have experienced some difficulty in dealing with large collective exhibits, comprising articles in two classes, possessing many elements of merit, and upon which we have only given one award, in comparing them with single articles exhibited that come within the first order of merit. Throughout Section 9 we have taken each exhibit *in globo*, and made one award thereon, but deem it necessary to direct special attention to those large collective exhibits which we have classed in the first order of merit, and in which are to be found excellent examples of art workmanship.

CLASSES 17 AND 18.

CHEAP AND FANCY FURNITURE, UPHOLSTERERS' AND DECORATORS' WORK.

In the Victorian Court we found the exhibit of Messrs. W. H. Rocks and Co. possessing such merit as examples of cabinet-making and upholstering as to warrant us in presenting it for the Emperor of Germany's prize.

Messrs. Wallach Brothers also showed good specimens of cabinet-making and upholstering.

W. H. ROCKE & CO.'S EXHIBIT OF ART FURNITURE IN THE VICTORIAN COURT.

In the exhibit of Messrs. Whitelaw and Blair there were designs for interior decorations, finished articles of furniture, specimens of mouldings and objects moulded in composition, and lettering on glass, evincing excellent art workmanship.

Messrs. Alcock and Co.'s exhibit of billiard-tables and billiard-room accessories was so superior in every detail of manufacture that we were unable to class any other of the same kind in the first order of merit, and we consider their electrical and other appliances for marking specially worthy of commendation.

In the German Court were to be found the largest number of first-class exhibits of furniture. Messrs. Vogts, Præchtel, Pfaff, Kelterborn, Krause, Land, Richter, and Mahr, showed furniture which must be estimated for the enduring qualities derived from sound and good workmanship allied to artistic design.

In the British Court the exhibit of Messrs. Walker and Son displayed excellence in cabinet-making and upholstery.

Messrs. Arrowsmith and Co. exhibited skilful work in parquet flooring and art furniture.

The brass and iron bedsteads shown by Messrs. Peyton and Peyton merited special commendation for the varied and artistic designs, sound workmanship, refinement of finish, and moderate cost.

Messrs. Hoskins and Sewell were also equally commendable for this description of furniture.

In the French Court the cabinet and upholstery work of Messrs. Damon, Namur and Co. was most artistic and superior in every respect.

In the Austrian Court that exhibited by Bernard Ludwig was also worthy of mention. Thonet Gebrüders' bent-wood furniture was deserving of special mention.

It is to be regretted that so few of the great manufacturers of art furniture in England, France, Italy, and elsewhere have considered it expedient to exhibit here; but the cause is clearly traceable to the nature of the Victorian tariff.

There were many encouraging signs of advancement in the manufacture of furniture to be found in the courts of Victoria, Queensland, New Zealand, and South Australia; but there was still great scope for improvement in the direction of correct design and that refinement of finish so well displayed in many exhibits to be found in foreign courts. The establishment of schools for technical education in this country, such as exist in Belgium and France, we consider most desirable, and the best means for attaining this important object.

CLASS 21.

CARPETS, TAPESTRY, &c.

The exhibit by Messrs. Whittall and Co., Kidderminster, of Brussels and velvet-jute carpets, merited special commendation for the artistic designs, colouring, and excellence of quality: as also that of Messrs. Tomkinson and Adam, for Axminster carpets; Messrs. Humphries and Sons, for Brussels and Wilton carpets; Messrs. Watson and Naylor, for Kidderminster carpets; Messrs. Crossley and Sons (Limited), for tapestry velvet carpets; Messrs. Barbour and Miller, for silk and wool tapestry curtains and coverings; Braquenié et Cie., L. Bercloud, Duplan et Hemot, for tapestry; Thierry, Mieg et Cie., Laduc, Dupont et Hervé, Julius Schmits and Co., for silks and stuffs for upholstering purposes, all of which exhibits have been classed in the first order of merit.

Special attention has been given to the large exhibit of Indian carpets, mats, and matting. Those produced by free labour have been adjudicated upon in the same manner as the exhibits of manufacturers in other parts of the world, but have not been compared with those produced by the well-directed efforts of prison labour, which are much superior in every detail of manufacture, the designs and colouring in the carpets, in most cases, being characteristic and good, the texture and finish

excellent. That such highly satisfactory results have been attained by prison labour, we consider very commendable.

CLASS 22.—PAPERHANGINGS.

The exhibits in this class sent from Great Britain, Germany, France, and Austria, were such as to merit the highest commendation, being mostly distinguished by excellence of manufacture, beauty and appropriateness of design, and perfection of printing and finish.

The knowledge and taste displayed in the exhibits show a thorough acquaintance with the principles of decorative art, both past and present. The higher class and expensive papers exhibited were fine specimens of the designers' art; whilst the purity, brilliancy, and harmony of the colouring were such as to do ample justice to the reputation of the eminent firms exhibiting. In the cheaper goods, also, excellence of design and manufacture was shown.

It is worthy of note that the extravagant and inappropriate floral arrangements so much in vogue with the paperstaining trade a few years ago, were generally absent, and that when flowers were introduced in the papers exhibited, it was with correct taste and judgment. The great majority of the designs, however, were in conventional flowers and ornament in soft and gentle tints of harmonious colours.

CHAS. A. DONALDSON, *Chairman*.

EXPERTS' REPORTS.

Steinfeld, Levinson and Co., Melbourne.—Cane House and Furniture.—We consider the workmanship in both house and furniture as being very good, and deserving to be placed in the first class.

Wooton Desk Co., Indianapolis.—The Desk of the Age, the Wooton Patent Cabinet Office Secretary.—We consider this a very useful and ingenious piece of furniture.

JURY SECTION X.

EXPERT APPOINTED TO CONSIDER APPEALS AGAINST JURY DECISIONS.

E. P. Cecchini.

SIR—In presenting this report, we are pleased to state that the exhibits in both classes which came under our inspection were above the standard usually brought to Exhibitions. The progress made in both branches since the International Exhibition at Paris, in 1878, was very perceptible; and this jury has found it necessary to place

the following eleven exhibits under your special notice, as we could only classify them with others in the first order of merit, whilst their merit deserved the highest possible distinction:—

CLASS 18.—CRYSTAL GLASS AND STAINED GLASS.

Thos. Webb and Son, Stourbridge, showed a splendid exhibit of cut, engraved, and other glassware, of excellent quality, pure and white in colour; all articles were of very fine workmanship and artistic merit, and exhibited great progress in the designs and cuttings.

Count Harrach, Neuwelt, showed ornamental and other glassware of the finest description. More than sixty different colours and tints were represented in this exhibit, rivalling each other in beauty. The decoration and enamelling deserve great praise for their tasteful and truly artistic finish.

Société des Glaces de St. Gobain, St. Gobain, showed mirrors and glass tiles of great beauty, purity, and careful silvering, perfect in finish, and deserving great praise.

Compagnia Venezia-Murano, Venice, showed a splendid collection of Venetian glassware, of very fine designs, beautiful in colours. Several specimens shown deserved great praise for their highly artistic finish.

CLASS 20.—POTTERY, STONEWARE, TERRA-COTTA, &c.

The Collective Exhibit of the Chamber of Commerce, Limoges, presented an exhaustive picture of the high standard to which the manufacture of porcelain has been brought. All the objects showed splendid, hard, white, very pure material, and fine glazing, with new and artistic designs; the decorations, finished with great care, displayed fine, bright and harmonious colours, rich and durable gilding; great progress was manifest in the tracing of many objects glazed over the carved designs, which were novel and attractive. The whole exhibit deserved great praise and high distinction.

Minton and Co., Stoke-on-Trent.—This exhibit merited great praise for the truly artistic objects shown. The designs and finish were distinct and fine in appearance, and would adorn any collection. Several colours shown surpass in delicacy of tints anything shown here; the ornamentations were attractive, and the gilding rich and durable.

Königlich Porzellan Manufaktur, Meissen, exhibited an extensive collection of artistic porcelain of high merit, of very fine designs and execution. Many objects ornamented with raised flowers deserve great praise for their careful and masterly finish. Many of the plates, which were artistically decorated, would be highly valued ornaments in any museum. Objects with lacework designs in the ornamentation showed great progress; the whole exhibit was worthy of the highest award.

Manufactures Nationales de Sèvres, Sèvres, showed a small but grand collection of highly artistic porcelain, fully worthy of the high reputation this factory enjoys, of splendid designs, painted and decorated with care and in a masterly style; the *pate appliquee* decoration showed considerable merit, and the whole exhibit deserved the highest possible distinction.

Worcester Royal Porcelain Factory, Worcester, showed a very fine collection of artistic pottery, of excellent material and glazing, good, bright, and harmonious colours; a specimen of perforated porcelain showed considerable progress and deserved great praise for finish; the gilding was rich and durable.

Minton, Hollins and Co., Stoke-on-Trent, showed the finest and best assorted collection of tiles, of excellent material and fine durable glazing; the decoration was of high merit.

Doulton and Co., Lambeth, showed a splendid and well-assorted collection of stoneware, &c., for chemical and domestic purposes, of excellent material, good designs, and very fine durable glazing; all articles shown have been finished with great care and ability, and were deserving of high distinction.

CH. M. ROSENTHAL, *Chairman*.

EXPERTS APPOINTED TO CONSIDER APPEALS AGAINST JURY DECISIONS

E. Wilson.

J. W. Bobardt.

SIR—In making the various awards in Section XI, Classes 24 and 39, the jury kept prominently in view the originality of the design, skill in the workmanship, quality of the material used, the utility and cheapness of the different exhibits upon which they had to adjudicate. Exhibitors, therefore, received awards of first, second, third, and fourth orders of merit, according as they satisfied the jury and approached their standard of perfection in the above-named particulars.

WALTER FELLOWS, M.A., *Chairman*.

EXPERTS' REPORTS.

SMITH AND WESSON, Springfield, Mass.—Nickel Plate on Iron and Steel.—These are very good specimens of nickel plate, and I would recommend a first award.

W. W. HARRISON AND CO., Sheffield.—These goods are really first-class productions; they are well made and artistically finished, both the workmanship and material being excellent. I would recommend them for a first award.

WILKENS AND SÖHNE, Bremen.—I must certainly recommend for a first award, as their exhibit is of superior quality and workmanship, and they exhibit a complete set of silverware of the very best finish.

H. W. HOLLOWAY, Melbourne, being the only exhibitor of electrotype models of medals, and showing an immense variety of very good designs of excellent finish, I beg to recommend him to a first award.

S. CRANMORE, Birmingham.—Imitation Jewellery.—I must certainly recommend for a first order of merit, as being superior in colour, quality, workmanship, design, and finish.

JURY SECTION XII.

Class 27.—Apparatus and Processes for Heating and Lighting.

Class 64.—Apparatus and Processes of Civil Engineering, Public Works, and Architecture.

EXPERTS TO ASSIST JURY.

J. Sullivan. | J. Taggart. | D. Ford.

EXPERTS APPOINTED TO CONSIDER APPEALS AGAINST JURY DECISIONS.

J. Richards. | Jas. Taggart.

Sir—In submitting this report of the results of their labours for the past four months, the jury have to mention that they held thirty-five meetings; and their work has not been concluded earlier in consequence of the large number of exhibits (about 450, comprising several thousand articles) in these classes, some of which required to be practically tested before they could be adjudicated upon; and as these tests occupied considerable time, the delay was unavoidable.

In connection with the subject of practical trials of exhibits, the jury feel compelled to express their regret that there were not greater facilities and opportunities for making such trials, as the absence of them considerably increased the difficulty of determining the relative merits of the articles judged. So far as such tests have been made they have been carried out in accordance with the latest and most approved systems and appliances, fairly and impartially, to the best of our ability and judgment.

In giving their awards the jury have had to exercise a great deal of care, owing to the large number and great variety of exhibits they had to judge; and they have been careful not to lower the value of the awards by giving them too freely, but only to those that showed a manifest superiority. Under this system, no doubt, many exhibitors, by not seeing their names in the list of awards, may think they have been passed over; but all exhibits brought under our notice were inspected, and such only as we considered to excel in all points were included in the list.

The first section on which we report in detail is—

CLASS 27.—HEATING AND LIGHTING APPLIANCES.

In ornamental and registered grates the exhibits were of a very superior character, especially those from Great Britain, which worthily occupy the premier position, as will be seen by the award list.

The collection of cooking ranges was varied and excellent. The competition in this class rested wholly between Great Britain and Victoria, the British goods showing a somewhat superior finish, but the Victorian running very closely at all points.

The competition in colonial ovens and stoves rested solely between the Victorian manufacturers, who have made a special study of these useful articles (which are

well adapted for the purposes intended); but as the class of work put in these goods is generally rough, we did not consider them sufficiently well finished to merit first awards.

The American cooking stoves stood alone in competition, there being no exhibitors from any other country. The workmanship of these was very good, and they seemed well adapted to answer all the purposes they are intended for.

Gas cooking stoves were subjected to a practical test on 11th March. There were only two competitors—Walker, Melbourne, and Viellard, Paris. The results were very satisfactory, as far as the trial went, as both stoves were equal in consumption of gas (\$1 cubic feet each), in the time occupied in cooking, each doing it in 1 hour 45 minutes, and in the manner the viands were cooked. (Arrangements were made for testing the stoves of other exhibitors, but at the last moment Jeans and Wallis Bros. declined to compete, so that no award or opinion could be given as to the merits of their exhibits.)

At the same time we tested some stoves heated by kerosene. These did their work efficiently, and were very compact and useful articles for small family purposes where gas is not obtainable. The time occupied in cooking was 1 hour 37 minutes. There was no smell of kerosene to be perceived during the operation, nor taste of it afterwards in the viands, which were thoroughly done.

A first award was given to Jeans, of St. Kilda, for his very fine collection of gas heating stoves and grills, and gas iron heating stoves.

We also tested two gas water heaters for baths, &c., by Walker, of Melbourne, and by Jeans, of St. Kilda, and found them of equal merit. They were useful articles, and heat water very rapidly.

We inspected a great variety of washing machines exhibited by several countries. On 11th March we subjected them to a practical test, and in doing so divided them into two classes—those that are worked entirely by manual labour, and those that do their work by boiling and steaming. The results were that the manual labour machines did their work generally in *less than half* the time the boiling and steaming ones, and in a much better manner, and we have given the awards accordingly. It will be seen by the award list that the Victorian competitors, with one solitary exception from Great Britain, were the sole winners of awards. To assist us in our judgment we had the help of the following experts:—Mr. Taggart, manager of the Melbourne Steam Laundry, and Mrs. Ford, laundress of the Melbourne Benevolent Asylum. The following were the competitors, with the time occupied by each and experts' reports thereon:—

We have the honour herewith to submit our report as experts on the merits of the different washing machines tried before your committee in the building of the Exhibition:—

No. 1. Bradford and Co.'s, Manchester.—A useful family machine, easy on clothes, simple to work, but not up to the mark in getting through quantity expeditiously.

No. 2. Wall's, Camperdown.—Turns out the clothes in short time well washed; simple and easy to work. A really good household machine.

No. 3. Wolter and Eckberg's, Melbourne.—Most effective; washes well and quickly; of simple construction, and easily handled.

No. 4. Fischer's, Adelaide.—Turned out the clothes not half washed.

No. 5. Piet and Co.'s, Paris.—Washed badly; spots and dirt not taken out of garments.

No. 6. Baker's, Melbourne.—Clothes very well washed.

No. 7. A. O. Chambers's, Adelaide.—Clothes not half washed.

No. 8. Mrs. T. Thomson's, New Zealand.—Same remark as to No. 7.

No. 9. Flood's, Melbourne.—First trial, clothes very badly washed; second trial, very well washed.

No. 10, Ford's, E. Brighton.—Best washed clothes of the lot, but the process is very slow.

(Signed)

JAMES TAGGART }
BRIDGET FORD } *Experts.*

Wooden and wax matches were well represented by numerous exhibits, showing great variety. There were ten exhibitors from Italy, Austria, Netherlands, Great Britain, Sweden, and Japan (the latter being noticeable for the extraordinary cheapness of his goods). The exhibits generally were of a high class. We subjected them to a practical test, with the results as given in our awards.

There were three exhibitors of gas-producing apparatus, one being W. Smith and Son, U.S.A., whose apparatus prepared carbonised petroleum gas of excellent quality and a pure, soft, white light. The cost of production is twice that of coal gas, yet as it gives twice the light the cost is about the same. The apparatus is portable and easily moved, and is very suitable for private houses and the country. Two (one from Great Britain and one from New South Wales) were for carburetted gas. The processes were very simple, and consisted of forcing atmospheric air through gasoline. The cost of production was very moderate, and the apparatus light and portable. These apparatus were all tested, with the results as given.

Gas-measuring apparatus were all tested. There were two very good exhibits of meters—one by W. B. Cowan, Edinburgh, and the other by Glover and Co., London. Glover and Co. also exhibited a valuable and highly finished apparatus for testing meters, which deserves high commendation. There was only one photometer, by Sagg, London, exhibited. This was a very fine, delicate, and accurate instrument, well fitted for the purposes intended, and deserved the highest commendation for its design and adaptability.

Amongst other exhibits connected with gas-lighting which we tested, and must notice, were those of W. Sagg's improved burners and regulators for lamps, and also his 200 and 400-candle lamps for lighting large areas; C. and W. Walker's (London) large gas centre valve for purifiers, an efficient and serviceable article, and their purifier sieves, &c.; and Messrs. Pelonze and Audoin's (Paris) gas condenser, which was also a most useful apparatus, and worthy of special notice.

The exhibits in chandeliers and gasaliers were numerous and varied. Almost every country was represented, some of them showing a high degree of excellence, Douglas's, of Melbourne, comparing favourably for design and workmanship with the exhibits of older countries. Delafolie, of Paris, and T. Webb and Sons, of Stonbridge, were especially noticeable for the excellence of their articles shown.

The numerous exhibits of table lamps were of a highly satisfactory character, and creditable to the exhibitors, especially those of Great Britain, France, and Austria.

There was a very good collection of locomotive, steamboat, and other lamps of that kind, in the Victorian Court. Those calling for special remark are by J. Paterson, of Melbourne, and J. W. Paul, of Sandhurst, which we tested with others, and found highly satisfactory.

There were two very good exhibits of carriage lamps, both from Great Britain.

CLASS 64.—APPARATUS AND PROCESSES OF CIVIL ENGINEERING, PUBLIC WORKS, AND ARCHITECTURE.

The exhibits of building stone were numerous and varied, principally, however, from all parts of Australasia. The specimens examined comprised every description of stone for building purposes; and those we have given first awards to are by far the best. In granite, Victoria takes a first award, with stone from Harcourt. In sandstones, Tasmania has a first award, with stone from Spring Bay; New South

Wales a first, with stone from Ultimo; and Victoria a first, with stone from the Grampians. In limestones, New Zealand obtains a first award with stone from Oamaru, which, we consider, is particularly adapted for interior work.

There were specimens of fourteen different kinds of marble, all of high quality, from Italy, exhibited by G. Biondetti, of Venice. There were also several samples of marble exhibited from New Zealand, which show that this valuable material exists there; but the evidence as to the extent of the quarries and size of the blocks to be obtained was not sufficient to enable the jury to express a further opinion as to its value, which they trust will be fully developed at a future period.

Specimens of "flagging" were exhibited from New South Wales, South Australia, and New Zealand. The best of these were from quarries at Mintaro, South Australia, and from Burrowa and Wagga, New South Wales.

In "slate slabs," for baths and other useful purposes, also "ridging slabs" of various thicknesses, the Penyrorsedd Slate Quarry Company of North Wales were the only first-class exhibitors. The same firm also has "roofing slates;" but we did not consider them entitled to more than a second award, as they were not equal to those exhibited by Previte and Greig, from Lord Penrhyn's Bungor Quarries, Wales. South Australia and Tasmania also exhibited fair samples of this class of slate.

Lime was exhibited from Victoria, South Australia, and Fiji, which we considered to be only of medium quality.

In gypsum and plaster of Paris the jury wish to mention the good exhibit of gypsum crystals, and plaster of Paris made from same by Augustus Tocchi, of South Australia.

Common bricks for building purposes were exhibited by all the Australasian colonies; but we could only give awards to three; the first of whom was the Hoffman Patent Brick Company, of Brunswick, whose exhibit was of a very superior quality, and to which we wish to call special attention.

The best exhibits of firebricks and fireclay goods were from Great Britain, of which two proved to be of superior quality—those of Harper and Moores, Stombridge, and J. Cowen and Co., Blaydon-on-Tyne.

There was a very great variety of tiles in the British, German, Victorian, Italian, and Belgian Courts, and, with the exception of one very fair exhibit of roofing tiles from Belgium, the exhibits were flooring and wall tiles. The British exhibits were of great excellence, and received four first-class awards for flooring and enamelled tiles, and two other firsts for terra-metallic and malt-kiln tiles respectively. To the exhibit of Minton, Hollins and Co., Stoke-on-Trent, we gave special mention for its collection of encaustic, flooring, and enamelled tiles.

H. A. Cawikwell, of Malvern, also carried off a first award for encaustic tiles, of excellent quality, being well made and durable.

In marble tiles for paving there were some first-class exhibits, all from Belgium.

For drain pipes H. Doulton and Co., of London, took the premier position for excellence of work and finish; and after them we noted two very good colonial exhibits, those of Cornwell, Melbourne, and Austin, Kirk and Co., of Christchurch.

In sanitary ware, &c., G. Jennings, London, deserved special mention for his numerous and varied exhibits of first-class merit; while H. Doulton and Co., London, and several others from Great Britain, worthily occupied first-class places; as also did Wilson, Corben and Co., of Melbourne, who exhibited enamelled-slate baths (equal to those exhibited by J. Sessions and Sons, Gloucester), and also showed fine specimens of enamelled slate mantelpieces of high excellence.

In marble mantelpieces the exhibits were very numerous, and of the highest character, the Belgium and British taking premier position. The Belgium, in particular, were specially worthy of notice; that of Verbist-Lamal, in black marble, showed the highest taste and beauty of design.

There were several very good exhibits of doors from New Zealand, in which the beauty and adaptability of native woods were shown; in particular, we must notice the exhibits of Messrs Waddell, M-Leod, and Weir, of Wellington, who have been awarded the only first degree of merit.

In locks there were five first awards given, four of which go to the United States of America, and one to Great Britain. Of the United States exhibits that of the Russell Erwin Manufacturing Company, Connecticut, stood superior to the rest for finish and excellence of make, cheapness, and simplicity of construction. The Chutwood Safe and Lock Company of Bolton exhibited locks for strong rooms and safes, and with their model of a steel strong-room and hydraulic apparatus for same were well entitled to rank in the first class. In connection with this latter class of exhibit we must also draw attention to the Milner Safe Company's strong-room, lobby, and gate.

Cantland, Pemberton, and Harcourt, of Birmingham, and Russell Erwin Manufacturing Company, all worthily occupied the first position for door furniture.

The exhibits of parquet flooring were very good, and were all entitled to occupy the first place, to which we have assigned them. There were only three. One each from Austria, Belgium, and Great Britain.

There were a number of exhibits of window sashes, but none that call for special notice.

The steel revolving shutters of Clark and Co, London, were well worthy the first award given them. They were light, strong, and have proved to be well adapted for the purposes intended.

In stained glass windows one only is worthy of special notice—that of Lorin, of Chartres—for its purely artistic design and perfection of workmanship.

There were a number of exhibits of ventilators, showing various ways of attaining the object, but there was only one—that of James Howorth, Manchester—that we considered worthy a first award.

There was a large collection of models, plans, and photos, of various architectural, civil engineering, and other works, but none to call for any particular notice, except those in the French Court. We beg leave to bring under your special notice that portion of the French Court which has been presented by the Minister of Public Works of the French Republic to the Commissioners of the Melbourne International Exhibition. We examined and inspected the various works comprised in this magnificent gift, which contained valuable works, plans, and models of the principal engineering works that have been executed in France, undertaken by the various branches of the Department of Public Works—viz, roads and bridges, hydraulic works, canal works, ports and harbours, lighthouses and beacons, railways, mines, and public buildings. We consider the collection interesting, instructive, and of great value.

There was a fine collection of grindstones, and first awards were given to the Société Industrielle, Brussels; Lasetter and Co., of Sydney; and Kischmeyer, of Hamburg.

In cement there were thirteen exhibits. These we submitted to practical tests, in the usual way, by having them made into briquettes by an expert, appointed by the superintendent of juries and awards. The expert was supplied with a numbered sample of cement from each competitor's exhibit. These samples were made into briquettes, composed as follow:—Two of each of pure cement; two of each of one to one of sand; two of each of one to two of sand; and two of one to three. All were immersed in water for seven days after making. After that, one series was taken out of water seven days, and another fourteen days before testing. All the samples were tested by Holste's cement-testing machine, and our awards are strictly based upon the results of these tests. After the tests were finished as above, and the awards made accordingly, the jury then referred to the record of the names to which the numbers applied, and they were found to be as follow:—

TESTS OF PORTLAND CEMENT AT THE MELBOURNE INTERNATIONAL EXHIBITION, 1880-81,
BY JURY NO. 12. TABLE COMPILED FOR JURY BY A. PUROHAS, C.E.

	No. 1. J. C. Johnson.	No. 2. Touffier, Gravitz & Co.	No. 3. Jesse and Delange.	No. 4. J. C. Geshling	No. 5. J. B. White and Bros.	No. 6. Schiff- acker and Soane	No. 7. Frye and Goldhard	No. 8. Maumboussé	No. 9. Frasier, Phelps and Co.	No. 10. Gerr.	No. 11. R. Raven and Co.

Awards	Third	Second	Fourth	First	Fourth	Second	Fifth	Third	Third	—	—

N.B.—B.W.W. indicates that the briquettes broke without weight. All the briquettes were stated to have been seven days out of water, the remaining period in water.

There were several exhibits of monumental sculpture, but only that of Weiller, of Leghorn, was entitled to a first award.

There were two exhibits of water meters, one each from Germany and Great Britain; but we had no opportunity of properly testing them.

There was one exhibit of a fluviometer, or instrument for testing the rate of currents, in the Netherlands Court; but we also had no opportunity of testing this, as it was brought under our notice too late.

The only excavator in the building was worked by steam, and exhibited by Tangye, of Birmingham. This was a very useful and practical apparatus, easy to work, and well adapted for the purpose intended—viz., deepening rivers, and general dredging work.

Several earth scoops were also inspected, which the jury regret not having been able to test, but they consider the best to be McCaughy's patent earth scoop, exhibited by David Munro and Co., of Melbourne; and their judgment has been borne out by gentlemen who are using them.

In conclusion, a large number of valuable exhibits of a highly useful and meritorious character have been examined by the jurors, in the two important classes occupying their attention, some of which may not have been fortunate enough to reach classification for awards, or to require special notice in this report.

W. F. JOURNET, *Chairman*.

EXPERTS' REPORTS.

I have examined the exhibit of Dell and Sons', London, millstones and machinery, and I have compared them with other similar exhibits which have been awarded first order of merit, and I find that of Dell and Sons is fully equal to any; and I recommend a first award.

It. G. Ford, E. Brighton.—Washing Machines—I saw the clothes which had been operated upon by this machine, and can affirm that they were beautifully clean; in fact, not surpassed in this respect by any other machine that stood the test on the day of trial, and equalled by few.

CORRESPONDENCE RESPECTING CEMENT AWARDS.

The Superintendent Juries and Awards.

Melbourne, 25th April, 1881.

Sir—Referring to my letter of 2nd inst., and a copy of Mr. Sullivan's letter received with a copy of your favour of the 11th inst., through Professor Reuleaux, I beg to lay before you the following considerations.

The report of the jury says:—

"These samples were made into briquettes composed as follows:—

"Two of each of pure cement, two of each of one to one of sand, two of each of one to two of sand, and two of one to three of sand. All were inserted in water for seven days after making. After that one series was taken out of water seven days and another fourteen days before testing.

"All the samples were tested by Holste's cement-testing machine, and our rewards are strictly based upon the results of these tests. After the tests were finished as above, and the awards made accordingly, the jury then referred to the record of the names to which the numbers applied, and they were found to be as follow:—

Average tested strength.					
1021.5	J. C. Gostling and Co.	1st
800.0	Schiffordlecker and Sohne	2nd
828.5	Toepffer, Grawitz and Co. (Stem cement)	2nd
558.5	J. C. Johnson	3rd
539.5	Prusing, Planck and Co.	3rd
501.0	Mannheimer Cement Co.	3rd
440.5	Josson et Delangle	4th
437.5	J. B. White Brothers	4th
389.0	W. Fege and Gotthard	5th

As I was told by a member of the jury, the whole of the work of making the test briquettes and testing them was left to Mr. Sullivan and Mr. Kemball respectively, and no precaution was taken that these *employés* should not know the origin or brand of each number, the giving of a number to each sample thereby becoming quite an illusory precaution. Mr. Kemball himself hunted to me several times that he had the whole matter in his own hands, and I found him to be in continuous friendly intercourse with the agent of J. C. Gostling and Co., awarded the highest figure.

To satisfy my curiosity I have myself made very careful tests with Gostling and Co.'s and Stern cement.

Instead of two, I tested ten briquettes of each, seven days old, which I first of all sifted through the same sieves, in which operation the Gostling left about four times as much refuse as the Stern cement.

I received the following results.—

Gostling maximum, 576 lbs.; minimum, 433 lbs.; average, 570 lbs. per square inch.

Stern " 722 lbs. " 579 lbs. " 747 lbs. " "

These results agree very well with the practical daily experience, while the high figures which Mr. Kemball reported are beyond all experience, and, as my maximum results show, they are not only too high as an average, but even impossible as an exception.

The importance of the verdict of a jury of an International Exhibition should have warranted the greatest care and most stringent control in regard to the experiments, which have not been the case, if—

(1.) The test pieces made by Mr. Sullivan could have been exchanged by older ones while drying or while being carried from the Museum to the Exhibition

(2.) The average was taken from only two samples of each kind.

(3.) Mr. Kemball knew the brand of each number of samples.

(4.) The members of the jury did not control the whole work, but identified themselves with the report of Mr. Kemball.

(5.) The cements were not properly treated before testing by sifting through a uniform mesh.

I beg, therefore, to repeat my appeal against the decisions of the jury, and to request another series of tests to be made with the proper care and controls, with samples to be taken from the market, which can easily be obtained.

I am willing to defray all expenses, and to deposit the necessary amount

I trust that the Commission of Awards will sustain my request, and not allow injustice to be done on account of unreliable tests or mistakes to an exhibitor, who has at all previous exhibitions secured the highest awards over all competitors, and that you will not without reassuring yourselves publish a report, which, by the impossibility of its figures and its contrast to scientific and practical experience, would astonish everybody, and thus reduce the intrinsic value of the awards made at this great International Exhibition.

I have the honour to be, sir, yours most respectfully,

FELIX DOEHLING,

Representative of the Stern Portland Cement Works, Messrs. Toepffer, Grawitz and Co.

J. C. Newbery, Esq.

Melbourne, 26th April, 1881.

Sir—I have the honour to send in to you herewith an appeal of Mr. Doehling, and beg of you very respectfully to use your whole influence that a German exhibitor would be adjudicated in the right way. I need not add that I can in every point consent to the reasons laid before you by Mr. Doehling.

I have the honour to be, sir, your very obedient servant,

For, and in absence of the Commissioner for the German Empire,

DOBROGOISKI.

J. C. Newbery, Esq.

20 Temple Court, Melbourne, May 6th, 1881.

Sir—I have the honour to acknowledge the receipt of your letter of the 2nd inst., requesting me to report on an application from Mr. F. Doehling for an appeal against the decision of Jury No. 12, with reference to the awards on cements, and requesting that another series of tests may be made; also offering to defray all expenses of same.

Referring to the remarks made by Mr. Doehling about "the test pieces being exchanged," and that "the cements were not properly treated before testing," I would beg leave to state that the jury had nothing to do with the samples of cement or the briquettes made from same until they were brought into the office of the jury by Mr. Sullivan (the expert appointed by yourself, who had received instructions from us how to treat the cement, and how to make the required number of briquettes for the purposes of testing).

You will readily understand that the mode of treating the cement to be tested is of the greatest importance, so as to obtain a uniform manipulation after being sifted, then to be made into uniform briquettes.

How far Mr. Doehling's assertion is correct with regard to "the expert being acquainted with the brands," and other similar remarks, formed no portion of the duty of the jury to inquire into. Proper measures had, the jury thought, been adopted to prevent anything of the kind. The jury had to place implicit confidence in the expert nominated by the Superintendent of Juries and Awards.

The results shown by the testing machine caused the jury to have serious misgivings as to the way in which the briquettes had been made, and all the members expressed considerable dissatisfaction at the extraordinary range of the results, and they would have suggested the desirability of a new series of tests being made on briquettes prepared by some other expert if the time would have allowed it, but, unfortunately, they were compelled to give their awards in accordance with the results then obtained.

By referring to the table of tests made, a copy of which is appended hereto, you will no doubt notice the discrepancy that exists in the results between the first and second tests made with the same sample of cement (see No. 2), and supposed to be treated in the same way, and the briquettes made in a similar manner. There is also a glaring case with a sample (No. 6) which stood a strain of 150 lbs upon the square inch in the first test, and broke down in the next test without any strain being indicated (see No. 6). There is also another instance where the difference between the two tests is 118 lbs (see No. 9). In two cases there is a difference of 140 lbs, and others range widely. Another unaccountable difference is shown in a sample which stands a strain of 123 lbs. to 281 lbs. in four tests (see No. 3), and with the next four tests breaks down at nothing indicated.

Thus the jury considered most unsatisfactory; and the cause has not been explained or accounted for, as tests of the same cements usually show very similar results, and under these circumstances I consider it only fair to allow all exhibitors who appeal to have a new series of tests made upon the same conditions as proposed by Mr. Doehling. The jury, I feel sure, would undertake the same, as they have a strong feeling that justice has not been done in the matter.

I have the honour to be, sir, your most obedient servant,

A. PURCHAS, C.E.,
Vice-Chairman of Jury No. 12.

N.B.—As a proof of the inferior manner in which the briquettes must have been made, I need only call attention to the results in the table attached, the highest being 441 lbs., whereas reliable evidence is published of similar briquettes breaking at 634 lbs. A. P.

Technological Museum, Melbourne, 20th August, 1881.

Report of an examination of the cements exhibited by the "Stern" Cement Company (Tropfner, Grawitz and Co) and Messrs. Gostling and Co., made at the request of the Commissioner for Germany.

Upon analysis these cements gave in 100 parts:—

			"Stern"		"Gostling"
Water	0.95	..	1.50
Lime	62.59	..	60.80
Lime (carbonate)	trace	..	2.25
Lime (sulphate)	1.81	..	1.16
Magnesia	3.10	..	2.26
Silica	11.70	..	19.60
Silica, soluble in acid	7.70	..	1.80
Oxide of iron	3.60	..	4.40
Alumina	8.10	..	4.00
Soluble salts	2.00	..	1.75

Briquettes were made from each sample, and, after exposure to air for one day and immersed in water six days, they were broken on Holst's machine with the following results:—

Twelve samples of "Stern" cement gave results equal to a breaking strain of 340.8 pounds to the square inch, with a minimum of 300 and a maximum of 390. "Gostling's" cement, treated in the same way, gave an average of 357.1 pounds as a breaking, maximum 395, minimum 355.

A second series from the Exhibition cement gave "Stern" cement an average of 585 pounds, with a maximum of 730, and a minimum of 400. "Gostling's," treated in the same way, gave an average 403 pounds, with a maximum 509, and a minimum of 300.

Both cements give results above that guaranteed by the makers, and had this evidence been before the jury, both would have received the first order of merit.

J. COSMO NEWBERRY.

I fully approve of the above.

A. PURCHAS, C.E., Vice-Chairman.

Melbourne, 26th August, 1881.

George Collins Levey, Esq., C.M.G., Secretary to the Melbourne Exhibition.

Sir—I have the honour to lay the following matter before you:—

In the beginning of April the awards in connection with Cement (Jury 12) were published. The jury having awarded second order of merit to the exhibit of the Portland Cement Fabrik "Stern," Stettin, Messrs Toepfler, Grawitz and Co., I, as their agent, immediately appealed, through the German Commissioner, against their decision, knowing very well that the cement of this firm is recognised everywhere as being the best with regard to strength, density, hardness, fineness, colour, and uniformity of quality, especially in regard to strength; this firm guaranteeing a strength of 568 lbs. to the square inch, seven days' test, being more than any other firm can do.

I asked to have the cement tested by one or two experts.

Some delay was caused by the necessary correspondence on this subject, but finally Mr. Cosmo Newbery offered himself, in his capacity of Government analyst, to submit the samples of "Stern" and Gostling cements to proper tests, in order to arrive at a correct understanding regarding the claimed qualities of the cements.

In consequence of Mr. Newbery's many engagements, and the difficulties in the way of properly testing cement in a short time, he was not able to give the result of his examinations before the 20th August, on which day he submitted to you a report, copy of which you kindly forwarded to me, from which you will have observed that, according to his examination, the "Stern" cement was quite entitled to a first order of merit.

I beg, therefore, to request you to be good enough to have the award for the "Stern" cement of the Portland Cement Fabrik, raised from the second to the first order of merit, to which it is entitled.

It is no fault of mine if this matter did not come sooner before you for your consideration, and I hope I will obtain from you the justice to which my firm is entitled.

Awaiting your reply, I have the honour to be, sir, yours truly,

FELIX DOEHLING.

Forwarded to Mr. Newbery for his report.

G. C. LEVEY. 29/8/81.

Melbourne, 30th August, 1881.

Sir—In reference to the delay which took place in the appeal made by Mr. F. Doehling, I beg to offer the following explanation:—

After the awards of the jury were made known on the 30th March, a protest was made by Mr. Doehling through Professor Rouleaux that the tests had not been fairly made. This protest was sent to the jury, who replied that the cements had been dealt with by a skilled person, and that if any error occurred it must have been with his knowledge. I investigated this charge, and was satisfied that all the cements had been dealt with in a perfectly fair manner, and reported the matter to Mr. Doehling, who then submitted a series of briquettes from his exhibit as a means of substantiating his appeal; these were broken in the usual way on Holst's machine in the jury offices by Mr. Doehling and Mr. Balke of the Gorman Court; several briquettes were very imperfect, and showed a greater range than even the jury briquettes. This test not having substantiated the protest, the matter fell through.

On the 28th April a letter was read at the meeting of the Committee of Jury and Awards from the Acting-Commissioner from Germany, and after I had made a report as to what had been done, the committee decided to reply that the question could not be re-opened.

The German Commissioner again pressed me to personally inquire into the matter, and Mr. Doehling sent me samples of cements for analysis. Owing to other pressing work in the Exhibition some delay occurred before the analyses were finished. I then gave them to Mr. Doehling, who thereupon sent me a barrel of cement from a store in Melbourne; from this briquettes were made under my supervision by a man employed by Mr. Doehling, as well as from barrels of cement marked as "Gostling's" and "White's" for comparison; they were all tested after having remained a week in water.

Mr. Doehling was dissatisfied with the result, and a second and third trial was made—the last being with a portion of the exhibit in the German Court; this was satisfactory, and the results are given in my report to you, dated 20th August, 1881. The time occupied in these trials was about one month.

There is no doubt that, had the information brought to light by my investigation been before the jury, this cement would have received the award claimed; but the first complaint was a protest charging the jury's workman with fraud, and on this charge Mr. Doehling based his claims till after the decision of the Committee of Jury and Awards on the 28th April, 1881.

I have the honour to be, sir, your obedient servant,

(Signed) J. COSMO NEWBERY.

G. C. Levey, Esq., C.M.G., Secretary Melbourne International Exhibition.

1st September, 1881.

Sir—I have the honour to forward, in reply to your letter of 26th inst., respecting the cement awards, a copy of a letter received from Mr Newbery upon the subject, and I regret to inform you that, after the statements made therein, I cannot do any more, but furnish you with a copy of Mr. Newbery's report, which will be published in the "OFFICIAL RECORD," and which will shortly appear.

I have the honour to be, sir, your obedient servant,

G. C. LEVEY, *Secretary.*

F. Doehling, Esq., 49 Collins-street West.

JURY SECTION XIII. AND XXII.

Class 28.—Perfumery.

Class 46.—Chemical and Pharmaceutical Products.

Class 47.—Chemical Processes for Bleaching, Dyeing.

JURY.

EXPERT WITH JURY—

G. Manley Hopwood, F.C.S., F.I.C., & Co.

SIR—I have the honour to submit the following report on the exhibits submitted to jury 13 and 22:—

CLASS 28.—PERFUMERY.

This class, considered in the widest acceptance of the term, was well represented by English and Continental manufacturers, and colonists had a good opportunity for judging the estimation in which the patronage of the antipodes is held, and at the same time of forming some just idea of the lucrative nature that must appertain to this branch of manufacture under circumstances favourable to its prosecution. It is a subject for some consideration why this branch of industry has had so little success in these colonies, where soil and climate are most favourable, that it may be pronounced to be practically non-existent.

A very large percentage of the awards made came under first order of merit, which arose from the fact that the exhibits, as a whole, were of a very high class. In respect to eau-de-cologne, so keen was the competition, and so important has this special toilet manufacture become, that it was deemed necessary and just to the several makers to create for it a special division. Great attention and care was exercised in making awards for eau-de-cologne; and though some surprise was experienced when the names of the manufacturers ranked in each order were revealed, there need be no doubt as to the justness of the verdict pronounced. Eau-de-cologne is probably one of the most notable toilet preparations of the kind the excellence of which depends upon the greatest nicety in manufacture; care in preparation, excellence of aromatics, and purity of spirit must be *sans reproche*, and any slight laxity in one or more of these conditions is certain of detection when the product is suitably compared with a more carefully prepared manufacture.

The eau de cologne prepared by K. Fievet (Johann M. Farina, gegenüber dem Altenmarkt), Cologne; E. Coudray et Fils, Paris; and J. and E. Atkinson, London, were especially agreeable preparations of this world-famed article. But this must not be read to the exclusion of all the others classified, whether first or second. All were respectively good, and it is pleasant and promising to find two colonial makers—viz., C. A. Atkin, Melbourne, and F. Longmore, Melbourne—obtaining a place beside old well-known firms.

J. and E. Atkinson, London, made a wonderfully fine display of miscellaneous perfumery and toilet preparations. The excellence of the majority of this firm's preparations, and the delicate fragrance of its handkerchief bouquets especially, supplemented by an unique and elegant style of presentation, unsurpassed by any other exhibitor in this class, fully entitled it to special mention and to the first award accorded. The essence of white rose exhibited by them is noticeable as being one of the most delicately fragrant and lasting of the great variety of similar preparations exhibited.

Piesse and Lubin, London, exhibited a great variety of bouquets for the handkerchief, all of the highest merit, combining agreeableness of fragrance with permanence and durability. Their toilet preparations generally were of a superior character; and an especial feature of their exhibit consisted in an assortment of essential fragrant oils of great purity, for which special mention was recorded at the same time that the first award was given for their collective exhibit.

E. Coudray et Fils, Paris, exhibited first-class bouquets, soaps, pomade, and other toilet preparations, and a speciality—a sachet, containing sheets of a highly aromatic paper, called "papier inalterable," suitable for placing with clothing and linen, in lieu of the lavender and rosemary sprigs, so frequently employed.

Roure, Bertrand, et Fils', Grasse, exhibit of perfumes, essential oils, pomades, &c., deserved special notice on account of character and excellence. The essential oils were very fine, as also were the bouquets, while the pomades were of a peculiarly high degree of fragrance. These preparations are made and put up especially for exportation, the bouquets and pomades being as highly concentrated as possible, thereby saving cost in carriage, and enabling retail vendors to put them up (after suitable dilution) in such quantities and forms as may suit each one's particular class of customers. This firm deservedly received first award.

Gustav Bohm, Offenbach, one of the earliest manufacturers of the elegant form of toilet soap, known as "transparent soap," exhibited this article in a great variety of forms, together with toilet soaps of the very finest character. Another speciality in the exhibits of this manufacturer was "soap fruits," which were so true in form and faithful in colouring as to deserve very high commendation, even when regarded as models, and most certainly are worthy of finding a position on any toilet table alongside of works of art manufactured of less homely and utilitarian material. Special mention and first award were well earned by this exhibitor.

F. M. Farina (No. 4711), Cologne, likewise exhibited transparent soaps, together with a great variety of very superior toilet soaps, of various and elegant shapes, and very delicately perfumed. The handkerchief perfumes and other toilet preparations of this exhibitor were of an equally high order, and the manner of packing was in excellent keeping. The exhibit received first award.

L. Leichner, Berlin, exhibited theatrical toilet preparations. This was an unique and most elegant display. The various cosmetics, pomades, powders, pencils, &c., &c., appeared to be of the best description of material, and all showed signs of very careful preparation to suit them for the purposes intended. This was the only exhibit of the kind in the Exhibition, and deservedly received first award.

Calderara and Baumann, Vienna, displayed a great variety of toilet preparations, all of good quality, and having the additional recommendation of moderate cost, the latter remark applying especially to toilet soaps. First award.

Gottlieb Taussig, Vienna, exhibited excellent toilet soaps, also "fruit soaps," all of very moderate price, and received first award.

A. C. Diedecks Sohn, Vienna, exhibited perfumes and toilet soaps, the latter preparations being very good, and of low price. First award.

G. Oates & Co., Messina, exhibited a variety of very choice essential oils, of which those of bergamot, orange, and lemon were conspicuously worthy of notice. These exhibitors received first award and special mention. Their oils were of a high degree of purity.

C. Hardoun, Penang, also exhibited several specimens of well-prepared essential oils; likewise J. Fisher, Singapore. To both these exhibitors first award was given.

The Apollo Stearine Candle Company, Melbourne, exhibited largely transparent toilet soap, in various shapes. First award.

J. Kitchen and Sons, Melbourne, displayed a great variety of toilet soaps, well made, and perfumed; also, "fruit soaps." For toilet soap, first award.

J. Bosisto, Melbourne, exhibited "perfumery obtained from native flowers" by the "enfleurage" method of extracting aromatic odours which, by the process of distillation, would be injured and rendered useless. Every credit is due to Mr. Bosisto for this practical demonstration of the applicability of this simple, inexpensive, and elegant method for the extraction of the odours of some of our native fragrance-yielding flowers; and, no doubt, the partial success that has attended his efforts in this direction will prompt him and others to follow up the matter further, till finally an economic success shall be attained. I do not consider it likely, however, that such odours as that obtained from the flowers of the wattle-tree will prove suitable for toilet perfumery. However, there is no reason why fragrance-yielding flowers—such as the jasmine, violet, tuberose, and jonquil—should not be cultivated and collected in quantity, and treated by the enfleurage process with remunerative result. The jury did not give a separate award to this portion of Mr. Bosisto's exhibit; but it is due to him, I consider, to place on record this step towards establishing an industry so suitable to the Australian colonies.

CLASS 46.—CHEMICAL AND PHARMACEUTICAL PREPARATIONS, &c.

A very large proportion of the exhibits in this class were more of a pharmaceutical than a strictly chemical manufacture.

The great "alkali trade" of Great Britain had only one representative—namely, Messrs. Gokling, Davis and Co., Lancashire—who exhibited caustic alkali and "bleaching powder" of very superior make and high percentage value, for which they received first award.

Solvay et Cie., of Vranzeville and Conillet, exhibited in both the French and Belgian Courts carbonate of soda made by decomposing chloride of sodium with bi-carbonate of ammonia. The samples exhibited were of excellent quality, and contained a very insignificant quantity of chlorine. The exhibits by the French branch of this firm were slightly superior in this respect to those contributed by the older branch in Belgium.

The manufacture of carbonate of soda from common salt by double decomposition with bi-carbonate of ammonia has been often attempted, and many methods have been the subjects of patents, the earliest of which appears to have been granted in England in 1838. From that date till 1863 all attempts to obtain, on a large scale, carbonate of soda from common salt, by this reaction proved only partially successful, and failed to attain to the position of rivals of the famous Leblanc process. Mr. Ernest Solvay, profiting by the experience of others, after much patient labour and some failure, at length contrived and perfected apparatus by which the method of manufacture was made

an economic success. At no distant date the consumption of carbonate of soda by certain of the many important manufactures being established in these colonies will doubtless prompt capitalists to turn their attention to its production, and the Solvay process would soon to possess features that are calculated to make it more suited to our position than the Leblanc method. The former, in brief, requires common salt and carbonate of ammonia; the first could be manufactured from sea-water, and of the latter our gas manufactories are a never-failing source of supply. The Leblanc method requires common salt, lime, much fuel, sulphuric acid (the transport of which is so costly as to make its local manufacture absolutely imperative where large quantities are consumed), for which must be used nitrate of soda, and a very costly plant erected. From a sanitary point of view the new process is certainly preferable, for whereas Leblanc's method, even under the most careful management, corrupts the air, and pollutes the rivers with its by-products, the "waste" arising from the Solvay process is of inoffensive character, and there are no acid fumes or deleterious offensive gases evolved, whereby vegetation is destroyed, and the neighbourhood rendered all but uninhabitable. Special mention and first award were given to both exhibits.

J. Schlessinger und Söhne, Trencsin, Hungary, exhibited good specimens of potash, raw and refined, obtained from wood ashes, for which they received second award.

All the colonies neglect this industry, which is greatly to be regretted, seeing what an immense amount of timber is annually felled and left unutilised. Also at saw-mills large quantities of sawdust, which might quickly be converted from an inconvenient by-product into money, and in many instances with considerable profit, yearly rot and are lost. It has been incontestably proved by Baron von Müller and Mr. Cosmo Newbery that much of the indigenous timber of these colonies is remarkably rich in potash, and it may well be asked by visitors why this valuable industry is not attempted. In the opinion of the writer many men might readily earn a respectable income by potash-making, and need not suffer many of the hardships experienced by most fossickers and not a few selectors.

Stassfurter chemische-fabrik, Stassfurt.—The exhibit of this association was large and most complete. It contained in all eleven distinct specimens of the several potash, soda, and magnesia salts, also bromine, manufactured by the firms having chemical works at Stassfurt, Leopoldshall, and Döglashall. Special mention and first award was given for this display.

Cuming, Smith and Co., Melbourne, exhibited an assortment of mineral acids of the very highest class. The pure acids made by this firm left nothing to be desired, and reflected the greatest credit upon their skill and care. They received first award for mineral acids, with special mention. This firm also exhibited artificial manures, for which they obtained first award. Supplementing this exhibit, the firm showed a very complete model of a sulphuric acid plant, which, however, the jury ignored (as not coming under their section) in making their award.

Cuming, Smith and Co. were nominated as worthy to receive the Emperor of Germany's prize.

Felton, Grimwade and Co., Melbourne, exhibited an extensive assortment of chemical products, including mineral acids, together with acetic acid, pure and glacial, &c. Out of the great number of articles shown by this enterprising colonial firm, their carbonate of ammonia is deserving of special mention, together with their bi-sulphide of carbon and carbonate of magnesia, prepared specially for "fluid magnesia," of which they are manufacturers. The general excellence of this firm's chemical and allied preparations was well sustained, and won for them first award for their collective exhibit.

Felton, Grimwade and Co., also Roche, Tompsett and Co., Melbourne, showed samples of the now pharmaceutical preparation, known popularly as fluid magnesia. The jury decided not to make any special award for this manufacture, but samples

were analysed by me with the following result:—Fulton, Grimwade and Co's manufacture contained of pure carbonate of magnesia 11.35 grains per fluid ounce, and Roeke, Tompatt and Co's 10.03 grains; so that, considering the nature of the preparation, both manufacturers exhibited first-class articles. It is worthy of note that the "fluid magnesia" exhibits now under notice compare favourably with those shown at the Exhibition held in Melbourne in 1866-7, which were analysed by Mr. J. Cosmo Newbery, B.Sc., F.C.S., &c.

Chemical laboratory discoveries had some interesting examples of elaboration and development in the manufacturing world. The apparently inexhaustible aniline series of dyes obtained a magnificent representation at the hands of A. Poirier, of Paris. His exhibit of these triumphs of scientific chemistry, that rivalled in their brilliancy and purity of colour the richest and brightest-tinted flowers, and promise to equal in multitude the shades seen ever mingling and intermingling on Nature's pallet, was a monumental earnest of what this branch of science will yet do. A special mention for utility, improvement, and variety, and first award, was given M. Poirier for his exhibit.

The Badische Anilin und Soda Fabrik, Stuttgart, also displayed a series of aniline colours, all of the highest character, and a specimen of one of the latest applications of chemical synthesis—viz., artificial indigo—was conspicuous. The jury, in giving to this company's exhibit a first award, made special mention directing attention to this achievement of their manufactory.

Hardly less commendable for variety and brilliancy was the exhibit of aniline dyes shown in the Swiss Court by J. Mouret et Cie., of Geneva, which likewise received first award.

Another example of the application of chemical research and synthesis, indicative of advancement in another direction, was made in the exhibit of Haarmann und Reimer, Holzwinden, which contained artificial vanillin (vanillic acid?), heliotropin, &c., for which they received first award. These substances (white crystalline and amorphous bodies) are chemically identical with, and possess all the beautiful odour and delicacy of flavour characteristic of, the plants from which their several names are derived. In consequence of the concentrated state of the flavouring substance (vanillin), the manufacturers supply it mixed with fine white sugar, thereby rendering its use for flavouring purposes within easy control.

In the same category as the foregoing ranked the manufacture of salicylic acid and compounds, of which Dr. F. von Heyden, Dresden, made a special exhibit, and received first award therefor.

And the foregoing notice brings one to exhibits appertaining directly to medicine—pharmaceutical preparations. Of this description, as before mentioned, the number was large, and extremely varied, ranging from the rarest alkaloids to the most well-known simples of household dispensing.

The products of opium were largely shown. T. and H. Smith, of Edinburgh and London, so well known as manufacturers of all products of opium, and the discoverers of many of its constituents, exhibited a most complete series, which, besides all the more generally known derivatives, contained two not so well known, opium alkaloids, and a neutral body; also aloine, the purgative principle of aloes. E. Genevoix et Cie., of Paris, exhibited opium and other alkaloids, together with a large assortment of pharmaceutical preparations of the finest description. The Chemiefabrik Braunschweig exhibited quinine and chinconidine, alone and as salts; with which the preparations of quinine and strychnine of T. Whiffen, London, kept equal rank. Corbryn, Stacey and Co., of London, exhibited many rare pharmaceutical preparations of great merit. Southall Brothers and Barclay, Birmingham, exhibited, besides pharmaceutical preparations, a special case, containing cod-liver oil, and a series of cod-liver oil derivatives of great interest and value. C. Torchon, Paris, had, amongst an excellent display of pharmaceutical preparations,

"stamped pills," showing the name and strength on each pill. John Richardson and Co., Leicester, made a large display of a similar character, containing as a specialty tasteless pearl-coated pills, a perfectly soluble coating, and several other specialties of merit. W. H. Schieffelin and Co., New York City, exhibited soluble coated pills of a quality equal to any others shown, while Seabury and Johnson, New York City, had the finest display of medicinal, surgical, and other plasters in the Exhibition. There were also some excellent exhibits of medicinal herbs, roots, and barks, among which was the collection sent from the Philadelphia College of Pharmacy, and that of F. Wilhelm and Co., Vienna. J. Bosisto, Melbourne, had a representative exhibit, containing the special chemical and pharmaceutical preparations from Australian vegetation, with which his name, as the original introducer, is connected. The number and utility of these preparations is continually on the increase, both for use in the arts and in medicine. All the above, together with several other exhibitors of this class of preparations, obtained first awards. In very many instances exhibits were suitably tested, but the results of such laboratory work possess no special feature calling for record.

The important industries—soap and candle manufacture—were represented on a scale quite in keeping with their value. In most instances the manufacture of both was carried on in the same works and exhibited in one case, and adjudicated upon as a collective exhibit. There is no necessity to supplement the decision of the jury section by any special remarks. A considerable amount of laboratory work was done, but not so much, especially with respect to the question of household soaps, as the prominence of the subject warranted, had time permitted. The following tabulated results may be of some utility to many interested in the subject.

SOAPS—YELLOW.

Country.	Water (per cent)	Ash (per cent)	Ash calculated on Dry Soap	Soda in Ash required to fill Carbonate of Soda (per cent)	
				Moist Soap	Dry Soap

Mazzurana e Co. .	Bari	6.21	20.80	22.1	12.17	12.98

Note.—In every case the percentage of water was determined with every care, but in the estimation of the amount of ash an equal degree of refinement was not observed; nevertheless, the results are to be regarded as closely approximate.

Taking as the maximum of water allowable in genuine hard soap—30 per cent. for yellow, 20 per cent. for mottled, and 25 per cent. for white—it will be seen from the foregoing estimations that all the soaps submitted to examination came well within these limits, except in the one instance of a blue mottled soap of Victorian manufacture.

However, it should be remembered that, since "hard soaps" lose more or less water in keeping, a low percentage of that ingredient is not necessarily an indication of superior manufacture, but on the contrary is not commendable, for such soap is slow to yield a lather, and therefore its use entails unnecessary labour and loss of time. Several of the Italian samples were exceedingly hard, and could only with difficulty be made to lather.

Messrs. McLeod Brothers, of Dunedin, exhibited as a speciality samples of bar soap made with oleic acid—a cheap detergent—suitable for many purposes. Respecting colonial soaps, it may be observed that the manufacture of all kinds has attained to a high standard of excellence, and one and all promise to hold their own on any occasion when in competition with European or American manufacturers.

In candles, however, so far as regards those made of stearine, the colonies stood second to none when judged by the standard of the exhibits from some of the most celebrated manufacturers of the old world, as the following statements of results fully show.

As yet the manufacture of paraffin is not found in the list of colonial industries, although the crude material is not wanting. Paraffin candles are, however, made in some of the colonies from imported material. Candle wicks also are all imported, but are suitably treated, in order that they shall be "self-snuffing," by colonial candle-makers.

COMPOSITE CANDLES.

Price's Patent Candle Co. Limited, London	4	1757.9	149.1	1.131	0.9159	{ Wicks good. Burn badly. Wicks very inferior, & candles gutter much.
Kuru-kosho Kuwaisha and Aki- yama, T. Tokio	18	408.1		not determined		

PARAFFIN CANDLES.

Price's Patent Candle Co. Limited, London	6	1155.8	1.260	1.093	1.0410	Wicks good.
Young's Paraffin and Mineral Oil Co. Limited Glasgow	3	2279.6	1.214	1.819	1.3037	Ditto ditto.

Had it been possible to have added a column showing prices, the value of the whole would have been greatly enhanced.

In addition to the stearine, there were exhibited, by Tasmanian makers, tallow candles of good quality.

There were many other important exhibits, such as ultramarines, dye stuffs, tanning materials, &c., &c., the importance of which deserved more extended chemical examination than they received.

EXPERTS' REPORT.

J. B. Fenby and Co., of Birmingham.—I consider that, viewed as camp equipage generally, the frame of the tent, the camp tables, bedsteads, chairs, &c., possess in a high degree the following merits:—(1) ingenuity of construction, (2) actual usefulness, (3) strength, (4) lightness, (5) portability, (6) capability of being speedily set up, or as speedily taken down, and packed in a minimum of space. They are admirably adapted for the use of surveyors, explorers, travellers, or those whose occupations necessitate frequent changes of residence. I consider this exhibit of camp equipage to be entitled to a first-class award

SIR—We have the honour to report on the above section, comprising Classes Nos. 30, 31, 37, and 38. In submitting this report, it may be remarked that the jury felt the duty allotted to them as one of great importance, requiring the utmost knowledge of experts to bring it to a successful issue. The different headings under which we had to make our decisions will show this at once. It must also be taken into account that from the commencement it was impressed upon us that value in relation to price was constituted a prime factor in guiding us to all our conclusions; therefore, if exhibits otherwise deserving of mention have been omitted, it is entirely attributable to their highness in this respect.

The total number of exhibits adjudicated upon was 479. Due consideration was bestowed in every instance before determining, some, indeed, of the number requiring as many as four or more visits.

Special attention was devoted to sewing cottons, as bearing on the wants of the people; and it was only after long and careful consideration, during which the different exhibits were subjected to a crucial and exhaustive test, that the jury unanimously decided to give to Edmund Ashworth and Sons, Bolton, the only first award; its much greater strength placing it before all others, not only for sewing machine purposes, but also for hand sewing.

The paucity of exhibits offered for our inspection by Manchester manufacturers was much regretted, and it would have been a matter of congratulation had others entered into competition. At the same time, we could not be otherwise than satisfied with the large exhibit of bleached calicoes by Crowsdon, Crosses and Co., Manchester, showing their different varieties; and which for their general excellence, quality, and cheapness, received a first award.

To Walter Crum and Co., Manchester, the jury gave a first award for their very fine show of printed cotton goods, satens, &c., for their splendid printing, brilliancy, and harmonious blending of colours, together with the quality and comparative cheapness.

The exhibit by Haslam and Co., Manchester, of plain muslins, brocades, sateens, &c., the jury appreciated highly, and for quality and price placed them in the first order of merit.

The exhibit of Thibaut, Autin and Laperonne, of Rouen, comprising printed and velours moleskins, well merited the first award given for beauty of design, excellence of quality, with cheapness combined. This firm obtained a higher position in our awards than any other of the French competitors.

The black and white dress goods shown by A. Manchon, Rouen, elicited general approbation, and they fully deserved the first prize adjudged. The cretonnes and prints of soft finish exhibited by Keitinger and Fils, Lesenre, were very much admired for their style, colourings, and quality, which were considered fully equal to any shown.

In the Austrian Court we had brought under our notice the magnificent exhibit of G. A. Fröhlich's Söhne, of Vienna, consisting of plain and embossed velvets, velvetens, and cotton tweeds, and which, in our opinion, for quality and arrangement of colourings of the first two, and especially for taste displayed in choice of patterns for cotton tweeds, could not be surpassed.

The exhibit of the Wamsutta Mills, New Bedford, in plain and twilled cottons, was highly praised, both for quality and skill in workmanship. The prices quoted, however, so far ruled them out of competition that they were only awarded a second order of merit.

Next in order was the very important industry of linen threads and fabrics, and the jury could not avoid expressing their gratification at the extent of the exhibits placed before them, and awarded several first orders of merit. However, the exhibit of Marshall and Co., Leeds, of linen threads, fully entitled them to the premier position for quality, strength, evenness, and value.

We have also much pleasure in recording our opinion with regard to the exhibits in the Belgian Court, shown by Druve et Henderickx and Eliaert-Cools, of Alost, of sewing and lace threads, from the ordinary thickness up to the very highest numbers, which deserve the highest commendation.

Hussequoy Frères, Paris, had also an exhibit of linen threads, which, for quality and price, could not be excelled.

In linen fabrics the York-street Flax Spinning Company, Belfast, take foremost rank. This exhibit was unanimously accorded special mention for its extent, quality, and price, together with its other excellencies.

In the French Court our attention was drawn to a magnificent display of damask cloths, napkins, towels, &c., by Meunier and Co., Paris. Their very fine quality, beautiful patterns, and novelty of design certainly qualified them for the highest order of merit.

A larger exhibit, embracing a more varied description of linen fabrics, was that of Magnier, Brunet, Dnplay and Co., Paris, which also merited a first award.

E. Berger and Co.'s, of Freudenthal, exhibit in the Austrian Court met with our warmest approval, and an unanimous vote of first award. In the same court H. Klinger's, of Vienna, very fine exhibit was considered fully deserving of first order of merit.

K. H. Schiffner, and K. E. Hänsch, Gross-Schönau, made a very creditable display of table cloths and napkins; each receive first awards.

C. Mackintosh and Co., London, showed a large assortment of waterproof clothing, leggings, gig wrappers, &c., which, for excellence of manufacture, novelty of design, and cheapness, placed them superior to any that came under our observation; although Bartrum, Harvey and Co., London, may well be mentioned as justly entitled to a first award, which they have received.

We had to examine a large number of exhibits of men's and boys' clothing. In some instances keen competition existed, although there was little trouble in

arriving at the conclusion that D. Schwarzmann and Co., Vienna, had successfully competed for first award in style, quality, workmanship, and surprising cheapness. At the same time, M and J. Mandl, Prossnitz, Moravia, nearly approached them, in a very fine exhibit of a like character.

The jury unanimously concurred in the opinion that the fine exhibit of silk and other hats shown by J. E. and W. Christy, London, had no rival for excellence of manufacture, style, quality, and cheapness. This was considered a very exceptional exhibit, and it was particularly recommended that it should receive special mention; also, that a certificate to that effect should issue from the Commissioners.

The jury were agreeably surprised at the exhibit of T. Shehnerdine, Collingwood, which comprised soft felt and fur hats in all stages of their manufacture. Most, if not all of us, were astonished that such a factory was being worked in our midst. Still more were we amazed at the extent and magnitude of its trade, and it was unanimously recommended as a fit competitor for the Emperor of Germany's prize for colonial industries. It certainly had in its favour the circumstance that wool, hares' and rabbits' skins are so plentiful in this colony; but the high price of labour obtaining here must have taxed the energy of the proprietor to place at this Exhibition goods of such a character and value as to successfully compete with exhibits from British and Continental manufacturers.

The Bielefeld joint exhibit of shirts and shirt fronts justly entitled them to a first award for quality and price.

It is a matter of regret that the manufacturer's prices of shirts, collars, &c., made at the Braeside Shirt Factory, Richmond, could not be ascertained. In regard to quality, style, and workmanship, they were equal to anything of the kind exhibited.

It would have given more satisfaction had a larger display of hosiery from British manufacturers been shown. To Ragnet and Co., Paris, for their very fine exhibit of silk-span, merino, and cotton hosiery, the jury had much pleasure in giving a first award. Also to Thullier Poisson, Paris, for fancy hosiery, a like award, with almost the same degree of praise. The jury wish to remark that an exhibit of lambs'-wool hosiery in the New Zealand Court, manufactured by the Mosgiel Woollen Company, Dunedin, shown to them, was in every respect equal in quality and finish to any similar exhibit in the other courts. The prices quoted, owing, no doubt, to the dearth of labour in that market, placed them in the second rank. Should we as a colony at any time enjoy the benefit of intercolonial free-trade, a grand future will be opened for that industry.

F. Bapterosses, Paris, received an unanimous first award for his very fine exhibit of buttons. May Frères, Paris, and I. Krehan and M. Salcher und Söhne, both of Vienna, deservedly rank high for quality, style, workmanship, and cheapness.

Several very fine exhibits of artificial flowers, feathers, and millinery were placed before us, but those of the Chambre Syndicales des Fleurs, Paris, much surpassed the others for elegance and taste.

The exhibit of Flatau and Fuchs, Berlin, of ladies' and girls' dresses and jackets, in great variety, was strongly recommended.

There was severe competition amongst glove manufacturers, and a large number of first awards were given, but the jury unanimously placed the exhibit of F. Calvat and Co., Grenoble, at the head of the list.

Bailey and Kerr, Cape Town, shewed some magnificent ostrich feathers, which for finish, quality, and price, were unequalled. First award.

O. Falcimaigne Fils, Paris, had a very creditable exhibit of umbrellas and parasols, surpassing any other collection.

We specially commend the exhibit of fans shown by Ernest Kees, Paris, as being by far the best we had seen.

GEORGE STIRLING, *Chairman.*

EXPERTS' REPORTS

Lincoln and Bennett, London.—The silk hats, pullovers, and all the goods in their case are equal in every particular to any other shown; we therefore consider they deserve a first award.

De Clermont et Cie, Paris, exhibit a case of very superior soft felt hats of excellent manufacture and at a reasonable cost; we think they deserve a first award.

E. Haller, Melbourne, has shown some silk hats made in Melbourne, equal in quality and finish to any in the Exhibition, and we think he deserves a first award.

Dudon and Beaupin, Melbourne.—I have thoroughly examined the exhibits of wigs and hairwork of this firm, and find them composed of first-class articles; the workmanship is of a very superior order, and the arrangements of a high artistic class, comparing favourably with any made in the best establishments at home, and in my opinion deserving the highest award.

Aguellet Frères, Paris.—We have been carefully through this exhibit, and are of opinion that it is deserving of a first award. The makes of their ladies' untrimmed hats are of a very superior quality; the fineness of the straw, tuscany, and beaver exhibits are better than any we have hitherto seen in the colony. Taking the exhibit as a whole, we consider it a display of first-class fashionable goods, and therefore recommend the jury to give them a first award.

De Saxe and Co., Melbourne.—The exhibit of umbrellas fairly entitles them to a first award, as it is in our opinion one of the best exhibited.

T. Gittins, Melbourne.—On carefully examining these goods we are of opinion that he is fully entitled to a first award, more particularly for his umbrellas, which are manufactured in considerable variety and are of first-class material, make, and finish, and also moderate in price.

E. Harrison and Co., London.—Cotton fancy dress goods.—Taking this exhibit as a whole, we consider they are well deserving of a first award for the following reasons—cheapness, variety, colour, and general adaptability to public wants.

J. D. Spedding, Melbourne.—We made a very careful examination of this exhibit, which consists of a great variety of ladies' underclothing, ladies' and children's embroidered goods, infants' cloaks, frocks, &c. As an individual or collective exhibit, we consider it the best in the Exhibition. The goods are all beautifully made, nicely designed, and of the best quality. The embroidery on the robes, with hoods to match, are well worthy of mention, the designs being quite new, and are copies of the early English patterns now so fashionable. A child's cashmere cloak, with quilted satin linings, we also consider very fine. We therefore recommend a first order of merit.

Fownes Bros., London.—I have examined the samples submitted of this firm's gloves, and consider them superior in quality and make to any I have seen in the Exhibition, and consider them entitled to the highest award.

Welsh, Margetson and Co., London.—I have examined the exhibit of this firm, and consider they are first-class goods and worthy of the highest award.

Swainson, Birley and Co., Preston.—This exhibit consists of nine different ranges of makes. After carefully examining these goods, we feel it our duty to recommend this firm for a first order of merit on the following grounds—cheapness, quality, finish (being very free from dressing), and for variety.

D. H. Pollak (Wiener Schuhwaarenfabriks actiengesellschaft), Vienna.—Boots.—Taking this exhibit as a whole, and considering the very low price, I am of opinion that it is first-class, and accordingly recommend it a first award.

A. R. Löwenstein, Vienna.—Ladies' Boots and Shoes.—I recommend this exhibit a first order of merit for excellence in workmanship.

	P. Harrington "

No detailed report has been made by this jury.

The following analyses were made on behalf of the jury:—

Industrial and Technological Museum Laboratory, March 2nd, 1881.

Report on five samples of lithofracteur and dynamite submitted by the chairman of Jury XVIII.

Australian lithofracteur (1) contains 70.4 per cent. of nitro-glycerine. No exudation. Is free from acidity.

Australian dynamite (2)—Large amount of nitro-glycerine exuded; wrapper also saturated. More nitro-glycerine has been put in than it can hold. It is an unsafe mixture. This sample would be condemned in England, and destroyed.

German (1) dynamite contains 68.4 per cent. of nitro-glycerine. Exudation small; acidity slight. Nitro-glycerine separates at once from sample on addition of water.

German ("0") dynamite contains 76 per cent. of nitro-glycerine. Very slightly acid.

German ("00") jelly.—Mixture of nitro-glycerine, soluble cotton, and camphor.

--	---------------

SIR—The International Exhibition of Melbourne afforded among its various displays an opportunity for obtaining further knowledge of the timber resources, not only of Australia, but also of several other parts of the globe. But collections of wood for

exhibition purposes are generally made up rather for numeric extensiveness of objects than with a view of bringing what is exhibited into commercial and technical use; and it becomes, therefore, often necessary, in examining wood specimens, to distinguish between those really available as raw material for industries and those merely displayed for showiness or curiosity. In glancing over the woods displayed in various Courts of our International Exhibition, the palm had to be conceded to British India for the extensive variety of its wood samples, though small in their size. Tropical Africa and America may cope with South Asia in future grand fairs of the world also in this respect, but in India alone have the tropical timbers been subjected to accurate and extensive investigations respecting the distribution and abundance of the trees, the structure, texture, and specific gravity of their wood, and the special adaptability of the very varied timbers for the purposes of builders, joiners, and all other artisans who utilise wood in their trades. But even in India much has yet to be learned on the natural frequency or scantiness of particular kinds of trees, the accessibility of supply, their power of recuperation, their facility of being reared, their adaptability to particular localities, the rate of their growth, their bearing-power and durability, especially as regards the latter quality when employed for underground structures. India, however, through large and well-organised departments, has been enabled to place before the world very extensive records upon the constituents of its forests; and when we refer to Dr Cleghorn's voluminous documents on the forests of Madras, to Dr Falconer's reports on the woods of Tenasserim, to Stewart and Brandis's elaborate forest-flora of North-western and Central India, to Colonel Boddome's largely illustrated flora sylvatica of the Madras Presidency, and to Dr Kurz's meritorious forest-flora of British Barmah, a wide insight into the Indian timber supply and its practical application may be obtained without tedious reference to scattered and often incomplete data in isolated documents or in journals not readily accessible. Thus, through the literature alluded to, anyone interested in the trade or utilisation of timber can arrive at some fair conclusion as to the respective values of the different woods exhibited in the Indian Court, in comparison with the teak, red cedar, sal, sissoo, deodai, ebony, satin and rose wood, and the few others well known in the general commerce with India; and with the aid of these works it might be ascertained to some extent how many of the exceedingly numerous kinds of Indian trees from various altitudes and climatic regions could be chosen for forest culture elsewhere with the best prospects for commercial and industrial gain, while by the same means the technical value of any new kinds of wood entering the trade from thence may be judged.

Next to the Indian wood collection for numerical extent of different kinds stood the superb series of timber specimens displayed by New South Wales; as a whole, the collection occupied a foremost position for the size and soundness of the samples, while the fitness of many of the select species for ornamental furniture and for many sorts of implements was well demonstrated by the careful planing and polishing to which these wood-exhibits had been subjected. Nevertheless, as in the case of the rather numerous variety of excellent specimens of woods from Queensland, any considerable traffic has hitherto been limited to comparatively few species; and it remains to be ascertained what sorts occur sufficiently frequent to enter the market in quantity and at moderate price, and how many kinds can compete in ease of working, or degree of durability, or beauty of appearance, with the timber of the red cedar, the ironbark trees and other leading eucalypti, the blackwood acacia, araneaia kauri and podocarpus pines, yellow-wood, tulip-wood, gmelina and grevillea tree, maba ebony, and a few other sorts of mereantile timber of East Australia. Again, the question arises also, as to which species of trees are most rapid in growth and require the least expensive treatment for entering the domain of forest culture. As we proceed in Australia to the cooler southern latitudes, the bewildering diversity of the tree vegetation of the intratropic and sub-

tropic zones gives way to a far more limited number of timber species—they are no longer counted by the hundreds, the aspect of the forests becomes more monotonous, and gregarious species replace the scattered kinds: but what is lost in variety is gained by the abundance of the fewer forms, fortunately many of them excellent in their way for the purposes of industrial life.

Thus Victoria can pride itself on its masses of the famous rapidly-growing blue-gum tree, its easily worked stringy-bark trees, its redgum and ironbark trees of extraordinary durability of timber; its box-eucalypts of several select kinds, singular for the toughness of their wood. Our famous blackwood tree is not only interspersed in the forest vegetation, but also still abounds in many parts of the open country, yielding a magnificent furniture wood; again, in some of the higher altitudes and cooler valleys the evergreen beech forms forests of its own. The eucalypts, however, predominate decidedly in Victorian tree vegetation, numbering many variously important species, and on then descriptive and technological elucidation a special volume has been published by the Government Botanist, whereby a fair guide through the eucalyptus vegetation of Victoria, and of all the other Australian colonies, can be gained. Tasmania and South Australia participate in many of the species of timber trees which form the native wood resources of Victoria; but while South Australia (in its extra-tropic portion) possesses hardly any timber vegetation peculiarly its own, Tasmania can boast in its vast forest regions of its endemic splendid Huon and celery-topped pines; and here alone, beyond Victoria, have the bluegum tree and the beech their home, though the almost incomparable redgum tree does not pass Bass's Straits. Many of the timber samples from Tasmania were of great size and particular excellence. South Australia, from its young but well-organised and well-supported Forest Department, will be able to send large displays of introduced timbers to future exhibitions. Western Australia, so strikingly singular in most of its vegetation, possesses likewise throughout its main forests features quite its own, an enormous area being covered by the jarrah eucalyptus, which tree has become world-famed for the durability of its timber. Also confined to the west of Australia are the York-gum tree, the tuart, and the yate, all counting among the most lasting woods, though, unlike the jarrah, they have not yet come into any regular export trade. The karri, although not so durable, is also of importance when gigantic dimensions of timber are an object. On the "forest resources of West Australia" a special and illustrated publication has been issued by a member of this jury; and it may also in this instance be recommended that the leading eucalypti timber should be transferred from thence to the forests of the south-eastern colonies—a recommendation which forced itself still more on our attention when we noticed the huge planks, the uncorroded though long submersed piles, and the variety of wrought-wood samples in the Western Australian Court.

Still more isolated than Western Australia stands New Zealand in its timber vegetation, peculiar in every respect—a circumstance all the more remarkable when the short distance which separates the great northern island from South-eastern Australia is considered. What is so much wanted here as a natural local resource—namely, pine timber—forms in New Zealand a large portion of the forests, though several evergreen beeches, with a few other kinds of trees, constitute in some localities main portions of the woods. The kauri, miro, totara, and matai are leading pine-trees there, representing a great forestal wealth, enhanced by the large demand already existing in the southern colonies for decay-resisting pine-wood in naval architecture. The display of timber specimens from New Zealand was, as regards kauri, truly magnificent.

Fiji also sent a contribution in woods; but it needs still more extended experience through longer colonisation before we can assign to each of the very varied kinds of timber from that or indeed any other Polynesian group its true mercantile value.

or select adaptability, the dendrologie information for technical purposes from thence hitherto mainly resting on passing notes in Dr Seenanu's *Flora Vitiensis*.

Mauritius, Ceylon, and Japan also showed some specimens of native woods worthy of further study, the Japanese trees having a special claim on our attention as being all exquisitely adapted for the forest regions of Victoria; moreover, the exuberant variety of trees, peculiar to the Japanese islands, offers to the workers in timber or ornamental woods a splendid display of pines, oaks, maples, ashes, walnuts, and others of less familiar features. A specific record of the numerous trees of Japan is accessible in the recent work of Franchet and Savatier, while references to the species most important to artisans are contained in the volume "on select plants for extra-tropical cultures," first issued in our metropolis, and subsequently in San Francisco, Calcutta, and Sydney.

Museum collections of wood specimens, such as arise readily in industrial exhibitions, technological institutions, or forest departments, tend much to a due appreciation of wood resources, and may become also to some extent helps in the specific choice of trees for forest culture. One of the most handy and elegant of all forms of wood samples is that in book-shape, adopted by the Government Botanist of Victoria for the Exhibition of 1862-3, and subsequently imitated in other countries for later International Exhibitions, though not now used at our own. This book-form for samples of wood recommends itself particularly for private collections, as requiring comparatively little space, and being easy of access. When cheapness is an object, the woods to be illustrated need merely to be put solidly into book-shape; otherwise it is preferable to have boxes constructed of the wood samples, resembling books, as into such boxes can be put leaves, flowers, fruit, and a portion of the bark of the species, irrespective of any samples of resin, gum, oil, fibre, or other products or extracts obtainable from the particular kind of tree. When once the size of such wood books has been fixed, orders according to the adopted pattern could be effected in any country from whence collections or additions may be sought. As in all other museum collections, it is also in this instance desirable to have two sets, the one to be arranged systematically, the other (with some repetitions) geographically, by which means the longitudinal sections of the woods could be simultaneously presented, tangentially as well as radially. The back of the wood books should be polished, and should, in the fashion of ordinary binding, bear the name of the species and its native country. Australia alone could furnish from fully a thousand distinct species of its indigenous trees an imitation library of as many volumes. Accurate records of the strength and elasticity of timber are as yet but scantily extant, considering the vastness of the material to be operated upon all over the world. Crucial tests of durability, by placing experimentally various pieces of carefully selected timber, pile by pile or post by post, into water and soil of various localities for strictly systematic comparisons, have hardly been commenced anywhere. Yet all this should largely influence the choice of trees wherever new or further forest operations are to be instituted, whether on Government areas or private lands, colder climes or in winterless zones like ours, where uninterrupted growth accelerates so very considerably the return from tree plantations. It is also a momentous fact that hitherto forest culture of every country has been limited to indigenous trees, the growth of our bluegum tree by the million in the countries around the Mediterranean Sea and some other regions of the world being one of the few exceptions.

In having glanced generally on the efforts made to bring together the wood samples from various parts of the world for comparative and absolute investigation of their value, we are led to reflect—How long will all the timbers established as excellent in the trade, and to some measure exhibited also on this occasion, remain available? further, to what extent can other and approved kinds from new regions supply their place in the market of the world? and lastly, what measures can be

adopted by forest culture to augment the almost everywhere declining or inadequate supply of really serviceable timber? On this occasion the future wants of Australia mainly concern us here, and to them merely will we devote a few passing words. Like every other country, so far as climate admits, our colonies should also strive to render themselves finally independent of imported timber, the sources of which are becoming more and more exhausted by the increasing demands of a population almost everywhere augmenting. We should also endeavour to adequately secure for growth in Australia every kind of timber trees best fitted for the multifarious requirements of our daily life; and we should avail ourselves of the fortunate circumstances which give to this our southern continent all the climatic zones needed for whatever vegetation of any country we wish to allot Australian homes. Entope in all times to come will have to rely mainly upon foreign products: in Australia, by prudent foresight and strenuous labour, we can collect independently around us, in one tract of the country or the other, all vegetable treasures, whatever they may be, and from wherever they may originally come.

The earlier we act on this principle, the sooner will the advantages be reaped. The magnificent forests of red cedar, restricted with us to Eastern Australia, are all but gone, excepting in a few secluded regions, so that the mercantile price of this unique wood has already doubled, with the prospect of a manifold increase in the future. Whether the Singapore or other cedars can be substituted for any length of time for what we had in Australia ourselves, and what we have largely wasted, seems quite problematical. Within our own colony the forests of the unsurpassable red gum and ironbark trees will soon be expended treasures of the past, nature not even being allowed to proceed in an undisturbed process of restitution, and the hand of man being yet nowhere active to aid her effort of regaining in the time of several generations what was lost or sacrificed in one. Our splendid blackwood trees, not over-quick in growth, are fast disappearing, however common they naturally were, and that which is shooting up under adversities to replace what is gone, has but a hurried or partial chance to attain to the perfection necessary for really important utilitarian purposes. Timber-pines, through a few champions of arboriculture, were planted here by thousands instead of the hundreds of thousands which will be requisite early in the next century. Land, bearing the noblest of trees, is alienated from the pristine forests all over Australia at a mere fraction of the price which, ere long, the timber alone would realise; the magnificent wood growth of ages being swept away by axes or fires as a worthless incumbrance. Stately kauries will soon be nowhere left, while new forests of them may slowly struggle on for a precarious existence. The best of pines, oaks, ashes, and maples will soon become, even under the stringent forest management of Europe, inaccessible to extra-European countries; while North America gives up its splendid species of these and other highly requisite trees without regard to the likely demands of a subsequent time, and the future calls of a vastly increased population, though private enterprise is commencing there to raise forests on new ground, but at a rate utterly out of proportion to the progressive annihilation of the virgin woods. Walnut-trees for timber will soon become as scarce as West Indian mahogany, and at best we shall have to wait till the middle of the next century before a cultivated supply will arise proportionate to the wants of the age. So far as we can see, in glancing around the world, there is not a single kind of tree on the surface of the globe for which adequate and permanent provision is made with any enlightened cosmopolitan views for future wealth and benefits.

Unquestionably, from the clearings of tropical jungles near harbours or navigable rivers in South Asia, Middle Africa, and Central as well as South America, a vast variety of trees will yet come forth for a long series of years, to replenish our future, perhaps, empty timber-yards. But who will foretell the perplexity likely to arise in estimating the adaptabilities of each of these extraordinarily varied timbers, even if sort for sort could be again recognised with exactitude under

scientific surveillance, even assuming that all such timber could be economically brought within the reach of ordinary requirements? The forest question, irrespective of its climatic and sanitary aspect, should here, for mere material considerations, receive, as in all other countries, the fullest attention in the economy and *régime* of states; and even private proprietors should come forward helpfully, and realise that an outlay in timber growth on the poorer and most lilly lands of their estates would prove a safe investment, returning a gradual and finally an ample interest. The treatment of questions like these must necessarily exercise a significant influence on the intercourse, comfort, and industries of all nations, and must contribute largely to the welfare of millions of beings in all future time and in all habitable parts of the globe.

JOSHUA SNOWBALL, *Chairman*.

JURY SECTION XX.

Class 45.—Agricultural Products not used for Food.

JURY.

J. Harris, M.P., Chairman, Victoria.
J. Ormond " "
R. E. W. M'Ivor " "
J. Lipschut " "
W. B. Jackson " "
W. Dean " "
Robt. Wright, Great Britain.

R. P. Ramsay, Great Britain.
C. Berghoff, United States.
C. M. Rosenthal, Germany.
H. Loid, France.
Lieut F. Orsini, Italy.
P. Villanis (substitute), Italy.

Sra.—The jury in the above class beg to submit the following report :—

Cameron Bros. and Co., Melbourne, showed a large and well-assorted collection of manufactured hard tobaccos, consisting of plug, twist, negrohead, aromatic, gold leaf, &c., of very good designs and finish; the leaf used externally and internally was of the best possible description, splendidly prepared, and of excellent aroma and keeping qualities. First award.

T. C. Williams and Co., Richmond, Va., U.S.A., showed a splendid collection of aromatic twist and plug tobaccos, of very fine designs and finish; the leaf used throughout being of the best quality and aroma, well prepared, and with good keeping qualities. First award.

W. Cameron and Brother, Petersburg, and A. Cameron and Co., Richmond, Va., U.S.A., showed collectively a very fine assortment of twist, plug, and aromatic tobacco, of excellent shapes and finish; the leaf used being excellent in every respect. First award.

Dudgeon and Arnell, Melbourne, showed a very fine collection of twist, plug, and aromatic tobaccos of every description, the shape and finish of the goods being excellent in every respect. The leaf used throughout the manufacture of their tobaccos was very well prepared, and excelled in aroma and keeping qualities. First award. This firm also showed cut tobaccos of excellent quality, well prepared, of splendid aroma, free and pleasant smoking. First award.

W. S. Kemhall and Co., Rochester, New York, showed samples of cut, chewing, and perique tobaccos, which for quality, aroma, fragrance, and skill in manufacture were first class. First award.

Compagnie "Lafume," Dresden, showed a collection of cigarette tobaccos, of excellent quality, well prepared, free and of pleasant aroma in smoking. First award.

Cameron Brothers and Co., Melbourne, showed a collection of excellent cut tobaccos, which were first class in every respect. First award.

Allen and Guter, Richmond, Va., U.S.A., were exhibitors of cut tobaccos, which were well got up, carefully prepared from first-class leaf, and of superior quality. First award.

Moss, White and Co., Melbourne, showed cut tobaccos of uniformly good quality, carefully prepared, and first class in aroma and smoking qualities. First award.

J. A. Hess, Hamburg; Loeser and Wolff, Berlin; H. Zieracks and Co., Hamburg; Bleckmann Brothers, Amhem; A. J. Reijnvaan, Amsterdam; and Moss, White and Co., Melbourne, showed collections of excellently made cigars, with good long fillers and wrappers, free smoking, and with good aroma.

Allen and Guter, Richmond, Va., Compagnie "Lafume," Dresden, and W. S. Kenball and Co., Rochester, N.Y., exhibited large and well-assorted collections of excellent cigarettes, manufactured of the finest tobacco, free and fragrant in smoking.

The following exhibitors showed good collection of light and dark snuffs, excellently prepared, pure and pungent—Mme. Couba, Mauritius; Dudgeon and Arnell, Heinecke and Fox, Moss, White and Co., Melbourne, Regio deir Tabacchi, Rome, and A. J. Reijnvaan, Amsterdam.

The jury recommended for first awards the Brisbane Botanical Gardens, for samples of excellent leaf tobacco, well cured, of good colour and body; and Osenbrück and Co., Heinslingen, for cigar-moulds of wood of good construction; and V. J. Hatterer, Paris, and W. Knepper's successors, Vienna, for variety and quality of cigarette papers.

Gail and Ax, Baltimore, showed splendidly manufactured cut smoking and cigarette tobaccos of first-class quality and aroma. First award.

JOSEPH HARRIS, *Chairman*.

JURY SECTION XXI.

Sub. Class.—Wool.

JURY.

W. Hick, Chairman, Victoria.
J. H. Halliburton "
P. Nettleton "
T. B. Schofield "
F. Betz, Tasmania.

W. S. Findlay, South Australia.
P. N. Tiebeck, New South Wales.
I. Younghusband, New Zealand.
C. Maquet, Queensland.

SIR—I have the honour to submit to you the following report made by the jury in this section. The exhibits were classified under the various headings described in the catalogue, and the awards have been made in accordance with their relative merits in these classes. In estimating the value and making the awards for wool and mohair, the jurors have taken into account the number of days' growth, and the exhibits have been judged as if free from seeds or burrs; the estimate of value and the weight of each exhibit has been duly recorded.

Three Grand Champion Prizes were placed at the disposal of the jury, two of which were awarded; the third—that for long wool—was not, the jury not selecting

WOOL SHOW AT THE MELBOURNE INTERNATIONAL EXHIBITION.

any exhibitor in that class for the award. The Grand Champion Prize for the best and most valuable 24 washed fleeces of merino wool, unskirted, from ewes of any age, which must have been previously shorn, was awarded to the Hon. Sir Samuel Wilson, for his exhibit from Ereildoune pure merino flock. The other champion awarded was for the most valuable 24 fleeces, washed or unwashed, from ewes of any breed, which have been previously shorn. This also fell to the Hon. Sir Samuel Wilson for merino wool from Ereildoune.

DIVISION 1 B.—MERINO WOOL, UNWASHED.

SECTION 1.—For the best bale of wool, weighing not less than 300 lbs., from not over 100 fleeces, skirted, from ewes of any age which have been previously shorn. Highest value per lb. to be the test of merit.

J. Gibson, Belle Vue, Tasmania, for bale containing 90 fleeces from sheep bred from pure merinos, entirely Tasmanian blood. This wool was extra fine, superior condition, silky, bright, good length, sound. First award.

A. Buchanan, Titanga, Victoria, for bale containing 100 fleeces from sheep bred from pure Australian merinos. The character of this exhibit was extra good, long staple, very fine, silky, bright, soft good combing. First award.

J. L. Currie, Larra, Victoria, for bale containing 78 fleeces from sheep bred from Australian merinos, from Camden rams. This wool was well grown, light condition, rather uneven. First award.

G. W. Keach, Chiswick, Tasmania, for bale containing 81 fleeces from sheep bred from general flock. This exhibit was of high quality, very bright, and free from faults. Second award.

D. Gollan, Mangataratu, New Zealand, for bale of 78 fleeces from sheep bred from Currie and Carnarham sires, which was well grown, superior condition, bright good combing. Second award.

SECTION 4.—For the best bale of hoggets' wool, from sheep never previously shorn, taken from not over 150 fleeces, and weighing over 200 lbs. Highest value per lb. to be the test of merit.

Hon. Sir Samuel Wilson, Ereildoune, Victoria, for 88 fleeces from sheep bred from Ereildoune pure merino flocks. The wool was of extra quality and condition, silky, fine and bright, good length. First award.

W. Gibson and Son, Seone, Tasmania, for 94 fleeces, from sheep bred from pure merinos, of a strain originally imported 60 years ago. These were extra long, fine, sound, bright and soft. Second award.

Hon. Sir Samuel Wilson, Mount Bute, Victoria, for 120 fleeces, from sheep bred from Ereildoune pure merino flocks. The character of this exhibit was extra quality, superior condition, soft, bright, good length. Third award.

DIVISION 1 A.—MERINO WOOL, WASHED.

SECTION 1.—For the best bale of wool, weighing not less than 200 lbs., taken from not over 100 skirted fleeces, from ewes of any age. The sheep from which the wool is taken must have been previously shorn. Award to be given for the highest value per lb.

T. Russell and Co., Baruah, Victoria, for 95 fleeces from sheep bred by the exhibitors. This wool was well grown, extra fine, silky, good condition. First award.

T. Shaw, Wooriwyrite, Victoria, for 100 fleeces from sheep bred from pure Camden rams and Learmouth's ewes. This was very fine, sound and well-grown, excellent quality, good condition. Second award.

Hon. Sir Samuel Wilson, Ereildoune, Victoria, for 97 fleeces from sheep bred from Ereildoune pure merino flocks, being good, sound combing, fine quality, good in all respects, good condition. Third award.

SECTION 4.—For the best bale of hoggets' wool, from sheep never previously shorn, taken from not over 150 skirted fleeces, and weighing over 200 lbs. The highest value per lb. to be the test of merit.

Hon. Sir Samuel Wilson, Ereildoune, Victoria, for 145 fleeces from sheep bred from Ereildoune pure merino flocks. Very well grown, excellent in quality and condition, almost perfection. First award.

Hon. Sir Samuel Wilson, Mount Bute, Victoria, for 134 fleeces from sheep bred from ewes and rams of Ereildoune flocks, which were well grown, fine, and good condition. Second award.

SECTION 5.—For the best bale of lambs' wool, weighing 300 lbs., of the highest value per lb.

Hon. P. Russell, Carngham, Victoria, for fleeces from sheep bred from Carngham stud and general flocks. The character of this lot was bright, fine, silky, and excellent character. First award.

Hon. Sir Samuel Wilson, Ereildoune, Victoria, for fleeces from sheep bred from Ereildoune pure merino flocks, which were remarked as bright, fine, silky, and very good. Second award.

Hon. Sir Samuel Wilson, Mount Bute, Victoria, for fleeces from sheep bred from ewes and rams from Ereildoune flocks, the character being bright, fine, silky, and very good. Third award.

DIVISION 1 C.—LONG WOOL, WASHED.

From pure or a cross of not less than 31-32 of Leicester, Lincoln, Cotswold, or Romney Marsh sheep.

SECTION 1.—For the best bale of long wool, weighing not less than 200 lbs., taken from not over 80 ewe fleeces, from sheep which have been previously shorn. The award to be made to the exhibit of the highest value per lb.

Hon. Sir Samuel Wilson, Corangamite, Victoria, for 69 fleeces from sheep bred from pure Lincoln rams, station bred, which were sound, good staple, and bright. First award.

W. W. Hood, Barton, Victoria, for 71 fleeces from sheep bred from pure Lincoln rams and nearly pure Lincoln ewes. This exhibit was of good length of staple, fair colour and strength. Second order of merit.

SECTION 4.—For the best bale of hoggets' wool, from sheep never previously shorn, from not over 100 fleeces, skirted, and weighing over 300 lbs. Highest value per lb. to be the test of merit.

There were two exhibits under this head, neither of which were considered worthy of being placed.

DIVISION 1 E.—SCOURED WOOL

SECTION 1.—For the best scoured bale of merino wool, weighing over 200 lbs.

Young and Dalgaty, Oamaru, New Zealand.—This exhibit was scoured with common bar soap, and was well treated, bright, soft, and good. First award.

L. Kaufmann, Dunkeld, Victoria.—This was stick-washed with soft soap, and was not bright enough, rather heavy, but otherwise well scoured. Second award.

SECTION 2.—For the best scoured bale of long wool, weighing over 200 lbs.

R. P. Williams, Mangakaleu, New Zealand, washed by Petrie's patent machine with soft soap.—This lot was bright, regular, and well managed. First award.

SECTION 3.—For the best scoured bale of merino lambs' wool, weighing over 200 lbs.

A. Douglass, Geelong, Victoria.—This wool was washed with hot water, soft soap, and ammonia, and was bright, regular, and well scoured. First award.

L. Kaufmann, Dunkeld, Victoria.—This bale was stick-washed with soft soap; it was irregular, little dull, but otherwise well treated. Second award.

DIVISION 1 D.—LONG WOOL, UNWASHED.

From pure or a cross of not less than 31-32 of Lincoln, Leicester, Cotswold, or Romney Marsh sheep.

SECTION 1.—For the best bale of long wool, weighing not less than 300 lbs., taken from not over 100 fleeces, from ewes of any age, which have been previously shorn. The fleeces to be skited. Award to be made to the exhibit of the highest value per lb.

There were seven exhibits under this head, none of which were placed in the first order of merit.

Hon. W. J. Clarke, Bolinda Vale, Victoria, for 58 fleeces from sheep bred from Leicester sheep, imported from Tasmania. This exhibit was of fair quality, good condition, bulky. Second award.

DIVISION 1 G.—EXTRA AND SPECIAL EXHIBITS.

E. G. Grieve, Borriyallouk, Victoria.—An exhibit of washed wool, from two and four tooth sheep, bred from pure Borriyallouk merinos. Highly commended. First award.

R. L. Dyhorenfulth, Jacobsdorf, in Silesia, for washed samples of Silesian wools. Highly commended. First award.

G. Wallis, Welton Dale, Victoria, an exhibit of angora wool. Highly commended. First award.

G. C. Hawker, Bungaree, South Australia, for samples of unwashed wool and photographs from Bungaree. Highly commended. First award.

R. von Mens, Karlsdorf, in Silesia, samples of Silesian wools, washed. Highly commended. First award.

F. H. Schlork and Co., Adelaide.—Wool mats, unwashed. Highly commended. First award.

T. Dowling and Son, Jellalabad, Victoria.—For merino fleeces, washed and greasy. Highly commended. First award.

W. A. Kermode, Mona Vale, Tasmania.—For six merino fleeces. Highly commended. First award.

G. Fairbairn, Lansdowne, Queensland.—An exhibit of hoggets' wool, washed. Commended. Two second awards.

F. H. Schlork and Co., Adelaide.—Samples of dyed wool. Commended. Second award.

C. and J. Degraus, Coliban Park, Victoria.—Samples of merino wool, coloured. Commended. Second award.

J. I. Currie, Larra, Victoria.—For two rams' fleeces from Larra lustre merino flock, in grease. Commended. Second award.

J. D. McAlinsh, Canning Downs, Queensland. Collection of unwashed wool. Commended.

DIVISION 1 A.—MERINO WOOL, WASHED.

SECTION 2.—For the best and most valuable 24 washed fleeces, unskited, from ewes of any age, which must have been previously shorn.

Hon. Sir Samuel Wilson, Ervildoune, Victoria.—For fleeces of 355 days' growth from sheep bred from Ervildoune pure merino flocks, 4 to 6 tooth. These were well grown, sound, fine quality, and good condition. Grand champion prize and first award.

Hon. P. Russell, Carngham, Victoria.—For fleeces of 375 days' growth from sheep bred from the Carngham stud flock, 2 to 3 years old. The character of this exhibit was well grown, sound combing wool, good condition. Second award.

J. L. Currie, Larra, Victoria.—For fleeces of 391 days' growth from sheep bred from Australian merino, by Camden (Spanish) merino, various ages. This lot was well grown, medium quality, fairly washed. Third award.

SECTION 3.—For the best and most valuable 24 washed fleeces, unskirted, from 2-tooth ewes which have been shorn as lambs.

Hon. Sir Samuel Wilson, Erildoune, Victoria.—For fleeces of 355 days' growth from sheep bred from the Erildoune pure merino flocks, 2-tooth. These were well grown, sound, dense, and of good quality. First award.

W. Gibson and Son, Seane, Tasmania.—For fleeces of 368 days' growth, from sheep bred from merinos bred in Tasmania for 60 years, age fifteen months. This exhibit was well grown, sound, good quality, and fair condition. Second award.

A. Douglass, Cammut, Victoria.—For fleeces of 360 days' growth from sheep bred from Tasmanian rams and station-bred ewes; age, 18 months. These fleeces were fairly grown, sound, fine, good quality, and good condition. Third award.

SECTION 6.—For the best and most valuable 12 washed fleeces of rams' wool, unskirted. The rams must have been previously shorn.

Hon. Sir Samuel Wilson, Erildoune, Victoria.—For fleeces of 360 days' growth from sheep bred from the Erildoune pure merino flocks, 2, 1, 6, and 8 tooth. Good staple, sound, extra fine. First award.

DIVISION 1 B.—MERINO WOOL, UNWASHED.

SECTION 2.—For the best and most valuable 24 fleeces, unskirted, from ewes of any age.

E. W. Pitts, The Levels, Dry Creek, South Australia.—For fleeces of 378 days' growth, bred from stock imported by C. B. Fisher, Esq., 4, 6, and 8 tooth. Medium quality, fair length, sound combing, light in grease, extra large fleeces. First award.

Austin and Millar, Wanganello, New South Wales.—For fleeces of 358 days' growth, bred from station rams and ewes, 2, 3, and 4 years. Strong, well grown, good combing. Second award.

James, Sanders and Co, Canowie, South Australia.—For fleeces of 395 days' growth; own breed; age, two years. Strong, good condition, rather coarse, strong combing staple. Second award.

T. Parramore, Ross, Tasmania.—For fleeces of 380 days' growth from sheep bred from pure merinos, 4-tooth, which were classed as superior quality, good condition, well and even grown. Third award.

SECTION 3.—For the best and most valuable 24 fleeces, unskirted, from 2-toothed ewes which have been shorn as lambs.

E. W. Pitts, The Levels, Dry Creek, South Australia.—For fleeces of 379 days' growth, bred from stock imported by C. B. Fisher, Esq. Medium quality, dry condition, and well grown. First award.

W. Gibson and Son, Seane, Tasmania.—For fleeces of 380 days' growth from ewes 16 months old, bred from pure merinos carefully bred in Tasmania. Superior quality, good condition, well grown, good length. Second award.

Austin and Millar, Wanganello, New South Wales.—For fleeces of 358 days' growth; age of sheep, 15 months; bred from station sheep. Medium quality, fair condition. Third award.

James, Sanders and Co., Canowie, South Australia.—For fleeces of 394 days' growth, from sheep bred from stock kept exclusively to themselves for fourteen years. These were of medium quality and condition, good length. Third award.

SECTION 5.—For the best and most valuable 12 fleeces of rams' wool, unskirted.

E. W. Pitts, The Levels, Dry Creek, South Australia.—For fleeces of 365 days' growth, from 4, 6, and 8 tooth rams bred from stock imported by C. B. Fisher, Esq. Medium quality and condition. First award.

Austin and Millear, Wanganella, New South Wales.—For fleeces of 356 days' growth, from rams of mixed ages bred from station ewes and rams. Fair quality and condition, rather heavy. Second award.

James, Sanders and Co., Canowie, South Australia.—For fleeces of 392 days' growth; age of sheep three years, bred from sheep kept exclusively to themselves for fourteen years. Medium quality and condition, good combing, and well grown. Third award.

DIVISION 1 C.—LONG WOOL, WASHED

From pure or a cross of not less than 31-32 of Leicester, Lincoln, Cotswold, or Romney Marsh sheep.

SECTION 2.—For the best and most valuable 24 fleeces, unskirted, from ewes of any age which have been previously shorn

W. W. Hood, Barton, Victoria.—For fleeces of 359 days' growth; age of sheep, 2, 3, and 4 years, bred from Barton Lincolns. Well grown and good quality. First award.

DIVISION 1 D.—LONG WOOL, UNWASHED.

SECTION 2.—For the best and most valuable 24 fleeces, unskirted, from ewes of any age which have been previously shorn

Ratledge Brothers, Farnham Park, Victoria. For fleeces of 365 days' growth, from sheep bred from imported Kikham stock, age 2 and 3 years. Strong, good lustre, sound, and fair condition. First award.

A. and R. Urquhart, Yangery Park, Victoria.—For fleeces of 366 days' growth, from sheep bred originally from merino ewes with Lincoln rams, 4-tooth. This wool was very rough and cotty. Second award.

D. and W. Blair, Fernhill, Wanganui, New Zealand.—For fleeces of 331 days' growth, from 4, 6, and 8 tooth ewes bred from nearly pure-bred Lincoln rams and ewes. Good condition, sound, and rather cotted. Third award.

SECTION 5.—For the best and most valuable 12 fleeces of rams' wool, unskirted.

R. Hood, Merrang, Hexham, Victoria.—For fleeces of 375 days' growth, 4 years old, from pure Lincolns, bred from imported stock. This exhibit was rough, full staple, heavy condition. First award.

T. Tanner, Riverslea, Heretaunga Plains, New Zealand.—For fleeces of 364 days' growth, from sheep bred originally from imported Lincoln ewes and rams, aged from 4 to 6 tooth and full mouthed. This wool was rough, cotty, heavy, part tender. Second award.

DIVISION 1 F.—MOHAIR.

SECTION 2.—For the best box of 10 lbs. weight of washed mohair.

There was but one exhibit in this class, which was from the Hon. R. Simson, Laugi Kal Kal, Victoria, taken from goats bred from does imported from the Cape of Good Hope, and coupled ever since with the Acclimatisation Society's bucks. Highly commended. First award.

EXTRA AND SPECIAL EXHIBITS.

W. Armstrong, Hexham Park, Victoria.—For two exhibits of 12 fleeces each of long wool, lamb's, washed, from station-bred sheep, from merino ewes and Leicester rams, age 4 months, of 112 days' growth. Highly commended. First award to both.

E. G. Greaves, Borriyalloak, Victoria.—For 12 fleeces of washed merino ewes' wool of 380 days' growth, age 4-tooth, bred from pure Borriyalloak merinos. Highly commended. First award.

The whole of the foregoing competitive exhibits have been entered as being shorn from sheep either paddocked or shepherded, and not artificially fed, with the following exceptions —

Division 1 A, Section 6 —Sir Samuel Wilson, 1 housed

E. Wilson.
J. Pearson.

R. Gatenby.

The jury have not supplied a detailed report; the experts reported as follows :—

Davis and Wilson, Birmingham.—This exhibit consists of a splendid lot of whips, of various classes, and of very low price considering the quality; and I cannot but consider them first class, and worthy of first order of merit.

Schmol, Dreyfus and Co., Paris, exhibit waxed and russet calf, superior in quality and finish. First award.

L. Durand, Les Fils de, Paris, exhibit waxed and russet calf and Wellington fronts, which entitle them to first award.

Bayvet et Petitpont, Paris, show a good collection of enamelled, patent, and imitation leathers, and I recommend them as entitled to a first award.

Alderson and Sons, Sydney, exhibit patent and fancy leathers of superior quality and finish. First award.

Michaelis, Hallenstein and Co., Melbourne, exhibit split or satin hide of first-class quality and well finished, which I recommend for a first award.

J. Cook, Melbourne.—This exhibit of close-plated harness fittings I think fully entitled to a first order of merit, as they are good boxes, well and close plated, well stamped, and well finished. The whole collection is an excellent specimen of workmanship.

EXPERT APPOINTED TO CONSIDER APPEALS AGAINST JURY DECISIONS.

T. Tozer.

SIR—In concluding our labours as a jury, we have the honour to report on some of the leading items of our work as follows:—

We commenced our investigations on 20th November, and concluded them on 2nd of March. In the period named we have examined over 300 exhibits, comprising about 1500 different articles.

Our judgment may, perhaps, be questioned in some few instances; but, throughout, we have endeavoured, to the best of our ability, to decide honestly and impartially the merits of everything coming under our notice, feeling that the duties of this jury were among the most important of the Exhibition, as they involved decisions upon the merits of exhibits that are of the highest moment to one of the most important industries of the age.

On the 23rd and 24th of last December a field trial of reapers and binders, strippers, and winnowers, was held at Mr. Seward's farm, near Rochester. This was in every respect a great success, notwithstanding the hurry necessary in order to secure suitable crop for the strippers; and we wish particularly to draw your attention to the fact that we have given the Walter A. Wood machine a special first degree of merit for the superior work done by it without a fault from start to finish, the sheaves being all well bound and regularly laid. The M'Comick

Harvesting Machine Co. machine was delayed at the commencement of its work through having bad twine, which was continually breaking; but after getting different twine it did first-class work, and rapidly overhauled its competitors, and we have placed it in first degree of merit from its performances and for its superior mechanical construction.

The work done by the other machines was not up to the standard we should like to have seen, and for this reason we placed the D. M. Osborne and Co. machine in third degree of merit. The Deering machine we could not place. The Johnston Harvester Co. machine was unfortunately thrown out of the competition through a portion of its machinery breaking on the road to the ground, which could not be repaired in time for the trial. Victoria was the only country besides the United States exhibiting a reaper and binder: this was a well-constructed machine by Humble and Nicholson, of Geelong, on Ferner's patent. This machine promises to turn out a very good implement, but on the road to the ground it also met with an accident, which, though repaired, evidently affected its work; besides that, it laboured under the disadvantage of not being managed during the trial by any one who understood it, and, consequently, it never got fairly to work, broke down, and retired early from the contest. The following were the times in which the competing reapers and binders did their work:—

Walter A. Wood, Hoosick Falls	1 hour 19 minutes
D. M. Osborne and Co., Auburn	1 " 47 "
Win. Deering, Chicago	1 " 57½ "
McCormick Harvesting Machine Co., Chicago	2 hours 16 "

The area of crop reaped by each binder and stripper respectively was 1 acre 3 roods 10 perches.

The contest with the strippers excited great interest, as this is evidently the machine, by which the principal work in the more extended warm wheat-growing districts of the colonies in the immediate future will probably be done. It is not, in one sense, what would be called an economical farming implement, as it does not save the straw; but in warm climates, where that is not required for fodder, &c., it is of little consequence when compared with the rapidity and ease with which a crop is reaped by it, and (owing to its requiring so few men to work it) the comparatively small cost at which a crop is got ready for the market. For instance, it can be said, taking the trial as a criterion, that the 1½ acre was reaped, cleaned, and bagged ready for the market in two hours by the labour of three men and two horses.

The winnower always accompanies the stripper in the field, and two men are required to work it, and one the stripper. While the stripper is reaping, the winnower is cleaning each load the stripper brings, so that in a few minutes after the crop is reaped it is ready for sale, cleaned and bagged in one operation—thus doing away with the double operations and extra number of men required in the use of reaper and thresher. The representatives of the various countries who were on the ground were so much struck with the cheap and rapid manner of harvesting that the Australian colonies were highly complimented for their adaptation of the stripper; and full particulars and details of its construction were, we understand, immediately forwarded to the principal implement-makers in Europe and America, who will most probably enter upon its construction ready for the next harvest. Eight of these machines were on the ground—viz., four from Victoria, three from South Australia, and one from England, made on the colonial model. The following were the times in which they respectively finished their work:—

Joseph Nicholson, Melbourne	1 hour 51 minutes
T. Robinson and Co. "	1 " 55 "
G. Munro, Ballarat	2 hours 11 "
J. Martin and Co., Gawler	2 " 14 "

circumstances. The elevators and bagging appliances attached to the Victorian and Corbett and Peele's machines deserve special notice for their great saving of time and labour, and the cleanness and rapidity with which they worked. More especially was this remarked in Nicholson's machine, which worked without a fault or check, and was entirely self-cleaning, and bagged everything. Corbett and Peele's elevator, however, was not quite perfect, as there was a loss of time (after the cups had finished their work) in cleaning up by hand, and then putting in the bags.

On the 17th January this jury subjected the wool presses on exhibition to a practical test. Three bales of washed wool, of from 200 to 250 lbs each, were given to each machine. The time occupied by each was :—

Humble and Nicholson, Geelong	29 minutes
Robinson and Sons, Melbourne	34 „
P. Williams	34 „ 48 seconds

The English press of J. H. Ladd and Co did not compete, being only for dumping wool. Messrs. T. Robinson and Co. did not enter their press for competition, but your jury, after inspecting it, desire to commend and bring it under the notice of small farmers as a cheap and efficient press, worked by hand.

Humble and Nicholson's press was a low-priced, hand-power machine, which by its mechanical construction is capable of exerting a very high degree of pressure. It was a cheap and useful press, did its work well, and could be worked very rapidly.

P. Williams's was also a hand-power press, but a much larger and heavier than the last-named, and costs more; but it did its work thoroughly, and was a capital and efficient press for heavy work.

Robinson and Sons' was a steam-power press, but could be worked by hand; of great strength and capacity, thoroughly suited for large stations and warehouses where the work is heavy and steam-power is obtainable.

On the 14th February we held a trial of rotary grain cleaners and separators in the Exhibition grounds. Seventeen machines competed, as follow :—

- 1 Coleman and Morton, Chelmsford.
- 5 Penney and Co. (Limited), Lincoln.
- 3 R. Bohy, Bury St. Edmunds.
- 1 W. Rainforth and Sons, Lincoln.
- 1 L. W. Brier and Co., Kalk, near Cologne.
- 2 Humboldt Works „
- 2 Mayer and Co. „

Albert P. Dickey, U.S.A., and Richardson and Sons, Carlisle, each sent one, but as they had been in the Rochester competition they were not again tried.

The machine of Coleman and Morton, for simplicity and strength of construction, and the rapidity with which it did its work, was far superior to any of the rest. Of the others represented, we did not consider any, except Penney and Co.'s No. 8 machine, worthy of an award, as their work was slow and bad. The machines of Morton and Sons, U.S.A., to be worked by steam, were not on the ground or prepared in any way for trial, so that jury have not made an award. The machine of R. Bodington, also a steam one, being fitted with proper pulleys and belts, the jury attended twice at its stand, with the necessary grain; but as neither Mr. Bodington nor his representative were present, although notified to attend, the jury were unable to try it.

In ploughs there was one exhibit to which we wish to draw special attention, as being the best, and that is the double-furrow, with swivel coulter, of Reid and Gray, Dunedin. In finish and construction it was far superior to any other.

In reviewing the exhibits as a whole, Great Britain was well and worthily represented by a large and varied collection of all kinds of implements from the workshops of her leading and world-known manufacturers, notably Messrs.

Ransome, Sims and Head, R. Hornsby and Sons (Limited), J. and F. Howard, Ruston, Proctor and Co., Clayton and Shuttleworth, and others too numerous to particularise.

Germany also showed well with a varied collection of different implements, which all took good positions.

The Victorian Court contained a splendid exhibition of the varied work done in her numerous workshops and manufactories, which would reflect credit on many an older country with long-established agricultural machinery manufactories.

The other colonies and countries were represented to a limited extent in agricultural implements, South Australia being the principal exhibitor.

Unfortunately, the section was deprived of one of its principal portions by the loss of the contribution of the United States of America in the wreck of the "Erie the Red;" the duplicates sent for to take their place did not arrive. We have not, therefore, been able to see, study, and compare with others some of those varied and important improvements in agricultural implements for which that country is so celebrated. We had, however, a few of her labour-saving implements—notably her celebrated reapers and binders—by which we could make some comparisons.

In agricultural implements and machinery generally there were marked evidences of constant improvements being made, which we were happy to be able to notice in our awards, and give to the inventor the benefit of our approval and the recommendation of his work to the agricultural world. In reference to these improvements, we must compliment the colonial manufacturers on the high position they have attained, as shown by the quality of their work and the way they have adapted their machines and implements to the requirements of the Australian farmer; and we unanimously chose Mr. Hugh Lennan as a candidate for the Euphor of Germany's prize.

In many ways the work of the jury has been hampered—firstly, by the non-attendance of a number of the first-appointed jurors, but chiefly by the bad arrangement of the exhibits in the building, and the incomplete information given by the exhibitors in their schedules.

Your jury cannot conclude without expressing their regret that there were not greater facilities for subjecting some of the numerous exhibits—in particular, threshing machines—to a practical test of their capabilities, so that better, more decisive, and far more valuable opinions could have been given of their respective merits, for a mere inspection is not entirely satisfactory to make an award by.

L. E. PAGE, *Chairman.*

EXPERT'S REPORTS.

G. Kent, London.—Domestic Appliances.—I have carefully examined these exhibits, and consider them a most complete list of labour-saving machines, and they are all well finished. I recommend that this exhibit receive a first award.

David Munro and Co., Melbourne.—I have carefully examined the horse-work exhibited by this firm, and recommend that it receive a first order of merit. I consider the exhibit entitled to the highest award, as although perhaps not so well painted as some, it is in workmanship and design fully equal to those already placed in the first order. The use of an iron frame, instead of wood, is, in my opinion, more lasting and preferable.

Dreyer, Rosenkranz and Droop, Hanover.—I have examined the exhibit of this firm, consisting of boiler mountings and other brass or nickel fittings, and consider they are entitled to a first award.

EXPERTS APPOINTED TO CONSIDER APPEALS AGAINST JURY DECISIONS.

G. Young.

Wm Howard.

Alex. G. Young.

SIR—The Jury beg to submit the following report upon the exhibits examined by them:—

HORIZONTAL ENGINES.

Under this heading were found many interesting and valuable exhibits, and in this department not a few important departures from preceding practice occurred. The more prominent novelties were—

1st. The abandonment of the old-fashioned flat bed-plate, and the adoption of a deep comprehensive frame, containing in one piece the front cylinder cover, the guides, and the crank shaft pedestals. This modification, no doubt, leads to a much firmer and more rigid engine, less dependant upon its foundation, and far less liable to get out of adjustment than the old engines built up of a multitude of separate parts bolted together. On the other hand, any casualty, whether in the way of a defective casting in the foundry, or of a fracture in transit, involves greater loss than under the old system.

2nd. The adoption of overhung cylinders, fixed at one end only and free to expand with changes of temperature. This is undoubtedly a great advance, though in very large engines the propriety of simply supporting the weight without any fixing of the overhung end naturally suggests itself.

3rd. The employment of a bored cylindrical surface instead of the usual flat guides. This is a most excellent arrangement, simplifying construction and ensuring great accuracy, nearly the whole engine becoming one piece of bored and turned work, which, when erected, goes together dead true, instead of needing careful measurement and adjustment by hand.

4th. The employment of a cast-iron disc properly counterbalanced by a segmental weight opposite the crank pin instead of the crank. Such a disc adds greatly to the steadiness and smooth running of a high-speed engine, besides being highly ornamental in appearance.

5th. The employment of small high-speed governors of great sensitiveness instead of the old slow-moving kind. In this direction great ingenuity has of late years been displayed, and highly satisfactory results obtained.

Marshall, Sons and Co. (Limited), Gainsborough, exhibited two horizontal engines of 8 and 12 horse-power respectively, which deserve the highest commendation as respects both design and workmanship. Here we find the comprehensive frame, the overhanging cylinder, bored cylindrical guides, high-speed governor, crank disc, and a very perfect automatic expansion apparatus consisting of a double slide, worked from two eccentrics, the stroke of the expansion slide being regulated by a sensitive governor on Hartwell's system, the pendulums of which are inverted. This apparatus conduces greatly to economy of steam, and uniformity of speed under great variations of load, and is of special practical benefit when fuel is dear, or when, as in the case of the electric light, unusual steadiness is needed. The cylinders of these engines were steam jacketed, with a separate steam supply to the jacket, which is always open to the boiler. First award.

A strong and well-made engine was shown by J. Cochrane and Co., of Barrhead. The cylinder was $13\frac{1}{2}$ inches diameter and 24-inch stroke. The bed-plate was of a girder form, with bored guides. This engine was provided with the simplest automatic expansion gear in the Exhibition. The cut-off plate on the back of the slide valve was carried along by friction until its motion was arrested by its rod coming in contact with a wedge, which was raised or lowered by the governor. Blocks of indiarubber were used to prevent noise or jar, when the motion of the valve was checked. This was the only engine in the Exhibition fitted with indicator gear. A smaller engine, presenting no very important peculiarity, was also shown. The workmanship in both engines was decidedly good. First award.

Tangye Bros., of Birmingham, exhibited a splendid collection of stationary steam engines, varying in size from a 20-inch cylinder downward. The largest engine constituted a departure from the well-known type of construction hitherto adopted by this firm, having what is called a girder frame supported at the ends only. The guides were bored out, and the crank disc provided with an ingeniously concealed counterweight. The governor was of the diminutive high-speed pattern, so well known as the patent of this firm; and the fly-wheel, which consisted of two castings bolted together, was very broad, and accurately turned to receive a belt. The engine was provided with a variable expansion slide, worked by a second eccentric. They also showed a very prettily finished engine of 10-horse power, with a separate expansion valve. It was of the very graceful form introduced by this firm some years ago, and which became so soon and deservedly popular. It had flat guides and an adjustable crosshead. A number of other engines of the same form without expansion valves were comprised in the exhibit. There were also several smaller engines of the "Soho" pattern. These were perfectly self-contained, both bearings of the crank-shaft being formed on the one frame. The connecting rod and eccentric rod were of girder section, and the crank pin of very ample size and length. The crosshead was hung in a very ingenious way from two broad, flat surfaces immediately above. For bold originality of design, as well as undoubted strength and ample wearing surfaces, these curious little engines were very noteworthy. The workmanship of all these engines was very good, and the appearance neat and unpretentious. First award.

Messrs. Wright and Edwards, of Melbourne, who were the contractors for the supply of motive-power to the Exhibition, had no less than seven engines on view, the most notable one, and that which they regarded as their real exhibit, being a variable expansive engine, situated in the Victorian Machinery Court. This firm has for many years adopted the comprehensive frame and counterbalanced disc crank, and deserves special credit for having practically demonstrated in this colony the benefits of high speed and simple mechanism, and that at a time when the majority of imported engines were of antiquated types. They do not, however, employ the overhanging cylinder or bored guide, the guide they adopt being a broad, flat surface immediately beneath the crosshead. Unlike most makers they, as a

rule, omit all provision for holding the cross-head down, deeming it unnecessary. Should, however, it be required to run one of their engines the reverse way, extra guide-bars must be added, for the attachment of which lugs are provided. The variable expansion was effected by a pair of cut-off plates upon the back of the slide valve, worked by a separate eccentric, and the point of cut-off was varied by rotating the valve spindle, which, being suitably screwed, alters the distance between the cut-off plates. The governor was of a peculiar form, adopted by no other exhibitor, and appeared fairly sensitive. The proportions of the crosshead, crank disc, eccentric rods, &c., were very good, being amply strong, and of pleasing appearance. The diameter of the cylinder was about 13 inches, and the stroke 2 feet, the engine making about one hundred revolutions per minute, and running very smoothly and without noise. The workmanship was highly creditable, and the exhibit, which included the engines, boilers, and several other pieces of mechanism, was deemed of sufficient importance to be recommended by the jury for the prize offered by the Emperor of Germany, as the best colonial exhibit coming under their notice. First award.

The Sächsische Maschinenfabrik, of Chemnitz, exhibited a beautifully finished engine of 10-horse power. The frame was of the girder form with bored guides. The governor was of the high-speed loaded type, and was provided with an air cylinder or dash-pot to prevent sudden and violent oscillations. The distribution of the steam was effected by the usual slide valve, with a separate semi-cylindrical cut-off plate on the back, the steam ports in the main slide resembling the threads of a screw, and the point of cut-off being varied by the partial rotation of the cut-off plate. This latter received its longitudinal motion from an eccentric, and its motion of rotation from a curious piece of mechanism connected with the governor. At each end of the stroke two little leather buffers came in contact with a double inclined plane, raised or lowered by the governor, and, if necessary, rotated the valve, and so altered the grade of expansion. First award.

F. R. and F. Turner, of Ipswich, exhibited their "Gipseswyk" engine, arranged horizontally. This little engine had bored guides, overhead cylinder, a comprehensive frame containing both bearings of the crank shaft, and a most ingenious high-speed loaded governor, the central weight of which was expanded into a hollow spherical shell, within which the pendulums were placed. This governor deserves special commendation. Second award.

E. S. Hindley, of Bourton, showed a strong, well-made, self-contained engine, having large wearing surfaces and improved governor, also very complete adjustments for wear. Second award.

Humble and Nicholson, of Guelong, showed a strong, simple engine. Third award.

Grayson and Co., of Fitzroy, showed a very well made engine of old-fashioned design, and having some rather peculiar points of detail. Third award.

Lugton and Sons, of Melbourne, exhibited small horizontal engines of the usual form. Third award.

Drysdale and Fraser, of Melbourne, also exhibited small horizontal steam engines. Third award.

VERTICAL ENGINES WITH BOILERS.

Marshall, Sons and Co. (Limited), Gainsborough.—This firm exhibited two engines of $1\frac{1}{2}$ and 3-horse power respectively. The former of these was placed on wheels, and was, in a limited sense, portable. The boilers were vertical, with longitudinal seams, double-riveted, and were most excellent specimens of workmanship. The engines had separate frames of simple and massive form, having the cylinder above and the crank below. The guides were bored out, and the crossheads were provided with a neat adjustment for wear. The bearings of the crank shaft were of somewhat novel design, and the governor, which was of the horizontal high-speed type, was driven by a belt. Both in design and execution these engines merited the highest commendation. First award.

Ransomes, Sims and Head, of Ipswich, exhibited a vertical boiler, with an inverted engine, having a separate frame, the whole mounted upon a casting, forming an ash pan and water tank. The design and workmanship were alike good. First award.

Tangye Bros., of Birmingham, exhibited a vertical boiler and inverted engine, having a separate frame of very elegant design. First award.

The Colts' Patent Fire-Arms Company, Hartford, Connecticut, exhibited an excellently designed engine, mounted on the top of a vertical cylindrical boiler, inside which the cylinder was placed, while the crank-shaft was supported overhead by massive standards. The bearings in this engine were unusually large, and were provided with a lining of white metal. This engine was tested under steam with highly satisfactory results. First award.

In addition to these, a large number of small engines of very good quality were awarded second order of merit.

GAS ENGINES.

Crosley Bros., of Manchester, exhibited three "Otto" silent gas engines, of 6, $3\frac{1}{2}$, and 1-horse power respectively. The cylinder was used as a compressing pump and a motor cylinder alternately, a weak mixture of gas and air being taken in and compressed during one revolution, and exploded, or rather burnt, during the next. The preliminary compression enabled a much weaker dilution of gas to be used than would be otherwise possible, and the alternate action was controlled by a system of valves worked from a shaft, making one revolution to every two of the engine. A sensitive governor regulated the admission of the gas to the cylinder. These engines consumed from 20 to 25 cubic feet of gas per actual horse-power per hour; they had no glands to pack, or gauges to watch; they required no attendance beyond that necessary for lubrication, and they worked with great smoothness and regularity. First award.

STEAM FIRE ENGINES.

Three of the above machines were exhibited, two being from the establishment of Messrs. Shand, Mason and Co., of London, and the third from Messrs. Merryweather and Sons, of the same place, and a competitive trial took place in the presence of the jurors between the larger of Shand, Mason and Co.'s engines and Messrs. Merryweather and Sons'.

Shand, Mason and Co.'s larger engine consisted of a vertical cylindrical boiler, having an internal fire-box, provided with a series of transverse tubes (sloping), through which the water in the boiler circulates. To this boiler were fixed, in a vertical position, three steam cylinders, which actuated directly three pumps of the bucket and plunger type, the length of the stroke being limited by a crank shaft having the cranks at angles of 120° with each other. The distribution of the steam was effected by slide valves of the ordinary type, the slide valve of each cylinder being worked through the medium of a rocking shaft, from a piston of one adjoining cylinder. The pump valves were of the mushroom type, comparatively small and numerous. The engine was provided with a feed pump, worked from an eccentric on the crank shaft, an injector, and a communication whereby water might be forced, if required, direct from the main pump into the boiler, and was supported on large wheels, suitable for rapid transit.

Merryweather and Sons' engine resembled that already described in outward form. The boiler, however, was fitted with Field tubes hanging in a vertical position over the fire, and the water space around the furnace also consisted of a series of tubes in contact with each other. There was but one steam cylinder, placed in a horizontal position, and connected directly to a horizontal double-acting pump. There was no crank shaft, and the steam valves were moved by a twisted rod embraced by an arm projecting from the piston rod. The pump valves were simply

hinged flaps placed beneath the cylinders, and accessible by removal of plates. A feed pump and injector were provided, and also a communication whereby the water might be turned directly from the main to the boiler; and travelling wheels, with suitable axles, and wheels and springs, enabled the machine to be rapidly moved.

The subjoined table contains the most important data relating to the above engines:—

SHAND, MASON AND Co.			MERRYWEATHER, SONS AND Co.		
Price	..	£540	Price	£120
Weight	..	33 cwt.	Weight	25 cwt.
Water thrown per minute	..	600 gallons	Water thrown per minute	360 gallons
Working pressure of steam	..	100 lbs.	Working pressure of steam	100 lbs.
Diameter of cylinder	..	5½ inches	Diameter of cylinder	6½ inches
Number of steam cylinders	..	3	Number of steam cylinders	1
Stroke	..	6 inches	Stroke	18 inches
Diameter of pump	..	{ Plunger, 4½ inches Piston, 6 ..	Diameter of pump	Piston, 5½ inches

The trial was held on the 6th December, 1880, when it was found that Shand, Mason and Co.'s engine raised 100 lbs. pressure of steam from cold water in eight minutes ten seconds, and Merryweather and Sons' in nine minutes. Both engines succeeded in throwing a jet of water above the top of a mast 106 feet high, but the jet from Shand, Mason and Co.'s engine was decidedly the highest, as well as the heaviest and steadiest, and more continuous. In horizontal distances Shand, Mason and Co.'s had the advantage, to the extent of about 30 feet, and the result did not differ in any important degree, as one large or several small jets were used. Shand, Mason and Co.'s engine worked with great smoothness and apparent ease, and kept up steam without difficulty. Its exhaust made but little noise, and it was evident that the slide valves were so proportioned as to use the steam economically. Merryweather, Sons and Co.'s engine, on the contrary, vibrated considerably, and its loud exhaust indicated that steam was used at full boiler pressure almost to the end of the stroke, an arrangement not conclusive to economy of steam. After a careful examination of the engines and the competitive trial above detailed, the jury came to the conclusion that Shand, Mason and Co.'s engine was deserving of the highest order of merit as a machine scientifically designed, well and strongly made, and highly efficient in working. To Merryweather and Sons engine they award a second order of merit; but desire to add that, with the actual results of the trial even somewhat unfavourable, the extreme simplicity and compactness of the working parts, and the admirable arrangements for gaining access to the pump valves in the event of their being choked by rubbish, are, in their opinion, points of the highest practical importance.

PORTABLE ENGINES.

Marshall, Sons and Co. Limited, of Gainsborough.—These engines exemplified several points of great originality and merit in design, while the execution of the work was almost perfect. The largest engine was provided with two cylinders and a link motion reversing gear; the boiler was flush throughout, and lagged over the fire-box as well as the barrel; the crank shaft bearings were supported on dove-tailed slides, and kept at the proper distance from the cylinders by tubular stays, thus relieving the boiler of all strain from the working of the engine, and ensuring the adjustment of the slide valves against being affected by the expansion of the boiler. The governor was of the very sensitive crossed-arm or approximately parabolic type, and together with the guide bars was supported by a transverse diaphragm attached to the stays. Two single cylinder portables of the ordinary type were also shown, but with improved governors, and in one case a well-arranged brake for use on hilly roads. These engines all had jacketed cylinders, the working barrels of which consisted of separate liners of specially prepared metal. The bearings of the crank shaft were supported on strong wrought-iron brackets, rivetted to the boiler, thus reducing

the risk of fracture or leakage, and the feed pumps and other details were very well arranged. In every respect these engines are worthy of the very highest commendation. First award.

Prick and Co., Waynesboro, Pennsylvania, exhibited a small and, at first sight, somewhat unorthodox-looking engine, which was found on close examination to possess several unusual merits. First, the engine was quite independent of the boiler, and capable, if necessary, of being removed from it and fixed upon a foundation, the cast-iron bed plate being of strong and simple form, and ingeniously contrived so as to constitute a trough for catching all waste oil and conducting it to a single outlet. The crank was fitted with balance weights, which enabled the engine, which was tested in motion, to run with unusual steadiness. The governor was of the high-speed type, very ingeniously arranged, and combined with it was a throttle valve capable of being worked from a distance by means of a small cord or bell-wire. The bulk of the weight of the engine was carried upon springs when travelling. First award.

R. Hornsby and Sons (Limited), of Grantham, exhibited four engines of 4, 6, 8, and 10-horse power respectively. These engines differed in several important respects from those of most other makers. First, the cylinders were contained in an upward extension of the boiler, which constituted a steam jacket of the most perfect sort, and also gave an unusual amount of steam room. The guide bars were circular in section, and could be rotated when desired, so as to utilise the whole surface for wear; and a special spark-catcher was applied at the base of the funnel, which was stated to have proved very successful in practice. The workmanship of these engines was most meritorious, but the design and proportions of the parts were peculiar, and in the eyes of those accustomed to engines by other makers somewhat ungraceful. First award.

Clayton, Shuttleworth and Co., of Lincoln, showed two well-made engines of 5 and 8-horse power respectively. The engines of this firm are noted as having taken the highest place in respect to economy of fuel at the trials made by the Royal Agricultural Society of England. First award.

Richard Garrett and Sons, of the Leiston Works, Suffolk, showed a 14-horse double-cylinder engine of very plain appearance, but substantially constructed. Unlike those of most other makers, the cylinders were not steam jacketed, it being considered that jacketing is an unnecessary and costly complication in the case of ordinary engines without expansion gear, designed for simplicity and strength rather than extreme economy of fuel. With this view the members of the jury were disposed to concur. A very peculiar side valve was used by Garrett and Sons, giving a very large opening with a comparatively small travel. A second smaller engine, fitted with a straw-burning fire-box, was also shown. First award.

Ransomes, Sims and Head, of Ipswich, exhibited an 8-horse power engine, which, considering that it was lost in the "Sorata," and recovered in a very damaged condition, looked remarkably well, and reflected great credit on the gentleman who succeeded in repairing the damages. This was the only 8-horse engine that had its boiler thoroughly encased, and to its makers is due the credit of having for many years back lagged their fire-boxes, and employed stays to relieve the boiler from the working strains of the engine. First award.

P. and H. P. Gibbons, of Wantage, exhibited a very strong and substantial form of engine, presenting no special features of interest, and not very highly finished, but was thoroughly sound and useful. Second award.

Robey and Co., of Lincoln, exhibited engines of 8 and 12-horse power respectively. The workmanship was found to be fairly good, but the design rather old-fashioned. The proportions of the slide valve of the smaller engine were considered by the jury to be extremely faulty, and calculated to choke the exhaust, thus giving rise to heavy back pressure, reducing the power of the engine, and wasting steam. This defect did not exist to so serious an extent in the larger engine. Second award.

Ruston, Proctor and Co., of Lincoln, exhibited four portable engines, rather roughly finished. In these the patent steam-stay, which was a specialty with this firm, was introduced. The jury did not agree with the proportions of this stay, as compared with the connecting rod of the engine, and further considered it an inconvenient and undesirable complication. Second award.

W. Foster and Co. (Limited), of Lincoln, showed a small strong portable engine of the ordinary form. Third award.

In arriving at the awards upon the above engines, the jury carefully examined the workmanship of the various parts, including the interior of the cylinder and valve chest. Wooden templates, representing the slide valves and valve faces, were prepared and criticised; the dimensions of fire-boxes, number and size of tubes, weight and cost, were all considered. The jury regret that lack of time and other conflicting circumstances prevented their practically testing each engine under steam.

MARINE ENGINES.

It was gratifying to observe among the marine engines exhibited many of the recent improvements in that branch of machine making. One of the most prominent examples of this was in the Orient S. N. Co.'s exhibit, who stated that it was an exact model of the s.s. "Orient's" engines, adapted to drive an eighty-foot launch. The model had one high-pressure engine and two low-pressure condensing engines connected to work together by the crank shaft. Each cylinder had piston slide valves on its starboard side, worked from eccentrics on the crank shaft by angled levers. The condensing engines had a surface condenser, and other main features of the model were similar to the "Orient's" engines, the details differing somewhat from the original, especially in the thrust-block and reversing gear. The model was well made and finished, and exhibited a decided desire on the part of the builders to advance in marine engine building. First award.

The Koninklijke Fabriek, Amsterdam, exhibited a pair of well-designed and highly finished inverted engines, working by steam. These engines, from their position in the Exhibition, received a large quantity of water with the steam; so much so that the drain-cocks had to be kept open during the trial. The engines, by their action under this test, showed ample strength in the various working parts, which were all adjustable for wear. First award.

Mort's Dock Co., of Sydney, exhibited a pair of inverted compound non-condensing launch engines, which showed great care in design and skill in the carrying of it out. The frames for supporting the cylinders were of cast iron, and of a simple A shape, with hollow rectangular section, giving great accessibility to the working parts. First award.

Seekings and Ellery, of Gloucester, exhibited a pair of inverted high-pressure engines, having cylinders 6 in. diameter and 7 in. stroke, which, although the smallest that came under the notice of the jury, were, however, well finished, and evidently from their appearance capable of a considerable amount of wear and tear. Second award.

Buchanan and Nosdrum, of Sandridge, showed a pair of inverted high-pressure launch engines, which were exceedingly creditable for their cheap and efficient design. The slide valves were placed between the cylinders, in order to allow the combined feed and bilge pump being worked directly from the outside of the forward crosshead, where it was very accessible. The cheeks of the cranks were formed of cast-iron discs, keyed on wrought-iron shafts, and the whole formed in a cheap and substantial manner. Third award.

AIR COMPRESSORS FOR MINING PURPOSES.

The National Drill and Compressor Co., New York City.—Their machine consisted of a pair of horizontal steam engines of the ordinary type, having a

common crank shaft and flywheel. At the rear of each steam cylinder was placed a double-acting compressing cylinder, the piston of which was attached to a rearward extension of the piston rod of the steam cylinder. These air cylinders were provided with a series of mushroom-shaped valves at each end, some of which acted as inlets and others as outlets, and were kept cool by the circulation of water outside, no water being admitted to the interior of the cylinder. The whole machine was very well made, and worked most satisfactorily. First award.

Maschinenbau-Aktiengesellschaft, "Humboldt," of Cologne, exhibited a compressor of a different type. Two horizontal cylinders facing each other are provided with plungers like those of an hydraulic press. The ends of the cylinders are curved upward, and provided with inlet and outlet valves at the upper end. When in use the cylinders are filled with water, which rises and falls in the curved ends in accordance with the motion of the plungers, and the air is compressed by this motion of the water. A small pump keeps up a constant supply of cold water, and the surplus passes away with the compressed air. The machine was driven by a steam cylinder, with variable expansion gear placed in line with the compressing cylinders, and provided with crank shaft and flywheels. This machine performed well during the Exhibition. First award.

The "Normanby compressor," Stillwell and Co, London, consisted of two single-acting plunger pumps, with a common circular slide valve driven by gearing. The whole was immersed in a tank of water, and the plungers were worked by eccentrics, driven by a belt from the general shafting of the Exhibition. First award.

R. G. Ford, of East Brighton, showed an air compressor which was not altogether unlike the Humboldt, being like it a "wet compressor." There was, however, but one cylinder double-acting, the piston of which was driven by gearing, actuated by a steam engine at a distance. Though rougher in appearance, and far more noisy in its action than the National or Humboldt, this compressor, nevertheless, did its work satisfactorily. Second award.

The compressor exhibited by R. Schram, Chesterfield, consisted of an ordinary horizontal engine, having an air-pump placed in rear of the steam cylinder. Instead of the usual valves, the air cylinder was provided with a slide valve, actuated by a small piston, the motions of which were regulated by the admission of steam from the main slide valve. Second award.

CLASS No. 52.—WEIGHING MACHINES.

The following firms submitted specimens of weighing machines for examination by the jury:—

W. and T. Avery, Birmingham; E. and T. Fairbanks and Co., St. Johnsbury, Vt.; Hodgson and Stead (Limited), Manchester; Howe Scale Co., Rutland, Vt.; Rd. Godfrey, Melbourne; Hy. Jones and Co., Melbourne; Henry Pooley and Co., Liverpool; L. Paupier, Paris; O. F. Scheeren, Liège.

With the exception of those of O. F. Scheeren, all the platform and counter machines were tested as to their accuracy, with gratifying results in each case. The weighbridges of Fairbanks and Pooley were very severely tested, and gave great satisfaction, both machines showing great sensibility, but owing to the giving way of a foundation, consequent upon the bursting of a drain pipe, the jury were unable to test the Avery weighbridge.

The principal differences in the various machines were those of material used in construction; relieving gear versus no relieving gear; wooden versus iron platforms; plain versus notched steelyards; extended versus maxtended platforms; substitution of slides for poise balls and runners; and chilled versus cast-steel bearings. Fairbanks, Howe, and Paupier appeared to favour the introduction of as much wood as possible into the construction of their machines. Avery combined a

cast-iron head with wrought-iron tubular pillar, and all other makers use cast iron for pillars, heads, and platforms. Both Avery and Fairbanks construct the levers for their weighbridges of cast iron, trussed with wrought iron, thereby securing great strength with little weight. Fairbanks condemned relieving gear as being injurious to the well working of any weighing machine, principally on account of the liability of the levers to take up a different bearing each time the platform is lifted or lowered into position, and they showed machines, the working of which clearly proved that relieving gear may safely be dispensed with. They have, however, invented and patented a system which the jury held to be free from the many objections hitherto urged against the old-fashioned systems. In this patent gear, the platform was suspended by means of four feet, which rested on supports hung from the pivots or knife edges, virtually bringing the weight of the platform *below* the levers, instead of resting direct upon the bearings. By these means unnecessary wearing and scraping of the pivots is prevented, as the bearings never leave the levers when the platform is raised. Pooley and Howe each exhibited a patent relieving apparatus. Pooley's arrangement had the advantage of always retaining the steelyard in a horizontal position, and, so far as the jury were able to test its working, they were satisfied with the results. For heavy machines and weighbridges, they are of opinion that this arrangement is as perfect as any exhibited. Howe's system consisted of raising the *platform*, and thus relieving the machine, without interfering with the working parts. The load is afterwards let down on to the levers, instead of their being lifted up to it. The mechanism by which this result was accomplished was very ingenious, and comparatively inexpensive, and appeared to secure the proposed end. Excessive vibration of the platforms of weighbridges and weighing machines was prevented by Fairbanks and Pooley by means of check rods, and by Avery in a novel arrangement of levers and corner-lugs. The jury were of opinion that the introduction of these check rods was an improvement. American and English manufacturers differed greatly upon the subject of the best material for weighbridge platforms, and the platforms of "colonial platform machines." American manufacturers continue to use wood, which they contend is not liable to break or rust, is also much easier to work, and admits of easy repair. English makers still make the platforms of their weighbridges of cast iron, some making them in sections for convenience of transport and handling, while others remain in favour of the platform being cast in one solid piece. The advantages urged on behalf of the iron platform were their freedom from absorption of moisture, and consequent immunity from the effects of climatic variations, their freedom from attacks by insects, and their extreme durability. With the exception of Avery, all English manufacturers continue to make the whole of their platforms of the small machines of cast iron. Avery, however, introduced a wrought-iron plate, fitted into a cast-iron frame. This arrangement rendered the machine stronger, and a few pounds lighter, but for the smaller machines there seemed to be no material advantage in either wood over iron, or iron over wood. For weighbridges, the cast-iron platforms in sections (none of which weighed more than 3 cwt. each) as shown by Avery were a great improvement upon platforms cast in a single piece, but Fairbanks' wooden platform had the advantage that the weighbridge could be delivered without the platform (which can be supplied by any carpenter), and a great saving in transport effected. A six-ton Fairbanks' weighbridge was said to weigh, without platform, only 12 cwt., and to measure 22 feet. A six-ton Avery weighbridge would measure 28 feet without platform. The steelyards of most of the American machines were made of brass with plain or smooth tops, the divisions, as well as figures, being marked on the side. In Fairbanks' scales the legibility of these figures and divisions was consequently enhanced by their being filled in with a kind of white enamel. A difference of opinion exists in the minds of manufacturers as to the advantages of notched over plain or unnotched steelyards. English makers, without exception,

adopt the former only, stating that accuracy is not so readily obtained by a slide being placed opposite a given mark, as by a knife-edge merely dropped into a notch. The notched steelyard, with a small tranway for the runner on each side, combines the two systems. Most of the English steelyards were made of iron, some were nickel-plated, and others had the divisions and figures cast on them. Avery and Fairbanks used a patent slide in addition to the usual poise ball and runner, formerly found on the steelyards. These slides were quicker and more reliable than the old-fashioned poise balls. American and English makers differed greatly upon the question of extended platforms. The former contended that the principle of extended platforms was a bad one, as a weight placed on a corner of the platform would have a tendency to tilt the opposite corner away from its bearings, and thus throw the whole machine out of gear. Though this objection appears reasonable, a 10-cwt. machine of Avery's, with a platform extending some 18 inches beyond the bearings, was severely tested by one of the jury standing upon each of the four corners in succession, with most satisfactory results. The pivots, or knife-edges, as well as the bearings upon which they rested, being important parts of weighing machines, it was interesting to note that English makers favoured cast-steel pivots, so fitted in their places that they could be removed, sharpened, tempered, and then replaced; but Fairbanks preferred case-hardened Bessemer steel, as being less liable to snap than cast steel. The principle of steel-faced bearings has been universally adopted. The pivots, bearings, and corner-links submitted for inspection by Avery and Fairbanks were splendid specimens of workmanship. Fairbanks, by making all the separate parts of their weighing machines by machinery, secure interchangeability and perfect accuracy. This is an immense advantage, as it not only guarantees the accuracy of all parts of the machine, but it enables an ordinary workman to repair a defective machine with very little trouble. Avery, though making all the various parts of his machines to gauge, has only partially adopted this system. The jury are in favour of dispensing with loose weights in all cases where it is possible to do so.

After a careful examination of all the machines exhibited, the jury recommended W. and T. Avery, Birmingham, for a first award for weighbridges, first award for platform machines, and a first award for counter scales. The jury were also of opinion that the splendid display of counter scales made by them, which in their opinion was the finest collection of counter scales ever exhibited by a single firm, together with the numerous improvements introduced by them, and the care displayed in the various parts of their weighing machines, were worthy of some extra special recognition at the hands of the Commissioners.

The jury also recommended Fairbanks and Co., St. Johnsbury, for first award for weighbridges, first award for platform machines, and second award for counter scales. The jury found that Fairbanks exhibited the best collection of weighbridges and platform machines, all of which evidenced very superior workmanship, great accuracy, and perfect mechanism. In addition, Fairbanks and Co. introduced numerous improvements into the construction of their machines, such as the interchangeability of parts, the application of check rods, &c., &c. In consideration of these improvements, and the high state of perfection of the Fairbanks weighing machines, the jury recommended Fairbanks and Co. for some extra special distinction in addition to the awards recommended above.

The jury recommended H. Pooley and Co., Liverpool, a first award for weighbridges, on account of superior mechanism, and a first award for platform machines, these machines having satisfactorily withstood the severe tests as to accuracy imposed by the jury.

The machines of the Howe Scale Co., Rutland, Vt., on account of their accuracy and sensibility, were recommended for first award for platform machines, second award for counter scales.

Hodgson and Stead, Manchester, for self-indicating weighing machine, were recommended for a second award, and for platform machines a second award.

The jury recommended L. Paupier, Paris, for platform machines showing great accuracy and sensibility, but rough finish and workmanship, a second award; and for counter balances of high sensibility a second award.

Henry Jones and Co., Melbourne, for general good workmanship, were recommended for a second award for platform machines, and for counter scales a third order of merit.

Rd. Godfrey, Melbourne, for general good workmanship, was recommended for a second award for platform machines, and for counter scales a third order of merit.

To O. F. Scheneep, Liège, the jury recommended a third degree of merit.

W. C. KERNOT, *Chairman.*

The following report has been made at the request of the jury by Mr. Blackburn:—

There were seven windmills exhibited, two of which were, however, duplicates. Despite the fact that the windmill utilises one of the great forces of nature, and is the cheapest mechanical power available, the users of motive power in this colony have never taken kindly to it, in consequence of their impatience of the delays inseparable from its intermittent action.

The Californian Allhouse Vaneless windmill, exhibited by Stephens and Woodin, San Francisco, had no sails, in the ordinary acceptance of the term, but had 104 floats, set in such a manner that when the mill was at rest their inside and outside ends formed two concentric rings, the exterior diameter being 14 feet and the interior about 7 feet. These floats were set slightly overlapping one another, like Venetian blinds, on the sides of an octagonal framework of iron, in eight sections, having, of course, thirteen floats to each, and were balanced on the centre of their radial length. At the interior ends they connected with another octagonal framework of iron, which was lighter than the other, and had a contracting and expanding action, not dissimilar to that of the ribs of an umbrella. With a light breeze these floats present themselves to the wind vertically, but the moment the breeze freshens the outside of each of the eight sections is pushed over, until by the time the wind reaches the maximum force which the mill is calculated to use they have turned on their centres until they are nearly at right angles with their position when at rest, with the ends of the floats presented to the wind. They are also provided with a feathering action, which acts in proportion to the extent to which the sections of the floats are turned over towards the horizontal. The moment the force of the wind decreases, a weight, acting on a lever bar behind the centre, immediately exerts a counter-balancing force, and keeps the floats up to their work. This arrangement, it was claimed, results in a maximum motion of forty revolutions a minute never being exceeded, even should the machine to be driven become disconnected. It was also claimed that they were the cheapest windmills in the market; but in connection with this claim, it must not be forgotten that the mills were supported on a wooden framework, and that the floats were of wood.

First award.

The Victory windmill, exhibited by its patentees, David Munro and Co., Melbourne.—It had six sails, working in a framework having a hexagonal margin, the rods, which radiate from the centre to the points of the hexagon, passing through a cast socket, which forms a backbone to each sail. The machine was self-acting, keeping itself to the wind. As the wind freshens, the pressure operating on a spiral spring placed in front of the hub causes the sails to feather, centrifugal force intensifying their action. As a protection against bush fires, the machine is wholly constructed of metal, even to the tripod frame which carries the mill. First award.

The new Victorian patent self-regulating windmill, by J. Abraham, Ballarat, was supported on a cast-iron pillar and bed-plate. Like the Althorne mill, it had a circular framework, bounded by two concentric rings, the outer 13 feet in diameter, and the inner about 9 feet. It was very light, there being no cast-iron in the revolving portion, which was entirely constructed of wrought-iron and gun-metal. The floats, 16 in number, were constructed of corrugated iron in sheets of about 2 feet 6 inches in length, the width being coincident with the radial distance between the two concentric rings of the framework, each swinging on an axle, then position being regulated by the centrifugal force of two iron rods, which cause the mill to maintain a regular speed. In action, any increase of the centrifugal force causes the floats to feather, until at last they assume the horizontal, exposing only their ends to the wind. The bearings are unusually large, and are so placed that they are surrounded with oil. This mill is capable of running a long time without attention, whilst the oil receptacles are so constructed as to reduce the loss to a minimum. First award.

John Druke, Melbourne, was also an exhibitor of a windmill. In appearance, viewed from the front, it was not unlike the Althorne when at rest, the floats being set in the form of a ring, bounded on the inside and outside by two concentric circles. The floats were, however, fixtures, and the mill was regulated by two powerful vanes. One of these was fixed, whilst the other, hung on a hinge, was kept in position by a weight. The moment the gale has sufficient force to move this vane against the weight, it moves the floats away from the direct action of the wind, and, of course, reduces its velocity. To this windmill your jury adjudged the second order of merit.

The patent steam crane exhibited by Priestman Bros., Hull, with self-acting bucket or grab, was, owing to the loss of the original exhibit in the "Sorata," represented by a model, and as a model was examined by your jury, although at a later period a duplicate was erected in the grounds. The crane itself did not present many points of originality. It was portable, bearing on four wheels with massive cast-iron foundations. The whole apparatus was on the same platform, revolving round the central pillar; the jib lifting and lowering, and the boiler vertical, with cross tubes, and placed at some distance from the central pillar at the extremity of the platform, so as to form a counterpoise to the leverage of the jib. The cylinders were on the outside of the winch, and the lifting barrel was driven by gearing which was said to be specially designed for these cranes. Though applicable to ordinary purposes when required, these cranes were stated to be specially designed for working the self-acting bucket, which was to your jury a novelty. It is somewhat difficult to describe the appearance and action of this bucket without a diagram. Closed, it appeared to be a little less than the lower half of a circular cylinder of about 7 feet in length and about 4 feet in diameter, constructed of boiler plate, hung horizontally, having a horizontal joint along the centre of the bottom for its entire length, and vertically at each end where it met the hinge, which was on the exact centre; two radial lines formed the upper edge of the ends. Open, these two radial lines moved on their centres until they traversed a right angle; the edges, which in the closed state met and formed the joint, being now wide apart and pointing downwards. In this state the bucket is lowered into the hold of a vessel having grain, small coal, sand, shingle, &c., for its cargo; and when it has buried itself as deep as it will by its own weight, the strain on the chain closes the two edges downwards, and the bucket, containing the load, is lifted, and the crane traversed until the bucket is over the hopper or other receptacle in which the cargo is to be discharged, the latter suddenly opens at the will and by the action of the man working the machine, and having thus dropped its load, is again ready, after the crane has swung round, for lowering into the hold. This bucket can be replaced by an instrument called the grab, of about the same shape and size as the bucket, but formed by two rows of

strong iron claws, working in precisely the same manner as the two segments of the iron bucket. It was described as being available for excavating hard material, either in dredging or in ordinary earthwork, also for lifting coal, coke, or cinders. This crane, with a bucket holding 15 cwt., was capable of lifting 40 tons per hour; and worked by one man during a day of ten hours was calculated to lift 2250 quarters of grain, or 100 tons of small coal, sand, or shingle. With the grab it was calculated to lift 187 tons of coke or cinders, and to excavate 375 cube yards of strong ground, or 375 tons in dredging. As no labour is required, either in tipping or filling, it is obvious that the saving effected by its use is very considerable. It was unanimously given a first award.

The pile-driver of this firm was also represented by a model, which your jury had the less hesitation in examining as the machine itself would necessarily not only have been very cumbersome, but the effective illustration of its working would have been attended by many practical difficulties. The model represented a staging 40 feet high, the bottom being 8 feet square, and weighing (with the engine and boiler, but excluding the ram, which of itself weighs 20 cwt.) five tons. Its comparative lightness, however, and the small space occupied by it, make it capable of being worked in any position, or under any circumstances, in which a common hand machine can be placed, either on land or afloat. It was moved by fastening the end of a rope ahead, passing it over a roller under the wheel, and taking a turn round the barrel. The travelling wheels were castors, so that, by lifting up each side alternately with a lever, the castors can be turned to run on a trestleway at any angle. The pile was quickly pitched by a chain round the head in the ordinary manner, and the ram was lifted by a tongue passing through the centre, and was drawn in and out by a lever with rack and pinion. To the outer end of the lever a cord was attached, and on being drawn downwards the tongue shot into the open link of the pitched chain in its upward motion. The tongue was withdrawn by the outer end of the lever striking against a staple fixed in the guide pieces, and the ram thus released then falls on the pile, usually at the rate of twelve times a minute with a 6-ft. lift. These machines can also be fitted with the telescope driver, which consists of the substitution of a long pile for the ram, and to the front of this the ram itself is secured at the desired depth below the staging. By this arrangement piles can be driven in a trench or tide-way down to a depth of thirty feet below the staging on which the machinery stands. Taking into consideration the simplicity of the construction of this machine, its efficiency, and its cost, your jury gave it first award.

The wood-working machinery exhibited by Chas. Powis and Co., of Milwall, was very fine and very complete. This firm makes a specialty of combination tools—that is, machines which combine two or three—thereby effecting economy by decreasing the quantity of shafting required, and by reducing the number of pulleys, &c. These they find a large demand for amongst the smaller class of builders, who have neither the capital, the room, nor business sufficient to justify them in procuring a separate machine for each description of work. As a sample of their tools your jury would instance the “general joiner,” which in the centre had a planing machine, worked from one end, which would plane or mould any timber under 12 inches wide and 4 inches in thickness. On one side was a mortising machine, in which was a fixed borer. A sharp, S-shaped, double-shell auger first drills the two ends of the mortise, and then, moving forward rapidly, rips out the wood between the one hole and the other, either through the wood or as a well-finished blind mortise, as may be required. On the other side was a saw bench, the spindle of which might be mounted with the ordinary circular saw, or with the “dunkan saw”—that is, a thick saw of small diameter, set on the spindle at other than a right angle, and which in practice cuts out a groove similar to that made by the joiner’s plough, having for its width the distance the outer periphery of the saw is set

from the right angle with the spindle on each side of the centre; or a pair of circular saws could be placed side by side, with a washer between, for the purpose of cutting tenons, the piece of wood to be operated on being fixed from above in such a position that, passing between the two saws, vertical cuts are made to the required depth, after which it passes between two circular saws of about 4 inches diameter, set horizontally, which completes the tenon by cutting off the side slips at the shoulders. In this machine all the three tools could be worked at the same time if required. Another machine worked a horizontal borer, an ordinary circular saw, and a small hand-saw, and could be adapted either to hand or to steam power. Another machine, named the "Estate Carpenter," combined a circular saw, a tenoning and mortising machine, as also a horizontal borer, the circular saw working simultaneously with either of the latter; and still another, known as the recessing machine, which combined a circular saw, a boring machine, and a machine for cutting either straight or circular mouldings. They also exhibited a band-saw, working on a 36-inch wheel, to the framework of which was fitted a crane, which, carrying the guide and self-acting feed table, enabled the band-saw to be employed in the work of ripping down timber. The whole of these machines were distinguished by the excellence of the workmanship, and to the exhibit was unanimously given a first award, in addition to which a resolution was also passed to the effect that the general joiner should be made the subject of a special commendation.

Another collection of wood-working machinery, exhibited by T. Robinson and Sons (Limited), Rochdale, were also worthy of notice. Noticing these machines in the order in which we examined them, the first was a saw-sharpener, in which the saws to be sharpened or gulletted were placed in clamps capable of being adjusted to any angle, so as to enable them to be brought in contact with an emery disc running on a shaft placed at an angle of 45 degrees. The second was a self-acting emery wheel for grinding planing irons, the irons being fixed in clamps which hold them rigid, the clamps themselves having a backward and forward motion parallel with the spindle of the grinding wheel, which brings every portion of the edge in turn under the action of the sharpener, the extent of the backward and forward motion being regulated by two iron plugs dropped into two holes of a series parallel with the spindle, the two plugs indicating the points at which the reverse action commences in each instance. Another exhibit was a new invention. It was a continuous self-feeding saw-bench, in which the timber to be sawn is laid along-side a guide, which gives it the desired direction. It is then pushed until its front end is advanced to within about six inches of the edge of the saw, when it is taken by a ratchet wheel working on a vertical spindle which has its upper end revolving in the arm of a lever, acted upon by a weight which causes the ratchet feed-wheel to adapt itself to the width of the timber to be operated on, and, pressing it against the guide, also carries it forward to the saw. All the man attending the mill has to do is to take care that by the time the ratchet wheel is ready to part with the first piece the front end of the second piece touches the heel of the first, and the action goes on continuously so long as the increase or decrease in size of the pieces to be sawn is worked up to gradually. Another of the specialties of the firm was a moulding and planing machine, capable of operating on any size of timber under 12 inches in width and under 3 inches in thickness. By this machine all the four sides of the timber were dressed at one time, and to it was added a novelty in the shape of an arrangement which slopes the cutter so as to keep it close to its work when the moulded face is not square with the others, as in the case of an architrave. Another novelty was a small saw-bench for sawing, tonguing, grooving, rebating, boring, or cross-cutting. For the purpose of rebating, this saw was fitted with a rising and falling spindle. In rising or falling the spindle worked on an arc of a circle, which had for its centre the centre of the driving shaft, the

reason for moving on the are instead of in a vertical slot being to prevent the relaxing of the driving belt every time the spindle required to be shifted. Several other machines, the action of which it would be tedious to particularise, although well worthy of close examination, completed this interesting exhibit, to which first award was unanimously given by your jury.

The Sächsishe Maschinen Fabrik (formerly Richard Hartmann), of Chemnitz, exhibited one band-saw, one wood-planing machine, and one circular-saw bench. All these machines were very substantially built, and of the highest class of workmanship. The band-saw had rollers of 40 inches diameter, and a clear height for cutting timber 18 inches in thickness. It was fitted with a pivoted table of large dimensions, and with a feeding apparatus with variable speed and handy adjustment of thicknesses. Some peculiarities of this machine were a sliding brass rim on the upper wheel, allowing the rim to stop suddenly with the saw while the wheel is still revolving a while in consequence of its attained centrifugal force, and also to start the rim with the saw suddenly, taking the wheel along only gradually by friction, thus avoiding in both cases the overstraining and breaking of the saw, and easing the starting and stopping. Besides, this machine was fitted with a brake-wheel and brake, which come into operation simultaneously with the shifting of the belt on to the loose pulley, thus effecting sudden stoppage, which is a very important achievement. The planing machine was made to plane timbers of 24 inches width and from 1 to 4 inches thick; and being especially intended to give rough-planed boards a fine finish, had only one planing cylinder for the lower side. It was driven by two belts, one on each side, to avoid uneven wearing of the bearings. The table was adjustable, resting the whole length on an inclined plane, thus giving it a very solid foundation. The pressure rollers were pressed down by springs and screws. The speed of the feed rollers was variable. The circular-saw bench was driven from below; its shaft could be raised and lowered, and the saw replaced by knife-heads for tonguing, grooving, and moulding. There was an attachment for boring and slotting also, consisting of a special table, sliding in both directions by screw and lever. The circular saws used in this machine had peculiarly-shaped teeth, these being spread to both sides at their points by a special upsetting tool, thus each tooth cutting on both sides, and avoiding the setting of the teeth, which makes each tooth only work on one side, and if not done very carefully does not bring all the teeth to equal cut. The augers, also, used for slotting and boring, and fitted into the end of the shaft, were of a novel form, being S shaped, thus having two cutting edges, which is especially useful in slotting. To each of these machines your jury gave a first award.

The Sächsishe Stickmaschinen Fabrik of Kappel also exhibited a fine collection, consisting of a band-saw, a dovetailing machine, an edge moulding and shaping machine, a universal hand-feed planer and joiner, a surface planing machine, only the first two of which, however, can receive more than a passing notice. In the band-saw the rim of the upper pulley, which had a diameter of 40 inches, was of bent hickory, only the nave and spokes being of iron. The lower pulley was, however, wholly of iron, and had a diameter of 44 inches, but both pulleys were exactly balanced and covered with elastic rings. The upper pulley was arranged to rise and lower, so as to take in blades of different lengths, and had the lower attachment weighted, in order to give a proper tension to the saw, which was adapted for cutting wood 20 inches thick. The table could be arranged for level sawing. To the machine was attached a self-acting roller-feed apparatus, the rate of advance of which could be varied from 4 to 20 feet a minute. This was, however, removable at pleasure. With this machine were exhibited, as indispensable accessories, apparatus for sharpening, setting, and brazing the saws. The dovetailing machines struck your jury as the most ingenious pieces of mechanism exhibited in this subdivision of the class. Without a diagram, however, it appears hopeless to attempt to describe their action. It may be sufficient,

therefore, to say that both boards are placed in their relative positions, at right angles to each other, and that they are cut simultaneously, the machine being put in gear by the motion of a hand lever, each movement of the hand lever forming one turn. By an adjustment of the spindle the cut is adapted to the varying thickness of the boards. To the whole exhibit of this firm, in this subdivision, your jury unanimously gave first award.

The most noticeable exhibit in hydraulic machinery was that of Sir William Armstrong and Co., Limited, Newcastle-on-Tyne. The machines shown were three—a revolving crane, a patent jigger, and a capstan—all of which derived their motive-power from one hydraulic ram. The ram was fixed in a heavy framework, the actual pressure being obtained from 35 tons of sand contained in an iron cylinder, technically called “the accumulator,” which, acting on a column of water, produced a pressure equal to 700 lbs. to the square inch. In connection with this ram pipes were laid, with which each of the machines now under notice was connected; and in large establishments these pipes would be telescoped to a considerable distance from the accumulator, having various junctions with which the several machines might be either permanently or temporarily connected, and each machine is put in motion by the simple operation of turning a tap. Water was forced into the column under pressure of the accumulator by a steam-engine, that used in the present instance being of four-horse power. The power of the engine will, however, vary, and will be dependent, not only on the number of machines attached, but on the extent of the work required of them, the object being to hit the exact power necessary to keep up the column of water, by promptly making good the loss in supplying the rams of the various machines. Thus, any one watching the accumulator during the time any of the machines were at work would notice that it was slowly sinking, and that the moment the machine stopped the accumulator began to rise; and it would be the object of the engineer in designing his work to have just enough power in his engine, and no more than was sufficient to make good the loss of water, without causing the machine to wait for a single moment. There would always, however, occur moments of delay, which would cause a longer interval between the workings of any given machine than usual, and it is important that during these pauses the accumulator should not be forced above its full height. This risk was avoided by an exceedingly neat, and at the same time simple arrangement, which renders the stoppage and re-starting of the engine automatic. Projecting from the side of the accumulator was a stout bar of iron some one inch in diameter, and from eight to twelve inches long. As the accumulator rose, this bar pressed on the under side of a lever, which, gradually closing the steam valve, first reduced the speed of the engine, and, finally, by the time the accumulator had reached its maximum height, stopped it altogether. The moment the accumulator commenced to fall through any one of the machines being set in motion, the upward pressure on the lever was released, the lever itself was acted on by a weight, and immediately the engine started again, and gradually attained its full speed. The three machines connected with the hydraulic power were a revolving crane, a jigger, and a capstan; the first two, being mounted on wheels travelling on ordinary rails, were available for use at any point and at any instant their services might be required, by simply connecting them with the reticulated service pipes at the nearest junction. The revolving crane had a fixed jib, which, controlled by a tap or two under cover in a house which goes round with the mast, cannot only complete the entire circle, but can lift or lower its load at the same time, the effect being that the minimum of time is lost. The second machine was the jigger. It was specially intended for the rapid removal of goods from the hold of a ship, but it was equally adapted for lifting material from the ground to the upper stories of a building under construction. On the iron framework a cylinder was mounted at an angle of about forty-five degrees, and at the heel of the cylinder and at the outer extremity of the ram

were iron sheaves for a triple purchase. The ram being set in motion, the chain over the sheaves at first tightened, and as the ram was projected, communicated its motion to a winding barrel of something less than one foot in diameter. On the spindle of this barrel was fitted a wheel of about seven feet in diameter having a channelled periphery, so that for every revolution of the drum twenty-two feet of lifting-rope was wound round the large wheel, and, as a matter of course, the load was lifted to a corresponding height, the package being lifted in less time than it takes to read this sentence. The third machine—the hydraulic capstan—was set in motion by the simple pressure of the foot of the man working the rope on a knob rising above the foot-plate, the motive-power being communicated by two small water-engines, concealed below the foot-plate. The machine was fitted in a cast-iron frame, in which the floor-plate, which was circular, was supported on a pair of bearings, with the result that the motor-work could almost instantly be exposed for examination, oiling, &c., and almost as instantly closed again, nothing being seen above the floor-plate but the bell of the capstan and the knob which, being pressed, sets the machine going. These capstans have been found equally available for wharf purposes, in bringing ships alongside, as for shunting purposes in railway stations. This latter class of work is usually effected by a special locomotive kept for work in the yard, or else by horses. Stations in which these machines have been fitted in the old country have been by their means rendered entirely independent of either the one or the other. To each of these three machines, as well as to the hydraulic apparatus, and to the steam-engine, were given a first award; five awards in all.

The hydraulic hoist (Cherry's patent) exhibited by Tangye Bros., Birmingham, was adapted for lifting either light or heavy weights into warehouses, or from one floor to another, at the average approximate rate of 60 feet per minute. In this hoist the cylinder was placed horizontally, and the motion of the piston was communicated directly to the shaft of the winding-drum by means of a flexible steel rack. On behalf of this method of construction it was claimed by the exhibitors that it was more compact and more easily fixed than other hydraulic hoists, and that from the directness with which the power was conveyed from the piston to the winding-drum, and the frictionless nature of the mechanism, a smaller piston suffices than in the ordinary hydraulic hoist; whilst they were worked with a smaller quantity of water. Messrs. Tangye's exhibit included several ingenious adaptations of the hydraulic principle; amongst others, to lifting-jacks, and the "jim-crows," for straightening bent rails; and to the whole of the hydraulic machines your jury gave a first award.

The patent self-acting breaking-down travelling saw bench exhibited by David Munro and Co., of Melbourne, was deserving of notice. Under ordinary circumstances the operation of breaking down the log, as it is technically called—or that process which first cuts the log into twoitches, and afterwards reduces these into slabs of the desired thickness for cutting into scantlings—is done by the vertical saw, which requires the excavation of a pit, besides the erection of comparatively strong and expensive framing. The mill now under notice breaks the log down with the circular saw, and the advantages claimed for it were that, by reason of the ease with which it could be erected, it could be repeatedly moved as required, the only framework required being rough bush logs, which can be put together in a few hours, and that when erected it does more work with a given horse-power than the vertical saw. In working, the log is placed on a platform, which, travelling on rollers, carries it towards the saw. When, however, the timber is of extra size, a second saw, working from above and in front of the log, comes into play. This saw is so set that its cutting edge is exactly vertical over that of the lower saw, and its periphery slightly overlaps that of the under one, the effect of which is that the cutting edge reaches and revolves in the upper portion of the cut formed by the lower saw. For instance, we will suppose a log 3 feet in diameter on the platform, whilst the radius of the lower saw is only 2 feet. The

lower saw consequently makes a cut to that depth only, in practice a little less, as the spindle of the saw is revolving below the planking of the platform on which the log rests; but the log in passing forwards then comes in contact with the upper saw, which, cutting a little lower the usual twelve inches, completes the separation of the two pieces of timber. Whilst your jury approved of the general design of this saw, and whilst the method of breaking down the log by two saws of smaller diameter instead of by one of larger diameter struck them as ingenious, some defect of detail which may be easily remedied prevented them from awarding a higher degree of merit than the second class.

Two stone-breaking machines were in the Exhibition—the first, Arthur Hope's, of Melbourne, patent double-acting stonebreaker, being one of the most notable exhibits which fell under the notice of your jury. This machine has made a fresh departure from Mr. Hope's previously patented stonebreaker, "The Excelsior," and was fitted with the cubing jaw, which causes the stone to be broken into cubes, so essential for good road-making, and not into galls or chips, like those struck off by the working mason with his hammer. Its peculiarity was that the teeth of the fixed jaw alternate—that is, that in the lower half the points are in the same vertical line with the bottom of the separation of the upper half; and that the movable jaw works point to point, instead of point into hollow, as in the early pattern machine, with the result that the aperture is of such a shape as renders it impossible the stone can fall through until it has been reduced to the cubical form. In addition, however, to the cubing jaw, other improvements have been introduced into the machine under notice, the most important being in the application of the motive-power, which was communicated by a crank shaft working a cam. At the back of this cam, towards the tail end of the machine, was what may be described as a knuckle, the whole width of the cam, not moving on a centre, but resting in a manner from which it cannot escape on the cam, and on a bolster which moves to and fro to regulate the gauge; and at the front was a similar knuckle, through which the motion is passed to the jaw. It was claimed on behalf of these knuckles that, besides acting as wedges, they have the peculiarity of communicating irregular blows, a long, full stroke being followed by two short half-strokes, which has an effect in cubing the stone not unlike the knapping action of the stone-breaker's hammer; besides which, from their construction, they yield the moment the jaw has completed the fracture, thus preventing the stone being wasted by the production of an undue quantity of screenings (as the small metal is technically called) and dust. Whilst all these improvements have been effected, others have not been overlooked. Thus, the weight of the machine has been reduced from six and a-quarter to five tons (not by any means an unimportant matter when it is remembered that they have frequently to be removed from contract to contract, often over very bad roads, and sometimes over no road at all). This machine was unanimously given a first award.

The second stone-breaking machine was that of H. Gurson, Buckan. Upon examination, however, it was found to be almost identical in its design with machines which, the produce of Victorian workshops, had been in use in the colony for some years; and as it had none of the recent improvements engrafted on it, your jury was unable to give it a higher degree than second award.

EXPERT'S REPORT.

Merryweather and Co., London.—I have examined the steam fire-engines of this firm, and I consider that they have scarcely done themselves justice in forwarding an engine of inferior size and power for competition; and if the award is to be made entirely on the merits of the two engines exhibited and engaged in the competitive trials, it should go to Messrs. Shand, Mason and Co., their engine being by much the more powerful engine of the two; but if the awards are to be made for the guidance of the public as to which type of machine is the best, I think it would be just as mis-

leading to place Messrs. Shand, Mason and Co above Messrs. Merryweather and Co., because the former sent a large engine and the latter firm a smaller one. It must not be lost sight of, that Merryweather and Co make much more powerful engines than the one exhibited. The type of engine and boiler made by them is entirely different to that made by Messrs. Shand, Mason and Co. Each make has its own advantages, and I consider both of them first-class machines for the special work they have to do, and equal in point of merit.

David Munro and Co.—Postborers: The workmanship is good; it is adapted to public wants, and is labour-saving. Winding and Pumping Gear. Design and workmanship are thoroughly good. Vertical Engine: This engine is well designed and easy of transport, and the workmanship good.

A. Mathieson and Co., Glasgow.—Mortising Machines, Lathes-heads and Spindles, Mitering Machines and other Tools—I have examined these exhibits, and consider them well and faithfully finished, and deserving a first award.

JURY SECTION XXVII.

Class 60.—Carriages, and Wheelwright's Work.

JURY.

William Williams, Chairman, Victoria.
T. Woodward, Victoria.
Jas. Garton "
T. Gittus, sen. "

Hon. W. A. C. O'Beckett, Great Britain.

R. Beatty.
J. S. Henderson.

C. N. Beere.

Sir—We have the honour to report as follows:—

The exhibits in this class numbered 84. Victoria, as might have been predicted, contributed a large proportion of the collective exhibits, and competed in every variety of the classes represented in the British and foreign sections; a considerable residue, however, not represented therein, and therefore competing in the Victorian section alone, will account for the greater relative proportion of awards made to Victoria, resulting naturally out of the greater number, variety, and high average merit of her exhibits.

In order to adjust the exhibits on a fair competitive basis, it was found requisite to arrange them in classes; and where important divergences from a leading type occurred, into sub-classes.

There were, however, in the Victorian Court a number of exhibits which, being incapable of being classified, and therefore of being placed in competition, have been isolated under the heading of miscellaneous. Selections for award have been made from these, but only in cases which, in themselves, present features of more or less conspicuous merit.

Excepting in one or two unimportant cases, it was observable that the foreign exhibits were deficient in beauty of design, finish, and other essentials which should distinguish representative national exhibits; and without detracting from their intrinsic merits, it may be safely surmised that, as a whole, they were not, in any wide sense, either the best or latest examples in this branch of industry of the great nations whence they emanated, in contrast to which it seems fitting to state here that some of the higher examples in the Victorian Court would prove no discredit to any international exhibition.

Awards were recommended for bicycles, perambulators, carriage finishings, bent timber, &c. These were advised by members of the jury, who, from their technical knowledge, were fitted to report thereon, and had patiently and critically examined them in detail.

It may be observed in conclusion that the figures first, second, third, and honourable mention, denoting the awards, were intended to convey the jury's opinion of the comparative merits of the various exhibits as they stood related to each other, rather than that they were *par excellence* the best of their kind.

The highest standard of excellence was, however, reached in the examples of M'Naught and Smith, C and under-prong London, and Stevenson and Elliott, brougham

W. WILLIAMS, *Chairman*.

EXPERT'S REPORT.

I have practically tested Messrs. Singer & Co.'s exhibit of bicycles in the British Court. I find that this bicycle is one of the easiest I ever rode, going very easy and swiftly, and well adapted to Victorian roads; both wheels true, the spokes in each at full tension; the brake, bearings, saddle, steering gear, tyre, pedals, dustproof bearings, &c., are all first-class and good manufacture. The quality of finish and material very good, and I recommend them for first order of merit.

SECTION C, CLASS 82.—MINERALS, ROCKS, AND FOSSILS.

SIR—In the division of mineralogy and geology (Section C), which has been allotted to us to adjudicate upon, we now beg to hand you the accompanying report.

A glance at the colonial courts will have convinced the most sceptical of the enormous mineral wealth with which the continent of Australia has been endowed; and what is now known is probably only a fractional part of what still remains hidden, to reward, at a future period, the exertions of the prospector.

The Australian colonies were the only exhibitors of any magnitude in this section, the Continent of Europe and the rest of the world apparently not having thought it worth their while to exhibit, except from a metallurgical point of view, and that only, with one or two exceptions, very insignificantly. America had a large collection, but it was not a national one.

The colonies appear to have their specialties in the way of metallic ores, as, for instance—Victoria for gold and antimony; South Australia for copper and bismuth; Western Australia for lead; New South Wales for gold, silver, coal, tin, and antimony; Queensland for gold, tin, antimony, manganese, chromium, cinnabar, coal, and opal; New Zealand for gold, chrome, and many other ores; Tasmania for tin and gold.

Victoria made but a poor show of metalliferous ores and coal in comparison with the rich displays of her sister colonies, and only surpassed them in her gold-producing capabilities, though not in exhibits of the raw material. Great apathy had been manifested; this was proved by there being so few exhibits of even the minerals we do possess, partly due, no doubt, to the closing of several of our mines, notably the Buchan and St. Armand silver lead mines, the Wallalla and Bethunga copper mines, and the Rugwood and other antimony mines.

Gold was the only mineral well represented by Victoria, but not so well as might have been expected, only about 118 quartz and 27 alluvial mines being accounted for. Many gold specimens were to be found in the various colonial departmental or private collections, which have been awarded prizes for collective exhibits.

The opinion has been entertained that the gold became impoverished (by silver admixture) towards the northern portions of the Australian Continent; but this is proved to be quite erroneous, as both the Northern Territory of South Australia and the Palmer River district of North Queensland (Cape York Peninsula) produce gold of as great purity as any to be found. The Gympie and Ravenwood (Queensland) gold is the poorest, and worth about 70s. per ounce, but this is equalled by some from Eastern Gippsland. The Gympie gold takes the filamentous (locally termed "wire," "thread," and "spider-leg") form of native silver.

We have deemed it advisable to make specialties of gold and coal, and the following are the awards in these classes:—

E. W. H. Rowe, Fryer's Creek.—Gold exhibit from Duke of Cornwall and Mosquito Mines, one remarkable specimen in particular, exhibiting crystals of gold (rhombic dodecahedrons) in a cavity in a mass of crystallised quartz. First award.

Brunner Coal Co., Grey River, exhibited a section of coal, showing total thickness of the 16-foot seam, worked for the past fifteen years. As steam coal it is stated to be superior to any other Australian coal; as gas coal it yields 12,000 feet per ton of 18 to 20 candle gas.

Coal Pit Heath Coal Mining Co. (Limited), Greymouth, exhibited a section of 18-foot seam from the company's mine.

Kaitangata Coal Company, Otago, exhibited a sample of coal from ordinary working seam.

Westport Colliery Company, Westport, exhibited a specimen of coal, showing half the thickness of the 30-foot seam, Mount Rochfort mine.

The following table shows the result of the analyses of the coal exhibits:—

	Fixed Carbon	Hydro-Carbon.	Water.	Ash.	Evaporative Power. lbs.
Brunner Coal Co., Grey River— average of seven analyses ...	56.62 ...	35.68 ...	1.59 ...	6.11 ...	7.36
Coal Pit Heath Coal Mining Co. (Limited), Greymouth ...	59.38 ...	35.48 ...	1.05 ...	4.09 ...	7.70
Kaitangata Coal Co., Otago ...	39.41 ...	37.25 ...	19.61 ...	3.73 ...	5.00
Westport Colliery Co., Westport —average of seven analyses	60.44 ...	34.95 ...	2.26 ...	2.35 ...	7.85

Brunner Coal Company, Grey River, also exhibited coke, for which they receive first award.

Newcastle Wallsend Coal Company, Newcastle, exhibited a pillar of coal, with roof and floor attached; seam from 8 feet 6 inches to 9 feet 4 inches thick. It was a free burning bituminous coal, suitable for household, steam, smelting, gas, coking, and blacksmith purposes, and had a specific gravity of about 1.29. First award.

New Lambton Colliery Company, Newcastle, exhibited a pillar of coal, from seam varying from 8 feet 1 inch to 9 feet 9 inches thick, with same characters as the last. First award.

Waratah Coal Company, Waratah, exhibited a pillar of coal, with floor attached, average thickness of seam, 10 feet to 9 feet 1 inch, of that which is usually mined. It had the same characters as the last two. First award.

New South Wales Shale and Oil Company, Sydney, exhibited a trophy of Australian boghead mineral or torbanite. First award.

Australian Kerosene Oil Mineral Company, Sydney, exhibited a trophy of Australian boghead mineral from Ioadja Creek. First award.

Bay of Islands Coal Company Limited, Auckland, exhibited a block of glance coal, showing every stage, from brown coal to anthracite; used for steam, household, brick-burning, and other purposes. Second award.

W. Whitley, Burrum, Maryborough, Queensland, exhibited a specimen block of coal, from seam 4 feet 6 inches thick, at 115 feet from surface. Second award.

A. C. Gregory, C.M.G., Brisbane, exhibited a collection of coals, as under:—

	Volatile in coking	Fixed carbon.	Ash	Water.	Total.
Burrum mine, Maryborough ...	31.5	64.0	4.5	...	100
Thomas's mine, Bundamba, near Ipswich	29.8	59.2	11.0	...	100
Jones's " " "	28.9	61.5	9.6	...	100
Waterston mine, Ipswich ...	25.2	62.0	12.8	...	100
Tivoli mine " "	26.7	66.4	6.9	...	100
Comet River, Rockhampton ...	25.0	65.3	9.7	...	100
Walloon, West Moreton ...	41.0	42.0	17.0	...	100
Hon. J. M. Thompson's mine	30.2	58.2	9.1	2.5	100

Also coals from Fassifern, West Moreton; from outcrop at Blackfellows Creek, Gatton; from Clifton mine, Darling Downs; and from near Rockhampton. Second award.

Vale of Clwydd Coal Company Limited, Lithgow Valley, New South Wales, exhibited a pillar of coal, from seam about 10 feet 7 inches thick. It was a splint coal, suitable for household, steam, smelting, gas, blacksmith, and coking purposes. Specific gravity, 1.32. Second award.

Osborne-Wallsend Colliery Company, near Wollongong, exhibited a pillar of coal from seam 7 feet 6 inches thick, without bands. It was a semi-bituminous coal, suitable for steam, household, smelting, coking, and blacksmith purposes. Specific gravity, about 1.35. Second award.

Illawarra Coal Company, near Wollongong, exhibited a pillar of coal from seam about 7 feet 6 inches thick, without bands, and had similar characters as the last. Second award.

Greta Colliery Company exhibited a pillar of coal 4 feet 6 inches high, cut from lower part of the seam, worked at the Greta Coal and Shale Colliery. The seam (all of the same quality) varies from 26 feet to 17 feet 6 inches thick, and the coal was raised from a depth of 450 feet. It was of excellent quality, and suitable for gas, household, steam, and other purposes. Specific gravity, about 1.25; and from its hard splinty nature bears shipment and carriage well. Second award.

W. R. Kissane, Melbourne, exhibited coal from Reward Company, Cape Patterson, Queen vein, 4 feet, and rock vein, 3 feet 6 inches thick.

Dr. W. F. Mackenzie and C. K. Moore, the Sugar Loaf, Mount Victoria, New South Wales, exhibited boghead or petroleum oil canal coal, top and bottom canal from outcrop of seam 1 foot 6 inches thick, which yields 180-150 gallons crude oil to the ton; and the same from Bathgate, near Wallerawang, top and bottom canal from outcrop of seam 2 feet thick, which yields 17,000 cubic feet of gas per ton, having an illuminating power of not less than thirty-six candles. Second award.

MINERALS, ROCKS, AND FOSSILS.

H. A. Warw, Rochester, New York, exhibited an extensive collection of minerals, rocks, fossils, casts, skeletons, &c., &c., from all parts of the world. First award.

Government of the Dutch East Indian Archipelago exhibited a very interesting collection of rocks, ores, coal, &c., numbering about 500 specimens, accompanied by some well-executed geological maps, and a large number of descriptive works and atlases on geology and mining, the official catalogue of which is a model for imitation. First award.

The Borneo Company (Limited), Sarawak, Straits Settlements, exhibited a collection of the ores of antimony (including a fine mass of native antimony from Sarawak), arsenic, and lead and stream (mineral) of great richness. First award.

The Perak Government, Straits Settlements.—This was a large collection, comprising both stream and lode tin from various districts, as well as the stripping, wash, and stratum, with the amount and weight of tin obtained, depth of stripping, depth of wash-dirt, &c., and three large tin splashes, one weighing 150 catties (225 lbs.) and two 80 catties each, tin ingots, &c. First award.

James Hector M.D., C.M.G., F.R.S., Director of the Colonial Museum and Laboratory, Wellington, and of the Geological Survey, &c., exhibited a large collection, numbering 2500 specimens, illustrating the geology of New Zealand. The subdivisions of the different formations were issued in catalogue form by the New Zealand Commission. First award.

Professor Julius von Haast, Ph.D., F.R.S., Director of the Canterbury Museum, Christchurch, exhibited a large collection illustrative of pre-traditional man in New Zealand (the moa hunter), consisting of flakes, chipped and polished stone implements (of flint, obsidian, chert, &c.) found associated with moa bones, at Moabou Point Cave, Banks Peninsula, and elsewhere, to which were added stone implements of the Chatham Islanders, the Solomon Islanders, and the Fijians, with pre-historic stone implements from Europe, America, &c. These were exhibited with a view to show that, as far as New Zealand and the Chatham Islands are concerned, we cannot divide the stone implements into Palæolithic and Neolithic ages, both kinds having been used by the moa hunters and the Morioris (Chatham Islanders) at the same time. This collection numbered 1030 specimens. The professor also exhibited three complete skeletons of dinornithide, viz.:—*Dinornis maximus*, *palapterix elephantoqueus*, and *meiomorins castarhinus*. These were articulated from material obtained in the tertiary deposits at Glenmark, after a study of some complete skeletons found in Otago, and were selected to illustrate the three most remarkable groups into which the exhibitor has divided the order. In relation to ethnology, Dr. von Haast exhibits a series of maps, sections, and drawings, including rock paintings from Weka Pass. First award.

Commissioners for South Australia, Adelaide, exhibited an extremely fine and well-arranged collection, representing the ores and minerals of the colony. These have been arranged and classified by T. C. Cloud, A.R.S.M., F.C.S., F.I.C., and number 809 specimens, although really many more were shown, owing to the Catalogue numbers in some instances, including several specimens. Among them may be noticed—Crytallised calcite from Wallaroo; quartz encrusting calcite from Wallaroo; molybdenite from Yelta and Wallaroo mines; bismuthite and bismuthinite from Balhannah; hematite (like the Cumberland ore) from Barossa Range; arborescent native copper from Kambaitoo and Poma mines; the splendid masses of native copper from Moonta; the crystallised cuprite (ruby copper) from Burra Burra, Moonta, &c. (occurring in cubes and modified octahedrons); the beautifully marked malachite, exhibited by Sir H. Ayers, especially that with arborescent markings; the case of very handsome polished specimens of malachite, exhibited by T. S. Cloud; azurite from several localities; the fine crystals of atacamite from New Cornwall and Doora mines; the various occurrences of gold in

different minerals, more especially in bismuthinite from Balliannah mine, and in bornite from Lady Alice mine; and a rich specimen (37 ozs. 11 dwts) of gold in ferruginous-quartz from Woodside. Some of the copper mines—notably the Wallaroo—exhibit good collections, illustrating the nature of the walls of the lodes, with the ores accompanying them throughout their whole depth. The Commissioners for South Australia exhibit a trophy of Wallaroo cake copper, and English and Australian Copper Co.'s Barra P.C.C. ingots. First award.

Trustees of the Queensland Museum, Brisbane, exhibited a collection, chiefly economic, of the ores, rocks, and minerals of the colony, among which may be mentioned the plumbeo from Stanthorpe; chrome iron from Ipswich and Rockhampton, antimony from Nairnie, a specimen of the rare native antimony, said to come from near Townsville, a large block of oxide of bismuth from Cloncurry; manganese (psilomelane) from Gladstone; atacamite (a fine crystal), stated to be diopside in catalogue; diamonds from Stanthorpe; a large suite of marbles from Calliope and elsewhere; opal, in its ferruginous matrix, from Bulloo and Cooper's Creek, Barcoo River, &c.; a collection of palaeozoic and cretaceous fossils, &c. First award.

R. L. Jack, F.G.S., F.R.G.S., Townsville, Government Geologist, exhibited a fine collection of fossils from North Queensland—viz., Devonian and carboniferous from Star River, Canoona, Broken River, Bowen River coalfield (equivalents of the "Lower marine beds," "Lower coal measures," and "Upper marine beds" of the New South Wales coalfield), also from the upper series of the Bowen River coalfield (equivalent to the "Upper coal measures" of Newcastle, Wollongong, &c., of New South Wales). The collection was arranged as follows—Lower Devonian, Upper Devonian, carboniferous (middle or marine series), carboniferous (upper or freshwater series), carboniferous (marine beds in last). The whole series has been described by R. Etheridge, jun., F.G.S., of the British Museum, W. Carruthers, F.R.S., F.L.S., of the British Museum, and Professor H. C. Nicholson, M.A., D.S.C., &c. Accompanying this collection was a paper read before the Royal Physical Society, on 18th February, 1880, by R. Etheridge, jun., F.G.S., "On a Collection of Fossils from the Bowen River Coalfield, and the Limestone of the Fanning River, North Queensland," with numerous plates. This collection completely sets at rest the uncertainty hitherto felt as to the age of our coal rocks; as, notwithstanding the frequent assertion (against all evidence) that *Glossopteris* was a mesozoic plant, it is here to be seen in the same piece of rock with brachiopods and corals of undoubted carboniferous age. First award.

Captain W. H. Eldred, Sydney, exhibited a collection of cinnabar (sulphide of mercury) ores, associated with quartz, calcite, carbonates of copper and sandstone. The lode was said to be seven feet wide, and appeared to be a brecciated one, consisting of angular fragments of the "country" rock, surrounded by cinnabar and embedded in a calcite base, from Kilkivan, Wide Bay district, Queensland. Two bottles of mercury or quicksilver extracted from the ore were also exhibited. First award.

Department of Mines, Sydney, exhibited an extensive and well-arranged collection of rocks, minerals, fossils, ores, &c. The exhibits were chiefly of an economic character, and comprised a large collection of lode tin, among which may be specially noticed a case of fine specimens of crystallised cassiterite from the Bolitho mine, Cope's Creek, New England. Tin was also shown associated with beryl and chalcodonic quartz, from Graigaud, the Gulf, New England, in granite. Lode tin has not, as yet, been worked to any extent, and the supply, which last year reached the value of £372,349 (being eight times as much as in 1872), has mainly been derived from alluvial and tertiary deposits. A trophy of tin ingots, weighing about nine tons, adorned with chains of bar tin, and wavy strips of rolled tin, the interstices being

filled with gram tin, was also exhibited. Among copper ores may be noticed the large masses of fibrous silky green carbonate from the great Cobar Copper Mine Company. A specimen from No. 5 Copper Hill, West Bogan, was also very rich. First award. A trophy or pyramid of nuggets of copper, weighing about ten tons, from the Cobar Company, received first award. Of iron ores the Department made a good show. With the exception of the Eskbank Ironworks Company, at Lithgow Valley, this industry does not appear to thrive in New South Wales, notwithstanding the advantages possessed in the proximity of coal, lime-stone, and railways. A large collection of coal from most of the known localities was exhibited, as well as petroleum oil and cannel coal.

Gold in all its various modes of occurrence was shown, among which were specimens of auriferous quartz from Bonnie Dundee reef, Parkes (containing seventeen ounces of gold), gold from Forbes, and a nugget from Trunkey. Round the base of the gold trophy was also exhibited three tons of auriferous pyritous quartz from Adelong, giving an average yield of three ounces of gold per ton. The silver ores exhibited round the base of the silver trophy were from the Boorook silver mines. Lead ores were also shown in the same position. A fine collection of antimony ores and products from the Macleay River district and other localities was shown, and received first award.

The rock collection was very complete, and the collection of minerals good. Among the latter may be noticed the following:—Lufusorial earth, containing mesosiro, from Barraba, peroxide of manganese or wad, assaying 77·2 per cent. of available peroxide, from a locality 34 miles south of Goulburn; a good sample of bin oxide of manganese, from the Kaiser Gold Mining Company, Mitchell's Creek, near Wellington; asbestos, from various localities, the best being from near Gundagai; noble opal, in a light grey vesicular basalt, from the Abercrombie River; alum and magnesium salts, from Cullen Bullen (Halotriclute); native arsenic, from Lunatic; peculiarly ribbed large quartz crystals, from Glenlyon; and amethyst quartz from near Bathurst; abnormally developed quartz crystals, with sunken or hollow terminals, associated with calcite and bitumen, from a basalt dyke faulting a coal seam at Wallsend; a bent quartz crystal, from Sidmouth Valley; water-stones or enhydros, of similar character to those from Beechworth, Victoria, but of a dull grey (instead of yellow), and, in one instance, bright cobalt blue colour, from Hone Hole, near Gulgong; and some good hone-stone from Boga. The collection included a series of gemstones, the most noticeable among which was a fine and large cut emerald, said to have been found at Kiandra, and some diamond crystals.

Among the departmental rock collection should have been noticed a large series of marbles. The specimens from Marulan, Rockley, Blayney, the Macleay River, Tamworth and Wallerawang districts, and the Manning River serpentine, are likely to come into notice.

The departmental series finishes with a splendid collection of fossils, numbering 170 specimens, illustrative of the principal sedimentary formations of the colony, mostly derived from the collections of the late Rev. W. B. Clarke. These have been arranged by C. S. Wilkinson, F.G.S., Government Geological Surveyor in charge. The whole collection numbers in all over 1400 specimens.

M. Isaacsohn, Sydney.—Collection of minerals. Although this collection was not strictly a New South Wales one, it was very nearly so, and, from its general excellence, was considered to be entitled to the award given. It included a good collection of gold specimens, with minerals, fossils, &c., and a case of very fine masses of quartz crystals. First award.

The Mining Department, Melbourne.—Collection of rocks, minerals, &c., arranged by Reginald A. F. Murray. This was by far the best representative collection yet brought together by the department. The rock collection was contained

in 18 cases, and numbered 609 specimens, illustrating the following formations:—Older igneous or Plutonic rocks; newer igneous or volcanic rocks; metamorphic rocks; lower and upper Silurian; lower, middle, and upper Devonian; mesozoic and associated coal rocks; tertiary, &c. The mineral and economic collection was contained in 21 cases, and numbered 874 specimens. The department also exhibited series of diamond-drill cores, of various sizes, and in different rocks and localities; a case showing the 24-inch coal seam passed through in a bore at Kileunda; a case from David White, of Stawell, containing some interesting cores of contorted and foliated hornblende schist, with quartz and calcite veins, from depths between 800 and 1300 feet, in the Great Northern Cross Reef Gold Mining Company's mine there; a case of rich gold specimens from the Egerton Gold Mining Company, Egerton; a case of rich gold quartz specimens, associated with galena and pyrites, from the Band of Hope and Albion Consols Company, Ballarat; three cases of nugget models, 43 in number (including the last Inglewood find); a case of auriferous specimens, from the Washington Freehold Gold Mining Company, Ballarat; a number of specimens of auriferous quartz, from the Normanby Gold Mining Company's mine, Teacup Creek, Dargo, and the New Good Hope Company's mine, Grant, exhibited by H. Luke, of Sale; a carnegorm, cut and mounted, exhibited by Donald Fletcher, Beechworth; and a collection of cut gems (topaz, zircon, corundum, &c.), from Braekket and Kangaroo Creeks, exhibited on behalf of Mrs. Sherring, Dry Creek, near Mandamvale.

Apart from this classified collection the Mining Department also exhibited a number of supplementary rocks, ores, &c., viz:—

Quartz, with arsenical and other pyrites, from various claims on the Garden Gully lode of reef, Sandhurst. A number of specimens of a so-called dyke, with reticulating quartz veins (some showing gold), from the "Crown" diorite dyke (?), Anderson's Creek, Warrandyte. Arsenical pyrites, from the South Scotchman's Reef, Stawell.

Stibnite, from Bombay Company, Heathcote; and from Ringwood, Blackwood, and other localities. Lead ores, from the Buchan River and Bethanga. Pyrolusite (oxide of manganese), in veins in quartz, from Tangil, Gippsland. Iron ore, from Dookie, near Benalla. Coal, from Colac; much decomposed and friable. Lignite, from Lal Lal, near Ballarat. Calespar (carbonate of lime), from Dookie, occurring in close proximity to a valuable bed of iron ore. Dendrites on slate, from Carshalton Reef, Golden Gully, Sandhurst, exhibited by Winterbottom and Stevens, Sandhurst. Gabbro, from the Barrabool Hills, near Geelong. Selwynite, from near Heathcote. Also limestones, from Warru Ponds, Geelong; from Limestone River, a source of the Murray River; and from Longford. Freestones, from Geelong. The Department received, for rocks, minerals, fossils, &c., first award.

H. B. Nicholas, senior inspector of mines, Castlemaine, to whom the Minerals and Mining Committee of the Exhibition were largely indebted for the time and trouble he had taken in collecting exhibits from his district, for which he received first award.

Higginson and Adet, and Pelletier and Co., New Caledonia, exhibited nickel ore from "Belair" and "Beaucourt" mines. The ore was mostly of a conglomeratic or brecciated character. First award.

L. Giraud, New Caledonia, exhibited a quantity of stibnite and five 12-inch cakes of "star" antimony, &c. First award.

Crowther and Mitchell, Northampton, Western Australia, exhibited two trophies of pig lead, for which they received first award, and an exhibit of ores, as follow:—Large masses of galena (coarse grained), from different depths in the Badara, East Badara, and Wheat Ellen mines, and from the Sister's mine, South Geraldine, with percentages varying from 73.84; carbonate of lead, from the same mines; copper pyrites and carbonates of copper, from South Geraldine and Badara

mines; a sample of so-called plumbago, said to form an immense deposit a mile from the railway terminus, Northampton, the plumbago occurring in fine disseminated grains in an earthy ferruginous matrix; a fine sample of zinc blende (sulphide of zinc, or black-jack), from Wheat Ellen; and iron pyrites, in radiated botryoidal masses, from the same mine, associated with galena and zinc blende. Second award.

R. Damon, Weymouth, exhibited a collection of fossils, comprising some miscellaneous tertiary fossils; a good series of upper cretaceous fishes, among which was a slab containing crowds of the small *clupea numma*, all heading the same way. The upperoolite was represented by the genera *tygonia*, *waldheimia*, *ammonites*, *belemnites*, *pectea*, *echinus*, *cidaris*, &c.; the lias, by *nautilus*, *ammonites*, *crinidea*, *gryphaea*, the ink-bag of a *Sepia*, *ichthyosaurus*, jaw and teeth, *ichthyodermite*, &c., &c.; the Devonian, by a fine series of fishes from Scotland (? Chumarty); and the upper Silurian, by corals, crinoids, trilobites, &c. Second award.

J. Sugimura, Shigaken, Japan, exhibited a collection of 112 specimens of the minerals found in the various departments of Japan; but the localities were not given. A list of Japanese minerals was given in the *Mineralogical Magazine*, volume 3, No. 13, July, 1879, page 96, by Professor John Mitsu, of Yeddo, Japan, which very nearly agrees with this collection. Thirteen specimens in the collection are not given in the list above mentioned; and twenty-one minerals in the list are not in the collection. Second award.

Conté Giulio Jugegnere Pulle, Porto Ferrajo, Elba, exhibited eight cases of minerals from the island. Three of these consisted chiefly of pyrites and iron glaucer, beautifully recrystallised; one contained rocks and the remainder minerals, some of great beauty. These were accompanied by a map of the island. Second award.

W. A. Fernando, Ceylon, exhibited plumbago in lump, chips, and dust; also a remarkably large mass of plumbago; a large specimen, presenting a prismatic, semi-crystalline structure, at right angles to the walls of the vein or bed; and a beautifully carved elephant in plumbago. Second award.

Commissioners for Tasmania, Launceston, exhibited a cabinet of minerals, numbering 432 specimens, with larger duplicate specimens of many, and extra specimens not in cabinet. They have been arranged by Thomas C. Jast, M.L.A., and a descriptive catalogue accompanied them. They comprised samples from the Mount Bischoff Tin Mining Company, of dressed tin ore and sand in all stages before dressing; washdirt from the different faces in work, giving the percentages of tin; stream and lode tin from numerous localities; white porphyry, slate breccia, chloritic rock, with fluorite, &c., from Mount Bischoff, topaz from Minders Island, Bass's Straits; iron ores, limestones, coals (with analysis), clays, earths, &c., lead ores, antimonial lead, copper ores (mostly poor), silver ores, antimony ores, bismuth ores, miscellaneous minerals, auriferous quartz and gold (both reef and alluvial), fossils (spirifer and productus), from Cludleigh, exhibited by J. Higgs, and some cut and polished slabs of handsome serpentine. Second award. The commissioners also received first award for their trophy of nuggets of Mount Bischoff tin.

Queensland Government exhibited a large collection of minerals, purchased from Nicholas Bartley; but which were, however, not strictly colonial, nor were they properly classified or named. The collection contained a large number of specimens of the so-called occurrences of gold in various metals and minerals; but, in nearly every instance, an examination showed that the gold occurred in quartz, and was merely in association with these minerals, or in cavities from which the previously contained pyrites had disappeared. Second award.

J. de Poix Tyrel, M.L.A., Stanthorpe, Queensland, exhibited tin ores and associated veins, as below:—Cabinet, with collection of stream tin in bottles, with

topaz, sapphire, &c., accompanying it; tin sand, in twenty-three bottles, from claims at Standlorpe; stamped tin ore, in twenty-one bottles; and dressed stream tin ore, in four bottles, from Brisbane tin mine. Second award.

Australian Asbestos Company, Gnadagai, exhibited asbestos, raw and manufactured, and specimens of the rather novel occurrence of gold in serpentine rock. Second award.

J. H. Butchart, Sydney, for tin ore from Deepsinker's Mine, The Gulf, New England. This fine exhibit consisted of large waterworn boulders of solid cassiterite (oxide of tin). First award.

The Sandhurst School of Mines (per Alfred Mica Smith, F.C.S.)—Collective exhibit (including mining machinery). The mineral collection was as follows:—Auriferous quartz, from Alabama and Butler's Reef Company, Heathcote, very rich; Carlisle and North Garden Company, Long Gully, Sandhurst; Railway Reserve Company, Eaglehawk; Great Southern Company, Great Extended Hustlers, Sandhurst; New Chin Consolidated Company, Sandhurst; North Shenandoah Company, Sandhurst; Great Extended Hustlers, Carlisle, and North Garden Gully, and Passaby United mines, and Cornish United Company (pyrites). Samples illustrative of Messrs. Chapman and Edward's chlorination process for separating gold from pyrites; stibnite from Whroo; magnesite, from Heathcote; quartz crystals, from Victoria gold mines, Long Gully, Sandhurst (J. Cock, exhibitor), and from Victoria Reef, Sandhurst (S. G. Cole, exhibitor); infusorial earth, from Talbot; dendrites on slate, from St. Catherine's Reef United Company (Messrs Proctor and Colquhoun, exhibitors); case of foreign minerals, undescribed, &c; graphitic slates; mamilulated sand-stone, "lava streak" (basaltic dyke), from Carlisle and North Garden Gully Reef; models of the "Beanty" and "Platypus" nuggets. Second award.

J. F. Bailey, Melbourne.—Six cases of Victorian fossils, well arranged, from the shores of Hobson's Bay, chiefly oligocene and plicocene mollusca, with some sharks' teeth, &c. Second award.

Jacob Bruché, Northcote, near Melbourne, exhibited cobaltiferous manganese ore. The ore (a "wad") was disseminated through a decomposed dyke, near Walthalla, and was stated to occur in considerable quantity. It contained variable proportions of cobalt, from 2 to 6 per cent. As there is a large demand for cobalt blues in fine art pottery at present, this discovery is likely to be of some importance. Second award.

Lewis Mackenzie, Lillieur, near Amherst, exhibited a large mass, of about 250 lbs. weight, of infusorial earth, used for absorbing nitro-glycerine in the manufacture of dynamite, &c. The deposit is said to be 10 feet thick, and to cover an area of ten acres, probably the bed of an old lagoon. It overlies basalt. An analysis by R. W. E. M'Ivor, F.C.S., F.I.C., gave:—

Silica	85.70
Iron and alumina	1.22
Water and a trace of organic matter	11.50
				98.42

Technological Museum, Melbourne.—Case of the rare zeolites, phacolite, and philipsite. These were exceptionally fine specimens of these minerals, and they are associated with a rare form of aragonite, together with calcite, &c., and occur lining cavities in the basalt at the Corporation quarries, Merri Creek.

Of exhibits which were not awarded prizes, but of which we consider some notice should be taken, we have selected the following:—

N. Hingley and Sons, Netherton Iron Works, Dudley.—Block of coal, weighing $1\frac{1}{2}$ tons, from the Cawn Colliery, Old Hill Estate. This was from the

celebrated 10-yard seam (Staffordshire thick coal), which measures in places 39 feet, without clayband or parting. It is the finest iron-smelting coal in England. The exhibit only showed a thickness of about 2 feet, though looking greater from the fact of its being set on edge at right angles to the bedding planes.

Earl Granville, K.G., and the Shelton Bar Iron Company, Staffordshire.—Sectional plan of the Shelton coal and iron colliery, showing the iron and coal beds, faults, &c.:—

			Ash.		Sulphur.		Coke.
Ten-foot coal	4.63	...	0.87	...	78.00
Rowhurst „	2.30	...	0.55	...	66.00
Harlaine „	1.50	...	0.28	...	63.00
Bassingham nonstone (blackband), Redshag ironstone (blackband), Gullbin ironstone (clayband), Pennystone ironstone (clayband)							

West Cumberland Iron and Steel Company (Limited), Workington.—Blocks of hard red mammillated hematite iron ore, used for making Bessemer pig-iron, obtained from the Cleator district, about ten miles from Workington; blocks of soft red hematite, from do. do., limestone; Irish aluminous ore, used as a flux; Spanish manganoferous ore, used for spiegeleisen.

The Victorian Mining Department exhibited the following plans, &c.:—

Geological sketch map of the colony, on a scale of 8 miles to 1 inch, with recent corrections, and a new section, by Reginald A. F. Murray, across the colony. Geological maps of the following goldfields, on a scale of 2 inches to 1 mile, viz.:—Sandhurst, by Reginald A. F. Murray; Ballarat, by Reginald A. F. Murray; Stawell, by Norman Taylor; Ararat, by Ferdinand M. Krausé; Creswick, by Ferdinand M. Krausé. Geological sketch map of part of Beechworth. Geological sketch map of the Continent of Australia, compiled from all sources, by Arthur Everett, scale 50 miles to 1 inch. First award. Plans and sections of quartz lodes, or reefs, by Arthur Everett, as under:—Underground survey of the principal mines of Stawell, by H. C. Bate, showing dykes, &c.; scale, 120 feet to an inch. Underground survey of the Garden Gully line of reef, Sandhurst, showing the occurrence of the saddle-reefs there, and also of the “lava streaks,” or dykes, by Caleb Thomas; scale, 60 feet to an inch. Underground survey of the Hustler’s line of reef, Sandhurst, by Arthur F. Walker; scale, 30 feet to an inch. First award.

David Munro and Co., Melbourne, exhibited a plan of improved quartz-crushing battery, driven by horizontal engine; plan of horizontal engine, with winding and pumping gear; plan of 8-horse power vertical engine, with double winding gear; plan of a portable engine, with winding and pumping gear; and plan of a vertical engine, with winding and pumping gear. First award.

School of Mines, Sandhurst, exhibited plans of mines and machinery; underground workings of the Pandora Company, on the Garden Gully line of reef; plan of crushing mill and winding gear, drawn by Pearce Delbridge, aged sixteen. First award.

Messrs. Wright and Edwards, the patentees, exhibited the “Australian water auger”; also sections of bores at Laen (409 feet), Swan Water, and Pope’s dam, 4½ miles from Laen. First award for the auger; and they are worthy of special mention for the sections of bores, as it is very desirable that accurate measurements should be taken of all boring operations.

The Department of Mines, New South Wales, exhibited two well-executed and valuable geological sketch maps of the colony, on the scale of 8 and 16 miles to 1 inch respectively, compiled from the late Rev. W. B. Clarke’s original map, and other sources. First award.

Professor de Kowalek’s “Recherches sur les Fossiles Paléozoïque de la Nouvelle Galle du Sud”—a work in which a large number of the fossils collected by the late Rev. W. B. Clarke are beautifully illustrated. First award.

Dr. Ottokar Feistmantel's "Illustrations of the Fossil Flora of Eastern Australia," in which are admirably figured the coal plants of the colonies. First award.

The following report on Dr. Feistmantel's publication has been received from Baron Von Mueller, K.C.M.G.:—

Melbourne, 25th February, 1881.

To J. Cosmo Newbery, Esq., Superintendent of Juries and Awards.

Sir—In response to your request, I have inspected Dr. Ottokar Feistmantel's publication on the "Palaeozoic and Mesozoic Flora of Eastern Australia," written in the German language, which literary contribution forms one part of a series, issued under the name of "Palaeontologische Beiträge," by the same author, through the celebrated establishment of Herr Theodor Fischer, of Cassel. As the exhibit in the New South Wales Court does not include the whole series, the question arises whether I ought to have reported on the whole, or only on the part brought out in 1878, concerning fossil plants of New South Wales, the main portion of the work referring to Indian fossils, and thus more properly coming under adjudication in the Indian Court. Practically, however, this does not affect the award, as I would suggest that, in any case, the first degree of merit for originality and utility in this description of exhibit be awarded for the essay concerning these New South Wales fossils, because it evinces penetrating research of an experienced investigator, who has been long and specially engaged in the elucidation of organic relics of former ages, and who, as a specialist, is employed in this capacity by the Government of India for the geologic survey of that empire. The publication, illustrative of vegetable remains of the palaeozoic and mesozoic epoch of New South Wales, comprises thirty quarto lithograms, with scientific text, and brings together connectedly all that is known (from widely-scattered literary data) of the flora of that age, together with the numerous new observations now offered by Dr. Feistmantel in the publication referred to. The drawings are beautiful, and the fact that they emanated from Dr. Feistmantel's own hands is a guarantee of their perfect faithfulness. The text is lucid, and thoroughly scientific, while the lithographic and typographic workmanship is such as we might expect from Fischer's establishment. We have thus an important instalment towards the past flora of our own continent, the constituent parts of which are even now only fragmentarily known, from the imperfect material hitherto accessible.—I have the honour to be, sir, your obedient,

FRED. VON MUELLER

The Commissioners of the Melbourne International Exhibition, 1880-81, exhibited a large gold trophy of the form (a rhombic-dodecahedron) in which, when crystallized, gold most commonly occurs in the colony. The formula for the calculation of this crystal was suggested by Mr. Reginald A. F. Murray, of the Mining Department. The three equal axes of the cubic system, to which it belongs, are each 22 ft. 5.87 in. in length.—Length of sides of each of the 12 rhombs, 9 ft. 8.86 in.; length of longest diagonal of the 12 rhombs, 15 ft. 10.83 in.; length of shortest diagonal of the 12 rhombs, 11 ft. 2.94 in.; surface area of each rhomb, 89 sq. ft. 50 sq. in.; total surface area, 1072 sq. ft. 137 sq. in. The proportions were calculated to the nearest whole numbers, or an amount of 49,100,000 ounces of gold; the amount, as given by the Mining Department, to the 30th June, 1880, being 49,098,408 ozs. 11 dwts. 6 grs., or about 1503 tons, of the value of £196,393,632. There is little doubt but that large quantities of gold found their way out of the colony in earlier times without being accounted for, and Mr. Birkenhead's estimate of the gold exported between the 1st October, 1851, and the 1st October, 1880—viz., 49,964,314 ozs. troy—may even be under the mark. The inscription on the trophy was written in English, French, German, and Italian.

The Sandhurst School of Mines had a trophy in the form of a pyramid representing the amount of gold raised between the years 1851 and 1878—viz., 11,000,000 ozs. troy, equal to 336½ tons, of the value of £44,000,000. Its corners rested upon cubes about two feet square, representing the yield of gold for the year 1879, and the spaces between were filled in with quartz from the celebrated Hustler's line of reef. They also exhibited a number of gilded, dome-shaped pots, representing some of the best yields of the Sandhurst (Bendigo) mines for different periods; and a full-sized representation of a saddle reef, 22 feet by 5 feet, and 23 feet high, built by G. Thureau, F.G.S., showing the mode of timbering drives.

The Pleasant Creek Cross Reef Q. M. Co., Stawell, exhibited a trophy of model (full-sized) ingots of gold, arranged as a pyramid, and representing the gold raised from their mine between 1st January, 1870, and June, 1880, amounting to 296,837 ozs. 4 dwts. 15 grs., equal to 9 tons 1 cwt. 2 qrs. 26½ lbs., of the value of £1,106,151 17s. 10d., at £3 1 ls. 6½d per oz. average value. This gold was obtained from 233,508 tons of quartz. The dividends paid by the company have amounted to £725,742 1s. 9d.; the wages to £187,988 18s.; and the total expenditure to £1,116,189 5s. 8d.

R. H. Bland, Clunes, exhibited a large model of a cake of retorted gold, representing 498,937 ozs. of standard gold, equal to 20 tons 16 cwt., troph. 1,151,347 tons of quartz, raised during the past twenty-three years, from the Port Phillip and Colonial Gold Mining Co.'s mine at Clunes.

The Department of Mines, New South Wales, exhibited an obelisk gold trophy, representing the total bulk of gold raised—viz., 9,066,601 ozs., of the value of £33,743,019, also a silver obelisk, representing the bulk of silver raised (mostly from Broken Hill)—viz., 661,270 ozs., of the value of £161,572.

The Meytown (Palmer River) residents—per P. F. Solheim, Warden—exhibited an emblematic column, representing the bulk of gold, of great purity, raised on the Palmer River goldfield, Cape York Peninsula, between November, 1873, and July, 1879, amounting to 946,716 ozs., of the value (exceeding £4 per oz.) of £3,948,500 sterling. The existence of gold on the Palmer River was first made known to the Government by Mr. William Hann's exploring expedition in 1872, the so-called *discoverer*, Mr. Mulligan, having afterwards followed on their footsteps, and proved its payable character.

The Queensland Commissioners exhibited an emblematic column, springing from a base of auriferous quartz, representing the bulk of gold, both reef and alluvial, raised in the colony between the years 1868 and 1879 inclusive, amounting to 3,447,679 oz., of the value of £11,762,316 sterling.

The New Zealand Commissioners, Wellington, exhibited an auriferous quartz trophy, in form of an octahedron, representing the total export of gold from New Zealand:—9,396,427 ozs.; value, £36,753,798.

NORMAN TAYLOR.

JURY SECTION XXIX.

Class 63.—Telegraphic Apparatus and Processes.

JURY.

R. L. J. Ellery, Chairman, Great Britain.
W. H. H. Lane, United States.
M. Kopsch, Germany.

P. Montaudon, France
P. R. Challen, Victoria.
K. L. Murray, "

EXPERT APPOINTED TO CONSIDER APPEALS AGAINST JURY DECISIONS.

R. W. Selby.

SIR—The jury upon Class 63 have the honour to report as follows.—

The exhibits in this section were rather limited in number, only thirty (30) having been scheduled, and the jury found very few presenting novel features, or of more than ordinary interest. With the exception of a fine collection of telegraphic and electric apparatus made by various makers and exhibited by the New South Wales

Telegraph Department, a good collection of telegraph instruments by Theiler and Co., of London, and one also by Naglo Brothers, Berlin, the now very important and extensive manufacture of telegraph instruments was scarcely represented.

There were only two competing exhibits in telephones—viz. J. E. Edwards, of Melbourne, and the Western Manufacturing Company, Chicago and New York. In order to arrive at a decision with regard to these exhibits, a practical trial of both the receivers and transmitters was made in the building, and the relative merits tested in various ways.

Edwards, J. E.—Telephonic apparatus. — This was a small exhibit of telephones, of the Edison-Bell type, and microphonic transmitters with a specialty as regards some of the carbon contacts. On trial both telephones and transmitters gave very satisfactory results; speech was received with considerable loudness combined with moderate crispness. Second award.

Western Manufacturing Company.—Telephone and Telegraphic Instruments, &c.—An exhibit of telephones of the Edison-Bell type, with microphonic transmitters, excellently made. The jury found, on trial, the telephones exceedingly good; and with the ordinary transmitters conveyed speech clear and crisp, without harshness, but not very loud. With Blake's transmitters speech came loud and strong, but somewhat harshly. So far as the experiments of the jury went, it appears that loudness can only be obtained at the expense of crispness and clearness. First award.

ELECTRIC TELEGRAPH INSTRUMENTS.

Myers, N., Melbourne.—Model Morse Apparatus.—This is a small working model of a complete table set of Morse's instruments, of the older style, fairly constructed. Fifth award.

Theiler, M., and Sons, London.—New Type Printing Telegraph, Telegraphic Instruments, Duplex and Single.—A very excellent exhibit of instruments by this well-known maker. The jury noted several details of a novel character, especially in one of the transmitting keys. A pair of mechanically duplex instruments, of first-class workmanship, was much commended by the jury, as was the ordinary Morse registers and sounders, which were excellently made, and worked with great smoothness and regularity. First award.

Naglo Gelander, Berlin.—Telegraph Apparatus.—A small exhibit of some excellent and well-constructed Morse telegraph apparatus of various kinds, and an electric fire alarm and railway bell apparatus. The jury commended this exhibit for the substantial character and good finish of the instruments, combined with very moderate cost. A very complete and handy set of field telegraph apparatus forming part of this exhibit is worthy of special notice. First award.

ELECTRIC BELLS AND INDICATORS.

There are two methods now in use for domestic communication, which will probably soon supersede the old bell-wire method. One is the electric bell, which can be set ringing by an electric current from a galvanic battery transmitted at will along an insulated wire to the bell by means of keys called "pushes." The other is the pneumatic method, in which the bells are connected with the pushes by a small metal tube; each push consists of an elastic air-bag, by compressing which a similar air-chamber beneath the bell is expanded and lifts a simple ratchet mechanism, which, falling back immediately the pressure is removed from the push, rings the bell.

Sax, J., London.—Electric Bells and Telegraphic Apparatus.—This was an excellent exhibit of all the kinds of apparatus in ordinary use for electric bell and electric alarm service, including pushes, keys, bells, indicators, &c., all of excellent workmanship, and of ordinary forms. Second award.

Zimdar, C. E., London.—Pneumatic Bells and Indicators.—A very complete exhibit of the now well-known pneumatic method of communication, including bells, pushes, air-chambers, &c., well made and effective. Second award.

MISCELLANEOUS.

Joseph Bros., Melbourne.—Electric Apparatus for Torpedo Defence and other Telegraphic Apparatus.—The chief feature of this exhibit was a peculiar instrument used in torpedo defence operations. It is known as a "shutter apparatus," and consists of seven small electro-magnets and bells, with a small but conspicuous metal disc and lever to each magnet. It is arranged to receive the conducting wires from seven torpedoes, and when in use the apparatus is put in connection with a battery, and the discs are raised till caught in a notch of the armatures of the electro-magnets. Immediately any of the seven torpedoes are touched, get injured, or are fired, the current, in passing to the torpedo, traverses its particular electro-magnet, whose disc immediately drops and rings the bell, indicating which of the seven torpedoes has been struck. This apparatus was well constructed, and showed excellent workmanship throughout. First award.

Apps, London.—Electric Indicator of Temperature and Pressure.—This consisted of a thermometer and aneroid barometer, arranged with a battery and electric bell, so that, when any pre-arranged temperature or pressure of air occurred, the electric bell rings. Fifth award.

Edison, T. A., New Jersey.—Electric Pen.—This was one of the now well-known inventions of Edison's. First award.

Hardy, E., Paris.—Edison's Phonograph, with improved Governor, Electric Pen, &c.—This apparatus was a neat and well-made specimen of Edison's Phonograph. The maker has introduced some little novelty in the governor of the clock movement. It works well and effectively. One of Edison's electric pens was also in this exhibit. First award.

Boivin, A., et Cie, Paris.—Fire Alarm and Electric Target.—An electric fire alarm, consisting of a thermometer, the mercury of which comes in contact with a platinum wire when expanded by high temperature; also, an apparatus consisting of a target of cast-iron, whose surface is divided into segments. Each segment, when struck by a bullet, is forced back against springs, making a momentary electric contact before recoiling to its normal position. The target is connected by wires to the indicator, which shows, immediately the target is struck, which segment has been hit. The indicator has a totalising mechanism, so that more than one blow on each segment is recorded. The apparatus was thoroughly practical, well designed and constructed. First award.

Ducrotet, Paris.—Electric Apparatus.—A few beautifully made instruments for lecturers, electricians, &c. Some had been damaged in transit, but the good design and excellent workmanship was much commended by the jury. First award.

Wallace and Sons, Connecticut.—Carbons for Electric Light.—Samples of carbon rods for electric lamp appeared good, and of even texture. Third award.

SUBMARINE TELEGRAPH CABLES, TELEGRAPH WIRE, POLBS, INSULATORS, &c.

The jury decided that in the case of exhibits of wire for telegraph lines, the awards should be based upon the results of the ordinary series of tests for elongation, torsion, and breaking strain, made by a sub-committee of the jury. This was done, and a report furnished, by which the jury was guided.

Telegraph Construction and Maintenance Company, London.—A large and interesting exhibit of samples of submarine telegraph cables, consisting of deep sea, shore end, and intermediate types, which were distinguished chiefly by the weight or the *armouring*, or protecting wire. These samples were arranged in a somewhat historical manner, so as to exhibit the progress made in the manufacture of sub-

marine cables. Specimens of cables manufactured by this firm, used on various lines all over the world, which now extend over 71,000 statute miles, were here shown, with samples of both shore and deep-sea forms. First award.

Rattier et Cie, Paris.—Electric Cables.—Samples of various forms of insulated wire and submarine cables, chiefly with caoutchouc insulation. These specimens were of excellent manufacture, and the multiple insulated cores for land use especially so. Second award.

Westfälischer Draht-Industrie Verein, Hamm.—Samples of telegraph wire amongst a general exhibit of wire. This wire gave the best results of all the samples tested. Second award.

Schomburg, H., und Sohne, Berlin.—Porcelain Insulators.—This was a collection of telegraphic insulators among a general collection of chemical and other pottery. The insulators were of the highest order, and comprised all the best forms; the material was excellent, being vitrified throughout their substance, and at the same time exhibiting considerable toughness in fracture; the glazing was also uniform and good. First award.

Superintendent of Telegraphs, Sydney.—Collection of Telegraph, Electric, and Torpedo Apparatus.—This was a comprehensive and instructive exhibit of instruments and apparatus by various makers. Among the telegraph apparatus were examples of the earlier forms of electric telegraphs, and the progress of electric telegraphy could here be traced by the historical arrangement of instruments. Siemens' electric light apparatus, and various instruments used in torpedo defence, were also in this exhibit. The jury specially commended some telegraph apparatus constructed in the workshops of the department in Sydney. Taking into consideration the value, in an educational sense, of this comprehensive collection, the jury gave a first award to this exhibit.

Sir—The jury appointed by the Executive Committee of the Melbourne International Exhibition to examine and report upon the wine exhibits have the honour to report as follows :—

The jury held their first meeting on the 18th November, 1880, and agreed to act under the following instructions, to which they desire to draw special attention :—First, the samples were to be placed before them as classified by the exhibitors, each sample being numbered for identification by the officer in charge of the cellar, the jury to be informed of the country to which the sample belonged, but not to have particulars as to the name of the grower or the exhibitor, or as to the description or the age of the wine; secondly, the estimate of the quality of each sample to be marked by numbers, the highest number being 21. The jury agreed upon the following graduated scale of numbers :—For the first class, 20 and 21; the second class, 18 and 19; the third class, 15, 16, and 17; the fourth class, 12, 13, and 14; the fifth class, 8, 9, 10, and 11; below which there was to be no classification.

The jury inquired whether an extra award might be given to wines of superlative quality, and the reply was in the negative. The list of awards, as shown by the comparative numbers, alone was to be handed to the Executive Committee. The jury had, therefore, no power to assign extra awards, however much they might desire to exercise it.

The number of exhibits from all countries examined was as follows :—France, 256; Germany, 209; Italy, 195; Austria, 63; Portugal, 31; Spain, 17; Victoria, 357; New South Wales, 159; South Australia, 149; New Zealand, 33; Western Australia, 13; South Africa, 11; California, 9—total, 1502.

The task of adjudicating occupied sixty meetings, at which a large majority of the working jury were always present. When a few meetings had been held, it was found that it would expedite the business in hand if the jury divided themselves into three sections, each section taking its fair proportion of samples; the awards of each section to be subsequently re-examined and adjudicated upon by the whole jury. Any wine to which an award had not been given by a section might be called for by any member of that section, or by the whole jury, for re-examination; and many of the samples were so called for and re-examined.

The number of samples thus re-examined and finally adjudicated upon was upwards of four hundred. The working jury then consisted of the following members :—B. C. Burstell (chairman), F. D. White (vice-chairman), H. R. Hogg, L. A. Moody, H. Commaux, H. M. Gooch, P. A. Agnew, T. C. N. Cooper, M. Rosenwig, E. Marks, A. Campi, J. Middlemiss, W. Gillbec, H. Creswick, O. Braché, L. Frère. Each separate sample was subjected to the most rigorous tests.

First amongst the exhibits, and standing high above all fair comparison with the growths of new countries, came those samples from world-renowned European vineyards whose products are the results of centuries of continually improved methods of cultivation and processes of manufacture. There can be no question that, on a basis of discriminating comparison, the first-class awards must be assigned to wines of that description, necessarily few in number. The jury were very decidedly of opinion that those wines ought to have had special awards, so as to place them out of comparison with wines produced under conditions so different that competition with the former could not be suggested. Acting, however, under the instructions furnished to them, the jury were unwillingly compelled to award only second honours to exhibitors who would otherwise have been entitled to the distinction accorded to first-class wines. Under these circumstances, it was simply inevitable that the numbers indicating the highest awards were confined to the samples from European countries.

The European wines are too well known, and have a reputation too well established, to render it necessary that any special remarks should be made on them. The jury regret that the exhibits from California and South Africa were too few in number to enable them to form a complete judgment on the general productions of those countries. They wish to express here their thanks to Professor Reuleaux for the assistance he rendered them in classifying the German wines.

The winegrowers of the Australasian colonies may well be congratulated on the generally high standard of excellence their products have attained, when brought into comparison with those of the old world, where the industry counts its history by centuries, whereas in this country it barely counts by decades.

It appears from the statistical returns of the last six years that the wine industry is not progressing in these colonies. In Victoria, for instance, the acreage under vines in the season 1874-5 was 4937; whilst in 1879-80 it was only 4284. The quantity of wine produced was, however, pretty nearly equal at the two periods. In 1874-5 it was 577,493 gallons; in 1879-80 it was 574,143 gallons. In the intervening period the quantity fluctuated from 755,000 in 1875-6 to 110,333 gallons in 1878-9. Mr. Hayter remarks on these figures:—"Although in 1879-80 the acreage under vines was less than in any of the other years mentioned, the wine produced was in excess of that in three of those years, and was about equal to that in a fourth." A diminished acreage, therefore, does not necessarily imply a decreased production of wine. The same facts are shown in the statistical tables of New South Wales, where the acreage was 4526 in 1873, and only 4266 in 1879; whilst the quantity of wine produced was 575,985 gallons in the former period, and 738,576 gallons in the latter period. In South Australia the decline under both heads is, however, distinctly marked. In 1873 the acreage was 5217; in 1879 it was 4117; and in quantity within the same period was from 733,478 gallons to 459,468 gallons.

This marked non-progressiveness in the area under cultivation is, no doubt, due in a great measure to the length of time that necessarily elapses between the planting of a vineyard and the obtaining of a profitable result. The greater honour is owing to those enterprising colonists who have laboured patiently and perseveringly at laying the foundations of an industry which will certainly, in course of time, become one of the chief sources of national wealth, and one of the main areas of profitable employment for both capital and labour, to the population of this portion of the British empire. When the enormously profitable results of the vine culture in France are contrasted with the comparatively small beginnings of the industry in these colonies, and when the fact is taken into account that the area available for vine culture in Australia is probably larger than that of the whole of Europe, an approximate idea may be formed of the magnitude to which the industry may here in time attain. According to an official statement issued by the French Minister of

THE EMPEROR OF GERMANY'S PRIZE-AWARDED TO MESSRS DE CASTELLA & ROWAN, MELBOURNE

Finance, and quoted by Mr. Henry Vizetelly, in his book entitled "The Wines of the World," the vineyard area of France, with its average production, together with the quantity and the value of the wine vintaged in 1873, were as follows:—Total vineyard area, in acres, 5,883,658; total produce in 1873, in gallons, 786,088,916; total value, £59,766,069 sterling. The annual average produce during the previous ten years was 1,176,076,199 gallons." Mr. Vizetelly adds—"A full vintage in France, such as that of the year 1869, yields its seventy millions of hectolitres of wine, or one-third more than the vintage of 1873, the increased value of which would be an extra four millions sterling, besides nearly two millions and a quarter additional for the *eau-de-vie* distilled from the husks and stalks of the pressed grapes. The after value of these as food for cattle, and as manure, combined with the value of the pruned branches of the vine, both as fodder and fuel, will, according to the estimate of Dr. Gayot, adopted by M. Drony de Lhuys, a former Minister of Agriculture and Commerce, bring up the total value of a full vintage to £76,178,310 sterling." Compared with these figures, the produce of the four Australian continental colonies appears very limited. In 1879 Victoria produced 574,113 gallons; New South Wales, 733,576 gallons; South Australia, 459,168 gallons; and Queensland, 104,674 gallons—total, 1,871,861 gallons, or about one-fourth-and-twentieth ($\frac{1}{20}$) of the produce in France in 1873.

It is some compensation for the slight decrease in the acreage under vine-culture in Australia of late years that the quality of the wine produced is decidedly improving on the whole. Greater care bestowed on the cultivation, and the adoption of improved processes of manufacture, will, doubtless, tend to continuous improvement of the average quality of Australian wines.

The invitation to name a candidate for the magnificent prize so generously bestowed by His Imperial Majesty the Emperor of Germany gave the jury the much-desired opportunity of bringing into conspicuous prominence this great national industry of the future; but they were, at the same time, fully alive to the extreme delicacy and difficulty of the task they had in hand. Upon careful examination of the lists of awards, it was found by the jury that their choice lay between Mr. A. Munro, of Singleton, in New South Wales, and Messrs. De Castella and Rowan, of St. Hubert's Vineyard, Lilydale, in Victoria. The first of these exhibitors had secured five first and eleven second awards, out of thirty-three exhibits; the second had gained four first and seven second awards out of nineteen exhibits. Mr. Munro had thus the larger number of awards, whilst Messrs. De Castella and Rowan had the greater proportion in relation to exhibits. On a balance of merit so very fine it was extremely difficult to deliver a decision. One other consideration remained to be taken into account—namely, the extent to which each of the competitors had carried the industry. It was found that Mr. Munro had 160 acres under vines, with 94 acres in full bearing, whilst Messrs. De Castella and Rowan had 250 acres under vines, with 210 acres in full bearing. Upon a full consideration of all these particulars, the jury decided that Messrs. De Castella and Rowan were entitled to be named as the candidates for the prize. A majority of the jury inclined to the view that when a vinegrower has thoroughly proved what descriptions of wines are best suited for the conditions of soil and climate in any particular locality, the larger growth of those sorts is most calculated to advance the interests of the vinegrowers in that neighbourhood, and thus to extend the limits of the industry generally.

In conclusion, the jury, in completing their labours, would take the liberty of earnestly pressing on their enterprising fellow-colonists engaged in this branch of national industry the necessity of strenuous perseverance in their efforts to perfect and extend the culture of the vine, until Australia shall take its rightful place amongst the first wine-producing countries of the world.

For the Jury,

B. C. BURSTALL, *Chairman*.

JURY SECTION XXXV.

Class 73.—Fermented Drinks.—Beers.

JURY.

William Johnson, Chairman, Great Britain.
James Garton, Victoria
L. H. Leplastrier " "

Prosper Lamal, Austria.
E. Stalford, Great Britain.
M. Schoessle, Germany.

CLASS 73.—BEER AND PORTER.

Sir—As Chairman of Jury No 35 (Beers, &c.), I have the honour to submit the results arrived at by its members.

Your jurors deem it proper to offer a few explanatory observations touching the circumstances and mode of such examination.

The samples were in all cases so protected from observation that it was quite impossible to obtain the slightest clue from whence they were derived.

In order to avoid confusion of palate, not more than four or five samples were examined at one time, and when the best one had been unanimously selected, it was set aside and its number taken for further investigation and competition. Four fresh samples were then proceeded with, and so on till the whole number of beers had been tested. By this method some 120 barrels of beers were reduced to forty (40). A further competitive examination amongst these reduced the number to nineteen, and a still farther examination, after due lapse of time, eventually eliminated two more; the remaining seventeen being all so good, your jurors did not feel justified in further reducing the number, which now had to be subjected to a most searching and, we may add, difficult task of being awarded their respective ranks of first, second, third, and fourth order of merit.

Our examination of bottled ales and porters was conducted in a precisely similar manner, and in no instance until all the members of the jury had signed a paper binding them to the decision, was it permitted to them to know whence such beer had been obtained.

The commissioners will observe that, in consequence of this ignorance on the part of the members of the jury, samples of beer such as Bass, Guinness, and some others, but bottled by different bottlers, became repeatedly selected as worthy of first consideration; and this will account for the seeming preference given by the jurors to certain brands.

Your jurors have ascertained, as a result of their investigations, that when any samples of beer were presented in both quarts and pints, the former were invariably the best.

Your jurors were almost invariably unanimous; and when, in one or two instances, a slight difference of opinion did occur, a postponement of the award to the next day of examination always ended in unanimity.

When any reason existed for suspecting that any particular sample of beer had received a little shaking in transit, and so was not in its best condition, fresh samples were always taken—occasionally, indeed, several times over, till a perfect one had been obtained.

Beers were submitted quite indiscriminately from all parts of the world, and had to be tested against one another at one and the same time.

Some beers submitted for competition had evidently been first class, but had gone beyond their prime, and the jurors were therefore unwillingly compelled to set them aside, or place them in an inferior rank.

Your jurors have had eleven meetings, extending over a period of one month, from 20th November to 20th December, and have deliberated, on an average, about three hours each sitting, so that ample time and care was duly taken to form a correct and acceptable judgment.

WM. JOHNSON, *Chairman.*

P.S.—Three very superior samples of beers from Fratelh Metzger were submitted to us after our report had been sent in. We therefore could not award them any position.

W. J.

SIR—The jury beg to submit their report on the above Classes.

CLASSES 54 AND 55.—SPINNING, WEAVING, AND ROPE-MAKING MACHINERY.

There were thirteen schedules in these classes, many of the exhibits being of much interest.

The *Sächsishe Maschinenfabrik*, "Hartmann," Chemnitz, Germany, exhibited carding, spinning, and preparing machinery, representing a complete set, showing the whole process of woollen manufacture by machinery of the first order. The jury being debarred by regulations from accompanying their awards by any special commendations, feel it their duty to direct the particular attention of the Committee of Juries and Awards to this exhibit, on the grounds of high class of machinery, fitness for the purposes intended, and the general interest and advantages to the colony and the Exhibition in seeing and having such an exhibit in full work. First award.

L. Permezel et Cie, Lyons, exhibited an improved power-loom for plain and fancy silk weaving. The vertical stand—the Permezel improvement—is calculated to increase the speed and make the warp go more softly. The loom was inspected at work, and gave entire satisfaction to the jury, the finish of the machinery being very fine. First award.

Chas. Gilbert and Company, Worcester, Mass., exhibited a tweed and shawl weaving loom, which was inspected in motion, and performed its picks with great rapidity, proving that it was adapted for fast weaving. First award.

Kerr, Price and Co., Paisley, showed machinery for winding cotton. This was an adaptation of Magee and Sons' cotton winder, with the addition of Kerr's patent shuttle thread winder. The trial of this machinery was satisfactory to the jury, the attendant changing rapidly from large reels to egg-shaped balls and machine reels. First award.

Fred. Shaw and Co., Huddersfield; J. Thompson and Co., Kendal; and Horstmanns Frères, Liège, exhibited cards for spinning and weaving machinery. These were all well-finished goods, specially suited to their individual purposes. First awards.

Hallam Bros., Ecclesfield, exhibited steel hackles and gills, used in the preparation of flax. The case contained a full range of these well-prepared goods, from the finest imaginable to the stoutest used in the trade. First award.

CLASS 58.—PAPER MAKING, PRINTING, AND DYEING MACHINERY.

There were eighteen schedules in this class, comprising some excellent and a number of very useful exhibits of printing and bookbinding machinery.

John Greig and Sons, Edinburgh, exhibited a collection of bookbinding machinery, including a 32-inch self-clamping guillotine cutting machine, fitted for hand or steam power, improved lever millboard-cutting machine, cover-finishing machines, screw standing-press and bookbinding press. The exhibit was valuable, the self-clamping cutting machine especially showing the high finish and exactitude attainable in an important branch of machinery. First award.

W. Dawson and Sons, Odley, exhibited their "Wharfedale" and "Mitra" platten printing machines. The "Wharfedale" was a double dandy of excellent finish, provided with self-delivering apparatus, and possessing several minor improvements in construction. This machine was well suited for the production of fine bookwork, as well as for general jobbing work. The "Mitra" platten appeared to be very strongly constructed, and was carefully elaborated with a view to meet the demands made upon high-class platten machines. First award.

Merritt Gully, New York, exhibited the "Universal" platten printing machine. This well-known machine was employed in the Exhibition, printing a catalogue of the American Court on hard paper, with very satisfactory results. From its great strength this machine is also adapted for use as an embossing press. First award.

W. Maul, jun., Dresden, showed a pair of envelope-folding machines, one with self-delivery—exhibiting high finish in workmanship and construction. First award.

W. Powell and Sons, London, for an "Empire" platten printing machine—a commendable and useful machine, of moderate price, somewhat unequal in finish—second award.

Golding and Co, Boston, exhibited a number of small printing presses, comprising the "Pearl" treadle press, which had a useful self-inking attachment, and the "Official" press, fitted for employment in mercantile offices. These presses were of neat and compact form, and moderate in price. Second award.

Hampson and Bettidge, London, for a well-finished ruling machine, second award.

Ph. Swiderski, Leipzig, exhibited two cylinder printing machines, one crown and the other double-crown size. These machines differed in several respects from those of English make; they possessed no cylinder brake; the inking table was of wood, and the feeder stands at the back of the machine facing the cylinder, and feeds from an extended table on his right hand. The machines were shown at work, and were found to run remarkably easy, and displayed a high degree of finish. Second award.

Alex. Seggie, Edinburgh, exhibited a double-crown cylinder printing machine, of fair workmanship, combining several of the most approved features of power presses. There was also a spring attachment to the ends of the rollers, designed to prevent their "jumping" when passing over the forme. Second award.

Jonker en Zoon, Amsterdam, exhibited a paper-folding machine. In this exhibit, although it displayed high finish in workmanship, there appeared to be some points of weakness, making it liable to derangement. The first and second folds were effected by means of a blunt-edged knife pressing the sheet between india-rubber bands, and the third fold was made by passing the sheet between two iron rollers, which also pressed it. The sheet was laid to points—a plan now generally superseded by the quicker method of laying to gauge. Second award.

Louis Antoine showed an envelope-folding machine. Second award.

The Birmingham Machinists' Co, Birmingham, exhibited their "Simplissimu" platten printing machine—an ingenious press, worked by hand power; the bed was stationary, and the rolling and pressing were effected by one movement: a useful appliance where cheapness of first cost is considered. Second award.

W. Powell and Sons, London, exhibited the "Quadrant" cylinder printing machine, which was constructed for hand and treadle power, possessing a large treadle for two operators; it was also provided with stop-cylinder gear, and was of cheap construction. It laboured under the disadvantage of being in very rusty condition from sea damage. Third award.

Bailey Brothers, London, for a collection of embossing presses and numbering machines and stamps, third award.

Charles Bailey, Sydney, showed the "Bailey Model" printing press, of elegant appearance, and exhibiting remarkable speed. It was adapted to printing visiting and other small cards, but from the position in which the type have to be fixed—viz, face downward—its applicability is limited. Third award.

CLASS 59.—MACHINES, INSTRUMENTS, AND PROCESSES USED IN VARIOUS WORKS.

There were thirty-five competing exhibitors in this class, the exhibits being of a miscellaneous character.

Hayward, Tyler and Co., London, exhibited machinery for the manufacture of aerated waters. The appliances and engine were of high finish. First award.

Smith and Hamilton, of Sydney and Toronto, for aerated water machinery, which was inspected in operation, and performed its work smoothly and rapidly, first award.

G. B. Mino e Figli, Alexandria, for a well-finished exhibit of goldsmith's machinery, first award.

J. T. Mourant, Collingwood, for an interesting exhibit of wood taps, spile-, spires, &c., which embraced some novelties and patents, and showed good workmanship and finish, first award.

E. Maisan et Cie, Bordeaux; A. Flach, Weiskaden; F. W. Schrieber, London; Mazzini, Marchesi Fratelli, Milan; and Rouppe van der Voort en Lewin, Dons-le-due, for metal capsules, first awards.

F. W. Schrieber, London, for a capsuling machine, its superiority being a steel band compressor, enabling it to perform the operation of capsuling by one movement of the lever, first award.

Barrett and Eilers, London, for patent stoppered bottles; amongst five competitors this was considered the most effective appliance. First award.

Grimshaw and Baxter, London, for an extensive exhibit of watchmakers' tools, of superior finish, first award.

The British Syphon Manufactory, London, for syphons, seltzogenes, and syphon-filling machinery; this exhibit comprised a number of highly-finished articles, well known in commerce. First award.

Hugh Wilson and Sons, Melbourne, exhibited bootmaking machinery. Although the exhibitors did not claim any patents, several articles in this exhibit showed improvements upon the old class of machinery, and, taken as a whole, showed good workmanship. It comprised a number of appliances well suited to the boot trade, and calculated to lessen the cost of production. First award.

Grahl und Hoeld, Dresden, exhibited hat-making machinery, hydraulic power. First award.

Boldt and Vogel, Hamburg, for a bottling machine (needle) for champagne, juice, and pickles; also, bottle washing and filling machinery. The exhibitors had a large and useful collection of this class of machinery, simple in construction and efficacious in their trials. First award.

Owen Roberts, Melbourne, for a machine for painting laths for Venetian blinds. This little machine must effect a great saving of labour. It can be worked by two boys. Second award.

Samuel Lawson and Sons, Leeds, for rope-making machinery. This exhibit, having been frequently worked for the benefit of visitors, attracted a good share of attention. It performed the work required of it with ease and precision. First award.

E. Remington and Sons, Ilion, New York, exhibited a "type-writer." This ingenious machine effects its printing by the operator finding and touching (piano-like) the letter wanted upon an alphabetical key-board. There are also numerals arranged in the same manner. It should be useful to untrained or nervous writers. Second award.

CLASS 56.—SEWING MACHINES, &c.

SEWING, KNITTING, AND EMBROIDERY MACHINES.

The competition in sewing machines proved very keen, and great interest was evinced, both by the representatives of the makers and the public, in the result of the trials. The machines were removed from the stands and submitted privately to the jury, and their various qualifications explained and exhibited by skilled operators. The jury then retained possession of them for a time, and at their leisure examined the workmanship and material, testing the latter for hardness by the use of a file.

DOMESTIC MACHINES.

The Davis Sewing Machine Company, New York, exhibited the "New Davis Vertical-feed Sewing Machine." In this machine the shaft, pulley, and fly-wheel occupied the same position relatively to the other parts as in the well-known "Singer" form, and the vertical motion of the needle bar was produced by

the usual crank-pin moving in a heart-shaped cam; here, however, the resemblance ended, and the remainder of the mechanism was of a most novel and curious kind. The shuttle, which moved in a curved path, was operated by a system of jointed levers, proceeding from a small eccentric placed on the shaft immediately behind the driving pulley, thus dispensing with the mitre wheels and vertical shaft hitherto so general. The feed apparatus was entirely removed from the usual position beneath the table of the machine, and was attached to the head. It consisted mainly of a vertical bar placed close to the presser foot, and which received suitable vertical and horizontal motions from mechanism contained in the head of the machine. Proceeding further, we found two other points entirely novel—first, the presser foot, instead of being continuously urged downward upon the work, was lifted slightly at the instant that the forward motion takes place: second, the feeding was accomplished *while the needle was in its lowest position*, and the needle itself partakes of the forward motion of the feed-bar, pinning the two plies together, and causing both to advance equally. This machine was also provided with a very complete series of adjustments for counteracting the effect of wear, and an improved automatic bobbin-winder, and all its details were carefully and judiciously worked out. Owing, apparently, to its peculiar feed motion, the Davis machine possessed an astonishing power of passing over seams and other irregularities, and accomplished with the greatest ease a remarkably wide range of work. It was also provided with a very ingenious and novel set of attachments, adapted to work in unison with the new feed motion, and enabling very complicated operations to be performed with facility, and, in many cases, dispensing altogether with the necessity of guiding the work by hand. It was at first supposed by the jury that this excellent performance was in some measure due to the special skill of the operator. This view was, however, entirely negatived by the fact that a change of operator in no way impaired the result. The Davis machine was made for either foot or hand power, and performed equally well in each case. To it the jury awarded the only first order of merit as being pre-eminent for simplicity, convenience, efficiency, and rapidity, both as a treadle and a hand machine. First award.

The Wheeler and Wilson Manufacturing Co., Connecticut.—The machine submitted differed greatly from the original form adopted by that firm, the curved needle and eccentric motion being abandoned, and a straight needle bar actuated through a bell crank from a cylindrical cam, such as has always been used in the Howe machines, being employed. The rotating hook and disc-shaped bobbin still retained their places, however, as substitutes for the shuttle, and a peculiar connection caused the hook to perform different parts of its revolution at different speeds so as to facilitate the formation of the stitch. Second award.

The remaining exhibitors adhered generally to the type usually identified with the name of Singer in the case of treadle machines, introducing small improvements in the way of automatic bobbin-winders, &c. In hand machines a greater variety of design was visible.

MANUFACTURING AND LEATHER MACHINES.

The Wheeler and Wilson Manufacturing Co., Connecticut.—This machine was of similar construction, but more massive dimensions than their family machine, and which performed the feat of sewing together all the parts of a pair of moleskin trousers in the space of nine minutes, doing its work smoothly and well. First award. This company also exhibited a machine of similar design to their domestic machine already referred to, which did good service on leather, but the stitch was not so firmly drawn up as in the case of the shuttle machines. First award.

Jones and Co., Manchester.—Of this exhibit the flowering machine, which was of the Howe type, with a well-made wheel feed and independent vibrating arm for

relieving the pressure on the presser foot at a certain period in the formation of the stitch, and the repairing machine, performed most creditably. First award.

Koch and Co., Bielefeld, showed a very powerful machine for heavy trace sewing. First award.

R. B. Turner et Cie, Brussels, exhibited a very large and well-designed machine for making sacks. First award.

Two of the largest sewing-machine houses—namely, those constructing the well-known Singer and Howe machines—though largely exhibiting, declined to compete. This circumstance is to be regretted, as rendering the comparison dictated by the jury the less complete. Nevertheless, it will be observed that while these particular machines were not tested, others on the same principles, and differing only in the smallest and least important details, did compete, with above-mentioned results.

KNITTING MACHINES.

Two of these were submitted to the jury, one by the Lamb Knitting Machine Company, Chicopee Falls, Mass., the original inventors, and one by Claes and Plentje, of Germany, exemplifying various improvements and modifications, including a steel bed instead of the usual cast-iron one.

EMBROIDERING MACHINES.

Some of the ordinary sewing machines were provided with attachments for the purpose of producing embroidery. In the French Court, however, several machines made specially for this purpose, making the Tambour stitch, and presenting some very curious and intricate mechanical combinations, were shown by E. Conely, Paris.

W. C. KERNOT, *Chairman*.

EXPERTS' REPORT.

We have made a practical test and thorough examination of the machines exhibited by the Bradbury, Grinné Natalis, Wertheim, Wheeler and Wilson Manufacturing Co., Jones and Co., Johnson, Clark and Co., and "The Davis." We find that the Bradbury, Grinné Natalis (Crauer withdrawn), Wertheim, and Jones, are all of the Singer type, and similar in construction, and should be classed in the same orders; the Wheeler and Wilson being different in construction, but the results of experiments are similar to the former.

The Standard of Messrs. Johnson, Clark and Co., is the only machine submitted (except "The Davis") with a radial shuttle movement, and, therefore, worthy of the consideration of the jury. If this machine had been supplied with similar accessories to "The Davis" (which, we believe, are manufactured by the company), we would strongly have recommended it to be raised to the first order of merit.

As regards "The Davis," we cannot but agree with the jury that it is very superior to any of the others, and went through every test to our entire satisfaction.

For heavy leather machines we beg to recommend the Bradbury for first order of merit, for the following reasons:—The spool is interchangeable; the small area of the extreme end of the lower arm, which enables the operator to sew closer to the toe of the foot than any other exhibit.

Leather Flowering Machines.—Bradbury and Co. Limited, first order of merit, for the following reasons:—Double bar, shuttle guide; construction practically the same as the Jones.

Manufacturing Machines.—First order of merit for Bradbury and Co. Limited, because all working parts are practically the same as Jones's, and the work produced similar in quality.

Kilters.—First order of merit for Bradbury and Co. Limited, as the only machine of its class in the Exhibition. The working parts are strong and simple, and the quantity of work produced is excellent.

The following table was compiled by the experts on sewing machines as the result of their examination:—

Exhibitor's Name	Leather Sample.	Long Stitching Sample.	Blanking	Rolling.	Lace and Pilling.	No of Parts comprising the Machine.	No of Parts of Feed.	No of Parts in Motion.	Speed.	Speed Stitching	Tension	Height	Gap	Shuttle Movement	Lat of Needle	Stroke of Shuttle	No of Accessories	Go as you please for half-hour	Needle Tension	Shuttle Tension.

Flueck, J., Brienzen—Wood carvings.

Class 12.—Photographic Proofs and Apparatus.
Ganz, J., Zurich—Magic-lantern and slides.

UNITED KINGDOM

OF

GREAT BRITAIN AND IRELAND.

SPECIAL EXHIBITS.

Paintings lent to the British Royal Commission by HER MAJESTY THE QUEEN

"THE QUEEN RECEIVING THE SACRAMENT" (the concluding part of the ceremony of Her Majesty's Coronation) on the 23rd of June, 1838. By C. R. Leslie, R.A.

"THE ROYAL FAMILY IN 1847" Copied by Signor Balli from F. Winterhalter's Picture at Osborne.

"THE MARRIAGE OF HIS ROYAL HIGHNESS THE PRINCE OF WALES," at St George's Chapel, Windsor Castle, 10th March, 1863. By W. P. Frith, R.A.

"THE ROYAL PROCESSION TO ST PAUL'S CATHEDRAL," on the Thanksgiving Day, 27th February, 1872. By N. Chetwode.

Painting lent by HIS ROYAL HIGHNESS THE PRINCE OF WALES.

"CHIEFMAST OF THE OPENING OF THE INTERNATIONAL EXHIBITION IN VIENNA, 1875" By N. Chetwode.

Electrotype Reproductions of the Royal Plate

Contributed by the Department of Science and Art, South Kensington Museum, London.

The objects forming part of the Regalia preserved in the Tower of London were lent, for the purpose of being reproduced, by the gracious permission of Her Majesty the Queen.

They consist for the most part of plate made at the time of the Restoration, in 1660, to replace, and in some instances to represent, earlier pieces. This seems to be the case with the Ampulla, or Anointing Cruse, the original of which is of pure gold. Its form is antique, evidently derived from an early epoch; but the actual work is of the seventeenth century. The Anointing Spoon, however, which accompanies it, made of silver richly gilt, dates from the only year of the thirteenth century. The sanctity of the anointing oil was, in early ages, deemed of great importance, and various legends were current respecting its discovery and efficacy. These superstitions afforded, no doubt, a special reason why in 1649 the Commissioners of the Parliament destroyed all they could lay hands on, and were well content to be able to report these ancient and long-valued objects as "broken and defiled." The salt-cellar dates from the time of Queen Elizabeth, and has been called a model of the "White Tower" of London, to which, however, it has little resemblance except in being square and castellated. It was used on the King's table at the coronation of George IV. The wine fountain, of silver gilt—a large and elaborate piece of English silver-smith work—was presented to King Charles II. by the Corporation of Plymouth.

The other objects exhibited are from the Royal collection of plate at Windsor Castle, and were also reproduced by permission of Her Majesty the Queen. The following is the list of the articles exhibited, with the date when made—

SPOON. English. Date, about 1300-30.

PLATE. English. Seventeenth century.

SALVER, OR ADAR DISH. English. Date, about 1600.

CHRISTENING PAIL, WITH COVER. English. Date, about 1600.

SALVER, OR CHRISTENING PAIL. English. Date, about 1600.

WINE FOUNTAIN. English. Second half of seventeenth century.

TANKARD, WITH COVER. Flemish (?). Seventeenth century.

SALT-CRUSE. English. Seventeenth century.

AMPULLA, OR ANOINTING CRUSE. English. Seventeenth century. (Probably representing an earlier piece.)

SCRIPTURE. English. Seventeenth century.

SALVER. English. Date, 1814.

VASE, OR WINE COOLER. English. Date, 1812.

VASE, OR CUP. English. About 1815.

CUP. The ivory carving. Flemish (?). seventeenth century.

The mounting. English. Date, 1785.

Elephant. English. Date, latter part of eighteenth century.

ERERONE, OR CENTRE PIECE. English. Date, about 1750.

TABLE. English. Date, about 1670.

TABLE. Date, about 1700.

FIRE DOG. English. Date, about 1670.

Cartoon lent by the LORDS OF THE COMMITTEE OF COUNCIL ON EDUCATION.

"INDUSTRIAL ART AS APPLIED TO WAR" By Sir Frederick Loughton, P.R.A.

PAINTING AND ETCHINGS by James Barry, R.A. (born 1741, died 1806), lent by the Society for the Encouragement of Arts, Manufactures, and Commerce, Adelphi, London.

PAINTING.

"THE TEMPTATION OF ADAM"

ETCHINGS.

These etchings, at the close of the Exhibition, were presented to the National Gallery of Victoria.

The first six etchings represent the series of paintings executed by Barry for the Lecture Hall of the Society.

"A GREEK HARVEST HOME."
"THE VICTORY AT OLYMPIA."
"THE THAMES."
"THE SOCIETY."
"EUBOIA, OR THE STATE OF FINAL RETRIBUTION."
"PORTRAIT OF THE LATE JAMES BARRY, R.A." (Died 1741, died 1806).
"THE TEMPTATION OF ADAM."
"THE PRINCE: OR, THE RESURRECTION OF FREEDOM."
"TESTAMENTAL TO THE MEMORY OF CHARLES JAMES FOX."
"JOB REPROVED BY HIS FRIENDS."
"SACRA CHRISTA FAMILIA."
"THE CONVERSION OF POLOMON."
"PHILADELPHIA IN THE ISLAND OF LEMNOS."
"THE FALL OF SATAN."
"SATAN'S ADDRESS TO THE FALLEN ANGELS."
"SATAN AND DEATH."
"THE BIRTH OF VENUS."
"KING LEAR."
"PORTRAIT OF FITZ, EARL OF CHATHAM."
"PANDORA"

Contributions Illustrative of the Action of the Department of Science and Art, South Kensington, London.

Palagysay, J., und Sohne, Freiburg—Wines. (As above)

Pokorny, F., Agram—Apricot spirits, agnolds, raspberries, punch, Roina Claude, and Sibowitz (As above)

Reisinger, C., und Sohn, Vienna—Various Hungarian wines. Branches, Szolnok, Ealsburg, Buda-pesth Other wie Bordeaux, Ruster-Ausbach, Kadarka, Rosling. The wines exhibited have been grown in the most distinguished wine growing districts of the Austrian-Hungarian Empire, and have been kept on the premises with the greatest care for years. Particular attention is drawn to the red "Other wie (as) Budeaur." It is produced of genuine Bordeaux vine twigs, which have been transplanted to the mountains of Adelsberg, near Ofen; and the conditions of climate and the quality of soil there being similar to those of Bordeaux, the product is such that in flavour it fully comes up to, and by its richness it even surpasses, most of the best noted Bordeaux brands. The extensive shipments to France, rising from year to year, give the best proof for the above statement. With a view to enlarge and extend the use of the splendid wines of our country, we follow the principle of small profits for a large sale, and accordingly quote our wines as

low as possible, hoping to attain our aim. All wines awarded at M.I.E. Sole agent for Australasia: L. Radinger, Austrian agent, 27 Little Flinders-street West, Melbourne.

Schadn, J., Vienna—White and red wines (The representative of the Chief Commissioner for Austria: L. Radinger, 27 Little Flinders-street West, Melbourne.)

Stampalia, T., Zara—Rosoglio Marschino. (As above)

Szarvasy, F., Vienna—Wine. (As above)

Teutsch, J. B., Schersburg—Transylvanian wines and Sibowitz (genuine plum brandy). (As above)

Tommasich, F., Capo d'Istria—Vino Santo. (As above)

Tommasso Stampalia, Zara—Marschino (As above)

Wieninger's, J. G., Wine Estate Johannestein, Gumpoldskirchen.—Self-grown Gumpoldskirchen wines, from clean grapes. By appointment furnishers to the Imperial Royal Courts of Austria and the Brazil. Austrian wines grown on his own estate. Awarded at M.I.E. (1st), and with first prizes at every I.E. Only high-classed wines grown. Sole agent for Australasia: L. Radinger, Austrian agent, 27 Little Flinders-street West, Melbourne.

Class 33—Mining and Metallurgy.

Eisner, H., Trieste—Hydraulic St. Andrew Portland cement, F., and 25 barrels of the same cement, mark " (The representative of the Chief Commissioner for Austria: L. Radinger, 27 Little Flinders-street West, Melbourne)

Pechar, J., Toplitz—Statistical work concerning the coalfields and iron ores of the whole world (As above)

BELGIAN EXHIBITS.

Class 6.—Education of Children, Primary Instruction, Instruction of Adults.

Belot, L. E., Brussels.—School furniture
Cambier Freres, Ath.—Baby chair for infant schools.
Lebon, L., Brussels.—Books of education
Ministere de l'Instruction Publique et des Beaux Arts.—Publications, documents, and statistics concerning primary instruction.
Verstraete, C., Ghent.—Books for the education of the deaf and dumb.

Class 7.—Organisation and Appliances for Secondary Instruction.

Ministere de l'Instruction Publique et des Beaux Arts.—Publications, documents, and statistics concerning secondary instruction

Class 8.—Organisation, Methods, and Appliances for Superior Instruction.

Ministere de l'Instruction Publique et des Beaux Arts.—Publications, documents, statistics concerning superior and professional instruction
Serrure, H., Architect to the City of St Nicholas, Wares.—Classical centres in architecture

Class 9.—Printing, Books.

Henderloekx, F., Mons.—Printed music.
Katto, J. B., Brussels.—Printed music

Class 10.—Stationery, Bookbinding, Printing and Drawing Materials.

Biermans, L., Turnhout.—Playing cards.
De Broux et Cie, St. Remy.—Printing paper
De Tournay-Catala, Brussels.—Printing and writing paper, straw board
Pfeffer, J., et Cie, Ghent.—Paper, parchment paper, varnished paper, imitation of leather for bookbinding
Turner, E. B., Brussels.—Model of india-rubber stamp
Van Renynghie, A., Pepersinghe.—Straw paper and cardboard.

Class 11.—General Application of the Arts of Drawing and Modelling.

Tasson, J., Brussels.—Decorative paintings

Class 12.—Photographic Proofs and Apparatus.

Baudoux, L., et Cie, Charleroi.—Photographic engravings on white and coloured sheet glass.
Develuy, V., Bruges.—Photographic views of the principal monuments of Bruges, by the carbon process
Fourcault, Frison et Cie, Charleroi.—Photographic glass
Hallé, J., Dinant.—Landscapes of "The Mousses," printed by the carbon process
Morel, A., Lodolinsart.—Photographic glass
Stilmant, L. J., Pepinster.—Photographic views
Verrieres des Hamendes (Lambert et Cie.), Junet.—Photographic glass
Verrieres de Charleroi, Lodolinsart.—Photographic engravings on white and coloured glass.

Class 13.—Musical Instruments.

Berrens, G. A., Antwerp.—Pianos
Campo Freres, Brussels.—Pianos
Van Eyte, B., Ghent.—Pianos

Class 14.—Medicine, Hygiene, and Public Relief.

Waessegiers, J., Antwerp.—Orthopedic apparatus.

Class 15.—Mathematical and Philosophical Instruments.

Mouly, J. V., Brussels.—Anemometer, for gauging winds.

Class 16.—Maps, and Geographical and Cosmographical Apparatus.

Chartographie and Military Institute, Brussels.—Geological and other maps of Belgium
His Majesty Leopold II, the King of Belgium
Mauvout chart of Africa, prepared by the Depot de la Guerre

Class 17.—Cheap and Fancy Furniture.

Angelroth, G., Namur.—A bedstead with a stool spring mattress
Arens, A., Antwerp.—Furniture
Cambier Freres, C. et H., Ath.—Chairs, stool seats
De Meuter, L., Brussels.—Two sideboards, chairs, tables, stools, toilet glass.
Van Geel, C., Brussels.—Sketch for a royal bedstead

Class 18.—Upholsterers' and Decorators' Work.

Belot, L. E., Brussels.—Frames, cornice pieces, and hangings
Braunburger, J., Brussels.—Marble clocks.
Braun, jun., Ghent.—Samples of gilt rods
Demunter, P., Brussels.—Imitation ancient tapestry.
De Meuter, L., Brussels.—Curtains, hangings, tablecloths
Omnozeux, F., Brussels.—Marble timepieces.
Tasson, J., Brussels.—Imitation of tapestry
Tesson et Washer, Brussels.—Inlaid footings
Wynen, L. J., et Cie, Antwerp.—Paper-weights, pedestals for statues and busts

Class 19.—Crystal, Glass, and Stained Glass.

Agence Generale de Vente des Glaceries, Brussels.—Glass, rough and polished, thick and thin plate-glass.
Baudoux, L., et Cie, Charleroi.—Window-glass, of various kinds, engraved and coloured sheet glass.

Crystalleries du Val St Lambert.—Crystal table service and pharmaceutical glassware, vases, and fancy goods in glass
Fourcault, Frison et Cie, Charleroi.—Polished, coloured, and mouseline glass
Mondron, L., Lodolinsart.—Window-glass of all sizes
Morel, A., Lodolinsart.—Window and other glass, pressed glass, free from rust and stain.
Schmidt, Devillez et Cie.—Dampremy.—Window, coloured, and mouseline glass
Societe Anonyme des Verrieres de Charleroi, Lodolinsart.—Sheet, ground, and figured glass.
Societe Anonyme des Verrieres Nationales de Junet, Junet.—Window-glass
Verrieres des Hamendes (Lambert et Cie.), Junet.—Window, coloured, and engraved glass, &c.
Verrieres de Mariemont, Mariemont.—White, coloured, dull, convex, and grooved window-glass.

Class 20.—Pottery

Boch Freres, Le Louviers.—Plates, crockery of all kinds.

Class 21.—Carpets, Tapestry, and other Stuffs for Furniture

De Meuter, L., Brussels.—Carpets.

Class 25.—Bronzes and various Art Castings and Repousse Work.

Arens, A., Antwerp.—Stamped copper plates

Class 26.—Clocks and Watches.

Taman, A., Brussels.—Chronometric clock for railway stations, monumental clock.

Class 27.—Apparatus and Processes for Heating and Lighting.

Byl, Fils et Cie, Grammont.—Models of matches.
De Laresse, C, Liège.—Kitchen and hot air stoves.
Hamal-Mouton, Liège.—Portable forges.
Mouly, F. V., Brussels.—Apparatus for heating apartments, design for warming railway carriages, hothouses and greenhouses, noiseless revolving chimney cover.

Class 28.—Perfumery.

Dubois-Crepy, Mous.—Samples of toilet soap.
Haenen, E., Verviers.—Eau-de-Cologne.
Mauvert Soap Co., Brussels.—Glycerine, Windsor, and honey soaps.

Class 29.—Leather-work, Fancy Articles, and Basket-work.

Barth, V., Andenne.—Fur thenware pipes.
Henrard-Cajot, Spa.—Fancy Spa goods.

Class 30.—Cotton Thread and Fabrics.

Guerinckx, Clement, et Cie, "La Dendre Cie," Termonde.—Cotton, mixed wool and cotton blankets.

Class 31.—Thread and Fabrics of Flax, Hemp, &c.

Druwe et Henderickx, Alost.—Sewing thread, for machine and hand work, knitting thread.
Elaert Coils, Alost.—Threads of all descriptions.

Class 33.—Woolen Yarn and Fabrics.

Baerwinckel et Rosenberg, Verviers.—Fancy coatings and tinsourings.
Biolley Freres, Verviers.—Fancy woolen and worsted fabrics.
Dresse, Piron et Cie, Enival.—Fancy woolen and worsted fabrics.
Garot, L. et H., Verviers.—Woolen fabrics.
Lefebvre-Vincent, Dison.—Woolen fabrics.
Peltzer et Fils, Verviers.—Woolen broadcloth, blanket-cloth, woolen worsted fabrics, and flannels.
Rollin, H., Fils et Cie, Wassy.—Woolen fabrics.
Savigne, A. J., Verviers.—Woolen and worsted fabrics.
Simons, I., Verviers.—Woolen cloths and blanket cloths.
Taste, J., Verviers.—Woolen fabrics, flannels, &c.
Vreede, L. et H., Verviers.—Flannels of all kinds.

Class 35.—Shawls.

Rollin, H., Fils et Cie, Wassy.—Shawls.

Class 36.—Lace, Net, Embroidery, and Trimmings.

Druwe et Henderickx, Alost.—Thread, for lace.
Montefiore, Levi.—Samples of lace.
Van Speybroeck, Mdma., Dargua.—Duchesse, Gumpure, and Valenciennes lace.

Class 37.—Hosiery and Underclothing, and Accessories of Clothing.

Goossens-Neerman, H., Ghent.—Fancy woolen materials.

Class 38.—Clothing for both Sexes.

Druwe et Henderickx, Alost.—Thread, for bootmakers.
Pfeffer, J., et Cie, Ghent.—Paper, imitating shagreen and morocco, for hatters.
Sironval-Paris, Verviers.—Shoes.

Class 40.—Portable Weapons and Hunting and Shooting Equipments.

Ancion, J., et Cie, Liège.—Military rifles, revolvers.
Bachmann, L., Ritterberg.—Cartridges, compressed bullets.
Fusnot, C., et Cie, Cereghem.—Cartridges of all kinds.

Pirlot et Fresart, Liège.—Fire-arms.
Tambour, M., Liège.—Fire-arms of all kinds.

Class 41.—Travelling Apparatus and Camp Equipage.

Cambler Freres, C. et H., Ath.—Folding chairs and camp stools.

Class 42.—Toys.

Turner et Cie, B. B., Brussels.—Skates.

Class 45.—Agricultural Products, not used for Food.

Staes-Sproelants, Tormonde.—Colza, radish, and flax seed oils.
Tautiez-Bottelier, Bruges.—Flax in various forms.

Class 46.—Chemical and Pharmaceutical Products.

Arsenical Water Co., Court St. Etienne.—Arsenical waters.
Botelberge, G. et Cie, Melk-lez-gand.—Ultimate blue, green, and violet.
Declercq-Haer, Antwerp.—Lacken liquors.
Dupuy, B., Brussels.—Cereine nasistone (concentrated juice of watercress and lemongrass).
Koch et Reis, Antwerp.—Sulphur, raw, refined, crystallized, &c.
Lebegeys van Paemel, D. Ghent.—Oil, and matches.
Manufacture Royale de Bougies d'Anvers (De Roubais, Oudenkoven et Cie), Antwerp.—Candles, and materials used in making.
Manufacture Royale des Bougies de la Cour (De Roubais, Janss et Cie), Brussels.—Candles and stearine.
Mauvert Soap Co., Brussels.—Household soap.
Solvay et Cie, Couillet.—Carbonate of soda and chloride of calcium.
Van den Daele, Rigot, Quéniam.—Powder for curing toothache.
Van Espen, K. W., Brussels.—Powder for cleaning metals, especially zinc, pharmaceutical products.
Van Speybroeck, H., Dargua.—Coatings for preserving wood, metals, ships' hulls, &c.
Verbiest, L. E., Aerschot.—Mercurial ointment.
Verzyl, G. G., et Cie, Louvain.—Chemicals used in the manufacture of saltpetre and nitrate of soda, chloride of potassium.

Class 47.—Chemical Processes for Bleaching, Dyeing, Printing, and Dressing.

Van de Wynckele, C., Ghent.—Threads of all descriptions, exhibited as a specimen of bleaching.
Van Laer, Brussels.—Dyer's text books.

Class 48.—Leather and Skins.

Destrebecq Freres, Péruwelz.—Samples of leather.
Monsieur, G., Theux.—Leather.
Rasquin, I., Liège.—Leather in belts, uppers.
Société Anonyme Tanneries et Maroquinerie Belges, Brussels.—Tanned skins, leather for hats.
Verse-Speilmans, A. Brichot et Cie, Brussels.—Leather bottines.
Zuree et Cie, Ghent.—Prepared furs; rabbit and other skins, dyed.

Class 50.—Apparatus and Processes used in Agricultural Works, and in Works for the Preparation of Food.

Dassonville, De St. Hubert, Namur.—Two milkstoves.
Naguels, J. F., Fontaine l'Évêque.—Curry-combs, tinned and galvanized.
Turner, R. B., et Cie, Brussels.—Horse-clippers.

Class 52.—Machines and Apparatus in general.

Beduwe, J., Liège.—Fire-engine and fire-escape.
De Tombay, A., Marnelle.—Elevators and plan of gas-holder of 250,762 cubic feet.
Hamal-Mouton, Liège.—Portable forges.
Mabille, V., Moulinsels.—Weighing-scales.

Montefiore, Levi, Brussels—Revolver, parts of machinery bearings
 Mouton, A., Liège—Steel lifting hook-jacks
 Mouly, T. V., Brussels—Designs for automatic pumps
 Rolin, B. et Cie, Braine le Comte—Boilers and steam-engines
 Schaefer, O. F., Liège—Weighing apparatus, scale, pendulum balance
 Thurnart, C. et Cie, Liège—Fue-engine
 Van Goeckheim, Reuiller et Cie, Brussels—Drying-machine, pump
 Verse-Spelmans, A., Brichot et Cie., Brussels—Belting.

Class 53.—Machine Tools

Heoner de Quir, E., Brussels—Grindstones
 Montefiore, Levi, Brussels—Powder-Lectry tools, in phosphor-bronze
 Snoeck, Mdm, Ensal—Miniature model of wool-press
 Societe Industrielle du Grand Duché de Luxembourg, Brussels—Grindstones

Class 54.—Apparatus and Processes used in Spinning and Rope-making.

Horstmanns Freres, Liège—Cards, &c., for spinning-mills

Class 55.—Apparatus and Processes used in Weaving

Snoeck, Mdm, Ensal—Plans and models of machines for the manufacture of woollen goods.

Class 56.—Apparatus and Processes for Sewing and for Making-up Clothing.

Druwe et Henderickx, Alost—Thread, for shoemakers and tailors
 Turner et Cie, E. B., Brussels—Sewing machines, for sack and sail making

Class 58.—Apparatus and Processes used in Paper-making, Dyeing, and Printing.

Pfeffer et Cie, Ghent—Materials and products for making paper
 Vanderborcht, A. et B., Brussels—Printing materials and types

Class 61.—Harness and Saddlery.

Druwe et Henderickx, Alost—Thread, for making harness

Class 62.—Railway Apparatus.

Blondiaux et Cie, Thy le Château—Iron and steel rails
 Compagnie Belge de Machines et de Matériel des Chemins de Fer, Brussels—Photographs of railway plant
 Finch, L., Brussels—Sample of permanent way for tramways
 Henricot, H., Court St Etienne—Axle-boxes, for railway trucks and carriages
 Mahille, V., Marlenwels—Springs and buffers
 Rolin, B. et Cie, Braine le Comte—Permanent railway plant, and machinery incident thereto
 Societe Anonyme des Acieries d'Angleur, Ougrée—Rails, tires, and axles
 Societe Anonyme des Forges Laminoirs et Fonderies de Jemappes—Iron and steel permanent ways for railways
 Societe Anonyme de Marchandise et Couillet, Couillet—Locomotive and tender for narrow gauge, iron rails, photographs of engines
 Societe St Leonard, Liège—Photographs of locomotives
 The Cockerill Co., Seraing—Parts of machinery used in connection with locomotives; steel rail, 200 feet long, rolled cold; general railway plant

Class 63.—Telegraphic Apparatus and Processes.

Jowa, G. T., Liège—Apparatus for telegraphic post.

Class 64.—Apparatus and Processes of Civil Engineering, Public Works, and Architecture.

Boucqneau, L., Brussels—Marble mantelpieces
 De Jaff, Devroye, Maey—Samples of marble and slabs for pavement and flooring
 Descamps, E., Bercse—Tiles, bricks, paving-tiles
 Gils-Delvigne, Liège—Samples of tiles and compressed cement
 Henroz, C., Floesie—Pavement slabs, tiles, and bricks
 Jauquet et Cie, Gosselies—Marble mantelpieces and flooring
 Jossion et Delangle, Antwerp—Portland cement
 Lalloumand, D., Andenne—Tiles, roofing, and pavement slabs
 Lafeyre, G., Yvoir—Vined black marble; blue Belgian and marble slabs, for pavements
 Lupat-Carlier et Cie, Sinit—Tiles and bricks
 Maudoux, A., Walcourt—Assorted marble, for flooring and pavements
 Societe Anonyme de Merbes le Château (Ponsant Vies)—Marble slabs and mantelpieces
 Rolin, B. et Cie, Braine le Comte—Bricks
 Societe Anonyme des Marbres, Brussels—Marble slabs and marble mantelpieces
 Tansy, F., Brussels—Marble slabs and mantelpieces
 The Cockerill Co., Seraing—Plans of workmen's villages and cottages
 Verbiest-Lamali, R., Brussels—Marble mantelpieces

Class 67.—Cereals, Farinaceous Products, and Products derived from them.

De Bontridder, I. F., Vilvorde—Venumcell, macaroni, pure rich starch
 Remy, B. W., et Cie, Louvain—Rice starch.

Class 70.—Meat and Fish.

Delacre, C., Brussels—Extract of meat

Class 72.—Condiments and Stimulants, Sugar and Confectionery.

Breckpot, G., Malines—Liquors
 Bulcke, H., Ostend—Liquors, "Bitter Bulcke."
 Cassiers, M. J., Antwerp—Chocolat
 Cuvelier, J. B., et Fils, Brussels—Liquors
 Debeukelaer, F. X., Antwerp—Elixir d'Anvers
 Declercq-Heer, Antwerp—Elixir
 Delacre, C., Brussels—Essence of coffee, chocolate, and cocoa
 Jovenau, A., Tournai—Chocolates
 Olemans, F., Brussels—Mustard
 Schmidt, B., Brussels—"Belgian Bitter"
 Vandendaels, Rigot, Quevriain—Chicory, mustard, vinegar, and syrups
 Vanderbrugghen, C., Brussels—Liquors
 Vanderschrick Freres, Brussels—Preserved fruits, liquors, syrups, vinegars

Class 73.—Fermented Drinks.

Cuvelier, J. B., et Fils, Brussels—Alcohols and spirits
 Meeus, L., Antwerp—Geneva and alcohol (the "Key" brand)
 Vandenberghe et Cie., Antwerp—Geneva ("Deli" brand)
 Vanderschrick Freres, Brussels—Spirts

Class 81.—Apparatus and Processes of the Art of Mining and Metallurgy.

Jaspert, J., Liège—Safety lamp
 Societe Anonyme des Acieries d'Angleur, Ougrée—Mining tools
 The Cockerill Co., Seraing—Photographs of mining engines

Class 82.—Mining and Metallurgy.

Allebos, H., Brussels—Burglar and fire proof safes
 Ancion, J., et Cie, Liège—Wire, wrought and cut nails, patent nails, tools of every description
 Dawans, A., et Orban, H., Liège—Wire and nails

Del Marmol de Montpellier, Otn — Copper in sheets, wire.
 Fix. A., Molenbeck, St. Jean — Iron and brass wire, nails, machine-made rivets.
 Francotte, Pirlot et Cie, Liège — Brass and zinc sheets, brass wire and chaldons.
 Henricot, E., Court St. Etienne. — Enamelled cast-iron hardware.
 Henroz, C., Floreffe — Refractory products.
 Hoener de Quuru, Brussels — Grindstones.
 Hoerickx, G., Brussels — Buglas and fire proof safes.
 Jowa, G. T., Liège — Coated and galvanized iron sheets and wire, galvanized iron.
 Marchot, H., Liège. — Roofing sheet-iron.
 Montefiore, Levi, Brussels — Wire and divers articles of phosphor-bronze.
 Naguels, J., Fontaine l'Evêque — Nails, chains, kitchen and pantry utensils.
 Nicause, P. et N., Société Anonyme Fabrique de Boulets de la Blanchisserie, Marcinelle. — Bolts, rivets, spikes, &c.
 Nyst, J., Liège. — Bolts, screws, rivets, &c.
 Oeschger, Messdach et Cie, Ougrée — White zinc for paint.
 Ortmans et Fils, Verviers — Machine-made horse-shoes.
 Pussant, H., Court St. Etienne. — Wrought-iron crucibles for Government mints.
 Riche et Cie, Marchienne au Pont — Iron bars, wrought and sheet iron.
 Société Anonyme des Acieries d'Angleur, Ougrée. — Bessemer's steel, steel plates for boilers.

Société Anonyme des Corderies et Clouteries de Chatelet. — Nails of all kinds, iron wire rope, fencing wire.
 Société Anonyme des Clouteries Mécaniques de Fontaine l'Evêque. — Nails of all kinds.
 Société Anonyme de la Fabrique de fer d'Ougrée — Broken samples of iron, steel and filons.
 Société Anonyme des Hauts Fourneaux de Monceau sur Sambre, Monceau — Broken sections of iron rods, rolled iron joist.
 Société Anonyme Métallurgique D'Esperance Longdoz, Liège. — Iron and steel in sheets, for springs and nails.
 Société Anonyme des Usines Boulonnaises et Fonderies de la Louvière — Rails, fixtures, rivets.
 Société Anonyme des Fonderies d'Andenne. — Hardware, and cooking utensils.
 Société Anonyme de Marcinelle et Couillet — Samples of wrought-iron.
 Société en Commandite par Actions des Forges et Laminiers de St. Pierre, Monceau, St. Sambre — Iron rods, bar and hoop iron.
 Société Industrielle de Luxembourg, Brussels — Grindstones.
 The Cockerill Co — Broken samples of iron—steady, fibrous; wrought-iron, iron castings for machinery, stamped boiler ends, &c.
 Tremouroux Frères, Brussels — Enamelled wrought-iron utensils.

FRENCH EXHIBITS.

Class 6.—Education of Children, Primary Instruction, Instruction of Adults.

Brody, A., Paris.—Practical method for reading music.
 Flament, E., Douai.—Album of calligraphy, writing-book, French style.
 Gauthier, J. L., Nîmes.—The calligraph.
 Godart, aine, Paris.—Drawings, plans &c., for schools.
 Mangin, E., Paris.—Board for teaching music in schools.

Class 7.—Organisation and Appliances for Secondary Instruction

Bischoff, F. E., Rouen.—New method for learning the piano.

caskets, frames, and other articles for use.

Leuchthammer Factory.—Plagues, dishes, sets
for writing and dining tables, candlesticks, &c

Leuter, A., Carlsruhe.—Metal goods—gilded, zinc,
etched, silvered, &c—for household use.

Lichtinger, J., und Co., Muench.—Tinware
Meves, A., Berlin.—Iron and zinc goods of different
kinds, for household use.

Munichmeyer, G. A., und Co., Berlin.—Alfamide
and German silver table sets &c

Ritter, A., und Co., Esslingen.—Plated German
silver and table sets, in Britannia-metal, &c.
Schafer und Haenschner, Berlin.—Cast-zinc
ornaments, gas and petroleum hanging lamps,
luminaires.

Waagen, A., und Co., Berlin.—Galvanneal bronzed
candlesticks, lamps, vases, dishes, inkstands, &c.

Winkelmann, H. F., Berlin.—Articles for the
table and vessels in German silver.

Zimmermann, E. G., Hamei.—Articles and useful
objects in cast-iron, brass, bronze—figures, busts,
candlesticks, &c.

Class 26.—Clocks and Watchcases.

Becker, G., Freiburg.—Wall, cabinet, fancy, and
alarm clocks, &c.

Byers, F. A., Hildesheim.—Tower clock, and one
similar for railway stations.

Fehrenbach, A., Furthwangen.—Three calendar
regulator watches.

Haas, J., Schramberg.—12 timepieces.

Hettich, G., Furthwangen.—Four cuckoo and sing-
ing-bird clocks.

Junghans Gebr., Schramberg.—Six wall clocks,
and regulators of different kinds.

Lange und Sohne, Dresden.—Gold and silver
pocket watches, of peculiar construction, &c.
Leuter, A., Carlsruhe.—Regulator clocks and time-
pieces.

Maurer und Hoffer, Esslingen.—Hanging clocks,
timepieces.

Schwer, A., Tyrborg.—Regulator clocks and
watches.

Wehrle, E. und Co., Furthwangen.—Four flute,
trumpet, and singing-bird clocks.

Winterhalder und Hofmeier, Schramberg.—
Seven wall and table clocks.

Class 27.—Apparatus and Processes for Heating and Lighting.

Co. for the Manufacture of Bronze Goods,
Berlin.—Chandeliers, candlesticks.

Elster, S., Berlin.—Gas lusters.

Hinde und Devoe, Berlin.—Tea lamps and
chandeliers for gas.

Flurschein, K., Garmisch.—Gas regulators,
soldering hammers, &c.

Francke, K., Bremen.—Articles for gas and water
works.

Kramme, C., Berlin.—17 gas lusters.

Kreuzberger und Sievers, Berlin.—Lusters.

Lauchhammer Works.—Candlesticks, candle-
sticks, articles for firing, &c.

Schafer und Haenschner, Berlin.—Gas and
petroleum hanging lamps.

Silbermann und Co., Berlin.—Gas-burners and
articles for lighting.

Stadelmann und Co., Nuremberg.—Soapstone
gas-burners.

Waagen, A., und Co., Berlin.—Lamps.

Class 28.—Perfumery.

Bohm, G., Offenbach.—Perfumes and soaps.

Cuntze, H., Cologne.—Eau-de-Cologne.

Farina, F. M., Cologne.—Eau-de-Cologne and
perfumes.

Farina, J. M., Cologne.—Eau-de-Cologne and
perfumes.

Farina, J. M., Cologne.—Eau-de-Cologne.

Fievet, K., Cologne.—Eau-de-Cologne and perfumes.

Junger und Gebhardt, Berlin.—Essences,
scented and washing waters, soaps, pomades, &c.

Lechner, L., Berlin.—Fragrances and rouges.

Martin, M. G., Cologne.—Eau-de-Cologne and
"Caruseler-Gelb".

Class 29.—Leather-work, Fancy Articles, and
Basket-work.

Adler, G., Bucholz.—Lastboard articles.

American Factory of India-rubber and
Celluloid Goods, Mannheim.—Combs, &c.

Ancon und Schnerzel, Berlin.—Basket-work
and cane goods.

Buhring, C., und Co., Hamburg.—Smoking-
pipes, water-dites, &c., of plastic-porous porcelain.

Dobler, E., und Gebr., Berlin.—Fancy goods in
ebony and celluloid.

Flemming, H., und Co., Schöneberg.—Brushes
of different kinds.

Junge, M. G., Berlin.—Fancy goods—handker-
chiefs, gloves, cigar-boxes, frames, little tables, &c.

Kelterborn, R., und Co., Berlin.—Fancy furni-
ture and carriages.

Mann, F., Osnabrück.—Cigar-boxes of different
kinds.

Muller, H., Berlin.—Articles in ivory and tortoise-
shell.

Pruckner, D., Muench.—Clothes and hair brushes.

Roegner, C. H., Striegau.—Brushes.

Vogel, W., und Sohn, Grandens.—Clothes, head,
hat, furniture, washing, and bath brushes.

Wagner, E., Berlin.—Flower-bands, drawing-room
and smoking tables, writing-tables, &c.

Wild, J. C., Kier.—Goods in agate.

Class 30.—Cotton Thread and Fabrics.

Muller, A., Reutlingen.—White and coloured
blankets.

Riemann, J. F., Nordhausen.—Bed linen, in satin dunnity, damask, coloured &c., cloths, aprons
Schramm, C. F., and Sohn, Hedenheim.—Blankets and covers for drawers, beds, &c
Thiel, A., Burscheid.—Different covers

Class 31.—Thread and Fabrics of Flax, Hemp, &c.

Berg, E. F. W., Bohn.—Flax, hemp prepared for spinning, from different countries
Frohlich and Wolff, Cassel.—Linen and huck-back goods, equipment for tents and camps
Martin, F. A., and Co., Sorau.—Damask covers, towels, table linen, &c
Mechanical Cord Factory, Immenstadt.—Strings, common and coloured
Mechanical Net and Woven Goods Factory, Heselbe.—Fishing-nets of hemp, linen, and cotton yarn, fine-nets, bow-nets, &c
Saxon Joint Exhibition of Stuffs for Men's Clothing.—Cotton, half-woollen, linen, and half-linen coats and trousers suits. Six exhibitors:—
FAHRMANN, C. G., Gross-Schönau.
GÜNTHER, G. W., Waltesdorf.
HÄBLER, C. G., UND SOHN, Gross-Schönau.
HOPPMANN, C. G., Nienstedorf.
KRIEGER, UND HEINER, Leutenstorf.
MATTHEI, A., Gross-Schönau

Saxon Joint Exhibition of Table-linen, Gross-Schönau.—Table-linen. Six exhibitors:—
BÄBLER UND CO., Zittau.—Linen towels, serviettes, &c.
HÄBLER, K. E., Gross-Schönau.—Towels, tablecloths
HÄBLER, C. G., Gross-Schönau.—Tablecloths, &c.
LANGER, J., Waltesdorf.—Tablecloths, napkins
PAUL, E., Gross-Schönau.—Tablecloths, napkins.
SCHLIPFNER, K. H., Gross-Schönau.—Tablecloths.

Saxon Joint Exhibition of Woven Goods.—Coloured linens, cotton, and mixed white and coloured woven goods. Three exhibitors:—
DUMMIGER, ABRAHAM UND CO., Harnhat.
NEUMANN, JUN., C. F., Eiben.
WUNDSCH, H., Ebersbach.

Siemens, J., Haineln.—Plated hemp goods, bags, mats, &c.
Wolf and Speyer, Bohn.—Waterproof sail-cloth covers, for railway carriages, ships, tents, &c.

Class 32.—Worsted Yarn and Fabrics.

Bomann, G. O., Zelle.—Dyed zephyr wool
Elberfeld Joint Exhibition, Elberfeld.—Wool, half-wool, cotton, silk, and half-silk goods, stuffs, shawls, non goods, articles of equipment. Twenty-three exhibitors:—
BOCKMUEHL, P. E.—Woollen shawls.
BOHMINGHAUS, W., UND CO.—Zanella.
BREIT, P., UND CO.—Buttons.
CLENKE, H.—Articles for equipment.
DE WERTH UND CO.—Zanella.
DUCKENBERG, J. C.—Turkey-red yarn
EISEN, F., UND HAARHAUS.—Stool and lion goods.
FROHM, A., UND GIER.—Ribbons, cords, and bands.
GEHARDT UND CO.—Silk and half-silk dress stuffs
GLAUS, BAUER, UND STROMVELL.—Silk and half-silk fancy goods.
HERMINGHAUS UND CO.—Zanella.
JUNG UND SIMONS.—Zanella.
KREHMANN UND HAARHAUS.—Stuffs for covering furniture.
LEHACH GIER.—Ribbons, cords, and bands.
MUESEL UND CO.—Silk and half-silk dress stuffs
PETER, D., UND CO.—Zanella.
REIMANN UND MEYER.—Silk and woollen goods
SCHLIEFER UND BAUER.—Printed calicoes.
SCHWITZ, J., UND CO.—Stuffs for covering furniture.
SCHULZ, H. E.—Silk and half-silk dress stuffs.
SCHWABER, A., UND F.—Turkey-red yarn.
SIMONS, J., EISEN.—Woolen and half-woollen dress-stuffs, &c.
WURST, F. W., UND CO.—Lashing.

Klein-Schlatter, C. F., Barmen.—Stuffs of wool and cotton mixed.

Saxon Joint Exhibition of Orleans, Reichenbach, and Zittau.—Three exhibitors:—
MARX, H. F., Seifensdorf.—Orleans.
PRAEDER, C. A., Reichenbach.—Orleans.
SOEMER GEBL., Zittau.—Orleans.

Class 33.—Woollen Yarn and Fabrics.

Delius, C., Aix-la-Chapelle.—Cloths
Gulpen, J. van, Aix-la-Chapelle.—Cloths
Berlin Joint Exhibition of Cloths.—Cloths and woollen goods. Six exhibitors:—
COHM UND FRIEDLAND, Lambach.—Under-jackets, trousers
HERRICH UND MARAWALD, Bielefeld.—Woollen goods.
MAYR, J. F., Bielefeld.—Under-vests, felt cloths.
SABON, G., Kottbus.—Woollen goods
SCHMIDT, M. UND O., Kottbus.—Woollen goods
WASSERLOO, E. F., Gera.—Various woollen goods
Edler, Harry, and Co., Bielefeld.—Nine patent quilts

Elberfeld Joint Exhibition, Elberfeld.—Woollen goods

Feuchtenauer, M., und Sohne, Berlin.—Felt for technical purposes

Greve and Quentin, Osterode, Harz.—Woollen and half-woollen bed and travelling rugs, fine horse-cloths, &c., in Jacquard texture

Greve and Uhl, Osterode, Harz.—Woollen and half-woollen bed, travelling, and horse rugs

Heerklottz and Thurner, Döbeln.—Woven upper leathers

Kantorowicz, R., Bielefeld.—Bags and covers
Oppenheimer, S., Wuppertal.—Felt shoes and boots, and other kinds of felt

Reichsneider, P., Glauchau.—Silk, woollen, cotton bed and travelling rugs

Ruffer, S. B., und Sohn, Leizniz.—Cloths
Schramm, C. F., und Sohn, Hedenheim.—Coloured woollen square covers

Thiel, A., Burscheid.—Half-woollen rugs
Treffz, J. G., und Sohn, Leizniz.—Cloths

Class 34.—Silk and Silk Fabrics.

Edler, H., und Co., Bielefeld.—Covers
Elberfeld Joint Exhibition, Elberfeld.—Silk fabrics

Mex, K., und Sohne, Freiburg in Baden.—Sewing-machine and net underclothing, &c.

Ohme, C. W., Bielefeld.—Silk hat plushes for hats, and two silk hats

Reichsneider, P., Berlin.—Silk bed and travelling rugs

Thiel, A., Burscheid.—Half-silk rugs

Class 35.—Shawls.

Elberfeld Joint Exhibition, Elberfeld.—Shawls

Class 36.—Lace, Net, Embroidery, and Trimmings

Baecher and Leon, Annaburg in Saxony, Berlin.—Trimmings for ladies' dresses, fringes

Elberfeld Joint Exhibition, Elberfeld.—Trimmings

Lehmus, C., und Co., Berlin.—Embroidery in wool, silk, penis

Plauen Joint Exhibition.—650 loom and hand embroideries, white goods, labour, and applique embroideries. Nine exhibitors:—
ALBRECHT UND BÄRGER.
ARTHELET, L.
EISENBERG UND SOHN
GUNTHER, L.
HOPPMANN UND TROGER.
KOHM, G. F.
WERNER, W., UND CO.
WERNER, F. L.
ZACHENBERG, O.

Scharf, E., Bielefeld.—Carriage trimmings and saddlers' girths

Stopp, H., und Co., Ehrenfriedersdorf.—Gold and silver trimmings

Thiele and Steinert, Berlin.—Gold and silver trimmings

Class 37.—Hosiery and Underclothing, and Accessories of Clothing.

Bielefeld Joint Exhibition of Linens and Under-linen Manufactures.—Gentlemen's shirts, shirt fronts. Four exhibitors:—
REINERT OBER
KROCHENBERG UND MOORE
NORDENHEIM UND KORTMANN
OBERMANN UND BADENHOFFER.

Busing, J. H., Bremen.—Sunshades and umbrellas.
 Colla, S., Berlin.—Ladies' and gentlemen's under-
 linen.
 Elkan Gebr., Chemnitz.—Stockings, socks, &c.
 Hertel, H. G., Wittenberg.—Stockings.
 Hüllig, C. G., Gersdorf.—Stockings.
 Mühlhagen, C. P. J., Sohn, Lemseh.—
 Knitted undergarments of wool and half-wool, &c.
 Philippsohn und Leschiner, Berlin.—Shirts,
 collars, and cuffs.
 Rosenthal und Co., Gelpingen.—Stays.
 Teichmann, M., Leobnitz.—Negligés.
 Wolff und Glasgerfeld, Berlin.—Collars and cuffs.
 Zelle Umbrella Factory.—Umbrellas.

Class 38.—Clothing for both Sexes.

Alfermann und Jacobi, Herford.—Suits for
 gentlemen and boys.
 Co for Manufacturing Gentlemen's Clothes
 (T. B. Flick), Berlin.—Coats.
 Dresden Joint Manufactory for Straw Hats
 and Feather, Dresden.—Straw hats.
 Feuchterhauer, M., Sohne, Berlin.—Ladies'
 lasting boots, and all full for technical purposes.
 Flatau und Fuchs, Berlin.—Articles of dress
 for ladies and children.
 Heerklötz und Thurner, Döbeln.—Women
 upper leathers.
 Herz, O., und Co., Frankfurt-on-Maine.—Gen-
 tlemen's and ladies' shoes and boots.
 Kramer und Gratz, Dresden.—Artificial flowers.
 Langenlocher, F., Götting.—Best style of shoes.
 Marthaler, J., Zeitz.—Lenther gloves.
 Mathias und Rumpel, Herford.—Saw coats,
 costumes, and trousers.
 Oppelt, A., Seifensdorf.—Shoes with wooden
 soles.
 Stern, S., Zweibücken.—Panama hats.
 Unger, H., Erfurt.—Ladies' and children's shoes.
 Wilke, C. G., Guben.—Woolen felt hats.
 Wolf, S., Mayence.—Ladies' and gentlemen's boots.

Class 40.—Portable Weapons, and Hunting and Shooting Equipments.

Flurscheim, M., Glangenau.—Sample pistols.
 Ganz und Co., Rastatt.—Different weapons.
 German Metal Cartridge Factory, Carlsruhe.
 Metal cartridges.
 Haenel, O. G., Suhl.—Aims, rifles, and revolvers.
 Leue und Thumpe, Berlin.—Rifles and guns.
 Linden Cap & Clay Goods Manufactory,
 Linden.—Percussion caps.
 Loebe, L., und Co., Oelm.—Revolvers, pistols
 and machines for their combination.
 Mauser Gebr. und Co., Oberndorf.—Revolvers.
 Sauer, J. P., und Sohn, Suhl.—Aims.
 Von Dreyse, N., Schmieda.—Infantry arms, with
 block and patent chamber locks; and other arms
 and ammunition.

Class 41.—Travelling Apparatus and Camp Equipage.

Kantorowicz, —, Berlin.—Bags and rugs.
 Reuther, —, Schwelmitz.—Hanging mats.
 Wolff und Speyer, Berlin.—Waterproof tents,
 carpet bags, bread-bags, watering-buckets.

Class 42.—Toys.

Fischer, Naumann und Co., Himmels.—Doll
 play things and other toys.
 Sonneberg Joint Exhibition, Sonneberg.—
 Toys, porcelain, glass, wood, metal, and hardware;
 wire-work, sewing machines. Thirteen exhibitors:
 Costa und Bohme, Posenbeck.
 Dura, H. und B., Sonneberg.
 Ernst, J., Sonneberg.
 Fressler, C. und O., Sonneberg.
 Eke, B., Untereichum.
 Eke und Greiner, Lachsa.
 Frieschmann Gebr., Sonneberg.
 Heinze, R., Neuhaus, near Sonneberg.
 Lindner, J. O., Sonneberg.
 Lindner und Sonne, L., Sonneberg.
 Müller und Stralsburgers, F., Sonneberg.
 Unger, Schmecke und Co., Gelfenthal.
 Vogel, F., Sonneberg.

Wagner, D. H., und Sohn, Grünhainchen —
 Toys, both for instruction and amusement.

Class 45.—Agricultural Products, not used for Food.

Barth, J., und Sohn, Nuremberg.—Preserved
 hops, Bavarian hops, 1st and 2nd qualities of 1879,
 two tables, showing variations in prices of hops
 from 1793 to 1879.
 Cigarette Factory, "Thessalia," of Horwitz,
 J., Dresden.—Cigarettes and tobacco.
 "Compagnie Laferme" Tobacco and Cigar
 Factory, Dresden.—Cigarettes and tobacco.
 Dyhrenfurth, R. L., Jacobsdorf.—Wool fleeces
 and samples of wool.
 Herz, J., Frankfurt-on-Maine.—Cigars.
 Hess, J. A., Hamburg.—Cigars.
 Kann, J., Jun., Nuremberg.—Hops.
 Keller, H., Sohn, Darmstadt.—Shadow grass and
 clover seed.
 Landfried, P. J., Rauenberg in Baden.—Cigars.
 Le Coq, A., und Co., Darmstadt.—Forest and
 agricultural seeds.
 Loeser und Wolff, Bohn.—Cigars.
 Noll, A., Gießen.—Cigars.
 Osenbrück und Co., Heselungen.—Cigars—roller
 model.
 Poppe, J. F., und Co., Berlin.—Seeds.
 Rees, J., Gaidelen.—Hops.
 Schaefer, B., und Co., Kassel.—Hops.
 Schottler, H. W., Leipzig.—Cigars.
 Thorbecke, A. H., und Co., Mannheim.—Cigars.
 Turkish Cigarette and Tobacco Factory,
 "Sultan," of J. Przedecki, Breslau.—Cigars—
 cigarettes, tobacco, and paper, &c.
 Von Mens, R., Karlsruhe.—Wool fleeces.
 Wenderoth und Harber, Bremen.—Extract of
 tobacco lyo.
 Zierlacks, H., und Co., Hamburg.—Cigars.

Class 46.—Chemical and Pharmaceutical Pro- ducts.

American India-rubber and Celluloid Fac-
 tory, Mannheim.—Articles in strong india-rubber.
 Associated Rheinisch Westphalian Powder
 Mill, Cologne.—Imitations of powder.
 Associated Staßfurt, Leopoldshall, Douglashall
 Salt Industry, Staßfurt.—Raw salt
 and products. Twenty-one exhibitors:—
 ANDRUS und GRIMMERS, Leopoldshall.
 ARAKATA AGR Co., Leopoldshall.
 ASSOCIATED CHEMICAL WORKS, Leopoldshall.
 BERNHARDT, E., Leipzig.—Chemicals.
 CHEMICAL FACTORY, Harburg-Staßfurt.
 COORDIN CHEMICAL FACTORY Co., Leopoldshall.
 DOUGLASHALL, Westeregeln.
 FRIEDRICH'S SMELTING-HOUSE, Leopoldshall.
 HELL und STEINER, Schönebeck.
 KALI und STEIN SALT MINT, Douglashall.
 LINDMANN und Co., Staßfurt.
 LOEPFKE, N. F., Staßfurt.
 MARGATHE, GREEN und Co., Leopoldshall.
 MÜLLER, E., Leopoldshall.
 MEYER und AMMER, Leopoldshall.
 NEFF, PAULWASSER und Co., C., Leopoldshall.
 ROYAL MINERIE IMPERIE, Staßfurt.
 SALT MINE, Neu-Staßfurt.
 STAßFURT CHEMICAL FACTORY, Staßfurt.
 WERSTENHAGEN und Co., Hettlingen.
 ZIMMER und Co., Staßfurt.
 Baden Anilin und Soda Fabrik, Stuttgart.—
 Aniline colours.
 Baerle, Van, und Spönnagel, Berlin.—Water-
 glass, its raw materials, and articles made from it.
 Bruckner, Lampe und Co., Leipzig.—Drugs,
 cut and in powder.
 Brunswick Quinine Works, Brunswick.—
 Quinine, quinine compounds.
 Chemical Factory, Berlin.—Chemical products.
 Devrient, J. E., Zwickau.—Chemicals and artists'
 colours.
 Feilner, J. B., und Grienwaldt, Bremen.—
 Collodion, gelatin for photographic purposes.
 Gademann und Co., Schweinfurt.—Colours.
 Gautsch, J., Munich.—Wax goods.

Haermann and Reimer, Holzminden.—Vanilin, Balchotropin, &c.
 Heyden, Dr. F. von, Dresden.—Salicylic acid and preparations.
 Heyl Gebr. und Co., Charlottenburg.—Chemical colours.
 Kitzingen Colour Factory, Kitzingen.—Pflüg's colouring stock.
 Koerber und Co., Mannheim.—Oils, fats, and laces.
 Merck, E., Darmstadt.—Chemical preparations.
 Mühle, H. L., and Co., Hamburg.—Tram oil.
 Munch and Rieder, Augsburg.—Wax candles, &c.
 Nuremberg Ultramarine Works, Nuremberg.—Ultramarine and its products.
 Oppel, C. and Co., Friedrichshall.—Friedrichshall filter waxes.
 Pfannenschmidt und Kruger, Danzig.—Amber, lac, &c.
 Piedboeuf, J. P., Düsseldorf.—Ultramarine.
 Sachesse, E. and Co., Leipzig.—Etherised oils and essences.
 Schuchardt, Dr. T., Götting.—Chemical technical products.
 Schweinfurt.—Ultramarine.
 Von Watz's Erben, Cassel.—Ultramarine.
 Witte, Dr. F., Rosack.—Dry rennet for whey.
 Wohlfahrt, A., Leipzig.—Colours.
 Ziffer, L., Berlin.—Butter and cheese colouring and preserving powder, cheese rennet extract.

Class 48.—Leather and Skins.

Doerr und Renhart, Worms.—Calves' leather, lacquered, waxed.
 Freudenberg, K., Weinheim.—Leather, lacquered, waxed; and goats' leather.
 Holznering und Co., Frankfurt-on-Maine.—Leather, and goods made of it.
 Heyl, K., Werns.—Calves' leather, lacquered, waxed, and the grain cut.
 Leather-work Co., Munich.—Lacquered hides, waxed calfskins, yellow and brown pigskins, &c.
 Mayer, Michel, und Deninger, Mayence.—Leather of various kinds.
 Schill, S., Kettlingen.—Waxed calves' leather.
 Schaller, G., Lehr in Baden.—Morocco skins.
 Waelin und Huber, Lehr.—Morocco and sheep's leather.
 Wamsey, D., Hamburg.—Lacquered and waxed calfskins.

Class 50.—Apparatus and Processes used in Agricultural Works, and in Works for the Preparation of Food.

Bodenheim, M. B., Cassel.—Beer barrels.
 Boldt und Vogel, Hamburg.—Beer-cooling and fermenting apparatus, and other machinery.
 Fritzner, N., Berlin.—Mechanical bottle locks.
 Ganz und Co., Raitzer.—Looms, &c.
 Hallstrom, F., Nienburg.—Distilling and rectifying apparatus.
 Hirschberg, L., Berlin.—Bottle-corking, filling, and washing machines.
 Kropff, O., Nordhausen.—Ice machines, air-coolers.
 Nagel und Kaemp, Hamburg.—Centrifugal flour-dressing machine, desiccator, and roller-mills.
 Neubecker, A., Offenbach.—Ice chest and milk-cooler.
 North German Ice Works Co., Berlin.—Ice chests and freezing-machines.
 Schomburg, H. and Sohne, Berlin.—Four porcelain millstones, porcelain insulators, &c.
 Vass und Littmann, Halle.—Ice machine.

Class 51.—Apparatus used in Chemistry, Pharmacy, and Tanning.

Flurschohm, M., Guggenau.—Chemists' double mill for powders, three juice pressers.
 Ziemann, A., Stuttgart.—Vacuum apparatus for pharmaceutical laboratories.

Class 52.—Machines and Apparatus in general.

Blanke, E. A. B., Frankfurt-on-Oder.—India-rubber rollers, hoses, &c.
 Boldt und Vogel, Hamburg.—Rotating pumps, ventilators, cane vices.

Dreyer, Rosenkranz und Droop, Hannover.—Fittings of steam boilers, water-pipes.
 Elberfeld Joint Exhibition, Elberfeld.—Articles of equipment.
 Grether und Co., Freiburg in Baden.—Hose joints.
 Gruson, H., Buckau.—Draw-beams and hydraulic jacks.
 Hall, C. H., Berlin.—Pulsometers.
 Saxon Machine Factory, at Chemnitz.—Steam machine, implement machines, spinning and weaving machines.
 Walther und Co., Kalk-on-the-Rhine.—Safety steam boiler, Root's system.

Class 53.—Machine Tools.

Boldt und Vogel, Hamburg.—Bread and bean cutting-machine, must-honing, knife-cleaning, washing and wringing machines, and mangle, &c.
 Flurschohm, M., Guggenau.—Parallel vices, with auger and plane contrivance, shaping machine.
 Oppenheim, S. and Co., Hamburg.—Emery goods.
 Rischmeyer, H. H. and Co., Hamburg.—Grind-stones and grinding apparatus.
 Saxon Machine Factory, Chemnitz.—Circular and chain saw, lathe, planing, cutting-machine.
 Saxon Machine Factory, Kappel.—Wood elaborating machines of different kinds.
 Wieland, J. F., Hamburg.—Veneer and large sawing-machines.

Class 54.—Apparatus and Processes used in Spinning and Roving-making.

Berg, E. F. W., Berlin.—Spinning-machine, implements for ropes and tow making, rolling-machine.
 Brucker und Zinke, Kottin.—English safety quick-mangle.
 Saxon Machine Factory, Chemnitz.—Different machines.

Class 56.—Apparatus and Processes for Sewing and for Making-up Clothing.

Brause und Co., Aix-la-Chapelle.—Samples of needles.
 Claes und Plentje, Muhlhausen in Thuringia.—Knitting-machines.
 Cramer, W., Saalfeld.—Sewing-machines.
 Frankfurt Sewing-Machine Factory, Frankfurt-on-Maine.—Sewing-machines.
 Grahl und Hoeft, Dresden.—Patent felt and straw hat press.
 Grimme, Natalis und Co., Brunswick.—Sewing-machines.
 Jipf und Langsdorf, Ohernd.—Mott-air machines for working sewing-machines.
 Koch, H. and Co., Bielefeld.—Sewing-machines.
 Saxon Machine Factory, Chemnitz.—Buck-skin loom, jacquard-machine, stamping-machine.
 Schmidt und Hengstenberg, Bielefeld.—Two sewing-machines.
 Nitsch, O. R., Osterode.—Wringing-machines.
 Nothmann Gebr., Berlin.—Sewing-machines.
 Wertheim, Joseph, Frankfurt-on-Maine.—Sewing-machines.

Class 57.—Apparatus and Processes used in the Manufacture of Furniture and Objects for Dwellings.

Grapow, G. D. F., Hamburg.—Hatching-machines.
 Schuster, H. A., Bad Oeynhausen.—Hand-worked press for ridge tiles.

Class 58.—Apparatus and Processes used in Paper-making, Dyeing, and Printing.

Maul, W., Jun., Dresden.—Two machines and three patterns.
 Swiderski, P., Leipzig.—Steam printing presses.
 Wollmer, W., Berlin.—Type, finished and unfinished.

Class 60.—Carriages and Wheelwrights' Work.

Blumhardt, C., Simonschaus.—Iron wheelbarrows.
 Ernst, T., Berlin.—Carriage.
 Stein, J., Berlin.—Shake carriage.

Class 61.—Harness and Saddlery.

Alves Gebr., Rehn.—Whips and sticks.
 German Co. for Shoeing Materials, Berlin.—
 Machine-forged horse nails.
 Martens und Co., Stralund.—Patent harness
 Weidenhammer, G. M. Aglasthausen.—Whips.
 Wulm und Sohn, Hamburg.—Driving harness.

Class 62.—Railway Apparatus.

Ganz und Co., Ratibol.—Different wheels
 Iron and Steel Works, Osnabrück.—Railway
 implements and plans
 Krupp, F., Essen.—Materials for railway use—axes,
 springs, wheels; locomotive parts, &c., of steel,
 steel for tools.
 Saxon Machine Factory, of Chemnitz, Chemnitz
 —Different parts of locomotive engines

Class 63.—Telegraphic Apparatus and Processes.

Atzberger, A., Munich.—Hotel telegraph.
 Naglo Gebr., Rehn.—Telegraph apparatus.
 Schomburg, H., und Sohne, Berlin.—80 porce-
 lan insulators.

Class 64.—Apparatus and Processes of Civil Engineering, Public Works, and Architecture.

Alsen, O. F., und Sohn, Itzehoe.—Six casks of
 Portland cement
 Pege, W., and Gotthard, Frankfurt-on-Maine
 —Portland cement, basins model, &c
 Gruson, H., Buelan.—Stone-breaker
 Iron Industry & Bridge Building Co., Duis-
 burg.—Photographic and pictorial explanations of
 bridges, &c.
 Lamberty, Servas und Co., Ebrang.—Coloured
 floor and footpath tiles.
 Lentze, W., Embesk.—Asphalt, for roofs; and roof
 model.
 Mannheim Portland Cement Factory (J. F.
 Eysenckel).—Portland cement and samples
 Prusing, Flanck und Co., Holtsdamen.—Cement
 samples and apparatus.
 Radeburg und Moller, Hamburg.—Three rolls
 of asphalt, for roofs.
 Royal Prussian Examiners' Office for
 Building Materials, Berlin.—Different appa-
 ratus, implements, tests as to solidity.
 Schifferdecker und Sohne, Heidelberg.—Port-
 land cement
 Stute, J. A. C., Bremen.—Tiles, for floors; lat-
 tiles, for roofs, of Soling sandstone
 Toepfer, Gravit und Co., Stettin.—Portland
 cement, "stern."
 Villeroi und Boch, Mettlach.—Tiles and archi-
 tectural ornaments

Class 65.—Navigation and Life-saving.

Bucher, M., Leipzig.—Fire extinguishers.
 Flurscheim, M., Carguenau.—Two-plated Baumstork
 patent rescuing apparatus.
 Frohlich und Wolff, Cassel.—Margarets, fire-
 engines, and articles for purposes of rescuing.
 Unseld, J. F., Kempten.—Two escape-ladders.

Class 67.—Cereals, Farinaceous Products, and Products derived from them.

Bartsch, M., Dresden.—Macaroni and sago.
 Brenner und Franke, Leobschütz.—Malt.
 Hundhausen, K., Mumm in W.—Wheat starch,
 gluten, and powder.
 Lobeck und Co., Dresden.—Macaroni and vermi-
 celli, chocolate and cocoa powder, cracknels and
 biscuits.
 North, F., Ebfurt.—Macaroni and vermicelli.
 Schomburg, H., und Sohne, Berlin.—Flour
 produce from porcelain millstones.

Class 69.—Fatty Substances used as Food. Milk and Eggs.

Nagel, Dr. W., Munich.—Milk preserves.

Class 70.—Meat and Fish.

Ehrsmi, C., Labock.—Preserved meat.

Fischer und Schmitt, Höchst-on-Maine.—Gela-

tine
 Jannasch, H., sen., Duenburg a. S.—Patent pre-
 serving salt, preserved meat and fruits.
 Mulsow, L., und Co., Hamburg.—Preserved meat,
 hams, jellies, vegetables, &c.
 Schörcke, A., Gerhitz.—Vegetable and meat pre-
 serves, glass and
 Walkhoff, J. H. G., Hamburg.—Preserved fish,
 haddies, sardines, herrings, &c.

Class 71.—Vegetables and Fruit.

Ehrsmi, C., Labock.—Preserved vegetables, fruits
 Lefmann, R., und Sohn, Hamburg.—Different
 kinds of fruit in glasses.
 Mulsow, L., und Co., Hamburg.—Preserved meat.
 Nagel, Dr. W., Munich.—Preserved fruit, milk,
 and vegetables.
 Schörcke, A., Gerhitz.—Preserved meat
 Stenhardt, J. H. W., Bremen.—Preserved vege-
 tables and fruits.

Class 72.—Condiments and Stimulants, Sugar and Confectionery.

Bollmann, E. und M., Bremen.—Vinegar of every
 kind, and liquors
 Hauswaldt, J. G., Neustadt.—Chocolaty meal.
 Knigge, H., Heilfeld.—Chocolate and cocoa
 Laugen, J. J., und Sohne, Cologne.—Lump
 sugar
 Lobeck und Co., Dresden.—Chocolate and easily
 soluble cocoa-powder.
 Wolf, W., Speyer.—Chocolate of every kind for
 eating and cooking.
 Württemberg Chocory Factory, Stuttgart.—
 Chocory.

Class 73.—Fermented Drinks.

Beck und Co., Reims.—Beer.
 Bohemian Brewery, Berlin.—German imperial
 and crown beer
 Bollmann, E. und M., Bremen.—Liquors.
 Bornmüller, A., Arnstadt.—Aromatic cordial
 liquor of Taurinian wood herbs.
 Brewery Co., "Moabit," Berlin.—Bottled beer.
 Drouven, J., und Co., Coblenz.—Liquors.
 Ehrhardt Gebr., Schillingen.—Bottled beer.
 Eisenmann, R., Berlin.—Spirits.
 Flensburg Brewery Co., Flensburg.—Light and
 dark Bavarian beer (stock beer)
 Geissel, L., Neustadt a. H.—Bavarian export beer.
 German Associated Wine Exhibition.—
 Thirty-four exhibitors
 Bismarck, H., Mühlheim.
 Biele, F. P., Dadeschitz.
 Deubard und Co., Koblenz
 Justich und Co., Hildesheim
 Ewald und Co., Hildesheim
 First Gebr. und Sohne, Frankfurt-on-Maine.
 Fiedler, H. J., Leich.
 Graft, O., Traubach
 Henkel und Co., Mayence
 Homburg und Co., Hildesheim-on-Maine.
 Hosen Gebr., Gersheim.
 Hoyer, C., Rappelsweiler in Alsenz.
 Hütten, J., Saug.
 Jorow, L. A., Dadeschitz
 Jung und Co., Hildesheim
 Keimann, F., Koblenz.
 Kessler, G. C., und Co., Eschwege, Württemberg.
 Kuffner, C. A., und Co., Mayence
 Labbe, K., Neustadt-on-the-Rhine.
 Leno, F. J., Würzburg.
 Langemann und Sohne, Worms
 Lautner und Sohn, G. Mayence.
 Mettenich-Wittenberg, Prince R., Johannsburg
 Meyer und Gumbach, Hagen-on-the-Rhine.
 Ottmann, J., Würzburg.
 Oppmann, M., Würzburg.
 Oes und Wenz, Westhofen, Hess.
 Rheingau-Schilling Wine Factory, Schillingen.
 Röhrenstein, B., Wiesbaden
 Schilling, E. A., Würzburg.
 Stock, J., und Sohn, Kronach.
 Traub, F., Leich-on-the-Rhine.
 Valentin, P. J., Worms-on-the-Rhine
 Vornberger, J. M., Würzburg.

Gilke, J. A., Berlin.—Berlin curaway grain cereal and liquors.
 Hanoverian Brewery Co., Hanover.—Light and dark beer, for export.
 Helmers, C. F. W., Hamburg.—Corn liquors, emulsions, and vinegars.
 Hildebrand, J., Plungstadt.—Light and dark export beer, after the Vienna brewing.

De Leonardi, L., Chiavari-Bari.—Candles.
De Ameglio, F., Udine.—Samples of ceresin.
De Angelis, & Co., Messina.—Essences.
Di Stefano, G., Catania.—Chemical products.
Erba, Comm. C., Milan.—Coffee extract, magnesia, digestive liqueurs, tamarinds, medicines.
Formigini & Levi, Modena.—Iron bed varnishes.
Gastardo & Leorio, Catania.—Almond and castor oils.
Guzzardi, L. M., Catania.—Chemical products.
Impresa Pubblici Macelli, Florence.—Albumen and glue.
Laboratorio Concentramenti Sughiella, Fabricazione Tabacchi al Rio, Parco, Turin.—Extract from tobacco.
Leonardi, Prof. P., Venice.—Medicinal gelatine.
Luciano, G., Turin.—Essence of mint.
Malvezzi, G., & Co., Venice.—Starch of wheat, starch of maize.
Mazzurana & Co., Bari.—Soap.
Meyer, I., Genoa.—Common soaps.
Millioni, L., Treviso.—Pharmaceutical products.
Mugelli, A., & Co., Messina.—Essences.
Nardi, C., Leghorn.—Starch of wheat, French and English manufacture.
Oates, G., & Co., Messina.—Lemon and bergamot essences.
Pari, G., Florence.—Soaps.
Ponsetti, A., Turin.—Lozenges.
Porciani, S., Catania.—Pharmaceutical products.
Rattusa Fratelli, Catania.—Extract of lime.
Salomone, A., Mondovì.—Wine to reduce fever.
Spadaro Grassi, Cav. Placido, Catania.—Chemical products.
Specavacca, de Gioia & Co., Bari.—Sulphuric oil.
Tabernacoli, G., Bari.—Hair dye.
Ulrich D., Turin.—Aromatic essences and perfumes.
Zamboni, G., Verona.—Fragrant Perfracta.
Zamboni, Dr. G. B., Venice.—Pharmaceutical products.
Zuccarello, M., Catania.—Chemical products.

Class 47.—Chemical Processes for Bleaching, Dyeing, Printing, and Dressing.

Impresa Pubblici Macelli, Florence.—Albumen, first and second qualities (extracted from blood).
Massee, Solari & Co., Genoa.—Albumen of blood.

Class 48.—Leather and Skins.

Baluffi, Niccolò, & Co., Ancona.—Soles, valones, white and black leather, cow-hides.
Biondi & Figli, Milan.—Manufactured leather.
Nerizzano, S. General, Genoa.—Leather for saddle, soles of cow-hide, sheep and goat rough hide.
Pivato, G., Venice.—Red and white leather for saddlery, soles and Morocco for lining purposes.

Pracconica, G., Messina.—Soles of Sicilian leather.
Sangiorzi Fratelli, Ivrea.—Leather.
Zamboni, A., Verona.—Leather for soles.
Zamboni, G., Verona.—Leather tanned with valonea.

Class 49.—Agricultural Implements and Processes used in the Cultivation of Fields and Forests

Cuminetti, Cav. F., Albino.—Stones to sharpen scythe.
Gavazzi, F., Pradellana.—Stones for sharpening.
Maffia, A. & V., de Filippo, Naples.—Model of reaper and mower.

Class 50.—Machines and Apparatus in general.

Borneti, G., Brescia.—Bands for machines.
De Luca, C., Naples.—Quecks for machines.
De Maria, S., Naples.—Description of an instrument to indicate the velocity of machinery.
Gugeri, G., Leghio, Como.—Wire netting.
Ulrich, D., Turin.—Asbestos ropes.

Class 51.—Apparatus and Processes used in Weaving.

Negri & Francou, Milan.—Cards for weaving.

Class 52.—Apparatus and Processes used in Paper-making, Dyeing, and Printing.

Bonetti, Primo, Modena.—Speculum of raga.

Class 53.—Machines, Instruments, and Processes used in Various Works.

Bertea, S., Turin.—Machines for making confectionery.
Mino, G. B., & Figli, Alexandria.—Machines and tools for the manufacture of goldsmiths' ware.
Spina, G., Sannicandro, Bari.—

Class 54.—Carriages and Wheelwrights' Work.

Macchi Fratelli, Varese.—A carriage cab landauletto (four wheels).
Savetieri, G., Palermo.—Carriage lamps.
Trinca, E., Pistoia.—Four-wheeled vehicle—"Cabin-milord".

Class 55.—Harness and Saddlery.

Bornati, G., Brescia.—Harness and saddlery.
Zalotti, G. B., Brescia.—Harness.

Class 56.—Telegraphic Apparatus and Processes.

Serra Capri, Cav. Prof., Rome.—Apparatus for telegraphic communication, for the use of non-professional operators.

Class 57.—Apparatus and Processes of Civil Engineering, Public Works, and Architecture.

Albanese, A., & Co., Palermo.—Enamelled tiles.
Buzzi, L. G., Milan.—Divan, two seats, and table with grates and birds of carved stone.
Capparoni Fratelli, Rome.—Marble mantelpiece.
Croze, I. O., Vittorio.—Tiles for flooring.
Galli, R., Milan.—Table and chairs for garden.
Ottimo, Cav. G., Turin.—Ornaments for roofs and gutters.
Ravera, Rosario, & Co., Catania.—Cement tiles for pavements.
Secco, A., Bassano.—Polished marbles for pavements.
Tombini, A., Rome.—Cement bricks for pavements.
Udney, J., Catania.—Marble slabs for Mr. Udney's own quarters.
Weiller, J., & Co., Leghorn.—Monumental mason's work.

Class 58.—Navigation and Life-saving.

De Maria, S., Naples.—Drawing of a screw rudder, patented as a method of propelling and steering vessels.
Fissil, N., & Fratelli, Venice.—A complete gondola, with tent, gondolier, and small boats.

Class 59.—Materials and Apparatus for Military Purposes.

Favero, P., Modugno.—Military appointments and metal cartridges.

Ministry of the Royal Marine, Rome
A cannon 75 B R., with self-acting carriage.
A millimetre, with 31 chambers, carriage and accessories.

An instrument to gauge projectiles, compasses to gauge the size of cylindrical shells.
Bottolo's complete indicating system.
Charge No. 1, Bottolo's segment system.
Charge No. 1, Parodi's segment system.
De Guesnet's complete indicating system.
Fusors for perforating shells of old iron, hardened by bronze.

Fusors of bronze by Dazdicheli's time system, Tand II No. 1, as above, Bottolo's segment system.
Ricchi's system.

Class 67.—Cereals, Farinaceous Products, and Products derived from them.

Arrighetti, M., Florence.—Macaroni and pastas.
Blochi, A., Leghorn.—Samples of pastes.
Ferrari, R., e Fratello, Modena.—Four qualities of rice.

Gentili, F., Pisa.—Alimentary pastes.
Ghigliotti Fratelli, Genoa.—Alimentary pastes.
Malinvern, Cav. S., Vercelli.—Rice and flour.
Mimbelli, G., Leghorn.—Wheat.

Montaldo Fratelli, Genoa.—Alimentary pastes.
Norris, A. P., Manila.—Chinese, Novace, and giant rice.

Pansini e Gallo, Molfetta.—Alimentary pastes.
Pantanello, M., Rome.—Alimentary pastes.
Poggiali Fratelli, Bologna.—Alimentary pastes.

Racchard, V., Turin.—Alimentary pastes.
Righi, Ing. P., Modena.—Rice samples.
Russo Fratelli, Torino Annunziata.—Alimentary pastes.

Subbia, A., e Co., Bari.—Chicken's peas.
Valdonio, O., Piacenza.—Alimentary pastes.

Class 68.—Bread and Pastry.

Cristofori, T., Vicenza.—Cake unaffected by change of season.

Class 69.—Fatty Substances used as Food, Milk and Eggs.

Agostini, Cav. Conte A., Pisa.—Olive oil.
Arrighetti, M., Florence.—Olive oil.
Azzona Fratelli e Co., Bari.—Olive oil.

Capocchiano, F., Molfetta.—Olive oil.
Cioni, L., Florence.—Olive oil.
Compagna, Baron F., Corigliano—Calabria.—Olive oil.

De Angelis, A., Bari.—Olive oil.
De Rosa, G., Naples.—Olive oil.
Donesand, Fratelli, Porto Maurizio.—Fine oils.

Ferrari, F., Cologno.—Cheese and butter.
Francesconi, O., Lucina.—Oil.
Gabrielli, G., Siena.—Oil.

Giacca, A., Pisa.—Olive oil, from his own farm of Buti.
Gusceffa, Cav. E., Milan.—Cheese and butter.
Italian Condensed Milk Co., Milan.—Condensed milk.

Laborel Melini, L., Florence.—Olive oil.
Longo, D., Bari.—Olive oil.
Mimbelli, G., Leghorn.—Olive oil.

Moderato, G., Milan.—Cheese and butter.
Rizzi, N., e Co., Milan.—Butter and cheese.
Tassinigo, Comm. B., Rome.—Oil and sheep's milk, cheese.

Class 70.—Meat and Fish.

Arrighetti, M., Florence.—Florentine hams and sausages.

Bassi, M., Bologna.—Italian sausages.
Bellentani, G., Modena.—Italian sausages.
Benassati, R., Modena.—Salt meats.

Bordoni, N., Bologna.—Italian sausages.
Colombini, G., Modena.—Italian ham and other provisions in boxes.

Colombini, G., Bologna.—Italian sausages.
Del Col e Co., Milano.—Alimentary substances.
De Rosa, G., Naples.—Small salted pigs, in boxes; smoked chickens and meat.

Falcone, L., Turin.—Smoked sausage of 1877, and fresh sausage.

Ferrari, A., Ferrara.—Sausage made with Marsala wine.

Frigieri Fratelli, Modena.—"Zampone," "Capello da Prete," "Mortadella," and ham.

Frigieri, G., Modena.—Ham, "Mortadella," sausage, and other provisions, in boxes.

Fusari, A., Alavilla.—Ham.
Gibaldi, P., Turin.—Raw sausages.
Grofoli, F., Modena.—Salt meats.

Marretta Fratelli, Palermo.—Preserved meat.
Mazzoneschi Fratelli, Spoleto.—Cannichino.
Molinari Fratelli, Modena.—"Mortadella."

Sangiovanni, Dr. R., Rome.—Preserved meat.
Societa Bolognese, Bologna.—"Mortadella" and salt meats, in boxes.

Taccani, P., Bologna.—Italian sausages.
Valdomo, C., Piacenza.—Sausages, bacon, lard.
Zappoli Fratelli, Bologna.—"Mortadella" and sausages.

Class 71.—Vegetables and Fruit.

Amato Fratelli, Catania.—Fruits preserved in jars.

Brancato, O., Catania.—Dry fruits.
Bornia Fratelli, Treviso.—Preserved vegetables.
Del Col e Co., Milano.—Pickles (aspets).

Marretta Fratelli, Palermo.—Preserved vegetables.
Maurano, F., Castellabate.—Dry figs.

Mazzoneschi Fratelli, Spoleto.—Preserved vegetables.
Milella, M. di Lorenzo, Bari.—Dry figs.

Sangiovanni, Dr. R., Rome.—Preserved vegetables.
Tafari, G., Cosenza.—Dry figs.

Ulrich, D., Turin.—Aromatic spices for the manufacture of Vermouth wine.

Class 72.—Condiments and Stimulants, Sugar and Confectionery.

Amato Fratelli, Catania.—Liquors and candied fruits.

Armenise, Pier D., Bari.—Liquors and confectionery.
Ascione, S., Naples.—Liquors, fruits, with marsh-mallows, chocolate, &c.

Audifredi e Co., Turin.—Liquors.
Ballor, G., Turin.—Liquors.
Barattucci, G., Olmeto.—Liquors.

Barone, G., e Figlio, Trani.—Liquors.
Baudino, E., Turin.—Liquors, olive "Pio IX."
Bellardi, Domenico e Co., Turin.—Liquors.

Benedetti, B., Rome.—Liquors.
Bergia, O., Turin.—Liquors, rhubarb oil.
Berlese, S., Turin.—Liquors and confectionery.

Bertello, L., Biella.—Liquors.
Bisio, L., Samsco.—Liquors.
Bornia Fratelli, Treviso.—Vinegars and jam.

Bossio, M. C., Milan.—Elixir "Calatini."
Brancato Fratelli, Milan.—Fernet Branca.
Brenna, Santo, Como.—Liquors.

Bronchelli, L., Pisa.—Liquors.
Carofiglio, G., Bari.—Liquors.
Cattabriga, M., Bari.—Liquors, vinegar.

Cerami, Principe, Catania.—Vinegar.
Carlo, C., Udine.—Liquor "Humilité I."
Cerrutti Fratelli, Genoa.—Liquors.

Chinaglia, V., Venetia.—Chai treuse.
Cito, F., e Co., Naples.—Liquors.
Clerici, C., Milan.—Liquors, Fernet Branca.

Cocchi, F., Reggio-Emilia.—Liquors.
Colina, A., Bologna.—Bianco Portino.
Colombini, G., Modena.—Balsamic vinegar.

D'Alessandro, B., Benevento.—"Torroni."
Dal Medico, B., Padua.—Liquors.
De Gioja Fratelli, Bari.—Trinitato.

De Sona, B., Naples.—Liquor, Bitter Melbourne.
De Simon, S., Naples.—Alcohol.
Eboli, N., Bari.—Liquor.

Fabli, G., Rome.—Fernet liqueur.
Fogliano, D., Rudugino.—Liquors.
Franceschelli, A., Piacenza.—Liquors.

Freschi, A., Cremona.—"Torroni."
Frigieri, G., Modena.—Balsamic vinegar.
Galli, A., e Co., Soriano.—Liquors.

Garetti, G., Chivasso-Turin.—Liquors.
Gay e Roveri, Turin.—Chocolate à la Santé.
Genta, G., Turin.—Liquors.

Ghedini, G. Ferrara.—Liqueurs
 Ghizzoni, F. Piacenza.—Liqueurs, Elvir Catroli
 Giacobini, C. Faenza.—Liqueurs
 Giannoli, Cav. L. C. A.—Ugonne rum, brandy.
 Giusti, G. Modena.—Balsamo vinegar
 Giusti, T. Modena.—Vinegar
 Giustetti, I. Turin.—Liquors
 Grassi, G. Modena.—Liquors
 Gregorini, G. Vicenza.—Brandy and spirit of wine.
 Guerrina, G. Padua.—Euganeo bitter.
 Lesca, G. Turin.—Liquors
 Loreti, A. & C. Roma.—Confectionery
 Mainero, E. Turin.—Liquors
 Malvezzi Fratelli, Rovigo.—Liquors
 Manzoni, A. Naples.—Liquors
 Marassi e Anselmi, Naples.—Spirit of granone (maize)
 Marretti Fratelli, Palermo.—Fruits in syrup.
 Martini, Sola e Co. Turin.—Liquors
 Masserano, P. Biella.—Liquors
 Mazzoneschi Fratelli, Asolo.—Apricot jam, cherries glicebate.
 Metzger Fratelli, Asti.—Reni
 Millipoli, L. Treviso.—Spirit of maraschino, Rosolio
 Kischwase
 Molinari Fratelli, Modena.—Balsam of vinegar.
 Monbello C. Asti.—Bour and liquors
 Montini, P. Palermo.—Liquors

Class 35.—Shawls.

Kiru-Kosho Kuwaisha and Akiyama, T., Tokyo.—Silk shawls.
 Shino, S., Yokohama.—Silk shawls, embroidered.

Class 36.—Lace, Net, Embroidery, and Trimmings.

Midzushima, S., Tokyo.—Silk embroidery, shawl, and table cover.

Class 37.—Hosiery and Underclothing, and Accessories of Clothing.

Arai, K., Wakana.—Walking-sticks.
 Kiru-Kosho Kuwaisha and Akiyama, T., Tokyo.—Fancy neckties, umbrellas, parasols, &c.
 Nakai, S., Osaka.—Fancy blinds of nanboku.
 Shino, S., Yokohama.—Silk handkerchiefs and carvings of crapes.
 Teuji, G., Ohmi.—Walking-sticks.
 Yasuda, Y., Osaka.—Fans, not folding.

Class 38.—Clothing for both Sexes.

Kiru-Kosho Kuwaisha and Akiyama, T., Tokyo.—Jensamen's nightgown.
 Shino, S., Yokohama.—Silk gowns, for lady.

Class 41.—Travelling Apparatus and Camp Equipage.

Kiru-Kosho Kuwaisha and Akiyama, T., Tokyo.—Travelling caps and trunks made of willow bark and bamboo.

Class 42.—Toys.

Hayaashi, T., Osaka.—Playing balls and dolls.
 Kiru-Kosho Kuwaisha and Akiyama, T., Tokyo.—Dolls, playing balls, painted pictures, &c.
 Wakano, S., Osaka.—Kites.

Class 43.—Products of the Cultivation of Forests and of the Trades appertaining thereto.

Akagawa, K., Osaka.—Ropes made of shure, a kind of palm-tree.
 Kaitakushi, Department for the Colonization of Islands of Yezo, Tokyo.—Specimens of different kinds of forest trees in the island of Yezo.
 Kiru-Kosho Kuwaisha and Akiyama, T., Tokyo.—Ropes of shure and the bark of shure.
 Momoshu, Department of Public Instruction, Tokyo.—Specimens of different forest trees.
 Sanrin Kiyoku, Bureau of Forests, Tokyo.—Specimens of forest trees.

Class 44.—Products of Hunting, Shooting, Fishing, and Spontaneous Products.

Kogio Shokuwa, Tokyo.—Dried mushrooms.

Class 45.—Agricultural Products not used for Food.

Kokaji, K., Shikoku.—Tobacco leaves.
 Kojima, G., Yokohama.—Tobacco leaves.
 Kuwanokioku, Board of Agriculture, Tokyo.—Tobacco leaves, and cocoons.

Kogio Shokuwai, Tokio.—Vegetable wax.
Nakamura, K., Shiga-ken.—Raw vegetable wax.
Noda, T., Tokio.—Cigars.
Tachibana, N., Tokio.—Cigarettes.

Class 46.—Chemical and Pharmaceutical Products.

Government Mint, Osaka.—Specimens of acid—nitric, chloric, and sulphuric.
Government Printing Office, Tokio.—Soaps and likens.
Kiru-Kosho Kuwasha and Akiyama, T., Tokio.—Japanese candles.
Kogio Shokuwai, Tokio.—Peppermint.
Wooyesugi, S., Osaka.—Specimens of glue.

Class 47.—Chemical Processes for Bleaching, Dyeing, Printing, and Dressing.

Kiru-Kosho Kuwasha and Akiyama, T., Tokio.—Yuzen, or the silk fabrics, on which objects are produced by dyeing.

Class 67.—Cereals, Farinaceous Products, and Products derived from them.

Asakusa Seimayjo, Tokio.—Rice, cleaned and uncleaned.
Idzumi, R., Osaka.—Seaweed.
Kawakita, K., Osaka.—Edible seaweed.
Kogio Shokuwai, Tokio.
Kanton, a kind of food prepared from edible seaweed.
Asakuseneri, a kind of food prepared from edible seaweed.
Fu, a kind of paste made of wheat-flour.
Kuwanno Kiyoku, Board of Agriculture, Tokio.—Specimens of seeds of various kinds of rice, beans, peas, Indian corn, &c.
Mitsui and Co., Tokio.—Specimens of rice.
Sanbensha, Tokio.—Specimen of vermicelli.
Shimizu, K., Osaka.—Kuzu (Acacia derived from the root of the plant called kuzu).

Class 70.—Meat and Fish.

Kaitakushi, Department for the Colonisation of the Island of Yesso, Tokio.—Preserved venison, preserved salmon and oyster, dried codfish.
Kogio Shokuwai, Tokio.—Dried cuttlefish and shellfish, shrimps-sushi, &c.

Kuwanno Kiyoku, Board of Agriculture, Tokio.—Sardines, preserved in oil.
Saito, M., Tokio.—Sardines, preserved in oil.

Class 71.—Vegetables and Fruit.

Kogio Shokuwai, Tokio.—Dried chestnuts; dried ginsan—small white nuts, being the fruits of the tree reho (*Salsola adumifolia*).

Class 72.—Condiments and Stimulants, Sugar and Confectionary.

Hayashi, Y., Bizen.—Preserved cakes.
Idzumi, I., Tokio.—Black tea.
Kanbayashi, K., and Tagawa, K., Tokio.—Black tea.
Kanbayashi and Okura, Tokio.—Black tea.
Kida, Z., Ohmi.—Black and green tea.
Kiru-Kosho Kuwasha and Akiyama, T., Tokio.—Japanese bonbons.
Kogio Shokuwai, Tokio.—Soy.
Konkon-sha, Kochi.—Black teas.
Kuwanno Kiyoku, Board of Agriculture, Tokio.—Black and green tea.
Sakai, G., Osaka.—Sugar candy.
Sasai, H., Tokio.—Black teas.
Seiko-sha, Tokuoka.—Black teas.
Shiranuhi-sha Kuwamoto.—Black teas.
Yamamoto, M., Shiga.—Black teas.

Class 73.—Fermented Drinks.

Kogio Shokuwai, Tokio.—Shochu, or the liquor made of rice.

Classes 76, 77, 78, 79.

Kuwanno Kiyoku, Board of Agriculture.—Seeds of various kinds of flower plants, vegetables, fruits, trees, and forest trees.

Class 82.—Mining and Metallurgy.

Government School of Fine Arts, Tokio.—Specimens of marbles used for columns, mantelpieces, and all purposes of statuary.

Bond, M. A. (now Hickisson), London.—Marking ink and appliances.

Bowman, C., London.—Stanol ink, plates and brushes; marking brushes, ink powder.

Brandauer, O. & Co., 101 to 110 New John-street West, Birmingham.—Circular Pointed and other Stool Pens. Awarded First Order of Merit for Pens (Silver Medal).

The Circular Pointed Pens, exhibited by Messrs O. Brandauer and Co., are well known in the Home Markets, and are fast superseding the ordinary Pens.

The new process of Rounding the Points has proved of great advantage in securing even and smooth writing, without scratching or spitting.

The following are illustrations of a few of the pens manufactured by the exhibitors, which number many hundreds.

REVIEW PEN—strong and moderately fine-pointed, best gilt.

SCRIBBLER PEN—extra strong and broad-pointed, for rapid writing, with reservoir for ink.

FIGARO PEN—Extra strong and fine-pointed. Carbonised steel.

TIMES PEN—Strong Aluminium Pen, moderately fine and flexible.

MAIL PEN—Strong Aluminium Pen, with coarse fine points.

MAGAZINE PEN—Extra strong medium points.

PUNCH PEN—Moderately flexible, with coarse fine points.

GLOBE PEN—Fine pointed and very flexible. Coated with Aluminium.

At the recent Sydney International Exhibition Messrs. C. Bradshaw and Co. received the award of a First Prize for Steel Pens.

 chment, polished enamel, enamel paper.
 Fleming, A. B., & Co., Birmingham.—Printing
 inks.
 Fourdriner, Hunt & Co., London.—Writing
 and printing papers, envelopes, playing cards.
 Gillett, J., & Sons, Birmingham.—Steel pens.
 Goodall, Charles & Son, Manufactory:
 Camden Works, Great College street, Camden-town;
 City Warehouse 17 St. Dunstons-street, Ludgate Circus,
 London.—Playing Cards, Christmas Cards, Mounting
 Boards, Card Boards, Ivory and Meersault Cards, Ball
 Programmes and Menu Cards, Writing Papers and
 Envelopes in Special Boxes. Awarded First Order
 of Merit for Playing Cards (Silver Medal). First
 Order of Merit for Menu and Christmas Cards
 (Silver Medal). First Order of Merit for Note Paper,
 Envelopes, and Stationery (Silver Medal). First
 Order of Merit for Ivory Cards, Mounting Boards,
 Bristol Boards, and Card Boards (Silver Medal).

The principal feature in the Collection exhibited by Messrs. Charles Goodall and Son was the selection of Designs from the Playing Cards made by the firm,

the variety extending to many hundreds, to which new patterns are being constantly added.

A very limited selection of Christmas Cards was shown, but sufficient to indicate the variety manufactured.

The Collection also included high-class Writing Paper and Envelopes, as “Basketville,” “Venezian,” and other well-known Marks—a specialty being the ornament and attractive methods of boxing these goods.

At the Paris Exhibition, 1876, Messrs. Charles Goodall and Son received one Silver and two Gold Medals, the two latter being respectively for Playing Cards and Ivory and Mounting Boards, and the former for an Envelope-making Machine. At the several Exhibitions of London (1862), Paris (1867), and Philadelphia (1876) they also obtained high awards, the last honours secured by them being four First Class Awards at the Sydney Exhibition, these being respectively for Playing Cards, Menu and Programme Cards, Basketville Paper, Envelopes.

Grosvenor, Chater & Co., 68 Cannon-st., London, Glory Mill, Woodburn, Bucks; Abbey Mills, Holywell, Flintshire. Paris Depot: C. Rue de Valenciennes.—Writing, Drawing, Printing, Blotting, and Bank Note Papers. First Order of Merit for Printing Paper (Silver Medal). First Order of Merit for Fine Paper (Silver Medal). Second Order of Merit for Writing Paper. Second Order of Merit for Blotting Paper. Third Order of Merit for Hand-made Paper.

The Collection included—

Superfine Hand-made Writing, Drawing, and Account Book Papers,
 Bank Note and Loan Papers;
 Machine-made Writings and Drawings, Tint steel and Engine sized, both Left-dried and Machine-dried;

Printings, Charts, Blottings, and Plate Papers,
 News, in Reams and Reels;
 Mounting Papers, White and Coloured;
 The Exhibition, who are the Sole Agents in Great Britain for the Dutch Hand-made Printing Paper, exhibit various Tints of French India Paper, for Proofs, also Whatman's, Joynton's, Hollingworth's, Tanners and other makes.

The following Special Marks in Note Papers are supplied by the Exhibition in appropriate Fancy Wrappers, as shown—

“Grosvenor,” Vellum Wove, Tub sized and Left-dried by Hand;

“Pure Linen,” Vellum Laid, Tub-sized and Left-dried by Hand;

“Woodburn,” Laid and Wove, Tub-sized;

“Clay Mill,” Laid and Wove, Tub-sized;

“Grosvenor,” Laid, Engine-sized;

Also Envelopes to match any of the above.

Messrs. Grosvenor, Chater & Co., who carry on business as Paper Makers, and Wholesale and Export Stationers and Account Book Manufactory, were awarded a Gold Medal at Paris in 1876. Samples and Quotations may be obtained upon application to Mr. George Robertson, Melbourne.

Hudson & Kearns, London.—Tracing and drawing papers, general stationery.
 Leonard, D., & Co., Birmingham.—Steel pens, gold pens, pen-cases, penholders.
 Lyons, W., London.—Writing, copying, and marking inks, stationery.
 Monckton, W. & Co., Kent.—Writing, drawing, ledger, and bank papers.
 Peables, A. M., & Son, London.—Reels of paper.
 Perry & Co., London.—Steel pens, penholders, pen-cases, stationery sundries.
 Price, A., & Sons, London.—Paper, envelopes, and cards.
 Saunders, T. H., & Co., London.—Hand and machine made writing and printing paper.
 Stephens, R. C., London.—Writing and Copying inks, "Archie" inks, marking ink, &c.
 Spicer Bros., London.—Hand-made, lean, and printing papers.
 Thacker, H., & Co., London.—Writing inks, copying inks, marking inks, liquid india ink, &c.
 Trubner & Co., London.—Book-binding, book-covers.
 Waddington Sons & Stewart, Edinburgh.—Stationery, suitable for use in hot climates.
 Willis, W. H., & Co., London.—Playing and testing aids, cardboards, drawing boards, calculators.

Class 12.—Photographic Proofs and Apparatus.

Avery, W. & T., Birmingham.—Weighing apparatus used in photography.
 Brightman, E., Bristol.—Landscape photographs of English scenery.
 Frith, F. & Co., Reigate.—Photographic views of British and foreign scenery, architecture, &c.
 Heath, V., London.—Landscape, forest, and tree series of well-known places in Britain.
 London Stereoscopic Co.—Photographs of celebrated men and women, and popular beauties.
 Mansell, W. & Co., London.—Series of plain and colored photographic.
 Nesbitt, G., Downmouth.—Photographic studies from life, untouched.

Class 13.—Musical Instruments.

Ajello, G., London.—Piano.
 Besson, F. & Co., London.—"Prototype" band instrument.
 Brinsmead, J., & Sons, London.—Grand and upright pianos and medals. (See Adm., page 200.)
 Challen & Son, London.—Piano, and model of patent action.
 Glen, J. & R., Edinburgh.—Highland bagpipes, music, and accessories.
 Ivory, H. A., London.—Piano.
 Lachlan & Co., London.—Violoncelles.
 Samuel, B., & Sons, London.—School harmoniums, diatonic organ harmoniums, brass and nickel silver cylinder flutes and flageolets.
 Samuel, B., & Sons, London.—Violin strings, manufactured from Australian sheepskin.
 Udal, W. & Co., Birmingham.—Violoncello, or music turning.
 Wallis, J., London.—Flutes, flageolets, and clarionets.

Class 14.—Medicine, Hygiene, and Public Relief.

Allen, T., Bristol.—Hot and cold bedstead and bed rest, asylum bedstead, camp bedstead.
 Arnold & Sons, London.—Surgical and veterinary instruments.
 Avery, W. & T., Birmingham.—Personal weighing-machines, for hospitals, asylums, &c.
 Cheever, G., Boston.—Liquid water filters (self-cleaning), syphon pocket filter.
 Crosby, R. J., & Co., Birmingham.—Attachment of patient wire mattress to iron bedsteads, for hospital.
 Evans & Wormull, London.—Amputating cases, steam-sprays, artificial limbs, surgical, midwifery, and dental instruments, air and water beds.
 Gray & Halford, London.—Artificial human eyes.
 Jowett, W. M. & Co., Manchester.—Thorough self-cleaning liquid water filters.
 Lample & Co., London.—Mucous teeth, dental rubbers, dental instruments, &c.

Mayer & Meltzer, London.—Surgical instruments, appliances, and dressings, artificial limbs.
 McEwan, J., & Co., London and Melbourne.—Baths and sanitary ware.
 Onions, J. C. & Co. Limited, Birmingham.—Most patent self-cleaning portable domestic filter.
 Silicated Carbon Filter Co., London.—Silicated carbon filter, for purifying water.
 Slack & Brownlow, Manchester.—Main service, household, syphon, and other compressed charcoal filters.

Class 15.—Mathematical and Philosophical Instruments.

Avery, W. & T., Birmingham.—Scales and weights, for use in laboratories and scientific purposes.
 Barker, F., & Son, London.—Slip, pocket, and portable compasses, surveying instruments.
 Buss T. O., London.—Hydrometer, saccharometer, thermometer.
 Dolland & Co., London.—Astronomical and scientific instruments.
 Harding, W. H., London.—Drawing, mathematical, and surveying instruments.
 Husband, H. Bristol.—The Frontis-Metron improved dumpy levels, theodolites, microscopes, telescopes, &c.
 Jones, Mary, Melbourne.—About four hundred copies of various Governments, extending to nearly two thousand years.
 Rabone, J., & Sons, Birmingham.—Patent steel and chain rules and levels.
 Stanley, W. F., London.—Drawing and mathematical instruments and apparatus.
 Wood & Co., Liverpool.—Surveyors' levels and theodolites.

Class 16.—Maps, and Geographical and Cosmographical Apparatus.

Johnston, W. & A. K., Edinburgh.—School and library maps, atlases, globes, &c.
 Smith, C., & Son, London.—Educational maps and diagrams, globes.
 Stanford, E., London.—Maps and apparatus for teaching geography.

Class 17.—Cheap and Fancy Furniture.

Arrowsmith, A. J., & Co., London.—All furniture and parquet flooring.
 Avery, W. & T., Birmingham.—Fancy hall chairs fitted with weighing apparatus.
 Conrath & Sons, London.—Bedroom, dining-room, hygienic, and early English furniture.
 Crosby, E. L., & Co., London.—Iron and brass bedsteads.
 Do Pont & Co., London.—Hagglebe beard, billiard and hagglebe balls, cues, and other requisites.
 Fenby, J. B., & Co., Birmingham.—Patent folding furniture, tents, and camp equipment.
 Hamilton, W., Brighton.—Invaded grasshopper couch, couches with screw movement.
 Hoskins & Sewell, Birmingham.—Bedsteads.
 Lume Chair Co., Lancaster.—Chair frames.
 Marsden & Saffley, Liverpool.—Billiard-tables, with marking board, cue rack, balls, and all adjuncts for billiards.
 McEwan, J., & Co., London and Melbourne.—Bass and non bedsteads.
 Middleton, J., Birmingham.—Blastic bedsteads and cots, in iron composite and brass.
 Nathan, S.—Oak chair and entomological case.
 Payton & Payton, Birmingham.—Metallic bedstead.
 Phillips, A., Birmingham.—Bass and non bedsteads.
 Phillips & Son, Birmingham.—Bass and non bedsteads and sofas.
 Walker, W., & Sons, London.—All furniture.
 Wright, G., & Co., Rochester and London.—Billiard-table and fittings.
 Wright, G., & Co., London.—Mahogany billiard-table and appendages.

Class 18.—Upholsterers' and Decorators' Work.
Block, S. & Sons, London.—Furniture coverings
Green & Co., Edinburgh.—Framed
Harwitz, L. & Sons, London.—Gilt mouldings
Hieromimus, W., London.—Washable gilt, patent
 machine-made ornamented, and other frames and
 mouldings

Stephens, H. C., London.—Stairs for wood
Universal Window Blind Co., South Shields.—
 Unique and transparent window blinds

Class 19.—Crystal, Glass, and Stained Glass.

Bailey, W. & J. A., Altona.—Glassware
Boulton & Mills, Stom bridge.—Cut crystal,
 engraved, etched, and other glassware

Breiff, H., & Co., London.—Glass bottles of every
 description

Chance Bros & Co., Birmingham.—Palm, rough,
 colored, and ornamented window-glass, photo-
 graphic glass, &c.

Cleary & Co., Edinburgh.—Engraved mirrors
 (Florentine pattern), carved wood and gilt frames

Darnon, R., Weymouth.—Models of diamonds
Defries, J., & Sons, London.—Crystal chande-
 lers, table glasses, &c.

Ford, J. & Co., Edinburgh.—Cut and plain table
 glassware, crystal chandeliers, lamps

Fouracre & Watson, Plymouth.—Memorial
 windows to the late Allan Spowers, of Melbourne,
 glass for domestic purposes

Kilner Bros., London.—Glass bottles
Mighorinzi, G., London.—Hot chimney glasses,
 toilet glasses, &c.

Pitman & Son, London.—Stained glass window
Sowbery & Co., York.—Pressed table glass in
 flint and in colours, Queen's ware

Sykes, Macray & Co., Cuthbert.—Glass bottles;
 patent glass mouthed bottle for aerated waters

Webb, T. & Sons, Stom bridge.—Flint, coloured,
 plain, cut, engraved, etched, and enamelled glass
 crystal chandeliers. (See page 582)

Class 20.—Pottery.

Bates, Gidea & Walker, Burslem.—Printed,
 gilt, and enamelled earthenware

Brownfield, W. & Sons, Cobridge.—China,
 earthenware, ironstone and stoneware, majolica, &c.

**Brown-Westhead, T. C., Moore & Co., Stoke-
 upon-Trent.**—Porcelain, earthenware, majolica,
 terra-cotta, and sanitary ware

Campbell Brick & Tile Co., Stoke-up-Trent.—
 Eucrasse, geometric, and majolica ornamental tiles
 for floors, &c.

Craven, Dunnall & Co., Ironbridge.—Eucrasse
 and geometrical tiles, art tiles

Defries, J., & Sons, London, E C.—Pottery and
 earthenware

Doulton & Co., Lambeth.—Sanitary pottery, stone-
 ware, terra-cotta, and art pottery

Doulton, H. & Co., Lambeth.—Fine art pottery
 in Doulton ware, Lambeth majolica-ware, decorative
 tiles

Doulton & Watts, Lambeth.—Stoneware filters,
 bottles, jugs, &c., stoneware used in chemical man-
 ufactures

Farnley Iron Co., Farnley.—Enamelled bricks

Fison, C. O., Stom bridge.—Kiln tiles

Hall, J. & Co., Stom bridge.—Fire clay and bricks

Hamblet, J., West Bromwich.—Porcelain goods
 for paving and lining purposes, &c.

Hammersley, R., & Son, Burslem.—Earthen-
 ware, Hockingham-ware

Harrison & Son.—Colours, glazes, and other mate-
 rials for pottery use

Hope & Carter, Burslem.—Enamelled and gilt
 table and toilet ware, &c.

Maw & Co., Shropshire.—Eucrasse tiles

M'Barney, D., & Co., Farnham.—Porcelain and
 china ware

Minton, Hollins & Co., Stoke-up-Trent.—Tiles
 for pavements wall linings, fire-places and hearths

Minton & Co., Stoke-up-Trent.—China, earthen-
 ware, parian, Henry II. ware, majolica, tiles, &c.

Moore Bros., Longton.—Decorated porcelain
Pinder, Bourne & Co., Burslem.—Earthenware
 and artistic pottery

Powell, Bishop & Stomer, Hanley.—Dinner, tea,
 and toilet services, ornaments

Wedgwood, J. & Sons, Stoke-up-Trent.—
 Earthenware of all descriptions, Queen's-ware,
 dinner and toilet sets

Wood, W. & Co., Burslem.—China and earthen-
 ware

Worcester Royal Porcelain Co., Worcester.—
 Recent-ware, Japanese and Chinese porcelain, terra-
 cotta, painted and glazed porcelain

**Class 21.—Carpets, Tapestry, and other Stuffs
 for Furniture.**

Atkins & Naylor, Kidderminster.—Brussels car-
 pets

Barbour & Miller, Glasgow.—Silk and wool
 tapestry curtains, furniture covering, and window
 curtains

Barton, J. E., Kidderminster.—Wilton and Brussels
 carpets

Brunton, J. & Co., Kidderminster.—Carpets
Child, W. M., Huddersfield.—Mattings, &c.

Clarke, E., & Sons, London.—Fleecloth
Crossley, J. & Sons Limited, Halifax.—Tour-
 net, Brussels, and patent tapestry velvet carpets;
 rugs and mats

Fawcett & Watson, Stom bridge.—Carpets and
 rugs

Hall, T., Edinburgh.—Imitation tapestry, painted by
 hand, suitable for wall decoration

Henderson & Co., Union.—Brussels Annam-
 steers, and other carpets

Humphries, J. & Sons, Kidderminster.—
 Brussels and Wilton carpets, and rugs

Laycock, S. & Sons, Sheffield.—Hair seating in
 plain black and colours and in damasks, uphol-
 sters' material

Lanoleum Manufacturing Co. Limited,
 London.—Lanoleum floorcloth

Lyle, J. & Co., Glasgow.—Annamsteers carpeting,
 hair tufted Brussels, door-mats

Morton & Sons, Kidderminster.—Royal Annam-
 steers, Wilton and Brussels carpets

Tapping, T. & Co., London.—Annamsteers carpets
Thom & Lawson, Glasgow.—Carpets, rugs, cur-
 tains

Tomkinson & Adam, Kidderminster.—Annamsteers
 carpets, in one piece and woven in length

Walker, J. & Sons, Huddersfield.—Astrachan
 rugs

Watson & Naylor, Kidderminster.—Kiddermin-
 ster carpets

Webb, H. & Sons, Worcester.—Horsehair carpets,
 known as Worcester carpets, damask hair seatings

Whitall, M. & Co., Kidderminster.—Brussels and
 velvet-pile carpets

Wilks, H. R., & Co., Kidderminster.—Wilton-pile
 carpets

Woodward, Grosvenor & Co., Kidderminster.—
 Velvet-pile, bordered Brussels, stain carpet

Class 22.—Paperhangings.

Allan, J. & Son, London.—Paperhangings

Carlisle & Olegg, London.—Paperhangings

Cooke, W., Leeds.—Paperhangings

Darven Paper Hanging Co., Leeds.—
 Paperhangings and wall decorations

**Heywood, Higginbottom, Smith & Co.,
 Limited, Manchester.**—Paperhangings

Jeffrey & Co., London.—Artistic paperhangings,
 embossed leather, and flock papers

Potter, C. & J. G., Dalgety.—Machine and hand
 printed paperhangings

Scott, Outhbertson & Co., London.—Raised
 flock paperhangings, printers for drawingrooms,
 and papers to match

Woodham, W., & Co., London.—Paperhangings,
 wall and ceiling papers, embossed leather

Wylie & Lochhead, Glasgow.—Paperhangings
 and decorations

Class 23.—Cutlery.

Blyde, J., Sheffield.—Saw-cuts, razors, knives

Evans & Wornall, London.—Table and pocket
 cutlery, Perry's patent pocket self-servers

Gorrell, R., Sheffield.—Saw-cuts

Webb, T. & Sons, Devila Glass Works, Stoubridge, England. London Offices and Showrooms, 11 Chatterhouse street, Hulton Circus, Paris Depot, 27 Rue des Petites Feuilles, Australian Depots, 41 Little Collins Street East, Melbourne, George-street, Sydney, Messrs. Brookes & Foster, Brisbane. This exhibit consisted of Flint, Coloured, Plain, Cut, Engraved, Etched, and Enamelled Glass Chandeliers, Lustres, Wall Lights, Flower Brackets and Centres; Jardinières, Clasp Plain Flint Glass of all descriptions, the patented "Scrabbers" and "Fronzo Glass," and the recently patented "Hyacinthine" Glass, for which Messrs. Thomas Webb & Sons received three first awards (Gold Medals)—viz., one from the Fine Art Jury, for their really artistic work in engraving and etching on glass; and the other two Gold Medals for their glass manufactures and chandeliers.

The history of glass-making is closely interwoven with the history of civilisation. It is of such remote age that tradition has invested its first introduction with a mythical origin—a sure sign of extreme antiquity. In the Dutch Museum is exhibited a glass perfume bottle from Ancient Egypt, inscribed with the name of Thothmes III., B.C. 1600; and another small glass vase from the ruins of Nineveh, bearing the name of the Assyrian monarch, "Sargon," B.C. 710. To excel in its manufacture has been the ambition of both ancient and modern nations. Tyre and Sidon—the Myriam of the old world—came next. Then Venice, in the middle ages, became renowned for its productions in this beautiful material, the manufacture being subsequently removed for greater safety to the island of Murano, in the Venetian Lagoon. The Flemish drinking glasses and German goblets of the sixteenth and seventeenth centuries next became celebrated. In modern times France took the lead, by means of State aid and encouragement, the Manufacture de Baccarat being virtually a State institution, on the same footing as the Savres and the Gobelin-tapestry manufactures. But more recently Messrs. Thomas Webb & Sons have not only rivalled, but outdistanced, all others in this interesting and artistic manufacture, and at the great International Exhibition at Paris, in 1878, this excellence was generously and fully recognised by the award of the "Grand Prix," and the subsequent bestowal upon Mr. T. W. Webb—one of the members of the firm of Thomas Webb & Sons—of the Cross of the Legion of Honour.

One of the most prominent objects in the whole of this exhibit was the *ATLANTA VASE*, which was shown in an unfinished state at the Paris Exhibition. The body of the vase consists of upper and under shells or layers of glass, one blue, and the other white opal. The drawing on the front is in white, and the blue, which has been laid bare, serves as a background; the other side is ornamented with scroll work in white, which has been introduced since the Paris Exhibition. The artistic work has been executed by Woodall, one of the artists engaged at the Works. This vase has been purchased by the Government of New South Wales for the Sydney Museum.

Another very beautiful exhibit was the *CRISTAL VASE*, designed after one of the Elgin marbles, the figures on all in relief the surrounding material having been cut away by the lathe. P. King was the artist by whom this design was executed. Next in point of interest comes the *SOCIETAS VASE*, which is a specimen of a totally different process of operating on glass to either of the previous ones—viz., with acid. The designers of this and the companion pair, the *BEATRICE BACCHUS*, are the Brothers Norrwood.

IRIDESCENT GLASS AND BAZOOKA GLASS held a very prominent position in this exhibit. The shapes of the various vases, jars, and cups were copied from the antique pottery discovered by Schliemann on the supposed ruins of Troy and Mycenæ, very curious blendings of green, blue, and yellow are to be seen in these. No special designs can be shown in this description of glass, as though the porphyry of its manufacture very much has to be left to chance.

In addition to the above there was a large collection of cut glass of every description, from the most elaborate to the simplest. One of the chief features of this portion of the exhibit was the "Service of Glass," consisting in all of 77 pieces, with engraved monogram, and comprising every thing that is necessary for an ordinary modern home.

Messrs. Thomas Webb & Sons' factory at Stoubridge is most conveniently situated for the production of every description of glass, as amongst the carboniferous shales of the district there is found a clay of remarkable fire-resisting power and freedom from mineral impurity, which is admirably suited for the construction of pots or crucibles, which play so vital a part in the manufacture of glass. These crucibles are made in the works, and the building them up of Stoubridge clay is a work of time and great skill, causing them when finished to be articles of considerable value. They are made with dome-shaped roof and lateral tapping. It being important to protect this glass from the furnace gases, which would detrimentally influence its colour. At these works the business of pot-making takes place once a year, a sufficient stock being then made to last during that period. The vessels are constructed to hold about one ton of "melt," as the molten glass is technically termed.

Messrs. Thomas Webb & Sons manufacture table glass in all its coloured varieties. The pigments for producing the different shades comprise oxides of gold (ruby), cobalt (blue), chromium (green), uranium (yellow), manganese (purple), arsenic (opalescent white). The first resulting from the manufacture of pure glass is a useful application in the production of coloured glass, giving to the vitreous mixture a beautiful blue-green tinge. The above colouring substances are introduced into the melting pots.

The manufactures exhibited by Messrs. Thomas Webb & Sons have, in addition to the three Gold Medals at Melbourne, been awarded the highest prizes at many International Exhibitions. Amongst these may be mentioned the only Grand Prix awarded for glass at the Paris Exhibition in 1875, together with the Cross of the Legion of Honour awarded to Mr. T. W. Webb, a member of the firm; the only Gold Medal granted for the same class of manufacture at Sydney, a Special Prize at the Brisbane Exhibition, and a Silver Medal at the Sydney Agricultural Society's show, 1881.

Messrs. Thomas Webb & Sons are represented in the Australian colonies by Mr. D. W. Gridgley, who had charge of their Exhibition collection both at Melbourne and Sydney. They are also agents for the celebrated china and earthenware of Minton and Josiah Wedgwood & Sons.

MESSES. THOMAS WEBB & SONS' EXHIBIT OF GLASS, &c. IN THE BRITISH COURT (MAIN HALL)

Johnson, Christopher, & Co., Western Works and Western Steel Works, Sheffield.—Cutlery Awarded First Order of Merit for Cutlery (Gold Medal).

The Collection exhibited by Messrs. Christopher Johnson and Co. included—

Table Knives and Forks, with Black Horn, Stag Horn, Buffalo Horn, White Bone, and Ivory Handles;

Presentation Cabinets and Cases of Cutlery;
Butchers' Knives and Steels, Sheath Knives;
Patty, Pajeta, Pankas' and Chazens' Knives;
Inced, Butter, Orator, and Cooks' Knives,
Electro-plated Dessert Knives and Forks;
Fish Carvers and Fish Knives and Forks;
Pen and Pocket Knives;
Sportsmen's Knives, Fairies' Knives,
Pruning, Birding, and Foot-rot Knives;
Hagger and Hunting Knives;
Sewers, Tailors' Shears, Barbers', Paper Hangers', and Surgeons' Scissors;

Latex Cutting-out and Enamellory Sewers;
Pruning and Vine Sewers;
Presentation Cases of Sewers;
Razors, a general assortment

(See also Class 33.)

Mayer & Metzger, London.—Cutlery.
McEwan, J. & Co., London and Melbourne.—Cutlery of various descriptions.

Read, T., Birmingham.—Cutlery, silver-plated by the "Argentine" process.
Rodgers, Joseph, & Sons Limited, 4 Norfolk-street, Sheffield.—Cutlery. Awarded First Order of Merit for Cutlery (Gold Medal).

The Collection exhibited by Messrs. Joseph Rodgers & Sons Limited included examples of the various articles of their manufacture—

Pocket Knives, from the lowest prices upwards;
Highly-finished Sporting Knives, with all sorts of instruments for shooting, fishing, and other country pursuits;

Burns and Hunting Knives, with sheaths mounted in steel, Nevada silver, and real silver;

Razors of every description, particularly the modern concave or hollow-ground blades, which have very keen and smooth edges.

Scissors of every description, arranged in sets of from three to seven pairs;

Table Cutlery of all kinds, especially the recently-introduced Ribbed Handles, which cannot be separated from their blades;

Carvers of "warranted good" quality;

Fancy-carved handle Bread Knives, Plated Dessert Knives and Forks, Fish Knives and Forks, and Carvers;

Butchers' Knives and Steels, of the best quality, and in great variety.

to the name) with their trade mark—a "Star and Cross," as named.

Articles, exhibited, manufactured by Messrs. Joseph Rodgers & Sons Limited, whose Cutlery Queen Victoria, are stamped (in addition

Ward, F. & Co., Sheffield.—Pocket and table cutlery, and sewers.

Wostenholm, George, & Son Limited, Washington Works, Sheffield.—Spring Knives, Hunting and other Knives, Table Cutlery and Razors. Awarded First Order of Merit for Cutlery (Gold Medal).

TRADE

MARKS.

The Collection exhibited included:—

Pocket and Pen Knives of all kinds;

Fine Table Knives, Butchers' Knives,

Gardens' Pruning, Grating, and Budding Knives;

Hunting and Lock, Sporting, Farmers', Stock-breeders', and Fishermen's Knives.

Razors and Scissors.

The Exhibitors are the sole manufacturers of the Celebrated "Doubly Carbonized" or Thin-bladed Razors, and of the Famous Original "Pine" Razors—the Trade Mark upon which (a Tobacco Pipe) was granted in the year 1891, and is the oldest Mark now in use for articles with a cutting edge.

Messrs. George Wostenholm and Son Limited have also another Trade Mark. This is stamped upon all genuine articles of their manufacture, with the exception of the "Pine" Razors before named, and consists of the letters I-XL, as shown above. By this Mark their Cutlery has been recognised throughout the world during the greater part of the present century.

At London (1861 and 1862) and Philadelphia (1876) Messrs. George Wostenholm and Son Limited were awarded the highest honours. At Paris (1865) they obtained the "Large Gold Medal of Honour"—the only one awarded—"for perfection in English Cutlery," and at Paris (1867) the then head of their Firm was chosen as Juror—thus placing the Firm *Bois Concours* in the matter of Awards. At Sydney (1879) a "First Class Special" Award was made to the Company by the Jurors, thus being the highest honour obtainable.

Samples of the manufacture of this Company may be obtained at their Sheffield Works, or of any of their Agents, as follows:—

Aslme Ward, 20 Chambers-street, New York;

Joseph S. Fisher, 411 Commerce-street, Philadelphia;

B and S. H. Thompson, Montreal, Canada;

H. King, corner of York and Barrack streets Sydney, N.S.W.

Class 24.—Goldsmiths' and Silversmiths' Work
Boardman & Gossop, Sheffield.—Electro-plate
 Dixon, J., & Sons, Sheffield.—Silver, electro-plate,
 Britannia-metal, and metal silver ware.
 Harrison, W. W., & Co., Sheffield.—Electro-
 plated ware.

Lee & Wriggall, Sheffield.—Electro-plated ware
 M'Ewan, J., & Co., London and Melbourne.—
 Electro-plated tea and coffee services, &c.
 Neal, J., & Co., London.—Pyro-silver cutlery,
 spoons and forks, and electro-plated ware
 Roberts & Bell, Sheffield.—Electro-plated ware
 Walker & Hall, Sheffield.—Silver-plating and metal
 silver, plated cutlery, Britannia metal goods.
 Woodward, H., & Co., Birmingham.—Electro
 plate

Class 25.—Bronzes and various Art Castings
 and Repousse Work.

Singer, J. W., & Son, France.—Silver, copper,
 and brass repousse and ornamented dishes, lecterns

Class 26.—Clocks and Watches

Buckney, D., London.—Pocket chronometers,
 watches, regulator watches, &c.
 Kullberg, Y., London.—Marine and pocket chrono-
 meters, various lever watches
 Nicole, Nielsen, & Co., London.—Watches

Class 27.—Apparatus and Processes for Heating
 and Lighting.

Barnes & Co., Birmingham.—Chandeliers
 Bell & Black, Limited, London.—Lamps, candles,
 tapers, in paper, wood, and fancy tin boxes
 Briscoe, W., & Son, Wolverhampton.—Gas lamps
 and chandeliers, ranges and grates
 Brown & Green Limited, London.—Kitchens,
 portable cooking stoves

Bryant & May, London.—Safety and other
 matches, gas lights

Flavel, S., & Co., Leamington.—Kitchens, fitted
 with roaster, oven, grilling apparatus, &c.

Grove, G. W., Leamington.—Kitchen ranges.
 Hanks, J., & Son, Limited, London.—Lamps.
 Hunt, J., & Co., Birmingham.—Gasheaters

Kelly, A., London.—Railway carriages and platform
 lamps

Kerr, E., jun., Dublin.—Windproof lamps
 M'Ewan, J., & Co., London.—Portable cooking
 stoves and ranges, fire grates, lamps, &c.

Morgan & Walde, Rothham.—Regatta stoves,
 fenders, fire-irons

Musgrave & Co Limited, Belfast.—Slow com-
 bustion ventilating stoves and air warmers

Nisbet, A., & Son, Star Foundry, Glasgow.—
 Kitchen Ranges and Register Grates. Awarded First
 Order of Merit for Cooking Ranges (Silver Medal).

The large Cooking Range exhibited was specially
 designed for Hotels, Clubs, Restaurants, Manu-
 factures, and Private Houses. Its chief feature is its suit-
 ability for extensive cooking operations with but
 small consumption of fuel. All parts subject to the
 wear and tear of fire are made extra strong. The
 Range includes two large ovens for baking and
 roasting and a Bright Braider, fitted above the fire,
 for grilling steaks, chops, &c. The Grate is con-
 structed so as to permit roasting in front of it, and
 is adapted for burning either coal or wood. For
 regulating and economizing the consumption of fuel
 dampers are provided. The hot plate is large enough
 to furnish ample accommodation for boiling, while
 the rack fitted between coverings is useful for warming
 plates. A large pressure boiler, affording a supply
 of hot water for scullery purposes, baths, &c., is
 attached to the range.

The economical Kitchenette is suitable for a good
 private dwelling-house. It has two ovens for baking
 and roasting respectively, and is fitted with a pressure
 boiler for the supply of hot water to baths,
 kitchens, &c. One small fire heat oven, boiler, and
 hot plate, an economical and inexpensive cooking
 arrangement for a moderate sized family thus being
 secured.

The Kitchenette with oven and side boiler is a
 serviceable and inexpensive Cooking Range.

The Hob Regatta Grate—newest design—is
 finished in Berlin black with brass monograms, and
 relieved with brass ornaments. The openings round
 the fire-place are fitted with enamel tiles, illustrating
 scenes from the Waverley Novels, a very pleasing
 and attractive feature in the Grate.

The Dining Room Grate is finished in Berlin black,
 fitted with enamel-lined panels and canopy of
 elegant design, and has also a brass monogram fitted
 to front.

The Dining Room Grate, finished in Berlin black,
 and cheeks fitted with Porcelain Tiles, in rich colours,
 is neat and inexpensive.

The cheap Parlor Grate is of ornamental design,
 and finished in Berlin black

Oerton, Grimley & Jagger, Woburn.—Cast-iron
 lamps

Parkes, B., & Sons, New Dudley.—Fire-irons,
 fenders, grates.

Portway, C., Huddersfield.—Slow combustion stoves
 Radcliffe & Co., Leamington.—Kitchens

Rowatt, T., & Sons, London.—Antique table
 lamps

Silver Light Co., London.—Duplo-burner table
 lamps

Sim, F. R., Edinburgh.—Crystal gasoliers and
 brackets

Smith & Wallwood, London.—British-made
 Anderson oil and gas cooking and warming stoves
 and ranges

Steele & Garland, Sheffield.—Wain oil, dog,
 and other stoves, fenders, fire irons, &c.

Sugg, W., Westminster.—Photometers, illuminating
 meters and gas apparatus

Wright & Butler, Birmingham.—Kerosene lamps,
 cooking stoves, lanterns, lamps, chandeliers

Wright, George, & Co., Rothham.—Store
 grates, fenders, ranges, &c.

Yates, Haywood & Co., Rothham.—Stoves,
 fenders, cooking ranges, air stoves, marble chimney
 pieces, chairs, tables, &c.

Zimmermann & Co., London.—Table lamps.

Class 28.—Perfumery.

Atkinson, J. & E., London.—Perfumes toilet
 soaps, powders, cosmetics, pomatum, hair washes.

Crown Perfumery Company, London.—Per-
 fumes, pomade, and toilet requisites

Gosnell, J. & Co., London.—Perfumery and toilet
 requisites.

Piesse & Lubin, London.—Perfumery and other
 toilet requisites.

Price, N., & Co., London.—Perfumery, fancy soaps,
 tooth powder, &c.

Rimmel, E., London.—Perfumery and toilet re-
 quisites.

Class 29.—Leather-work, Fancy Articles, and
Basket-work.

Crowden and Garrod, Falcon square, London.
 —Basketware. Awarded First Order of Merit for
 Brushware (Silver Medal).

The Collection exhibited by this Firm comprised
 very excellent specimens of their manufactures,
 and included the "Falcon" Painting Brushes, the
 quality and finish of which have made the name
 and brand so celebrated.

Great improvements have been made in the
 manufacture of these goods, the cement used
 securing the bristles under any circumstances.
 This will be found very advantageous in respect to
 Varnish Brushes, which can now be used in Paint,
 Oil, &c., as well as Varnish—as formerly Brushes
 for this purpose could be used for Varnish only.

Copper Bands were introduced by this Firm some
 years since, superseding the string with which
 Painting Brushes are usually made; and no doubt
 their Patent Copper Oval Ground Brushes, Varnish
 Brushes, Wash Tools, and Distemper Brushes, as
 illustrated above, will be as much used by deco-
 rators in the Colonies as they are in the United
 Kingdom.

The Patent Copper Band Duster-brushes will be found a great improvement on the old style in two knots, as with these there are no knots to

break off, and the handle is so formed that it prevents the bristles coming through.

The Household and Stable Brushes are worthy of attention, from their uniformity in quality, superiority in finish, and excellent value. Hair and Cloth Brushes are also manufactured in Ivory, Bone, and Satin Wood, &c., in very large quantities.

The "Falcon" Tooth Brushes are a specialite, for

the knots are wire drawn, fixed with cement, and also waxed backed, and being made of selected unbleached bristles, which, although not so white or attractive-looking as the bleached ordinarily in use, will be found to wear twice as long, as bleaching to a great extent impairs the bristle. With these improvements the hairs neither break off nor fall out.

The present Firm succeeded to the old celebrated house of Thomas Kent and Co. in the year 1847, and now holds the highest position in the wholesale brush-trade. For many years the home trade engaged attention, but now this and the export business have increased to such an extent that new, enlarged, handsome and very commodious premises are in the course of erection in Southmark-street, and by the end of the year the business will be conducted there. Some idea of the extent of the business carried on may be gathered from the fact that ten representatives are engaged, whilst the number of employees and workpeople, &c., amount to upwards of two hundred.

The representation of a "Falcon" is the appropriate Trade Mark of the Exhibitors, and thus guarantees the quality of all goods that are so stamped. Illustrated Catalogues of the most exhaustive character, include all the various kinds of Brushes, as well as Door Mats, Carpet Whisks, Chamber Lintels, India Rubber Knife Bands, Knife Cleaning Machines, Mincing, Washing, &c., Machines, and all labour-saving and Household Machinery, Plate Powders, Knife Polish, Black Lead, &c., &c., &c., all manufactured by the firm. "Domestic" bundles, Fancy Goods, Games of all kinds, are also included in the List. The Exhibitors are sole wholesale agents for Robinson's Indestructible Salver Soap, so well known and appreciated for cleaning and polishing Silver, Electro Plate, &c., without waste and dirt.

The Exhibitors obtained the "Higbest Award" at Sydney, 1879.

Hamilton & Co, London—Brushware.

Kent, G. B. & Co, London—Brushware.

Stewart, S. R., & Co., Aberdeen—Combs and other bone and tortoise-shell goods.

Titterton & Howard, London—Assortment of toilet brushware.

Class 30.—Cotton Thread and Fabrics.

Ainsworth, T., Camforth—Fine threads.

Ashworth, Edmund, & Sons, Egerton Mills

Bolton.—Cotton, in the various stages of manufac-

ture, Cop Yarns; Doubled Yarns, in two, three,

four, six, and nine folds; Sewing Cottons, Crochet

Cottons, in skeins, balls, and on reels; Knitting,

Mending, and Embroidery Cottons; Cotton Balls,

Levon-finish and Silk-finish Threads, &c. Awarded

First Order of Merit for Sewing and other Cottons

(Gold Medal).

TRADE MARKS

The manufacture of the goods exhibited has

been carried on by Messrs Ashworth and Sons for more than a hundred years, and the demand for these special makes of Sewing Cotton in Sax cord and patent Glass is large and increasing.

The material marked "XX Egerton Silk Finish," is largely used by Dress-makers, Mantle-makers, and Hat-makers, for Quilting, and by workers in Leathers, who are accustomed to use the best qualities of silk.

By means of carefully selected material, and a popular operation, the Exhibitors have succeeded in producing an article which will in most cases take the place of silk.

At the International Exhibitions of London, 1862, Paris, 1867, Vienna, 1874, Philadelphia, 1876, Paris, 1878, and Sydney, 1879-80, Gold and other Prize Medals and Awards were received by the Firm.

Mr F A Buxitt, of 20 Flanders-lane, is the Melbourne Agent of the Exhibitors.

The Warehouses of Messrs Ashworth & Sons are, in England—22 Wood-street, London, and 43 Fountain street, Manchester; in the United States—51 Leonard street, New York.

Booth & Fox, London.—Cotton and other plain and printed down quilts.

Chadwick, J. & Bros, Bolton.—Sewing cottons, Clark & Co., & Clark Thread Co., Paisley—Sewing, crochets, and unbleached cotton.

Coats, J & P., Paisley.—Sax cord cotton for machine and hand sewing; crochets and tacking cottons.

Crawdson, Crosses & Co. Limited, 40 Portland-street, Manchester; 10 Lawrence-lane, London; 77 Queen's street, Glasgow. Mills: Bolton and Rainworth—White Calicoes, comprising Heavy Mediums, Double Warps, Long Cloths, Stout Shirt Cloths, and Tails. Awarded First Order of Merit for Mesched Calico (Gold Medal).

The Goods exhibited by Messrs Crawdson, Crosses & Co Limited have had the highest reputation in the Home Trade for upwards of fifty years. They are always stamped with the

REGISTERED TRADE MARK,

CREWDSON & CO. MANUFACTURERS.

Messrs Crawdson & Co. received Awards and Prize Medals at the following International Exhibitions:—

London Exhibition, 1862.

Paris Universal Exhibition, 1867.

South African International Exhibition (at Cape Town), 1877.

Paris Universal Exhibition, 1878.

Sydney Exhibition, 1879.

Evans, W., & Co., Derby.—Cotton thread on spools, skeins, snids, and balls.

Ferguson Bros, Chisle.—Shirtings, pocketings, satins, serges, mixed cotton and silk goods for tailors' linings.

Harrison, E., & Co, Plain and Fancy Cotton Dress Goods. Mills: Oldham and Todmorden. Warehouses: No 10 Marshall-street, Manchester; and 40 Bow-lane, Chesham, London. Awarded First Order of Merit for Cotton Dress Goods (Gold Medal).

The Goods exhibited comprised:—

SATINETS, ROYAL RIBS and DRILLS, all of which are suitable for the manufacture of Ladies' Corsets, Boots, and the higher makes for under-clothing.

TRADE MARK

GALEATA STRIPES.

ATTILAS, TAILS, JEANS, SILVER CLOTH, TAILS, MATTINGS, VICTORIA DRAGONETS, and IRON CLOTHS, made in widths varying from 25 to 40 inches wide. The widths generally kept in stock are 27, 29, and 31 inches; all are useful for Ladies' and Children's Clothing.

FANCY WOVEN DRESS GOODS, such as GALEATA, ISMAILIANS, ANGELS, GANDIVA and KAMAR CLOTHS;

A selection of the new styles of Chints, Printed and Dyed Satin Dress Goods, and Cotton Italian Cloths.

SATINETS QUILTS from 9 quarter to 11 quarter, with white and coloured borders.

In the manufacture of these goods very great care is taken in the preparation of the yarns, so that the goods may be kept as true as possible from imperfections, and everything removed which would prevent the cloth taking the dyes and finish perfectly.

The very best dyes are used for the purpose of producing brilliancy and fastness of colour.

The Looms employed to make these goods can be adapted to the making of any fancy designs of a similar description, and new designs are issued annually by the Exhibitors, who are at all times ready to adapt their machinery to meet the requirements of the period.

The goods exhibited were not manufactured specially for this Exhibition, but selected from the various classes regularly produced by the Firm.]

Haslam, John, & Co., Meal-street, Manchester. Mills Hallwell Cotton Works, Derby-street Mills, and Lark-hill Mills, Bolton Wash-houses, 2 Milk-street, Manchester, 25 Milk-street, London, 12 Milk-street, Glasgow, and 111 Flank-lin-street, New York, U.S.A.—Cotton Fabrics. Awarded First Order of Merit for Cotton Dress Goods (Gold Medal), and Second Order of Merit for Bleached Calico.

The Collection exhibited by Messrs. John Haslam and Co., who are Spinners and Manufacturers, included:—

Broadens, Battens, Velveteens, Checks, Stripes; Grey and White Shirtings, Loug Cloths, Twills, and other heavy goods, Muslins, Umbrellas, Lawns, Mulls, Jaconets, Nammoaks, &c.

The Exhibitors, who have been established about three quarters of a century, are Spinners for the home and foreign market of white spinners from 40's upwards, principally from Egyptian and Son Island Cotton.

Johnson, J., & Fildes Manchester.—Quilts, quiltings, cotton blankets, towels, table and toilette covers.

Kerr, Price, & Co., Paisley.—Sewing cottons. **Swanson, Birley & Co.**, Preston.—Long cloths, heavy shirtings, twills, plain and fancy muslins, &c. **Ullathorne & Co.**, London.—Twines, threads, flax, silks, hemp, elastic webbing.

Class 31.—Thread and Fabrics of Flax, Hemp, &c. **Ainsworth, T.**, Whitehaven.—Linen threads for sewing-machines and hand-sewing, linen towels. **Anglo-American Rope & Oakum Co.**, Liverpool.—Machine-roped and spun oakum.

Barbour, W., & Sons, Leith.—Linen thread; shute, gilling, and netting thread; linen and hemp yarns.

Belfast Ropework Co. Limited, Belfast.—Tarred Russian hemp rope, white Manila rope.

Bessbrook Spinning Co., Bessbrook.—Flax in the various stages of preparation, ready for weaving; linen fabrics.

Crum, W., & Co. Manchester.—Printed percales, satteens, and other fancy cloths.

Great Ancoats Flax & Hemp Spinning Co. Limited, Manchester.—Heavy yarns for twine, cords, and ropes; plain, colored twines.

Harris, J., & Sons, Cockermouth.—Linen threads for hand and machine sewing.

Hounsell, W., & Co., Inverport.—Linen for ships' use, blaug, ducs, twines, cords, &c.

Liverpool Spun Oakum Co., Liverpool.—Air-blasted, patent spun and mazy oakum.

Marshall & Co., Leeds.—Linen threads, for boot making clothing, book-binding, &c.

M'Gregor & Co., Dundee.—Canvas hose for fire brigades, and hose couplings and detectors.

Northern Spinning & Weaving Co. Limited, Belfast.—Linen yarns, linens, handkerchiefs, cambrays.

Rogers, J., Belfast.—Booting satons, patent monotonous and patent haw felt.

Shields & Co., Perth.—Linen damasks of all the newest de sign; timeclings and napery.

Ullathorne & Co., London.—Flaxen thread, &c.

Webster, P., & Sons, Ayr.—Flax, hemp, and cotton yarns and twines, flax and hemp twines.

York-st. Flax-spinning Co. Limited, Belfast.—Linen manufactures.

Class 33.—Woolen Yarn and Fabrics.

Bless, W., & Son, Clappan, Notton.—Tweeds, wales.

Brooke, J., & Son Huddersfield.—Fancy woollens, woolen and worsted fabrics.

Crossland, B., & Sons, Huddersfield.—Sealskins, astrachans, cloths, rugs, and superfine linens.

Firth, T. F., & Son, Huddersfield.—Cloths, railway rugs.

Hogg Bros., Selkirk.—Scottish tweeds.

Hooker, C., & Co., Stonehouse.—Superfine broads, coatings, towings, military, naval, hunting, carriage, and riding cloths.

Hunt & Winterbotham, Cam-Hursley.—West of England cloths.

Jones, P., Newtown.—Welsh flann, &c., "Euklidia" rugs.

Lewton, G., & Sons, Mossley.—Flannels.

Lobby, J., & Co., Stroud.—Superfine broads and meltons, fancy costumes and trousers.

Mahoney, M., & Bros., Cork.—"Murney" and other tweeds.

Marling & Co., Stroud.—Superfine broads, beavers, meltons, Altours, Vometans, dookins, &c.

Randall & Way, London.—Waterproof quon cloth, for riding, &c.

Rust, T. W., & Co., St. Nicholas-square, Leicester (Partners, Holson, Hurford and Rust).—Spinners at Fingering, Fleecy, Alfox, and other Yarns for Knitting and Embroidery. Awarded First Order of Merit for Woolen and Worsted Goods (Gold Medal).

TRADE MARK.

This Collection included Fingering, Fleecy, Alfox, Lamb-wool, and Worsted Yarns, Knitting, Worsted; Belts, Shetland, Andalusian Wools, and Specially Worsted and Honey Yarns for Weaving, &c., all produced by the Exhibitors, whose Trade Mark as Spinners is here illustrated.

Salter, S., & Co., Trowbridge.—Woolen goods and fancy hosiery.

Stansfeld, Brown & Co., Bradford.—Lastings and seizers.

Stanton & Son, Stroud.—Cloths, tweeds, and fancy coatings.

Strachan & Co., Stroud.—West of England woolen fabrics.

Turner, J. B., & Co., Huddersfield.—Fancy woolen and worsted trousers, chevrons, serge.

Walker, J., & Sons, Huddersfield.—Sealskins, astrachans, rugs, &c.

Class 34.—Silk and Silk Fabrics.

Gibson, S., London.—Machine silk.

Lawton, G., & Sons, Manchester—Silk warp
 annals.
 Milner, W., & Sons, Leek—Sewing silks.
 Rickards, C. A., Leek—Machine silks.
 Ullathorne & Co., London—Sewing silks.

Class 35.—Shawls.

Bliss, W., & Son, Chipping Norton—Shawls.
 Cranston & Elliot, Edinburgh—Tartan plaids,
 shawls, mantles, and squaws.
 Jones, P., Newtown—White and colored shawls.

Class 36.—Lace, Net, Embroidery, and Trim- mings.

Kulp, H. N., & Son, Nottingham.—Lace, lace
 curtains, cotton and silk lace.
 Tutill, G., London—Mosaic and other regalia.

Class 37.—Hosiery and Underclothing, and Accessories of Clothing.

Brooke, J., & Co., London—Ladies' and gentle-
 men's linen-faced and paper collars and cuffs.
 Corder & Turley, Birmingham—Cold steel and
 patent umbrellas, ribs and furniture.

 Florentine cameos; mosaics in Whitby jet; silver
 jewellery.
 Hick, W., Huddersfield—Solitaire studs.
 Jacques, Z., Dublin—Irish bog-oak ornaments.
 Kilpatrick & Co., London—Jewellery.
 Levitas Bros, Birmingham—Canadian gold
 jewellery.
 Melillos, M., York—Gilt jewellery.
 Melillo, V., Brighton—Cornel jewellery.

Class 40.—Portable Weapons and Hunting and Shooting Equipments

Eley Bros, Limited, London.—Cartridges, per-
 cussion caps, and gun waddings.

Evans & Wormald, London.—Hunting-knives and spears, patent guarded handle, spring hunting-knives.

Greener, W. W., St. Mary's Works, Birmingham, and 68 Haymarket, London.—Trebble Wedge-fast Hammerless and other Guns, Rifles, Revolvers, and Ammunition. Awarded First Order of Merit for Shot Guns (Gold Medal).

The Hammerless Gun exhibited was recently subjected to a trial of 10,000 shots, fired by Dr. Carver, without jamming the lock mechanism, at the end of which the breech action was found to be in perfect order.

High Awards have been obtained at the several International Exhibitions, the most recent being a Special First Prize at Sydney.

Mr Greener is represented at Melbourne by Mr. J. W. Rosser.

Greenwood & Batley, Ailmon Works, Leeds.—Cartridges in various stages of manufacture, &c. Awarded First Order of Merit for Cartridge Making Machinery (Silver Medal). See also Classes 66, 68, and 69.

Hall, J. & Son, Faversham.—Gunpowders.

Henry, A., Edinburgh.—Guns, rifles, and pistols.

Kennell Gunpowder Co., London.—Gunpowder in its several stages of manufacture.

Lewis, G. B., Birmingham.—Trebble grip hammerless breech-loading guns, rifles, &c.

McNaughton, J., Edinburgh.—Hammerless and other guns, pistols, and nerve-sprays.

Pigou, Wilks & Laurence, Limited, London.—Gunpowder of all descriptions.

Purdey, J. & Sons, London.—"Express" rifles, sporting guns, hammerless and automatic guns.

Scott, W. & Co., & Son, Birmingham.—Sporting breechloaders, rifles, revolvers, and hammerless guns.

Soper, W., Reading.—Rifles, guns, pistols, &c.

Tisdall, W. H., Birmingham.—Sporting breech-loaders, rifles, hammerless guns, and revolvers.

Webley, P. & Son, Birmingham.—Guns, rifles, revolvers, cartridge implements, and patent artificial flying pigeon machines.

Class 41.—Travelling Apparatus and Camp Equipage.

Fenby, J. B., & Co., Birmingham.—Tents and camp equipage, folding chairs, &c.

Class 42.—Toys.

Ayres, F. H., London.—Lawn tennis, croquet, cricket, lawn bowls, and other games.

Briscoe, W., & Son, Wolverhampton.—Cricketing materials.

Duke and Son, Penryn, Kent.—Cricket Balls and appliances. Awarded First Order of Merit for Games, Cricketing Apparatus (Silver Medal).

All the Goods exhibited by Messrs Duke & Son were guaranteed of the best perfectly seasoned material and workmanship.

The Match Balls are used by the County Cricket Clubs of Kent, Surrey, and Sussex, as well as by many other clubs, and have an extensive sale in the Colonies.

At the London International Exhibitions of 1851 and 1862 Prize Medals were awarded to Messrs Duke & Son, who also received the Highest Award at the recent Sydney Exhibition.

Feltham & Co., London.—Games.

Lillywhite, Froud and Co., London.—Cricketing materials.

London Stereoscopic Co., London.—Scientific toys and instructive games, puzzles.

Nicolls, L., Roberts-buildings.—Cricket bats.

Class 43.—Products of the Cultivation of Forests, and of the Trades appertaining thereto.

Perkins, J., & Sons, London.—Corks, bungs, from Tosen, Catalans, and Saville, Spain.

Class 44.—Products of Hunting, Shooting, Fishing, and Spontaneous Products. Machines and Instruments connected therewith.

Alcock, S., & Co., Redditch.—Fish hooks, lines, rods, &c.

Damon, R., Weymouth.—Specimens of conchology.

Stuart, J. & W., Musselburgh.—Fishing nets and twines of cotton and hemp.

Class 45.—Agricultural Products, not used for Food.

Thorley, J., London.—Food for cattle.

Class 46.—Chemical and Pharmaceutical Products.

Anderson, Abbott & Anderson, London.—India-rubber manufactures, oilskin clothing, and sou-westers.

Atkinson, J. & E., London.—Soaps.

Bell, H., London.—India rubber pencils.

Bewley & Draper, Dublin.—Acetated waters.

Biggs, T., London.—Sheep dipping composition.

Blundell, Spence & Co., Limited, London.—Oils, varnishes, paints, colours, white lead, ant-tinting compositions, &c.

Brandram Bros. & Co., London.—White lead, zinc, vermilion, sulphur, and saltpetre.

Brown, R., & Co., Glasgow.—Paints and colours.

Burgoyne, Burdidge, Cyrtax & Farries, London.—Drugs, chemicals, pharmaceutical preparations.

Bush, W. J., and Co., Artillery-lane, Brompton, Works.—Ash-Groats, Hackney, London.—Essential Oils, Fruit Essences, Granulated Citrate of Magnesia, Chemical and Pharmaceutical Preparations, Hairless Vegetable Colours for Confectionary purposes, White Lead, Dry and Ground Colours, Metallic Oxide Paints, Perfumery, Toilet Soaps.

Awarded First Order of Merit for Perfumes, Essential Oils, Fruit Essences, and Toilet Soaps (Silver Medal); and First Order of Merit for Paints, Colours, and Varnishes (Silver Medal).

The business of the firm embraces the distillation of essential oils and artificial flavouring agents.

Many of the herbs, flowers, fruits, and seeds which yield volatile oils are treated at their place of growth, and their concentrated principles exported for the perfumery or confectionery use.

Several are indigenous to England, and develop their odouriferous principle to perfection in its original climate.

All essential oils that can be distilled in England are produced by Messrs. Bush, as also the hairless vegetable colours which, since their introduction a few years since, have so largely displaced the deleterious compounds used by confectioners for dressing their goods.

These colours comprise many shades, and are produced in the dry form, which is the best adapted for exportation.

It is of the first importance that the sugar used for fruit syrups should be absolutely pure. Commercial refined sugar, as a matter of fact, never is, owing to the chemicals used in its preparation, and, moreover, much of it is the product of the beet. Hence the duty of refining their own sugar is performed by the exhibitors. The old-fashioned processes of solution, precipitation, and decoloration are employed—the use of chemicals being entirely dispensed with.

The grinding, mixing, and packing of ordinary colours, and the manufacture of metallic oxide paints, also form a part of the Exhibitors' business. These paints are extensively used, being more durable than lead colours, and thus better suited to outside work.

In addition to the above, fruit essences and syrups, compounds for spirits and liquors, quinquinas for domestic purposes, and concentrated liquors, are amongst the products of this Firm, one of whose specialties is **FRENCH CHERRY GUM EXTRACT**, employed in connection with Syrups, Mineral Waters, Ciders, Beers, Ales, Wines, and all other liquors or beverages where a frothy foam or head is required.

This Extract, now for the first time offered to the trade, is a novel and useful preparation. The foam produced by it is light, frothy, and beautiful, and aids the retention of the Carbonic Acid Gas. By increasing the bulk, and improving the appearance of the beverage, it will save more than one hundred times its cost. Where this Extract is used, the Soda Water, Ginger Ale, or other beverage need not be charged as high by twenty degrees to produce an equal effect.

As is well known, when Soda Water, Beer, and similar beverages are drawn in an open tumbler, the gas escapes so rapidly that unless drunk immediately they become flat and worthless.

For all kinds of Syrups for bottling purposes, from one to two ounces of the Extract, according to the amount of foam required, should be added, thoroughly mixed, to each gallon, for Champagne, Cider, Ale, Beer, &c., one ounce of the Extract to every four gallons. The price of the extract is 2s 6d per lb.

Carson, Walter & Sons, La Belle Sauvage-yard, London.—Anti Corrosion Paint. Awarded First Order of Merit for Anti-Corrosive Paints (Silver Medal).

TRADE MARK.

This Paint, exhibited, has been known all over the world for eighty years past as a means of preserving all surfaces exposed to the weather. The effect of its application is to prevent decay in wood work, rust in iron work, and to render waterproof porous bricks, stone, cement, combs, &c. It possesses the unique advantage of resisting alike the extremes of climate, heat and cold, drought and wet, and has been adopted by railway companies and other important bodies in India and in Canada with equal success. The Colonial authorities have it also in general use in nearly every station from Newfoundland, with its cold and humid climate, to the West India Islands, where extreme heat prevails.

To avoid the waste inseparable from paints packed in a mixed state, and, by a simple form of preparation, to permit of its universal application, the Anti-Corrosion Paint is sold in a powder, which only requires to be mixed with Linseed Oil to make it ready for use.

Messrs. William Dunn & Co., of 61 Flinders-lane East, Melbourne, are the Agents of the Firm in Victoria.

Cantrell & Cochran, Dublin.—Ginger ale and mineral waters.

Chambers, J., & Co., London.—Chemicals, drugs, colours, varnishes.

Chassaing, Guenon & Co., London.—Peppine wine and medicinal preparations.

Corbyn, Stacey & Co., London.—Pharmaceutical preparations.

Corry & Co., Belfast.—Ginger ale and other aerated beverages.

Currie, W., & Co., Edinburgh.—India-rubber waterproof clothing and other manufactures.

Day, Son & Hewitt, London.—Hoses, cattle, and sheep molasses.

Foulger, J., & Sons, London.—White zinc, white lead, paints, oils, varnishes, turpentine, railway grease, composition for ships' bottoms, &c.

Genoveva Sparkling Mineral Water Co. Limited, London.—Mineral waters.

Golding, Davis & Co. Limited, Widnes.—Salts of soda, white carmine soda, bleaching-powder.

Grillon, B., London.—Taman Indian lozenges.

Grindley & Co., Millwall.—Varnishes and anti-corrosive paints.

Gulliver, S., & Co., Aylesbury.—Mineral and aerated waters.

Hall, R., Stockton-on-Tees.—Sheep-dip.

Harris, S. & H., London.—Blacking, polishing-paste, furniture polish, waterproof saddle paste, for polishing saddles and brown leather, &c.

Herrings & Co., London.—Pharmaceutical preparations, essential oils, &c.

Hockin, Wilson & Co., London.—Sedlitz powder.

Home & Colonial Sanitary Co., London.—Antiseptic and carbolic disinfectants.

Hudson, R. S., Liverpool.—Extract of soap and dye soap.

Jeyes' Sanitary Compounds Co. Limited, London.—Disinfectants, sheep dips, wood preservatives.

Judson & Son, London.—Gold and silver paints and inks; bronzed and dyes.

Lellievre, Dr. J., London.—Lard and more poultices with india-rubber covering.

Macintosh, C. & Co., Manchester.—India-rubber goods of every description.

Mackay, J., & Co., Edinburgh.—Varnishes and polishes, with materials from which they are made.

Maitland Co., The, London.—Maitland food and pharmaceutical preparations.

Mander Bros., London.—Varnishes, colours, paints.

M'Ewan & Co., London and Melbourne.—Oils of various kinds.

Marshall & Holland, London.—Wine and beer tunings, preserving liquids, &c.

Morris, Little & Son, Doncaster.—Chemical soluble phenyls.

Nesle, Harrison & Co., Manchester.—Carbolic and other disinfectants, patent antiseptics.

Newry Mineral Water Co. Limited, London.—Mineral waters and other aerated beverages.

Nicholls, W., & Co., Wiltshire.—Wind annatto.

Peacock & Buchan, Southampton.—Ready-mixed innocuous, non-poisonous, composition paints; anti-corrosive and anti-fouling compositions.

Pickering, J., & Sons, Sheffield.—Polishing paste, furniture polish, knife powder, plate powder, harness blacking, Brunswick black.

Price's Patent Candies Co., London.—Stearine, compounds, and paraffine candles; night lights, tapers, tapers, and household soaps, machinery oils. (See page 592.)

Reade Bros. & Co., Wolverhampton.—Extract of soap, scapine, dry soap, bisulphate of lime for brewers.

Reckitt & Sons Limited, Hull.—Blue and starch, for laundry purposes.

Richardson, J., & Co., Leicester.—Cod liver oil emulsions, colonists' medicine chests, pocket pharmacies. (See page 593.)

Biggott & Co., London.—Whitening leaves.

Rose, Sir W. A., London.—Juvelling and inlaid oils, varnishes, colours, and white and blue paints.

Silicate Paint Co., London.—Silicate paints.

Smith, T. & H., Edinburgh.—Salts of morphia; strychnine, and its salts.

Price's Patent Candle Company, Limited, Belmont Works, Battersea. London—
Scented, Composite, and Paraffine Candles, Night Lights, Glycerine, Toilet Soaps, Household Soap, Soap
Machinery, Machinery Oils. Awarded First Order of Merit for Soaps and Candles (Gold Medal)

The Self-lighting Candles exhibited are made of an improved form, lighting firmly at once in any of the various sized candlesticks in common use, without paper or other appliances. All the better qualities of the Company's Candles are procurable with these ends at a slightly higher price.

Amongst the various manufactures now being mentioned Glycerine Candles especially adapted for carrying about without dripping, are new Ornamented Candles of many coloured designs—Candles for use in Mines, in Signal Lamps on Railways, and Ship-lanterns—and many others.

The Belmont Scented Candles, ordinarily quoted as "Belmonts," form a considerable item in the tanning produce of the Company. They excel in hardness and purity of material as well as in volume of light and economy of consumption. Being of high setting point they are suitable for use in all climates, and then label—a tropical scene, with palm tree, and natives rendering the oil in vats in the foreground—is too well and universally known to need further description.

Price's Soap Machinery is a new manufacture and is a combination in powder of Soap and Alkali mixed in proper proportions for immediate use. It is a safe and powerful Washer and Cleanser; saves time, trouble, and money—gives neither smell in the house on washing day nor in the clothes washed, leaves the hands smooth and soft and causes no injury to the fabrics cleaned.

The Works of Price's Patent Candle Company, Limited, as it is believed, the largest in the world for the production of Candles and of articles connected with this manufacture. They consist of two factories, one on the Company's freehold land of about 12 acres on the Thames, at Battersea, and the other on its freehold of about 60 acres on the Mersey, near Liverpool. The factory village on this last-named estate, where many of the specialties exhibited are produced, comprises 67 houses for the officers and workmen and has a population of above 500. It has its own schools (the building being used for divine worship on Sundays), resident Chaplain, Co-operative Store, Rifle Corps, &c. The part of the ground not occupied by buildings serves for gardens, allotment grounds, and cricket field.

The sale of Candles from the two factories amounts in the busy season to 240 tons per week, made up of about 5,000,000 separate Candles, of which the week, extended end to end, would measure about 588 miles. Burned one after the other these Candles would last

for 3082 years; or, in other words, if the first candle of a week's sale had been lighted when Saul ascended the throne of Israel, and as each candle burnt out another had been set to burn, there would have been sufficient for a continuous light to the present time, and further for 110 years to come.

'Composite' Candles were first made, and the name was first given to them, in one of the Company's factories, but the name has since then and for many years past been applied to all cheap self-lighting candles. The Company's "Best Composites," from their acknowledged excellence, command a higher price than any other composite candle, but large quantities of their lower composites are sold, even at a retail price, as low as one halfpenny per candle. The "Gold Medal Palmatine" are an admirable substitute for the real wax, and open sixteen candles of our grandfather, and are only about one third their price.

Palm Oil was first employed for the production of white hard candles in the Company's factories. Their patent processes for rendering this oil, and some other oils and fats not previously usable for this purpose, available for the manufacture of good self-lighting candles, have been the means of giving these candles to the public at about one-half of the lowest price at which any such candles were previously sold. The processes have since been largely adopted by other candle manufacturers.

Night-lights form an important branch of the business. They are made either to burn in glass cups or in their own paper cases. Some kinds are well adapted for use in hot climates. The sale, on an average of the whole year, is more than 100,000 per day.

Glycerine, now so largely used, was first brought into a state of purity by the Company's patent processes. "Price's Glycerine" is still the name used to indicate the purest form of this material, which has since then become very valuable in medicine and manufactures.

Toilet Soaps of acknowledged excellence, Household Soaps of guaranteed goodness, Cloth Oils and Machinery Oils, make up, with the manufactures above named, a total of between 12,000 and 14,000 tons of finished goods sent out yearly from the Company's factories.

The Company employs, in its various departments, in connection with the manufacture of the articles as exhibited, nearly 1400 persons, and for these it provides mess rooms, reading rooms, baths, &c., and night schools for the boys.

Richardson, John, and Co., 10 Friar-lane, Leicester.—Pure Chemicals, Pharmaceutical Preparations, Cod Liver Oil Emulsions, Colonists' Medicine Chests, Pocket Pharmacies, &c. Awarded First Order of Merit for Pharmaceutical Preparations (Silver Medal).

Amongst the Specialities exhibited by Messrs John Richardson and Co. were the following:—

RICHARDSON'S SOLUBLE FRUIT-COATED PILLS—These Coated Pills are perfectly soluble, even in cold water, and have the power of preserving their active ingredients for any length of time, in all climates. The Exhibitors claim to be the largest makers of these tasteless medicines in the world, keeping in stock nearly 700 Formulas, embracing in simple and compound forms almost every combination of the various kinds of active substances.

RICHARDSON'S PHOSPHORIZED COD LIVER OIL EMULSION—This Preparation is an invaluable remedy in the wasting diseases of children, in the various forms of scrofula, rickets, impotency, and all other chronic diseases arising from mal-assimilation and enfeebled nerve power, also in cases of emaciation resulting from the inflammatory or hereditary forms of tubercular diseases, purulent expectoration, night perspiration, and pulmonary consumption in its various stages.

RICHARDSON'S PURE THYMOL SOAP—Fragrant, Antiseptic, Effervescent—This elegant Soap, prepared from the new disinfectant, Thymol, has every advantage over Carbolic and Coal-Tar Soaps, as it is non-poisonous, and instead of a nauseating odour has the delightful and refreshing fragrance of wild thyme, and possesses in the highest degree all the advantages of a powerful disinfectant. At a skin-soap it is most valuably beneficial, and well adapted for the bath or toilet, and general family use.

RICHARDSON'S COMPACT MEDICINE CHEST—This elegant little Chest has been specially designed for the use of Colonists, Clergymen, Heads of Families, Missionaries, and others engaged in benevolent work. Each Chest is fitted with twelve varieties of Coated Pills, prepared according to the directions of Dr Spencer Thomson, and a bottle of Chlorodyne. It also contains "The Handbook for Compact Medicine Chest," written expressly for it by Dr Spencer Thomson, giving full directions for the use of the Medicines, together with a considerable amount of valuable information upon Diet, &c.

RYAN'S PORTABLE MEDICINE CASE—This will be found most useful for Travellers, Emigrants, and Country Residents. It contains six bottles of Coated Pills and a bottle of Chlorodyne; an assortment of Medicines for the cure and relief of all ordinary ailments. It also contains a Card describing each of the Medicines, their uses and effects, and a brief description of all simple ailments, with their proper treatment. It is intended as a cheaper Case than the above Compact Medicine Chest.

RICHARDSON'S EMERGENCY CASES, OR POCKET PHARMACIES—The above elegant and compact Cases will be found most useful to Country Practitioners, and Colonial Surgeons, for whom they are more especially designed, containing as they do a carefully selected List of Formulas enabling the medical attendant to

prescribe a remedy on the spot, thus saving the trouble of some hours' delay in obtaining the necessary medicines.

RICHARDSON'S LIQ. SECALE AMMON—A most valuable therapeutic agent to the Obstetric Practitioner. Safe and certain in its results, pleasant to take, possessing all the virtues of the *Pure Eryol*, and preferable on account of its easy administration.

RICHARDSON'S HYPOPHOSPHITE—Dose—the same as Tinct. Opi P.B., 6 to 40 minims. A new and valuable Solution of Opium, of the same strength as Tinct. Opi P.B., and far superior to that or any other preparation of Opium. It does not produce headache, stupor, or constipation, and may be given in those cases of biliousness where the usual preparations are inadmissible.

RICHARDSON'S LIQ. BISMUTH CO.—This elegant Preparation, a solution of Bismuth with Pepsine and Starch, has been found a most valuable remedy in interrupted, laborious, or painful digestion.

PEPTOCOLON, OR, COMPOUND PEPSEINE WINE—This Preparation is simply Pepsine Wine to which are added the other natural elements in the process of Digestion, such as Tannic Acid, Dextrin, Lactose, and Hydrochloric Acid, &c. It is evident that such a combination must be far more effective as an aid to assimilation than simple Pepsine Wine. After an extensive trial, Peptocolon has been found to bring about the digestion of food when all other remedies have failed, being a combination of all the digestive agents, and thus strengthening and occupying the enfeebled organs of digestion.

RICHARDSON'S CHLORODYNE—This remedy has been prepared for the last fifteen years, and has gained the reputation of being equal to any, and far superior to many, of the similar preparations now so extensively vended.

Messrs. John Richardson & Co. are Manufacturing Pharmaceutical Chemists, Medical Outfitters for Military, Naval, and Expeditionary Forces, and Inventors and Sole Manufacturers of the POCKET, CASES, and COMPACT MEDICINE CHESTS, for the Naval and Mercantile Marine, Railway Contractors, and Exploring Parties, as exhibited.

The following Awards have been obtained by the Firm, who are patronized by the Imperial British, Indian, and Colonial Governments:—

- PRIZE MEDAL, Diploma of Merit, *Brussels Exhibition*, 1876;
- GOLD MEDAL, *South African International Exhibition*, 1877;
- PRIZE MEDAL, *Paris Grand Exhibition*, 1878;
- FIRST AWARD, *Sydney Exhibition*, 1879.

Messrs. Richardson's Specialities may be obtained from the leading wholesale Druggists in Melbourne and Australia, and in New Zealand.

Southall Brothers & Barclay, Birmingham.—Cod Liver Oil, Drugs and Powdered Drugs; Surgical Dressings; the "Aquarium" Sea Salt. Awarded First Order of Merit for Pharmaceutical Preparations, Cod Liver Oil, and Derivatives (Gold Medal).

The "A 1" Cod Liver Oil included in this collection differs from all others, as it contains less solid fatty acids, as proved by chemical analysis, and this result is obtained by a special process of the Exhibitors. It is obtained exclusively from selected livers of the Cod fish (*Gadus Morhua*) at a specially low temperature, to prevent decomposition of the organic constituents, such as *gadine*, *biliary matter*, &c. A pure oil is thus obtained, of a pale yellow colour, and both light and sweet. As the biliary matter is retained in its normal state, it is on this account, and from its lightness and freedom from taste and smell, more readily assimilated by the system than other oils. This Oil is prepared on the North-East coast of Norway.

In the Exhibitors' Case were shown :—

- (A) Specimens of analysed samples of Cod Liver Oil, as prepared by the exhibiting Firm, showing its superiority over Pale Bow, Newfoundland, and other Oils.
- (B) The various organic constituents found in the Oil prepared by a number of researches; and which have not been shown elsewhere than at the last Paris Exhibition by the Exhibitors.

For many years this Oil has been designated "A 1," which is the Trade Mark used in connection with it. This Oil has obtained Paris Medals wherever it has been shown, viz., at the Cape and Paris.

DRUGS AND POWDERED DRUGS, PHARMACEUTICAL CHEMICALS, AND GALENICAL PREPARATIONS, FRUIT ESSENCES.—These Preparations are exhibited in a separate Case, and are types of the Drugs supplied by the Exhibitors, and of the Chemicals and Pharmaceutical Preparations they manufacture. Special attention is called to the *Seals Preparations*, which are guaranteed soluble and of full strength; to the *Powdered Extracts*, which are of great convenience to dispensers; to *Lug Sarsaparilla*, a preparation of *Speocinnha* containing an invariable amount of alkaloid, superior in this respect to *virgine*, and also by the fact that it never deposits; and to *Coated Pills*, the coating of which is perfectly soluble in cold water, and stands exposure in warm climates without changing colour.

SOUTHALL'S "SOLUBLE MEAT."—This Preparation contains not only the organic salts, extractive and flavouring matters, with the mineral matters soluble in water, but also the *Fibrous* and *Albumen*, the essential flesh-forming matters which are absent in Liebig's Extract. It is prepared from the best English Beef, and by the process employed the meat is rendered soluble, and the stomach is saved three or four hours' work, the advantage of which in some cases can hardly be over-estimated. Baron Justus Liebig wrote:—"Were it possible to furnish the market at a reasonable price with a preparation of meat combining in itself all the albuminous principles, together with the extractive, such a preparation would have to be preferred to the *Extractum Carnis*, for it would contain all the nutritive principles of meat."—*Lancet*, Vol. II, 1895, Nov. 11th.

Honourable mention was awarded at the Paris Exhibition, (the only award to British Exhibitors for anything of the kind).

"TENUX"—Absorbent and antiseptic, superseding lint, cotton, wool, and oakum for dressings, as it readily absorbs the discharge from wounds, whilst the tar acts as an antiseptic.

THE "AQUARIUM" SEA SALT.—Differs from the so-called Sea Salts, as it contains all the ingredients of real sea water in full amount.

Storer, D., & Sons, Glasgow.—Paints, colours, white leads, white zincs, varnishes, oils, glazes, chemicals, &c.

Turner, C., & Son, London.—Varnishes, colours, paints.

Wallace, J., & Co., London.—"Metaline" (a substitute for oil as a lubricator).

Wheeler & Co., London.—Wheatmeal, lime, juice, salm, and "chalybeate."

Whiffen, Thomas, Lombard-road, Battersea, London.—Pharmaceutical Preparations, Quinine Sulphate and other Quinine Salts, &c. Awarded First Order of Merit for Quinine Preparations and Strychnine (Gold Medal).

The Specimens exhibited comprised :—

QUININE Sulphate, Hydrochlorate, Valerianate, Soluble Sulphate, Citrate, &c; also Pure Quinine,

QUINIDINE Sulphate and Pure Quinidine,

CINCHONINE Sulphate and Pure Cinchonidine;

CINCHONINE Sulphate, Hydrochlorate, and Pure Cinchonine;

LIQUID EXTRACT OF CINCHONA BARK, prepared by evaporation in Vacuum;

SALICIN, the active principle of Willow Bark, largely used in cases of Rheumatic Fever,

WILLOW BARK, used in the manufacture of Salicin,

NCA VONICA, used in the manufacture of Styroline and Brucine;

CINCHONA BARK, used in the manufacture of Quinine and Quinetum, from South America, British India, and Java, with the analysis of each;

QUINETUM, Quinetum Sulphate, and Citrate with Iron. The entire Alkaloids of E. I. Cinchona Succubra, consisting of Quinine, Cinchonidine, Cinchonine, and Amorphous Quinine. A most valuable preparation, having the properties of Quinine, at about one-third the cost.

STRYCHNINE and its Salts. The Exhibitor is the Inventor and Proprietor of the celebrated "Halle's" Strychnine, and from its introduction in 1850 has been the sole manufacturer.

Young's Paraffin & Mineral Oil Co Limited, Glasgow.—Burning oils, paraffin, and candles.

Class 48.—Leather and Skins.

Evans, P. S., & Co., Bristol.—Sole leather. **Ullathorne & Co., London.**—Leather, shoe machinery, gundery, &c.

Class 49.—Agricultural Implements and Processes used in the Cultivation of Fields and Forests.

Avery, W. & T., Birmingham.—All kinds of weighing apparatus used in husbandry.

Barford & Perkins, Peterborough.—Cultivators.

Bentall, S. H., Maldon.—Chaffcutters.

Bentall, M. H., & Co., Haybridge.—Chaffcutters, corncrushers, horse gears.

Black & Sons, Bewlwick-on-Tweed.—Spades and shovels.

Boby, R., Bury St. Edmunds.—Corn-dressing and screening machinery and appliances.

Brigham & Co., Berwick.—Combined reapers and mowers, mowers, seed-sowers.

Brooks & Cooper, Sheffield.—Sieves and other agricultural implements.

Burys & Co. Limited, Sheffield.—Knives, reapers, &c.

Clayton & Shuttleworth, Lincoln.—Agricultural machinery.

Coleman & Morton, Chelmsford.—Cultivators, corn-screens, water-carts.

Cooke, J., Lincoln.—Floughs and ploughshares. **Corbett & Feale, Shrewsbury.**—Agricultural implements and machinery.

Cocrooran, Witt & Co, London. — Millstones, for grinding coal, roller mill, for reduction of middlings.

Crowley, J., & Co, Sheffield. — Chaffcutters.

Davey, Sleep & Co, St. Gorman's. — Two-furrow ploughs.

Dell & Sons, London. — Millstones, wheat cleaning and separating machines, middlings purifiers, &c.

Denton, H., Wolverhampton. — Harrows, clod-crushers, wrought-iron rollers, barn doors, bolts.

Fallows & Bate, Manchester. — Lawn-mowers and knife-cleaners.

Gardner & Son, Birmingham. — Sawage machine.

Garrett, R., & Sons, Leiston. — Portable steam-engines, machinery, for stacking, threshing; hoes.

Gregory, J., Lincoln. — Lime screens.

Handy & Co Limited, Derby. — Mowing and reaping machines, and agricultural implements.

Harrison, M'Gregor & Co, Leeds, Lancashire. — Reapers, mowers, pulpers, shears.

Hornby, R., & Sons Limited, Grantham. — Steam-engines and agricultural machinery.

Howard, J. & F., Bedford. — Agricultural implements and machinery.

Hunt & Tawell, Earls Colne. — Agricultural implements and machinery.

Jeffery & Blackstone, Stamford. — Agricultural implements.

Marshall Sons & Co Limited, Grimsborough. — Portable, horizontal, vertical, and fixed steam-engines; road locomotive, threshing-machines.

Murray, G. W., & Co, Banff. — Chain pumps, wire straining baskets, ploughs.

Nicholson, W. M., & Co, Newark-on-Trent. — Agricultural implements and machinery.

Parkes, F., & Co, Birmingham. — Agricultural and horticultural implements.

Penney & Co Limited, Lincoln. — Rotary corn-screens, potato diggers.

Ransome, Sims & Head, Ipswich. — Agricultural machinery and implements. (See page 506.)

Richardson & Sons, Carlisle. — Blowing, winnowing, and corn-dressing machines, corn elevator.

Richmond & Chandler, Manchester. — Chaffcutters, corn-crushers, horse-gear works.

Robey & Co, Lincoln. — Agricultural machinery, portable engines, threshing-machines.

Rollins & Co, London. — Lawn-mowers.

Ruston, Proctor & Co, Lincoln. — Agricultural machinery, portable engines, steam threshing-machines.

Samuelson & Co, Banbury. — Soft-taking reaping-machines, combined reaper and mower, grass-mower.

Sellers, G. & Son, Haughty. — Ploughs, single and double furrow; patent diggers, harrows.

Skellon, C. T., & Co, Sheffield. — Agricultural and horticultural implements.

Smyth & Sons, Peasenhall. — Corn and seed drill, broadcast sowing machine.

Turner, H. R. & F., Ipswich. — Vertical steam-engines, agricultural implements.

Class 50.—Apparatus and Processes used in Agricultural Works, and in Works for the Preparation of Food.

Avery, W. & T., Birmingham. — Scales and weighing-machines.

British Syphon Manufactory, London. — Syphon vessels for mineral waters, &c.

Gardner, J., Birmingham. — Sawage-chopping machines.

Howard, J., Chesham. — Prints for stamping butter, for dairy and domestic use, &c.

Kent, G., London. — Domestic appliances.

Rylands, D., Barnes. — Electrically stoppered bottles, for preserved foods and drinks.

Ruston, Proctor & Co. — Corn mill.

Young, J. & T., Ayr. — Cheese presses, curd mill.

Class 51.—Apparatus used in Chemistry, Pharmacy, and Tanning.

Avery, W. & T., Birmingham. — Weighing apparatus used in chemistry, pharmacy, and tanning.

Cowan, W. & B., London. — Wet and dry gas meters.

Glover, G., & Co, Chelsea. — Instruments of precision for the measurement of gas.

Huxham & Brown, Exeter. — Buck mill and carbars, spring carriage leather roller, tanneries' pump, disintegrator.

Moliner, C., & Co Limited, London. — Machines for dressing skins and leather.

Muller, H. L., Birmingham. — Alpha patent gas-measuring machine, gas engine.

Ullathorne & Co, London. — Apparatus used in tanneries, curriers, saddlers, shoemakers, &c.

Walker, C. & W., Donnington. — Photographs illustrating apparatus used by the Gaslight and Coke Co of London.

Class 52.—Machines and Apparatus in general.

Adams, T., Manchester. — Safety valves and springs.

Armstrong, Sir W. G., & Co, Newcastle-on-Tyne. — Hydraulic machinery and apparatus.

Anchor Tube Co, Birmingham. — Wrought-iron tubes and fittings for boiler, steam, and water purposes.

Avery, W. & T., Birmingham. — Scales, steady-rod, platform, weighing machines, and weightbricks.

Barrett & Ellers, Westminster. — Soda-water filling machines.

Boberdt, G., Watch making machinery.

Bradford, T., & Co, Manchester. — Washing, wringing, and mangling machinery.

Clark, T. & Co, & Co, Wolverhampton. — Galvanised signal pulleys and sink hoists.

Cochrane, J., Bathurst. — Horizontal and vertical engines, boilers, safety-valves, mountings, &c.

Crossley Bros Limited, Manchester. — Gas engines. (See page 500.)

Eberitt, A., & Sons, Birmingham. — Tubes for locomotive, marine, gas, or steam purposes, sheet brass and copper; copper wire.

Fawcett, T. C., Leeds. — Ink-making machinery.

Fleming, E. S., Dornoch. — One-half tinned leather bands for steam driving, valves, taps, &c.

Foster, Wm., & Co Limited, Lincoln. — Agricultural steam engine and saw benches.

Gibbons, P. & H. F., Wantage. — Portable steam-engines.

Hayward, Tyler & Co, London. — Soda water filling machine.

Hendley, E. S., Dornoch. — Vertical steam-engines, circular saw benches.

Hodgson & Stead, Manchester. — Weighing machines and weightbricks, adapted to any known standard.

Kirkstall Forge Co, Leeds. — Rolled shafting.

M'Ewan, J., & Co, London and Melbourne. — Brass cocks, steam and water fittings.

Maynard & Larnan, Wolverhampton. — Plumber's brass foundry, &c., steam fittings, pumps.

Moncrieff, J., Perth. — Water gauge glasses, for showing the height of water in steam boilers.

Nicoll, G. H., & Co, Dundee. — Family mangle.

Patent Diagonal Rocking Fire Bar Co, London. — Furnace bars.

Patent Nut & Bolt Co Limited, Birmingham. — Bolts, nuts, rivets, set screws, coach screws, washers.

Pooley, H., & Co, Liverpool. — Weightbricks and weighing-machines for railways, roads, and warehouses.

Priestman Bros., Hull. — Crane (working model), pile driver (working model).

Robey & Co, Lincoln. — Patent "Robey" mining-engine.

Robinson, T., & Son Limited, Rochdale. — Wood-working machinery, engine and boiler.

Russell, J., & Son Limited, Wadsworth. — Wrought iron and steel tubes and fittings, for boiler, gas, steam, water, and other purposes.

Rustless & General Iron Co, London. — Anti-corrosive tubes and fittings.

Sanders & Sons, London. — Bear-engines, porcelain ware and split barrels, taps, tanks.

Schaeffer & Budenberg, Manchester. — Counting-machine, steam and vacuum gauges; Bus's pneumatic governor; Pearn's pump.

Seekings & Ellery, Gloucester. — Semi-portable steam-engines, steam launch engines.

Ransomes, Sims & Head, The Olve Works, Ipswich, England.—Agricultural Machinery and Implements, including Portable Engine, Vertical Engine, Steam Threshing Machine, Double and Single Furrow Ploughs, Horse Rakes, Lawn Mowers, and Patent Chilled Plough Shares. The name of this firm has, since the opening of the Melbourne International Exhibition, been changed to **RANSOMES, HEAD & JEFFERIES**.

THE PORTABLE STEAM ENGINE exhibited was of 8-horse power, and constructed of the best materials and fitted with all the latest improvements. A First Order of Merit (Gold Medal) has been awarded to it. These engines are manufactured from 3 to 10 horse power, with single cylinders and from 10 to 25 horse power, with double cylinders. Link motion reversing gear may be readily applied whenever required to engines intended for winding and hoisting purposes, &c. It is of the best construction, and the engines may be reversed with the greatest facility. The boiler is built of the best English plates, riveted by hydraulic machinery (which does not destroy the fibre of the iron in the rivets as the ordinary method of hand riveting), and has been tested by hydraulic pressure up to 100 lbs. to the square inch. It is covered with non-conducting covering, which prevents radiation and economises fuel when the engine is engaged in outdoor work during cold weather. The fire-box is specially constructed for the colonies, where wood is principally used for fuel, and gives a large heating surface. The engine is placed on the top of the boiler, the crank-shaft being carried on two strong iron brackets firmly bolted on the boiler. A strong wrought-iron "stay rod" is bolted on top of each of these brackets, the other end being secured to "lugs" cast on each side of the steam-cylinder and binding the whole of the working parts firmly together, thereby preventing vibration when working up to full power. The steam and slide valve chest are riveted like the boiler with solid "jacketing," and cleaning or repairing can be effected on either or both without removing them from the boiler. The feed pump is on the continuous action principle, and fitted with a suction and a discharge pipe. The suction-pipe is always drawing a full lift of water, and a stop-cock in the discharge-pipe regulates the supply to the boiler by opening or shutting it as required, the surplus being returned to the tank. The advantage of this pump is that when muddy water is used the valve seatings are continually kept clean by the continual rush of water, preventing any settlement which would cause the valve to stick. The exhaust steam is partially utilised in heating the feed-water, which effects a considerable saving of fuel. The governors are of the best description, and are very sensitive and perfect; the throttle-valve connection is adjustable by means of a quadrant, and easily got at for repairs or examination. The wheels are of the best wrought-iron, which is most suitable for countries where the changes of temperature are very sudden; they are fitted with patent axles and oil-cups. The chimney has a patent spark arrester, which lifts with a lever to give increased draught when firing up, a jet of steam also assists. These engines are especially adapted for threshing, pumping, sawing, and general agricultural and contractors' work, and from their ease of management can be driven by any intelligent labourer.

THE VERTICAL ENGINE, for which this firm has also received a first award (Gold Medal). The engine exhibited is of 4-horse power, but all sizes from 1½ to 10 horse power are made. These engines are well adapted for all light work required by the farmer or squatter, such as pumping, chaff-cutting, grain-crushing, &c.; and to manufacturers in towns, where space is a consideration, their compactness recommends them, and as they require no foundation they can be erected in any part of a building. The boiler and engine are mounted on a strong cast-iron bed-plate, which forms an ash-pen and tank; the water is heated nearly to boiling point by the

exhaust steam, and the consumption of fuel is considerably reduced. The boiler is built of 7-16 inch plates of the best iron, and tested by hydraulic pressure to 160 lbs. per square inch. The engine stands in front of the boiler, is entirely independent of it, and can be placed any distance from it if desired. The cylinder stand, valve chest, and framing, which carries the working parts, are in one casting. The engine can be worked backwards or forwards as required, by means of the adjustable eccentric, and the crank-shaft is long enough to take the fly-wheel at either end.

STEAM THRASHING MACHINE.—The framing of this machine is constructed of the best hardwood, thoroughly seasoned and well put together, the joints being all secured with strong bolts and angle-plates, and mounted on the best wrought-iron wheels. It is fitted with all the latest improvements for threshing, winnowing, cleaning, and bagging every description of grain at one operation. The drum is fitted with "Hanscom's Improved Spinal Reversible Beaters," which have three separate flails, and can be altered when the harvest varies. The concave of the drum is made of strong wrought-iron ribs and spring wire gratings, and protection is afforded against accident by a patent self-acting drum guard, which closes the mouth of the drum if any one should fall into it or the feed board. After passing through the various rollers and sieves, and being subjected to the fan-blind, the corn passes into the rotary adjustable screen, which separates it into the samples. This screen is formed with two wire cylinders (one inside the other) working on a slight eccentric, which, as it revolves, opens the wires at the top and allows the grains that are caught between them to fall back into the cylinder, doing away with the old system of the bush, which used to be such a heavy drag on this part of the machine. The screen can also be adjusted to make any sample of grain. This machine, which is made in sizes from 4-ft. drum to 6-ft. drum, has been awarded a First Order of Merit (Gold Medal).

SAWA AND FURROW PLOUGH exhibited are made especially to suit colonial requirements. They are built entirely of wrought-iron and steel. The single-furrow ploughs will work equally well with one or two teams, owing to the length of the handles and the shortness of the beam, which gives the ploughman great command over the implement. They are fitted with strong iron coulters and steel breasts, and are made in all sizes—from the light 1-horse plough to the strongest plough for dam-making (to be used with 10 or 12 bullocks). The double-furrow plough has a adjustable beam, and can be set to turn a sod from 8 inches to 14 inches wide. The depth and width of the furrow-wheel can be regulated by a lever and screw without leaving the handle. These are also furnished with disc coulters for ploughing land covered with heavy herbage, in addition to the ordinary coulters. These have also received a First Order of Merit (Gold Medal). They are made in sizes to suit, from 3 to 6 horses.

PATENT STAR HORSE RAKES.—This rake is made of strong wrought iron, mounted on 48-inch wheels of the same material, fitted with long axles to ensure steadiness, and capped to exclude dirt. The teeth are of the best steel of a "T" section expressly rolled for these rakes. This form gives great strength combined with lightness, and reduces the friction of delivering the load, whilst the shape of the tooth secures clean raking. The wheels are furnished with side levers, having a parallel lift, and raise or lower the frame, by which the points of the teeth can be set to suit different styles of work required. The teeth are hung on a balance rocking frame, which locks itself fast when at work, but becomes completely balanced whilst the load is being delivered, so that the work of raising the teeth is reduced to a minimum. The delivery is effected by a compound lever, and can be worked by a boy. These machines can be fitted with a seat, when the driver can deliver the load by the action of a double lever

MESSES. RANSOMES, SIMS & HEAD'S EXHIBIT OF MACHINERY IN THE BRITISH COURT.

and treadle; and another method is the self-acting delivery, which operates by a lever that forms a brake on to the wheels, which lifts the teeth and release the load. The whole operation is performed with the right foot, leaving the driver the use of both hands for the management of the horses. Made in sizes from 8 feet wide to 10 feet wide. They have been awarded a First Order of Merit (Silver Medal).

LAWN MOWERS.—The "AUTOMATON" LAWN MOWERS are thoroughly strong, well made, and durable machines, and the best suited for general work and gardeners' use. They cut the grass perfectly, leave no ribs, but produce a smooth velvety surface on the lawn, having sufficient speed and not being choked up with knives as some machines. They have been still further improved by the addition of longer handles, by increasing the size of the grass box, by substituting a sheet-iron concave—which can be removed in a moment when it is desired to leave the cut grass on the lawn, by completely covering up the gearing to protect it from stones and dirt, and by making the machines lighter in draught. They have front rollers for general work, and side rollers for cutting long grass, or when it is unnecessary to roll the grass in front of the cutters. They have the best machine made gearing, the best

knives of steel and iron rolled together, and an automatic self-action instead of ratchets.

The "Giant" LAWN MOWERS were introduced for season 1890 to meet the demand for machines specially adapted for cutting long grass; and which, whilst similar to the lawn mowers imported from America, have the special advantages of the most accurate fitting and general durability of English manufacture, and perfect adjustment. The frames are strongly braced together by the lodges which bolted to the sides of the machines. They have a cutting barrel which is large and open, with three knives, and is simply adjusted by top and bottom screws. The knives are made of steel and iron rolled together, and are not liable to be broken by any hard substance like cast-iron cutters, nor iron like knives which are only ground on. They will cut wet, dry, long, or short grass without clogging, and cut off almost all the "hunts." Although they do not leave the surface quite so smooth as the "Automaton," they are superior in this respect to all similar machines, and are well adapted for getting over a large amount of work with little labour, and producing an excellent result. These also received a First Order of Merit (Bronze Medal).

PATENT CHILLED PLOUGH SHARES.—This important invention of Robert Ransome, patented in the year 1863, has come into almost universal use, though even now in some places its advantages are not fully known. These shares have the under surface as hard as steel, whilst the upper part of the share is soft and tenacious. This is shown in the annexed drawing, where the white line represents the hard, steel surface. By reason of this construction, the upper part wears away, and the cutting edge of the share always remains sharp; the draught of the plough is uniform, and wears less than when fitted with a rougher or other share, which wear blunt, and must from time to time be relaid, causing loss of time by journeys to and from

the smithy, and by wasting there. When properly made, these patent chilled shares are very tough and strong, and not brittle. A great deal of care and attention is required in their manufacture to ensure a uniformly good share, well chilled and yet tough, and that is accurate in fit. An expensive and peculiar quality of iron is required. The art of manufacturing these self-sharpening shares having originated with, and been carried on by them for nearly eighty years, they are therefore able to produce the very best quality of shares, which have established a world-wide reputation. These received a First Order of Merit (Bronze Medal).

Shand, Mason & Co., London.—Steam fire-engines, manual engines, and other firemen's appliances.
Sponcer, J., West Bromwich.—Tubes and fittings.
Stone, J., & Co., Deptford.—Hydraulic apparatus and appliances.
Tangye Bros., Birmingham.—Steam-engines, boilers, pumps; hydraulic apparatus, cranes.
Tullis, J., & Son, Glasgow.—Leather belting.
Wallace, J., & Co., London.—Metallic Young, J. & E., A.L.—Vertical steam-engine.

Class 53.—Machine Tools.

Allid, W., & Sons, Birmingham.—Bellows, portable forges, anvils, vises, smith's hon heaters.
Bale & Co., M. Powis, London.—Cork-cutting machinery.
Bardsley, J., Liverpool.—Patent improved floor clamp, self-fixing.

Brooks & Cooper, Sheffield.—Anvils, vices, hammers, tools for smiths and excavators.
Brooks, J., Lye—Anvils, hammers, chain pulley blocks, joiners' screws, and tools.
Crownshaw, Chapman & Co., Sheffield.—Saws, files, machine-planing and moulding irons, cylinder grinders.
Dodge, J. & B., Limited, Sheffield.—Files, steel cutters, saws, tools, &c.
Gilpin, W., Sen., & Co., Cannock.—Edge tools, hammers, vices, &c.
Greenisade, H. A. & W., Bristol.—Carpenters' and joiners' planes, painting brushes, &c.
Ibbotson Bros & Co Limited, Sheffield.—Files, steel, saws, railway plant, edge tools.
Ladd, J. H., & Co., London.—Bourne patent presses.
Lee & Hunt, Nottingham.—Lathes; slotting, shaping, and drilling machines.

Lyndon, W. A., Birmingham.—Spades, shovels, and edge tools.

Marshall Sons & Co. Limited, Gainsborough.—Circular saw benches, with two table complete, saw-spindle, with perfect and brass bearings.

Mathieson, A. & Son, Glasgow.—Mechanical, engineering, and edge tools, and machines, mottling, boring, and mitering machines.

Omons, J. C. Limited, Birmingham.—Smith's apparatus and implements, Eyre's patent self-blowing steam forge.

Powis, Bale & Co., London.—Cork-cutting machine.

Reynolds, F. W., & Co., London.—Band and circular sawing machines, mottling and boring machines, patent miter cutters, flooring cramps.

Robey & Co., Lincoln.—Circular saw bench.

Russon, Proctor & Co.—Circular saw bench.

Schaefer & Budenberg, Manchester.—Henpe's screwing-machine, and machine tools.

Scott Brothers, Halifax.—Machine tools, steam hammers, and boiler-making machinery.

Shirlaw & Co., Birmingham.—Implement and tools for engineering and gas-fitting.

Smith, T. & Sons, Birmingham.—Carpenters' edge tools, axes, &c.

Spear & Jackson, Sheffield and Melbourne.—Saws, files, turning, engineering, and other tools.

Spencer, Walter, and Co., Midland Steel Works, Rotherham.—Cast Steel, Hand-cut Files, &c. Awarded First Order of Merit for Files (Silver Medal).

(N) SPENCER DIAMOND ROTHERHAM CAST STEEL

These Exhibits were shown in two sections—a desk section contains Steel, and an upright section Files. In the latter were to be found all kinds of Files, from the small one two inches long, used in watchmaking and other light industries, to the roughest cuts, two feet long used for the heaviest kinds of work. One of the features of the section was that the whole of the files were so fitted in the case that they could be taken out for examination, an arrangement which is not usually made in exhibition cases. The second section contained fractures of Steel of every class; Blister Steel, Shear Steel, Soft Steel (without extra toughness is required), Tool Steel, and Steel specially adapted for the manufacture of hard turning tools. The samples were of various sizes, the smallest being Sheet Steel, 38 gauge.

At the Sydney International Exhibition, Messrs Walter Spencer & Co., who have been established since 1777, were awarded Two Medals and Diplomas.

Taylor Bros., Sheffield.—Patent perforated circular and hand saws; saw fittings, files, edge tools, patent sheep shears. (See page 600.)

Timmins, R. & Sons, Birmingham.—Hammers, punches, shoe tools, &c.

Turton Bros. & Matthews, Sheffield.—Steel files; railway, conical, and volute springs; edge tools.

Tyzack, Sons, & Turner, Sheffield.—Saw and engineers' files, circular frame and carpenters' saws, scythes, &c.

Ullishorne & Co., London.—Awls and shoe-makers' tools.

Ward & Payne, Sheffield.—Edge tools, files, &c.

Wilkinson, J. & Sons, Dudley.—Smith's anvils, vices, hammers, tee irons, &c.

Wright, P. & Sons, Dudley.—Solid wrought anvils, parallel and other vices, hammers, &c.

Wynn, W. & Co., & Co., Birmingham.—Carpenters' and engineers' tools, &c.

Yates, J. & Co., Birmingham.—Edge tools.

Crossley Brothers, Limited, Great Marlborough street, Manchester.—Gas Engines. Awarded First Order of Merit for Gas Engines (Gold Medal).

The Exhibit of Messrs Crossley Brothers included the "Otto" Silent Gas Engine, in four sizes—1 H.P., 3½ H.P., 6 H.P., 12 H.P.

Messrs Crossley Brothers are Sole Manufacturers of this Engine for Great Britain, Australia, India, and all British Colonies. The "Otto" Engine cannot be made in the Colonies or imported from any of the Continental Licensees without infringing Patent rights.

About 6000 of these engines are now in use. The present sales of about 150 per month are their best historical. These "Otto" Engines may be found in almost every trade. Their advantages compared with steam are as follow—No waiting to get up steam, start at once, no smoke, no dust, little heat, no ashes to cart away, no risk of boiler explosions, no boiler to wear out and clog up, take up little room seldom afford nuisances, are very economical in gas, require little attention, no chimney to build, no nuisance from bad water or feed pump, as in boilers.

These Engines are well made, and wear well.

16 H.P.

For 1000s these Engines are by far the best motors. With gas at 4s. a 3½ H.P. will work a large Cigar House for about 7s. per week. In Liverpool one firm alone have 43 "Otto" Engines at work in their warehouses.

They are made in the following sizes:—

Normal Power.
1 | 1½ | 2½ | 4 | 6 | 12 | 18 | 25

Maximum Indicated Power.
1.1 | 2.25 | 3.00 | 5.0 | 11.57 | 14.7 | 23.1 | 36 | 60

Compound Engines up to 60 H.P.; Special Engines with Hydraulic and Force Pumps attached.

The Agents for the Firm are—Victoria and Tasmania, Messrs Cowan & Co.; Adelaide, Mr. James Hill; Sydney, Brisbane, and Melbourne, Messrs Bright Bros. & Co.; Auckland, Auckland Gas Company.

Engines are kept in stock by all Agents.

Highly suitable as FIRE ENGINES; also being adopted as STEAM POWER ENGINES, at a great saving as compared with steam.

Taylor Brothers, Adelaide Works, Sheffield.—Saws (Patent Perforated Saws, Guide-lined Circular Saws, Hand Saws, and all other kinds of Long Saws, Hand Saws, and other Short Saws); Saw Fittings, Steel, Files, Edge Tools, Machine Irons, Matchets, Patent Sheep Shears, &c. Awarded First Order of Merit for Perforated Saws (Silver Medal)

The principal feature in Messrs. Taylor Brothers' Exhibits were Saws, of which they showed a splendid variety, including the Patent Perforated Saws, the advantages of which are great and numerous. They effect, for instance, a great saving of Files and Filing, effectually prevent expansion and fracture, keep the teeth of uniform size, and are a great saving of steam power and hand labour. At the Vienna Exhibition in 1873, where the Firm exhibited a Patent Perforated Circular Saw of 37 inches diameter, they were awarded for the same the Highest Prize, viz., the Medal of Merit.

Messrs. Taylor Brothers' Exhibits showed further the Patent Guide-lined Circular Saw. The lines engraved thereon are the best possible guide to the sharpener; in following these lines it is impossible to go wrong. The Saw exhibited here was 38½ inches

in diameter, made of the best cast steel, and ground by patent machinery; it was the largest Saw ever made in the United Kingdom.

All other kinds of Saws, regular, as well as improved and new ones, were shown, too numerous to enumerate; also Saw Fittings, Machine Irons, Chaff Knives, Bagat One Knives, Matchets, &c.

Quite recently Messrs. Taylor Brothers have taken out a Patent for Sheep Shears, with movable blades, which they exhibited, and for which they claim important advantages over the regular ones.

Many distinctions have been obtained by Messrs. Taylor Brothers, the latest being at the Sydney Exhibition—First Prize, with First Special Prize for Invention and Improvement in Saws.

Messrs. Taylor Brothers send their Goods to all parts of the world, special attention being given to the requirements of each market.

Class 54.—Apparatus and Processes used in Spinning and Rope-making.

Hallam Bros., Ecclesfield.—Hand and machine hickies, gills, and wood and leather card covering.
Lawson, S. & Sons, Leeds.—Radial head drawing frame, automatic spinner.

Class 55.—Apparatus used in Weaving.

Shaw, F. & Co., Huddersfield.—Cards for wool, cotton, &c.

Class 56.—Apparatus and Processes for Sewing and for Making-up Clothing

Bradbury & Co. Limited, Oldham.—Sewing-machines, &c.
Greenwood and Batley, Albion Works, Leeds.—Boots, Leather Belting, Traces, &c.

The Boots exhibited by Messrs. Greenwood & Batley were sewn by the Keels' Patent Wax Thread Lockstitch Rotary Shuttle Sewing-Machine. They illustrated, in conjunction with the Belts and Traces, also shown by them, the accomplishment of the problem of equalising hand-sewing by machine, making a thorough solid lockstitch and using ordinary shoemaker's wax.

THIS BULK OF MESSRS. GREENWOOD & BATLEY'S EXHIBITS WERE LOST IN THE "SORATA." THE FIRM, HOWEVER, RECEIVED AWARDS OF FIRST ORDER OF MERIT WITH SILVER MEDAL FOR CARTRIDGE MAKING MACHINERY, AND SECOND ORDER OF MERIT FOR TWIST DRILLS, CHUCKS AND CUTTERS.

(See also Classes 40, 58, and 82.)

Howe Machine Co., London.—The original "Elias Howe" sewing-machines.

Jones & Co., Manchester.—Sewing-machines for manufacturing and domestic purposes.

Robinson & Co., Kettering.—Sewing-machines, &c., for manufacturing purposes.

Singer Manufacturing Co., London.—Sewing-machines, &c.

Class 57.—Apparatus and Processes used in the Manufacture of Furniture, &c.

Mathieson, A. & Son, Glasgow.—Mortising, boring, and marking machines.

Powis, C. & Co., London.—Wood-working machinery.

Class 58.—Apparatus and Processes used in Paper-making, Dyeing, and Printing.

Avery, W. & T., Birmingham.—Weighing-machines for use in the preparation of paper and tissues.
Birmingham Machinist Co., Birmingham.—Simplexian printing machines.

Casson, H. W., & Co., London.—Printing type, in various stages of manufacture.

Davison, W. & Sons, Otley.—Double-duty Wharfedale cylinder machine, with patent flays; foolscap-folio platen machine.

Durable Printers' Roller Co. Limited, London.—Printers' rollers.

Greenwood and Batley, Albion Works, Leeds.—The "Sun" Platen Printing Machine, Greenwood and Kitch's Patent, in Foolscap Folio and Duty Folio.

The "Sun" Patent Platen Machines exhibited were specially designed to combine great strength of construction, and of impression, with a very large and most effective ink distribution. The "Foolscap Folio" Machine was fitted with a card apparatus, by means of which cards can be printed at the rate of about 2,000 per hour.

The Agents of the Firm in Melbourne are Messrs. F. T. Wumble and Co., 70 Little Collins Street.

THE BULK OF MESSRS. GREENWOOD & BATLEY'S EXHIBIT, INCLUDING THEIR "SUN" PLATEN PRINTING MACHINES, HAVING BEEN LOST IN THE "SORATA," THEY COULD BE SO AWARD FOR THE "SUN" MACHINES, BUT THE FIRM OBTAINED FIRST ORDER OF MERIT WITH SILVER MEDAL FOR THEIR EXHIBIT OF MILITARY REPEATING CARTRIDGE MACHINERY, AND ALSO A SECOND AWARD FOR TWIST DRILLS, CHUCKS AND CUTTERS. (See also Classes 40, 60, and 82.)

Graig, J. & Sons, Edinburgh.—Paper cutting machines, bookbinding machinery.

Hampson & Bettridge, London.—Paper-ruling machine.

Powell & Sons, London.—Printing machines.

Seggie, A., Edinburgh.—Printing machines.

Zuccato & Wolff, London.—The "Typograph," a patent process for reproducing engravings, &c.

Class 59.—Machines, Instruments, and Processes used in various Works.

Bateman, A. H. & Co., London.—Patent steam wheels, Ullmax, Excelsior, and Speedwell grinders, patent valves.

Harris, G. H., Birmingham.—Linen hoisting and bolting.

Kucham & Brown, Exeter.—Tanner's pump.

Reinhold & Co., London.—Automatic anti-craming machine.

Schreiber, F. W., London.—Cayules, tin-foil, expelling-machine.

Class 60.—Carriages and Wheelwrights' Work. Coventry Machinist Co., Coventry.—Bicycles and tricycles.

Hocking & Co., London.—Bicycles.

Hopton & Sons, London.—Light phaeton, wood for coachbuilders, wheelwrights, &c.

Marshall, Sanders & Co., Birmingham.—Springs, bolts, &c., for carriages.

M'Ewen, J., Southwick.—Axe-block, drag axle-arm, steered and fitted complete.

M'Naight & Smith, Worcester.—Landaus and Victoria phaetons.

Offord, J. & Co., London.—Carriages.

Rigby, J., & Sons, Wednesbury.—Australian drag and lorry axles, axles, springs, hubs, &c.

Singer & Co., Coventry.—Bicycles.

Class 61.—Harness and Saddlery.

Bliss, W. & Co., London.—Saddles, harness, bridle-work, harness furniture, saddlers' ironmongery.

Cope, B., Brixworth.—Bridles, bits, harness, saddlery.

Davis & Wilson, Birmingham.—Whips and whip materials, walking sticks, adjustable whip sockets.

Jones, H., Birmingham.—Saddles, bridles, and sundries.

Lowe, Sligh, Bevan & Co., Birmingham.—Carriage furniture, harness, saddlery mountings, bridles, bits, &c.

Singer Manufacturing Co., The, London.—Weighing and cording apparatus, for carriage and harness makers.

Sydenham, G., Walsall.—Bits, spurs, patent leather, saddlery, saddlers' ironmongery, &c.

Zair, G. & J., Birmingham.—Whips.

Class 62.—Railway Apparatus.

Avery, W. & T., Birmingham.—All kinds of weighing apparatus for railways.

Bell & Lowe, London.—Light portable railway for mines, plantations, bric-a-brac, &c.

Cammell, O. & Co. Limited, Sheffield.—Steel, iron, railway springs, buffers, axles, and tyres.

Gover, H. C., London.—Railway carriage window, opening from either side, as well as up and down.

M'Kenzie & Holland, Worcester.—Interlocking apparatus for signalling, railway junction (model).

Parson & Shaft & Axle Tree Company Limited, Birmingham.—Railway wheels and axles, &c. (See page 602.)

Pooley, H. & Son, Liverpool.—Railway wagon, weighbridge, luggage weighing machine, goods stage weighing-machine.

Saxby & Farmer, London.—Interlocking apparatus (12 levers), for working railway points.

Schaffner & Budenberg, Manchester.—Steam and vacuum engines, water-lifting and forcing injectors, engine fittings.

Smith, T. & Sons, Birmingham.—Bicycles, parts of bicycles, coach and railway wrenches, &c.

Vickers, Sons & Co. Limited, Sheffield.—Cast-steel tyres, axles, couplings, &c.

Class 63.—Telegraphic Apparatus and Processes.

Sax, J., London.—Electric bells and telegraphic apparatus, telephonic signal apparatus.

Patent Shaft and Axle Tree Company, Limited, Brunswick, Old Park, and Monway Iron and Steel Works, Wednesbury, England.—Railway Wheels and Axles; Steel Tyres and Axles; Channel Girder, Angle, Tee, Bar Iron, Plate Iron, Hot and Cold Tests; Railway Fittings, &c. Awarded First Order of Merit for Manufactured Iron and Steel (Gold Medal); and First Order of Merit for Railway Wheels and Tyres (Silver Medal)

The Wheels exhibited—Nos. 2 and 3—are specially adapted for Railway Carriages running at high speed, and are universally used by the English lines. The wood acts as a cushion, and provides for the comfort and perfect safety of the passengers, besides prolonging the life of the permanent way, the axles, and the structure of the carriages. The Mansell Rings afford absolute safety in case of fracture of the tyre, which cannot fly off and wreck the train, owing to their peculiar design. The "Stroudley's" and "Clarke's" Patent Bars—prevent the wood moving round the hub under continuous shakes. The axles are of "Best Patent Fagoted" Iron, equal to a tensile strain of 26 tons per square inch, with reduction of area of 40 per cent., and the tyres of "Brunswick Cast Steel," equal to a tensile strain of 40 tons per square inch, with 60 per cent. reduction of area, of similar quality to the cold bent specimens—Nos. 7, 9, 14, 15, and 16. The Bolts and Nuts are all made from the Company's best Mild Iron—equal to the twisted specimen, No. 40.

Included in the Collection were a Pair of Wrought Iron Wheels and Axle; Brunswick Cast Steel Tyres; Best Patent Fagoted Axle; Rutley's Patent Wrought Iron Spoke; Wheel Centres, bent and cold by pressure. These are both most excellent wheels for waggon, combining lightness, with great strength. The Mansell Tyre fastening is here shown as applied to Wrought Iron Wheels on one wheel, and on the other is the "Gibson" fastening. Both are very serviceable, but though the latter has the merit of being very cheap, the Mansell is the most durable. To show the character of the welding in these wheels, sections of bars and rim, made by pressure—Nos. 35 and 36—are exhibited. Many thousands of similar wheels, made by the Company, are now running on all the Australian Government lines.

The Wrought Iron Skeletons—Nos. 5, 6, 106, and 197—were exhibited as specimens of forgings made by pressure only, the latter being the type of Wheel most extensively used on the Indian State Railway.

Nos. 7 to 16 inclusive were specimens of the quality of the iron and steel made by the Company, Nos. 8 and 10 being part of an order for the New South Wales Government. The Patent Fagoted Iron and Brunswick Cast Steel Axle, and Brunswick Best Shafting Iron, are bent cold by maintained hydraulic pressure of 500 tons, and closed by a 16-ton steam hammer, without showing signs of fracture. The Brunswick Cast Steel Waddies Tyres are also bent cold by hydraulic pressure of 210 tons, and closed by a 16-ton hammer.

Nos. 17 to 21, 27 to 31, 40 and 193, were specimens of the component parts of the Wheels bent cold, to show the toughness, soundness, and ductility of the metal. This iron, of which cold fractures are shown in a case, is specially adapted for cables, chains, railway couplings, &c., and will stand a tensile strain of 35 tons per square inch, with 50 per cent. reduction of area.

Nos. 32 to 36, 37 to 39, 41, 43 to 47, and 198, were specimens of hot tests applied to Plate, Bar, Angle, Tee, and Channel Iron, showing to perfection the Hot and Ram's-horn tests.

Nos. 60 to 62 were specimens of Wrought Iron Rivets, 68 to 105 sections of Tee, Angle, Girder, Channel, Reinforcing Ring, Half-round, Z, and Column Iron, Rolled Chair Iron, Tyre Iron, Bridges and Tee rails, &c.; all being examples of section, quality, and workmanship.

The Company's agents at Adelaide are Messrs. Francis Clark and Son; and at Melbourne Mr. D. U. Russell—of whom Catalogues, containing full lists of the Exhibits and of the various sections of Iron rolled by the Company, may be obtained—has represented them for twenty-five years.

Telegraph Construction and Maintenance Company, Limited, 88 Old Broad-street, London. Manufacturers, Wharf-road, City-road, and Morden and Enderby's Wharves, East Greenwich.—Submarine Telegraph Cables, Shore-and, Intermediate, and Deep Sea Types Awarded First Order of Merit for Submarine Cables (Gold Medal).

SUBMARINE TELEGRAPH CABLES—The case of specimens of Submarine Telegraph Cables exhibited, fully illustrated the progress and development of submarine telegraphy up to the present time.

The Cables from Europe to North America, Brazil, Egypt, India, China, Australia, New Zealand, South Africa, and other parts of the world, 63,000 nautical (or 72,600 statute) miles in length, have been laid by the Company across seas and oceans, varying from about water to 3,000 fathoms in depth.

Some of these Cables have been trialled and brought to the surface from great depths, in one instance 2,400 fathoms (2½ statute miles), and have been found in good condition after many years' submersion.

The Company was formed in 1864 by the amalgamation of Messrs. Glass, Elliot & Co and the Gutta Serena Company. The latter were the first manufacturers of core for cables and land-lines insulated with gutta-serena.

The Company has, on every occasion when it has exhibited, obtained the Highest Award including the Gold Medal for the Paris Universal Exhibition, 1878, and the Melbourne International Exhibition, 1880.

Thaler, M. & Sons, London—New type printing telegraph; telephone transmitters and other appliances.

Whitecross Wire Co., Warrington—Telegraph wire.

Zindar, C. E., London—Pneumatic bells, indicators for hotels, houses, offices, &c.; pneumatic despatch tubes.

Class 64.—Apparatus and Processes of Civil Engineering, Public Works, and Architecture.

Allan, J. sen., & Co—Sable fittings.

Arrowood, A. J., & Co., London—Parquet flooring, oak ballustrading, &c. for interior decoration.

Beasbrook Granite Co., Bessbrook—Irish granite, dressed and polished for monumental and other work; Celtic crosses.

Bunnett & Co. Limited, London—Lifts by hydraulic, steam, gas, and hand power; fireproof doors.

Chatwood, S. & Co., Bolton—Model of patent hydraulic steel strong-room, and "Invisible" locks.

Clark and Co., London—Shop-front fitted with noiseless self-closing steel shutters.

Cowen, J., & Co., Clayton-on-Tyne—Fire-clay rotors, fire bricks, supports for clay or iron rotors.

Doulton & Co., Lambeth—Plumbago and fire-clay crucibles, furnaces, muffles.

Doulton & Co., London—Sanitary appliances, water closet apparatus, high-pressure valves, sluice valves.

Doulton, H., & Co., London—Vitrified stoneware, drains, pipes, trays, closet-pans, sinks, &c.

Dunnachie, J., Glenhousie—Glenhousie "Star" fire-bricks, fire-clay apparatus, &c.

Gosling, J. C., & Co., London—Portland cement for building purposes.

Greenslade, E. A. & W., Bristol—Brushware and tools.

Hall, J., & Co., Stourbridge—Fire-bricks and clay.

Hamilton & Co., London—Painting brushes, graining tools, &c.

Harley, G. & Co., Wolverhampton—Locks and latches.

Harper, J., & Co., Willehall—Locks, latches, palkey, malleable iron castings.

Harper & Moores, Stourbridge—Fire-clays, fire-bricks, model glass house furnace for the manufacture of crystal or flint glass.

Harrison, G. K., Stourbridge—Fire clay manufactures.

Hobbs, Hart & Co., London—Iron doors, for bankers' strong-rooms, locks.

Howorth, J., M. & A., Manchester—"Archimedean" revolving screw ventilators.

Jennings, G., London—Baths, lavatories, general sanitary appliances.

Johnson, J. C. & Co., London—Portland cement.

Keay, H. C. & J.—Patent fastenings, &c.

Kennedy's Patent Water Meter Co., Kilmarnock—Water meter, model, with glass cylinder, sectional photograph and meter.

Lee & Griffiths, Birmingham—Locks.

Macdonald, Field & Co., Aberdeen—Polished granites, for monumental and architectural purposes.

M'Kwan, J., & Co., London and Melbourne—Cement-testing machines, tiles, bricks.

Patent Enamel Co., The, Birmingham—Enamelled sign-boards.

Penyrosedd Slate Quarry Co. Limited, Nantico Penryros—Roofing slates, slate slabs, slate ridge roll.

Peyton & Peyton Tube Co. Limited, Birmingham—Gas and water tubes.

Preston, H., Birmingham—Rules, spirit levels, planes, tools for carpenters, joiners, &c.

Previte & Greig, London—Roofing slates from Lord Ponchartraine's Bangor quarries.

Rabone, J., & Sons, Birmingham—Measuring rules, tapes, and bands; spirit levels.

Rennie, J., London—Patent pumps.

Rustless Iron Co., London—Specimens of rustless iron (Prof. Barff's process).

Salmon, Barnes & Co., Ulverston—Revolving shutters.

Sessions, J., & Sons, Gloucester—Enamelled slates, mantelpieces, lavatories, &c.

Smeaton, W., & Sons, London—Sanitary ware.

Smith, T. & Sons, Birmingham—Tools for carpenters, stone masons; angles, hammers, &c.

Spencer, J., & Co., London—Timber, &c.

Underhay, F. G., London—Lavatories and general sanitary appliances.

Walker, C. & W., London—Centric valves.

Walker, J., Birmingham—Patent locks and door furniture.

Wilson, J., London—Improved bell-rings.

Wright, P., & Sons, Dudley—Anvils and vices.

Class 65.—Navigation and Life-saving.

Anderson, Anderson & Co., London—Models and plans of ships.

Berthon Boat Co. Limited, London—Collapsible portable boats and canoes.

Carson & McIlwraith—Models of steamships.

East and West India Dock Co., London—Model of the Wool Warehouse, and portions of adjoining South-west India Dock.

Inman Steamship Co. Limited, Liverpool—Full shipping-rig model, &c., of s.s. "City of Berlin." (See page 604.)

Ismay, Imrie & Co., Liverpool—Model of White Star R.M.S. "Hibernia" and her engines.

London & St. Katharine Docks Co., The Dock House, 100 Leadenhall-st., London (General Manager, Col. B. H. Martindale, C.B.)—Models, Wall Plans, and Photographs of the Company's Docks, Warehouse, and Wool Department Awarded First Order of Merit for Plans, Models of Docks (Gold Medal).

The London and St. Katharine Docks Company exhibited Models, Plans, and Photographs of their London, St. Katharine, and Royal Victoria and Albert Docks, and of their Warehouse and Wool Department.

The St. Katharine are connected with the London Docks, and thence with the East Smithfield Railway Depot by means of bridges. They occupy an area of about 126 acres, and contain Warehouse admirably adapted for Housing, Working, and Showing Goods of every description and from all parts of the World, including Wool, Tallow, Hides, Wheat, Horns, Ivory, Seeds, Indigo, Spices, Gums, Tea

Dried and other Fruits, Opars, Tobacco, Coffee, Sugar, Cotton, Cocoa, Pepper, Rice, Oat, Jute, &c.

The Vaults beneath the Warehouses are a special feature, and will contain not less than 65,000 pipes of Wine, 50,000 heads of brandy, 5,000 puncheons of Rum, and 6,000 tuns of Oil.

The Wool Warehouses in these Docks are the largest in the World, and are capable of housing 100,000 bales, and of showing at one time 21,000 bales. They are provided with Heating, Ventilating, and Refreshment Rooms, and have been especially constructed and fitted for the Wool Trade. The following Table shows typically the number of bales of Wool lotted for public sale in these Docks, compared with the total number lotted in London, since 1863—

	London and St. Katharine Docks.	Total in London
1863, . . .	92,903	333,801
1864, . . .	107,290	459,679
1865, . . .	205,278	686,015
1871,	230,342	771,142
1874,	347,945	826,492
1877,	427,401	1,606,213
1878,	390,405	1,605,291
1879,	330,479	1,040,905

The Royal Victoria and Albert Docks are the most extensive of their kind in London, and afford unparalleled accommodation to the largest ocean-going steamships, whilst their position, being by some miles the lowest down the Thames, enables vessels to avoid the most difficult and crowded parts of the River.

These Docks are three miles in length, and contain magnificent Graving and Dry Docks. They are in direct railway communication with the Manufacturing Districts by the London and North-

Western, the Great Northern, the Great Western, the Great Eastern, and the Midland Railway Goods, are conveyed to the ship's side without change of truck, and if despatched from the North by evening trains, are in the Docks next morning ready for shipment, without additional charge to the shipper.

These Docks, like all the other Docks belonging to the Company, are fitted with hydraulic power of every kind for docking and unlading vessels, as well as for lifting, hoisting, and delivering all descriptions of goods.

The Company's Railway Depot in East Smithfield connects the Royal Victoria and Albert Dock with the London Docks and the City. Frequent goods trains run daily, carrying goods from London for shipment, and bringing goods from the Royal Victoria and Albert Docks for housing in the warehouses of the Upper Docks, or for distribution in London and to all parts of the Country.

Through rates are now in force for London Goods sent to the Royal Victoria and Albert Docks for shipment, including collection in London, transit by rail from the Railway Depot of the Company, and Dock Charges.

The Company's Cutler-street Warehouses occupy between four and five acres of ground in the centre of the City, and are a principal Depot for storing Tea, Silk, Coal-oil, Cloves, Fisco Goods, Japan Wares, and other valuable produce from India and China. To give some idea of the property stored in these Warehouses alone, it may be mentioned that the Average Stock is estimated at from £4,000,000 to £5,000,000, and the value of property passed through the Warehouses annually at double that amount.

Merryweather & Sons, London.—Steam and marine fire-engines.

Orient & N. Co., London.—Models, pictures, and plans of steamers, working model of engines.

Inman Steamship Company, Limited, 22 Water-street, Liverpool; 61 King William-street, London; 4 Rue de la Paix, 51 and 53 Broadway, New York.—Full Shipyarding Model, and Oil Painting, of S.S. "City of Berlin," the largest Passenger Steamship afloat. Awarded First Order of Merit for Full Models of Vessels (Gold Medal).

S.S. "CITY OF BERLIN."

The Inman Royal Mail Steamer "City of Berlin," of which Model was exhibited, was built and engineered by Messrs Caird and Co., of Greenock, in 1876. She is the largest merchant steamer next to the Great Eastern afloat; 6400 tons, 2 minutes, being equal to nearly 180 knots per hour, has made in one day's running 405 knots, equal to 400 statute miles, or 10 statute miles per hour.

The "City of Berlin" has accommodation for 320 saloons and 1200 third-class Passengers. She has made the run to New York via Queenstown (2830 knots) in 7 days, 14 hours, 2 minutes, being equal to nearly 180 knots per hour, has made in one day's running 405 knots, equal to 400 statute miles, or 10 statute miles per hour.

The present fleet of the Inman Line consists of some of the largest (ranging from 4000 to 5600 tons) fastest, and most comfortable Vessels in the world. They are furnished with all modern improvements, to ensure the safety and comfort of every class of passenger, Pianos, Libraries, Electric Bells, Baths, Barber's shops; and contain elegantly

furnished State Rooms, and a Saloon fitted with revolving Arm Chairs, in the centre of the Vessel, where noise and motion are least felt.

The good proportions, great speed, full power, and excellent sea-going qualities of the Vessels constructed on the model exhibited, have made them famous for speed, regularity, and comfort. Their average speed is about 250 knots, or 400 statute miles per day; the run between New York and Queenstown—a distance of 2850 miles—being frequently accomplished within eight days.

The Inman Line (established in 1856, and the first to adopt Ocean-going Screw Steamers) is under contract with the British and United States Governments to convey the Mails between England and America.

Particulars of Sallages and Special Rates for Passages between Australia, New Zealand, and Europe, via San Francisco and New York, may be obtained from the Agents of the Pacific Mail S.S. Co., in Australian and New Zealand ports.

Oswald, Mordaunt & Co, Southampton.—Models of iron screw steamers, non sailing vessels.
Shand, Mason & Co., London.—Steam and manual fire-engines

Siebs, Gorman & Co., London.—Drying apparatus

Steedman & M'Alister, Glasgow.—Life-boats, jackets, belts, pillows, cork mattresses

Tweedy, G., Chipping.—Antifretion and other bushes and shears used in tagging ships.

Vansittart, Mrs H., Twickenham.—"Lower Vansittart" non-vibrating, full-luoking propeller

White, R. M., Birkenhead.—Late saving apparatus for shipwrecks or bathing, with four compartments

Class 66.—Materials and Apparatus for Military Purposes.

Armstrong, Sir W. G., & Co., Newcastle-on-Tyne.—Field guns, models, &c

Class 67.—Cereals, Farmaceous Products, and Products derived from them.

Borwick, G., & Sons, London.—Baking powder, oatmeal powder, &c

Duttrill Solomon & Co, London.—"Pure grain malt sugar," French patent No 1 starch, starch powder

Grant, J., Scotland.—Scotch groats and oatmeal, Scotch pot and pearl barley

Thorley, T., London.—Food for cattle, horses, sheep, pigs, poultry, game, &c.

Class 68.—Fatty Substances used as Food. Milk and Eggs.

Clanchy, T. J., Cork.—Butter prepared for long voyage in hermetically closed tins and in tins

Hay & Co., London.—Dried fish.

Kopf & Co., London.—Consolidated soups

Marshall & Co., London.—Tinned fish

Class 72.—Condiments and Stimulants, Sugar and Confectionery.

Barringer & Brown, Nottingham.—Mustard and mustard condiments

Callard & Bowser, London.—Confectionery; boiled sugars, in paper packets and boxes

Corbett, J., Worcester.—Salt for domestic, dairy, curing, and other purposes

Dunn & Hewett, London.—Cocoa and its products, coffee, flavouring essences, arrow-powder, herb, ingredients of the cocoa and coffee mills

Elder, A., Edinburgh.—"Royal Holyrood" and other essences, essence of coffee and chocolate

Evans, Sons & Co, Liverpool.—Lime-fruit juice and preparations

Fry, J. S., & Sons, London.—Chocolate and cocoa, and substantive specimens

Grant, T., Maidstone.—Mosella cherry brandy.

Higgin, Thomas, Anderton Salt Works, Northwich, Cheshire, (Office—33 Tower-buildings West, Liverpool). Salt for Dairying and Household purposes, Bread Making and Meat Curing. Awarded First Order of Merit for Salt (Bronze Medal).

The Salt obtained by Mr. Higgin is prepared from pure, full proof, natural brine, from the well-known Salt Deposits of Cheshire, by a newly patented process securing colour, purity, and cleanliness in the highest degree. It is free from Lime, Magnesia, and other deleterious and deliquescent substances, and being absolutely pure and without bitterness, un-

pairs an excellent flavour, and is easily kept in the best condition

The Salt is well known in the Dairying Districts of the United States, Canada, Ireland, and Scandinavia, and many awards have been made in respect of it at the various International and Local Exhibitions, of which the following may be mentioned —

Philadelphia, 1876

Paris, 1878

London Dairy Show, 1879.

Dublin Dairy Show, 1879.

Diplomas from every County and District Dairy Show in the United States during the last four years have also been awarded to the Exhibitor.

Mr Henry Berry, of Melbourne, Adelaide, and Sydney, is the Sole Agent and Importer for Australia

Keller, J., & Son, Dundee.—Marmalade, jams, jellies, confectionery, candied peels.

MacKay, J., & Co., Edinburgh.—Flavouring quinces, from fruits, spices, &c

Maw, T., Leeds.—Pickles, sauces, liqueur cakes, bottled fruits, &c

Menier & Co., London.—Chocolates and cocoas

Phillips & Son, Swansea.—"Tinaacoon," or dandelion coffee

Pratt, J., London.—Sauce

Read Bros & Co, Wolverhampton.—Lime-juice cordial, artificial fruit essences, for confectioners

Rose, L., & Co., London.—Lime-juice cordial and other lime juice beverages, free from alcohol

Sparagapane & Co., London.—Wedding-cake ornaments, cracker cosques, wreaths

Stephens, J., Gloucester.—Pickles, sauces, vinegar.

Terry, J., & Sons, Clononhorpe, York.—Confectionery

Awarded First Order of Merit for Ordinary Confectionery and Cafe-au-lait (Silver Medal); First Order of Merit for Medicated Lozenges (Silver Medal), First Order of Merit for Candied Peel (Silver Medal), First Order of Merit for Jam-buns (Silver Medal), First Order of Merit for Calves-foot Jelly (Bronze Medal)

The manufacture and export of Confectionery, as exhibited, have been carried on by Messrs. Joseph Terry & Sons more than a hundred years, the Firm having been established in 1767

In order to ensure the highest quality of Lemon, Orange, and Citron Peels, the fruits employed in their manufacture by the Exhibitors are selected from the best suppliers. Their success in this respect is testified by the very large and increasing demand for them made. A special feature is made of the thick or Spadafore Lemon.

As regards material and manufacture generally, the greatest care is exercised, particular attention being given to the essential oils and those additions required to produce the finest flavour, and the colouring employed being perfectly harmless.

Medicated and other Lozenges required by Druggists are manufactured by the Exhibitors with great care, and, as far as possible, according to standard receipts. Proprietary Lozenges are also manufactured by them.

The Table Jellies of various kinds exhibited are so prepared as to ensure their keeping and preserving the bright appearance of newly-made Jellies.

York Confectionery Co., York.—Candied peel, lozenges, marmalades, &c.

Class 73.—Fermented Drinks.

Anglo-Bavarian Brewery Co., Shepton-Mallet.—Pale ale, in cask and bottle.

Aitken, J., & Co., Glasgow.—Ale.

Bowman, Duncan, & Co., Liverpool.—Scotch whisky.

Burke, E. & J., Liverpool.—Dublin stout, Burton ales, Irish and Scotch whisky.

Davis & Littlewood, London.—Glenoe Highland whisky.

Dunville & Co., Belfast.—Irish whisky.

Ford, W., & Sons, Leith.—Old Scotch whisky, Canby Blend.

Greenless Bros., London.—Highland pure malt whisky, model of still.

Hall, J. B., & Co., Liverpool.—Stout and whisky.

Innes & Grievie, Edinburgh.—Old Scotch whiskies.

Kemp & Co., Glasgow.—Finest Highland malt whisky.

Kirker, Greer & Co., Belfast.—Old Irish whisky.

Marshall & Holland, Limhouse.—Finnings for clarification and preservation of ales, wines, &c.

McEwan, Wm., & Co., Edinburgh.—Ales.

Mitchell & Co., Belfast.—Irish whisky.

Morrison, E., & Co., Glasgow.—Whisky.

Morrison, E., Glasgow.—Aitken's Falkirk ale, in bottle and in bulk, Morrison's standard whisky, in bottle and in bulk.

Paine & Co., St. Neots.—Pale ale in bottle and cask.

Porter, R., & Co., London.—Bass's ale and Guinness's stout, in bottle, champagne cider, Bull Dog brand ale and stout.

Read Bros., London.—Bottled ale and stout.

Siebert, Dr. J. G. B., & Sons, London.—Angostura bitters, Siebert's bouquet.

Slater, Rogers & Co., Glasgow.—Scotch whisky, in bottle and bulk.

Tennent, J. & R., Glasgow.—Beer.

Turnbull, P., & Co., London.—Bulk and case whisky.

Vaughan-Jones, E., 17 Water-lane, Great Tower-street, London.—Spirits, Liqueurs, and Cordials. Awarded First Order of Merit for Old Tom Gin (Silver Medal), First Order of Merit for Ginger Wine (Bronze Medal); First Order of Merit for Ginger Brandy (Bronze Medal); First Order of Merit for Cherry Brandy (Bronze Medal); First Order of Merit for Bitters (Bronze Medal); Third Order of Merit for Case Rum (pure old Jamaica); Fifth Order of Merit for Case Whisky ("Standard" Scotch); Fifth Order of Merit for Case Whisky (old West Highland Malt).

TRADE MARK.

The "Standard" Spirits as exhibited are supplied to the Royal Palaces, the Clubs, and the Army and Navy.

The "Standard" and "Usquebaugh" Scotch Whiskies are made from the best Barley Malt only, and carefully blended, rectified, and matured.

The other samples exhibited were the celebrated "Standard" Rum (blend of finest old Jamaican only), and the "Standard" Cherry Brandy, Ginger Brandy, Ginger Wine, Orange Bitters, Old Tom Gin, &c.

At the recent Sydney Exhibition three First Class Awards (one with special commendation) were granted in respect of the articles as now shown.

Walker, J., & Sons.—Scotch whisky.

Wormser, Harris & Co., Ireland.—Old Dublin whisky.

Class 74.—Specimens of Farm Buildings and Agricultural Works.

Bird & Co., London.—Team waggon.

Burgen & Ball, Sheffield.—Patent Solid Steel Sheep Shears, made from one piece of Steel.

Awarded First Order of Merit for Sheep Shears (Silver Medal).

The peculiar advantages of the Sheep Shears exhibited by Messrs. Burgen and Ball consist in their being made of One Solid Piece of Steel from point to point, and their being

unbreakable by use, either in the bow, or at the junctions of shanks and blades. In cheapness, durability, and utility they are unsurpassed, and are as superior to every Shear made upon the old principle as Steel Digging Forks are to Iron Forks.

Of the All-Steel Sheep Shears, as exhibited, Messrs. Burgen & Ball are the largest manufacturers in the world, being the Original Inventors and Patentees (Patent dated Feb. 2nd, 1866). The Shears are produced by machinery, which Burgen & Ball were the very first to successfully introduce, thus saving the great cost of hand labour.

The following are some of the numerous Testimonials received—

Mr. W. H. Moore, of Moreland City, California, testifies:—"I have found your Shears generally far ahead of any others. I sheared 2,000 sheep with one pair last spring; something unprecedented." The Manager of Yandea Station, Adelaide, certifies as follows:—"The 11A are the best shears I have seen, and are very popular with the shearers. They are very lively, and have plenty of spring, without being too strong, and the steel is exceedingly good." Messrs. Fell Brothers & Co., Birmingham, reported, September 12th, 1879:—"Burgen & Ball's Brand has almost superseded the various marks of Shears of other manufacturers formerly used. All who have used the 'B. & B.' make state they are the best they ever cut with, the quality of the Steel being most excellent, on account of which the implement retains both the spring and cutting edge better than any other description."

At the South African International Exhibition of 1877 a Silver Medal was awarded to the Firm, who at the recent Sydney Exhibition received the First Award, the only one of the highest degree made in respect of Sheep Shears.

Burys and Co., Limited, Regent and Philadelphia Works, and 40 Eyre-street, Sheffield.—Sheep shears, chaff knives, edge tools, files, steel, &c. (See page 607.)

Crowley, J., & Co., Sheffield.—Chaffcutters.

Hall, E., M.R.C.V.S., Stockton-on-Tees.—Sheep-chipping and washing machines.

Harrison, McGregor & Co., Leith, Lancashire.—Horse gear.

Martin, R., Old Chailton.—Horse-chipping machines.

McEwan, J., & Co., London and Melbourne.—Lawnmowers, chaffcutters, &c.

Musgrave & Co., Belfast.—Stables and cow-house fittings, models of stable and cow-house, harness brackets.

Richmond & Chandler, Manchester.—Chaff-cutting machines, corn crushers, horse-gears.

Ward & Payne, Sheffield.—Sheep-shears.

Burys and Co., Limited, Regent and Philadelphia Works, and 40 Ryre-street, Sheffield—Sheep Shears, Chaff Knives, Edge Tools, Files, Steel, &c
 | Awarded First Order of Merit for Tools and Sheep Shears (Silver Medal).

ALL THE
 SHEARS ARE
 WARRANTED

The Shears exhibited by Messrs. Burys and Co Limited, marked as above, are manufactured from the Best Cast Steel, and by new and special machinery, which secures the important advantage of working the steel at a lower heat, and dispensing with the uncertain process of welding. The blades being hammered and tempered in a superior manner, are warranted to carry an edge equal to the best made razors. The bows are double, and firmly riveted, thereby combining the greatest strength with the greatest elasticity.

At the International Exhibitions of London, 1861; Dublin, 1865; Cape Town, 1877, and Sydney, 1878, prize medals were awarded in respect of these Shears.

Messrs. Burys and Co. Limited are the sole makers of the Patent Elastic Double Bow Solid Cast-Steel Sheep Shears. All Shears of their manufacture are branded with the "Soldier" trade mark.

The collection exhibited also included Steel in various forms, Files of all descriptions, Edge Tools, Patent Picks for miners, quarrymen, and others, Scythes, Chaff, Hay, and Straw Knives, Reaper Sections, Machine Knives, Reaping Hooks, Strickles, Joiners' Tools, Saws, Plough Plates, and the Patent Tube Wrench or Universal Spanner.

For the superiority of their Steel, Files, and Edge Tools, Five Medals (four Gold and one Silver) have been awarded to the Exhibitors, as follows:—Paris, 1855, silver medal; and Paris, 1867 and 1875, Cape Town, 1877, and Paris, 1878, gold medals.

(See advertisement at end of book.)

Class 75.—Conservatories and Horticultural Apparatus.

Carter, J. & Co., London.—Gross and flower seeds, presented to the Commissioners of the M. I. E., 1880, and exhibited as seen growing in the grounds.
 Carter, J. & Co., High Holborn, London.—Models of roots.
 Crowley, J., & Co., near Sheffield.—Lawn-movers.
 Marples, William, & Sons, Westfield-terrace, Sheffield.—Carpenters', Masons', Engineers', and Gardeners' Tools. Awarded First Order of Merit for Edge Tools, Joiners' Tools (Gold Medal); and First Order of Merit for Garden Tools (Bronze Medal).

HIBERNIA.

The Collection of Tools exhibited by Messrs William Marples & Sons included —

Light and Heavy Edge Tools,
 Augers and Auger Bits,
 Joiners' and Carpenters' Tools;
 Blacksmiths' and Engineers' Tools;
 Spades, Rakes, Hoes, Forks, Shears, &c.;
 Wood Chisels' Tools,
 Planes and Rules;
 Fret-work Tools,
 Hammers, Pincers, and other Steel Toys,
 Shipbuilders' and Coopers' Tools,
 Wood Turnery, Handies, &c., of all kinds.

The Tools manufactured by this firm are well known in the Colonies, being specially prepared for exportation.

At the recent Sydney Exhibition a First Award was made to Messrs. William Marples & Sons.

Nettlefold & Sons, London.—Lawn-mowers.
 Parkes, F. & Co. Limited, Birmingham.—Horticultural implements.

Skelton, C. T., & Co., Sheffield.—Horticultural implements.

Sutton & Sons, Reading.—Various lawn grasses and fodder grass, presented to the Commissioners of the M. I. E., and exhibited as seen growing in the grounds.

Class 81.—Apparatus and Processes of the Art of Mining and Metallurgy.

Bagot, A. O., London.—Safety indicators, clinometers, metallic thermometers, barometers for coal mines.
 Beaumont, W., Canbourn.—Safety fuse, for conveying fire to the charge for blasting.
 Bickford, Smith & Co., Cornwall.—Safety fuses, for conveying fire to the charge in blasting.
 Brunton, W., & Co., Wrexham.—Safety fuses.
 Schram, R., Chesterfield.—Air compressor and rock drill.
 Smith, T., & Sons, Birmingham.—Miners' hammers and picks.
 Stillwell & Co., London.—Compressor and rock drill.

Class 82.—Mining and Metallurgy.

Anglo-American Tin Stamping Co., Stourport.—Timed and enamelled stamped ware.
 Askham Bros. & Wilson, Sheffield.—Cast steel for tools and miners' drills, spring steel, double and single shear, blister and sheet steel, &c.

Ash & Lacy, Birmingham — Galvanised, tinned, corrugated, and flat sheets, roofing tiles, ridging, gutters, &c.

Baldwin, E. P. & W., Stourport — Sheet iron, deep stamping sheets, tin plates, button iron, &c.

Baldwin, Son & Co., Stourport — Tinned and enamelled hollow-ware, bath hinges, &c.

Barrows, William, and Sons, Bloomfield Iron Works, Tipton, Staffordshire — Manufactured iron, boiler plates, sheet iron, angle, T, and rivet iron, &c. (See page 609.)

Barwell, J., Birmingham. — Steam fittings, brass cocks; tea, dinner boxes, and cattle bells, &c.

Blackwell Galvanised Iron Co Limited, London — Galvanised iron

Briscoe, W. & Son, Wolverhampton. — Galvanised iron sheets, hardware.

Brown, J. B. & Co., London — Galvanised wire netting, from four inches to half-inch meshes, with improved registered strage.

Brown, J. & Co Limited, Sheffield — Iron and steel material for railway and other purposes.

Carrland, J. & Sons, Birmingham — Builders', cabinetmakers', and naval brass work.

Castles Iron Co, 16 Broad-street, Birmingham. Works: Wellington, Salop — Bar Iron, Rod Iron, Rolled Fencing Wire. Awarded First Order of Merit for Galvanised Iron (Silver Medal), and First Order of Merit for Manufactured Iron and Steel (Gold Medal).

At the recent Sydney Exhibition a First class Award was obtained by the Exhibitors, who also trade as "THE IRONWIRE WIRE COMPANY" and "SETHIAHOLDS."

Chatwood's Patent Safe and Lock Co. Limited, Bolton — Fire and theft resisting safes.

Chubb & Son, London. — Fire and theft resisting safes.

Clark, T. & Co., Wolverhampton. — Enamelled and tinned cans, and wrought iron ware.

Cooke Bros, Birmingham — Safety pens, fountain pens, and rings, fancy pens, and rings.

Cooke, W. & Co., Sheffield — Bright shafting-iron, steel, steel forcing-ware &c.

Cordes, J. J., & Co, Newport — Corrugated-iron nails.

Crowley, J., & Co, Sheffield. — Carburized malleable cast-iron.

Damon, R., Weymouth. — Specimens of geology.

Dodge, J. & R. Limited, Sheffield. — Files, saws, steel, edge tools, cutlery, &c.

Dudley, The Earl of, Round Oak Iron Works, Brerley Hill, South Staffordshire — Manufactured iron. (See page 610.)

Fearncombe, E., & Co., Wolverhampton. — japanned iron ware.

Francis, T. & Co., Birmingham — Malleable iron nails, tacks, castings, &c.

Gospel Oak Iron & Galvanised Iron and Wire Co., London. — Iron, galvanised iron, wire, galvanised iron goods.

Granville, Earl, K.T., and the Shelton Bar Iron Co., Stoke-on-Trent. — Rolled iron, pig iron, puddled bars, sections of rails.

Greenwood & Batley, Albion Works, Leeds. — Bolts, Nuts, Screws, &c. Awarded Second Order of Merit for Twist Drills, Chucks and Cutters.

The samples of Bolts and Nuts exhibited by Messrs. Greenwood and Batley were made on the "Hornfall" Patent Bolt and Nut Forging Machine, the Screws being produced by Parker's Patent Automatic Screw Making Machines.

The Cartridges and other War Stores, &c., exhibited in Class 40, were—like the Bolts, &c., mentioned above—intended to illustrate Machinery manufactured by the Exhibitors.

(See also Classes 40, 50, and 53.)

Hadfield's Steel Foundry Company, Hecla Steel Castings Works, Sheffield. — Crucible Cast Steel Castings for Locomotives, Marine, Fixed, and Portable Engines, Ore Stamps, and Crushing Machinery, Agricultural Implements, Rolling Mills, &c. Crucible Cast Steel Wheels for Railways, Tramways, Collenies, State Carriages, Houselove, Lead, Tin and Copper Mines, &c. Wagon made entirely of Cast Steel Awarded First Order of Merit for Crucible Steel Castings (Gold Medal), and Second Order of Merit for Railway Wheels and Axle-boxes.

The Steel Castings exhibited were made of Best Cast Steel, and are manufactured under "Hadfield's" Patent. The following awards have been made in respect of them:—Gold Medal, Paris, 1878; the Highest Award at the Manchester, Leeds, Wrexham, and Cornwall Exhibitions of 1874, 1876, and 1877; the Highest Award at the London International Exhibition, 1882; and the Highest Award at the Sydney International Exhibition, 1879-80.

The Exhibitors supply Steel Castings, as exhibited, from five lbs. weight to five tons, to any form or design required, also for every class of railway work. The Castings are soft and easily worked, possessing double the strength of wrought iron forgings, with tensile strain of 30 to 40 tons per square inch, unto all the best qualities of wrought iron with the greater lightness, denseness, and strength of steel, and are practically indestructible.

Harcourt, R. & Co., & Sons, Birmingham — General cabinet and mechanical brass foundry.

Hutton, Sons & Co., Kidderminster. — Sheet iron, tin plates, tinned sheets.

Hill & Smith, Brerley Hill. — Galvanised wire and wire fencing, straining pillars.

Hingley, N. & Sons, Harts Hill. — Manufactured iron, chains, &c.

Hobbs, Hart & Co., London. — Bullion and plate and fire-resisting safes.

Imperial Wire Company, 16 Broad-street, Birmingham. Works: Smethwick, near Birmingham. — Fencing and other descriptions of Wire; The Patent Joint for Wire Fencing; Fencing Staples; Wire Nails, &c. Awarded First Order of Merit for Wire Fences (Silver Medal); Second Order of Merit for Wires for Fencing.

The Exhibitors also trade as "MERCANTILES" and "THE CASTLE IRON COMPANY."

Jessop, W., & Sons Limited, Sheffield. — Steel, crucible steel castings, circular saw plates.

Johnson, Clapham & Morris. — Woven wire for surgery.

Barrows, Wilham, & Sons, Bloomfield Iron Works, Tipton, Staffordshire — Manufactured Iron; Boiler Plate, Sheet Iron, Strip, Hoops; Best and Charcoal Rods, Best and Common Bars, Cable Bars; Angle, T, and Rivet Iron, Small Rounds, &c. Awarded First Order of Merit for Iron and Steel (Gold Medal).

TRADE MARK

FOR
BARS

The Collection exhibited by Messrs. William Barrows & Sons consisted of:—

SAMPLES of BBH HORN-SHOE IRON, largely imported into Australia, whose great wear-resisting properties and its capability of sustaining the deepest fullering (objects of special study in the process of manufacture) are widely known and appreciated.

CHAIN IRON.—Special attention is requested to the tensile strength of this Iron. One sample of 2 3/16 inches withstood the full power of Lloyd's Proving House at Tipton, viz., 150 Tons, without showing the slightest fracture; three samples of 2-inch Cable withstood upwards of 100 per cent. above the Admiralty test, and several smaller samples even a greater percentage. One most important feature it possesses is that, after having been repeatedly subjected to heavy strains, its fracture, when tested to destruction, is uniformly fibrous. This, together with its great reduction of area at point of fracture, renders it of special and peculiar value over other brands for the manufacture of Cables.

TIME IRON, which must necessarily be tough and thoroughly sound.—Particular attention is given to these desiderata in the manufacture of the BBH Brand, and materials thoroughly adapted to the purpose are carefully selected and alone used. The specimens, tested hot by drifting, &c., abundantly show their soundness. These broken cold exhibit a strength, colour, and closeness of fibre which cannot fail to arrest attention.

BOILER PLATES, DISHED AND FLANGED GLOBE (BOTH WAYS OF THE GRUN).—These will be of special interest, for their extreme ductility, and as showing the severe manipulation which the Iron is capable of sustaining against the grain—a very important feature in Boiler Plates. The name of BBH Bloomfield Boilers Plates is well known. Only the very finest Cold Blast Irons in commerce are used in their manufacture, the peculiar process of which gives not only great strength lengthways of the grain, but an unusually high tensile strength crossways; this, combined with the facility and success with which they range, enables engineers to specify their use with every confidence.

TRADE MARK

FOR
PLATES, HOOPS,
AND
STRIPS.

BBH
BLOOMFIELD

The Collection also comprised:—

SHAPES, deep stamped;

RIVET IRON;

SQUARE BARS;

TWISTED and POLISHED ROUNDS, tied cold into knots, some after being turned down bright;

SPECIMENS of VARIOUS SIZES OF IRON for general Smiths' and Engineering purposes, tested and worked in every conceivable manner, and also broken cold to exhibit its beautiful texture and its general excellence and malleability.

The Trade Marks illustrated above are the property of the Exhibitors, and the quality of the Iron stamped with them is well known all over the world. They have been duly registered in the countries named below, and their imitation for trade purposes is therefore fraudulent, and renders the imitators liable to legal proceedings.

AUSTRALIAN COLONIES; NEW ZEALAND and TASMANIA; AUSTRIA; BELGIUM; CANADA; FRANCE; GERMANY; HOLLAND; ITALY, PORTUGAL; RUSSIA; SPAIN; UNITED KINGDOM, UNITED STATES.

The operations of the Firm are carried on at the Bloomfield, Factory, and Tipton, Iron Works, where one hundred puddling furnaces are in use, the largest number at any works in South Staffordshire. The produce is 1000 tons of finished iron per week.

The brand BBH, above illustrated (derived from the names of the originators of the firm, Budley, Barrows, and Hall), is well known and appreciated, not only in Great Britain and its Colonies, but all parts of the world. It has for many years been the most favourite English brand imported into Holland and the Low Countries, owing to the excellency and uniformity of its quality. The Bloomfield Works were erected a little later than 1836, having from time to time been amplified to their present dimensions.

At the recent Sydney International Exhibition a First Prize, ranking as Gold Medal, was awarded to Messrs. William Barrows and Sons.

Dudley (the Earl of), Round Oak Iron Works, Brierley Hill, South Staffordshire.—
Manufactured Iron. Awarded First Order of Merit for Iron and Steel (Gold Medal).

The Collection of Wrought Iron exhibited by the Earl of Dudley contained samples of Bars (which are made flat up to 12 inches wide, and rounds and squares up to 6 inches diameter, Girders, Stup, Hoop, Horse-shoe, Cable, and Rivet Iron, of the various qualities made, viz, "L  W R O," "BEST," "BEST BEST," "BEST BEST BEST," and "BEST BEST BEST BEST," besides Sporting Guns manufactured from his Lordship's "Damascus" Iron.

Above the case itself, and suspended from a spiral bar, were five bars intended to illustrate the various forms into which the larger sections of his Lordship's Iron can be tied or twisted. First, there is a 2-inch round bar turned down in a knife, and afterwards tied cold, the knot being reduced to about six inches in diameter. Second, a double-headed rail twisted up tight so as to resemble a corkscrew, so close are the twists. The third and fourth bars are 3 and 4 inches in diameter, tied into knots, each about 12 inches in diameter; while the fifth is a 6-inch angle bar twisted similarly to the double-headed rail previously mentioned, the ends being reversed and doubled in.

All these extraordinary operations (with the exception of the reversing and doubling of the last-named bar) were effected while the iron was cold. The bars tied into knots represent the Earl of Dudley's Treble Best "Cable" quality; and it is quite evident that a ship riding at anchor with chains made of such Iron would always be safe. It is believed that if the Admiralty tests were directed towards reduction in area at point of fracture, instead of relying solely on tensile strain, as at present, many shipwrecks would be prevented; and the Earl's Agents claim that the *desideratum* in question is supplied by the qualities of Iron included in these exhibits.

Among other interesting objects in the case is a small chain tested up to a tensile strain of 30 tons 14 cwt. per square inch, whilst reducing the area at the point of fracture 50 per cent. There is also a piece of 7-in. by 6-in. Girder Iron bent sideways of flange until the two flanges meet together.

On the top shelf of the two end compartments were specimens of Merchant Iron, Horse shoe

"L  W-R-O , "The "L  W R O

, "Cable, and Plating, "nickel" and broken open to show fibre; also rough and polished samples of his Lordship's celebrated "Horse shoe" Iron. On the second shelf were similar samples of "Best," and specimens of Rivet Iron and Rivets; and on the third shelf "Best Best" samples.

The entire compartment was appropriated to the Damascus Guns, Horse-shoe, and a Galvanised Iron Bar, tied cold; also, samples of "Best Best Best," including Cast-iron. This latter can be worked up into any conceivable form, as will be seen from the curious forged samples on the third shelf. Each of the 13-inch fractured specimens stood 300 blows from a 35-lb sledge before breaking open, although decaying "nickel" on the top and sides. It has all the tenacity of steel with the ductility of iron.

With respect to the Gun Iron, it is interesting to note that the peculiar figures or rings work shown on the Guns exhibited are not produced by acids or any artificial means, but are the natural effect of the combination of iron and steel in the original bar from which the Guns were made. The Iron is known in the trade as "Damascus Iron," because this particular description of metal was originally made in the ancient city of Damascus, from whence came the celebrated "Damascus blades," so intimately associated with the Saracens was. From this natural alliance of iron and steel it may be inferred that our ancient discovered that these metals had each its separate functions, which neither could dispense with, so that whatever may be said about steel entirely superseding iron, experience has shown in the past, and is showing still, that there is a dream not likely to be realised.

The ground floor contained large specimens of Rounds, Squares, Angles, Tee, and Girder Iron, tested hot and cold, as marked.

The case itself, with its tasteful decorations, including his Lordship's coronet over each section, had a *tout ensemble* very striking and picturesque. It may be added that every sample shown has been taken from orders in course of execution; and as the Brand is distinctly marked on each, the public have a fair guarantee that whatever orders may be given out on the strength of these specimens, will be executed in precisely the same quality as is here exhibited and indexed.

At the International Exhibitions of London (1862), Paris (1867), and Sydney (1878-80), the highest awards were respectively secured in respect of these manufactures.

Mr. E. Fisher Smith is the Earl of Dudley's Agent, and his official address is The Priory Office, Dudley.

Johnson, Christopher, & Co., Western
Works, and Western Steel Works, Sheffield.—Files,
Steel, and Tools. Awarded First Order of Merit for
Files (Silver Medal); Second Order of Merit for
Steel; and Second Order of Merit for Edge and
Joiners' Tools.

The Collection exhibited by Messrs. Christopher
Johnson and Co. included—

Blacksmiths' and Farriers' and Carpenters' Ham-
mers and Pincers.

Upholsterers', Saddlers', and Engineers' Ham-
mers, Pincers, Pliers, Nippers, Calipers, and Com-
passes;

Carpenters' Saw Sets, Spokeshaves, Devils,
Squares, Spirit Levels, Try-squares, Saw Pads,
Trusses and Pits, Marking Ganges, Morses Ganges,
Gimlets, Planes, Plane Bits and Angles, Wrenches
and Spansers, Chisels, Goggles, Plane Irons, Draw-
ing Knives, and Timmer's Shears;

Blisters, Cast, and Engineers' Tool Steel, Miners'
Steel, Hammer, Cast, Shear, and Spring Steel;

Saw Files, Engineers' and Blacksmiths' Files,
Machinists' Files, Cabinet Files and Reaps, Horse Reaps,
Shoemakers' Rasps;

Wood Carvers' and Engravers' Tools;

Mining Knives, Meat Choppers, Butchers'
cleavers,

Hatchets, Carpenters' and Woodmen's Axes,
Carpenters', Ship, Fencing, and Australian Axes;

Praising Hooks and Switching Bills, Bill Hooks;

Masons' Trowels, Plasterers' Trowels, and Moul-
ding Tools;

Garden Hoes and Tools, Pruning Shears, Scuteurs,
and Tool Chisels. (See also Class 22.)

Johnson, Rich., & Nephew, Manchester—Wire
Kerriker, A., & Sons, West Bromwich—Timmed
and enamelled cast-iron cooking utensils, orn-
amental ironwork.

Kirkcaldy Forge Co., Leeds—Patent rolled round
iron and steel shafts and spindles. (See page 612)

Lloyd & Lloyd, Birmingham—Wrought iron tubes
and fittings.

Milner's Safe Co., Limited, Liverpool—Fire
and theft resisting safes, bank strong-room doors,
&c. (See page 611)

Milward, H., & Sons, Redditch—Needles, sew-
ing-machine needles, and fish-hooks.

Muntz, P. H., & Co., London—Muntz metal.
Nettlefolds, 16 Broad-street, Birmingham.

Works: Smithwick and King's Norton, Birming-
ham; and Wallington, Shropshire—Screws, Screw
Hooks, Nails, Bolts, Rivets, &c. Awarded First
Order of Merit for Screw Bolts and Nails (Silver
Medal); and First Order of Merit for Differential
Hatchet Brand, Fencing Wire, Knotting Machine
(Silver Medal).

This Collection included—

Patent Pointed Iron, Brass and Copper Screws
for Wood or Metal; Screw Hooks, Screw Eyes,
Gate Hooks and Eyes, Cotter or Latch Pins; Drift
Bolts and Nuts; all kinds of Iron Rivets, the
Patent Counter-Sunk Chest Nails; Bolted Braces;
Steam Lubricators; Transferring Furniture; Special
Hooks for Cotton or Woollen Machinery, &c.

The Exhibitors, who also trade as "THE GREAT
IRON COMPANY" and "THE IMPERIAL WIRE
COMPANY," obtained Two First-Class Awards at the
recent Sydney Exhibition.

Nowell, R. S., & Co., Gateshead-on-Tyne—Steel
wires and ropes.

Nichols & Beddoes, Blackwich—Saddlers'
needles.

Nottingham Malleable Iron Co Limited,
Nottingham—Malleable castings, for engines, &c.
Parke, J. & J., Snelthorpe—Nails, shoe-tips, and
cast hollowware.

Peat, Chattock & Co., London—Tin plates.
Pemberton, T., & Son, Birmingham—Cabinet
and building's brass foundry.

Phillips & Sons, Birmingham—Safes, bedsteads.
Phosphor Bronze Company Limited,
Southwark, London—Specimens of Articles in
Phosphor Bronze Awarded First Order of Merit
for Phosphor Bronze (Silver Medal).

The Collection exhibited by the Phosphor Bronze
Company Limited included—

A "Phosphor Bronze" Crushing Roll Bearing,
taken out for exhibition from the Rice Mills of
Messrs. Barclay, Gray and Co. This Bearing was
put in in November, 1874, and taken out July, 1876,
having worked night and day (122 hours per week).
On the other side was placed the accompanying
Gun-Metal Bearing, which was completely worn
though in the same time, the one on the Phosphor
Bronze being, as may be seen, scarcely perceptible;

Phosphor Bronze Worm Wheel, after eighteen
months' wear in Messrs. McDew and Co's Moulding
Mills. This was substituted for Brass Worms, which
did not stand 12 days' wear; one Phosphor Bronze
Bar tested by Mr David Kirkaldy, for torsion; one
smaller Phosphor Bronze Bar, tested by David
Kirkaldy for compression;

Phosphor Bronze Railway Carriage Bearing
(rough casting), as used by the principal British
Railway Companies;

Phosphor Bronze Finished Bolt and Nut, as used
in Deacon's System of Tramways, now being
largely adopted.

Phosphor Bronze Rolled Pump Rod Forged;
Phosphor Bronze Sheet, as used for Valves in
place of India Rubber, for Driving Bands in place
of leather, and for Spindles Bushes, and numerous
other purposes.

Phosphor Bronze Wire, used for Telegraphy
purposes, Electric Lamps, Wire Ropes for Mines,
Wire Web for Paper Machines, also for Springs and
for Tap Wires for Organs, Bicycle Spokes, &c.

Phosphor Bronze Tubes for Locomotive and
Marine Engine Boilers, and innumerable other
purposes; these are much stronger than Copper or
Brass, and therefore capable of being used
thinner.

Phosphor Bronze Steam Fittings. One Ball
Check Valve, and one set of Gange Cocks. Their
advantages over Gun Metal or Brass, are—greater
durability and resistance to the action of acids
and bad water, and better appearance.

Phosphor Bronze Revolver;

Phosphor Bronze Harness and Coach Furniture,
Carriage Polo End, Pair of Stirrups, two Buckles.
Advantages—Great strength and non-liability to
rust, handsome appearance.

Phosphor Bronze Locket and Chain;

Phosphor Bronze Shotguns and Rifles, as used in
Powder Works, Government Laboratories and
Magazines. The Metal does not emit sparks like
iron, Steel, Brass, Copper, or Gun Metal;

A Rough Casting, as supplied to the Royal Yacht
Osborne, showing fluidity of metal;

Phosphor Bronze Statuary and Ornamental
Work. The "Tired Minster" Part of a Group by
Mr. Boehm, R.A.

The attention of those interested in the articles
now exhibited is directed to the small Pamphlet
issued by the Company, copies of which may be
obtained on application.

Kirkstall Forge Company, Kirkstall Forge, Leeds—Bars of Patent Rolled Round Iron from $\frac{1}{2}$ inch to 7 inches diameter, for Line Shafting and general Machine purposes; Bars of Patent Rolled Steel; assortment of Patent Rolled Shafts and Spindles; specimens of Best (Kirkstall) Iron manufactured by the Exhibitors, Best Best Best Triple-worked Iron, Ordinary Bar Iron, Butler's Patent Flanges; Butler's Patent Friction Coupling; specimens of Patent Cart Arms, known as "Kirkstall" or "Diables," Patent Long Bolt Mail Axles, Patterns of Axles for Road Vehicles, selection of Blacksmith's Anvils, warranted. Awarded First Order of Merit for Ties and Axles, Shafting, Patent Company (Silver Medal); First Order of Merit for Manufactured Iron and Steel (Gold Medal); and First Order of Merit for Axles (Bronze Medal).

The STRUTTING exhibited is rolled by a Patent process of the Company, and is produced so round, true, and straight, as to equal any ordinary turned shafting. It is at the same time increased 50 per cent. in torsional strength over the ordinary rolled iron in the rough, while as compared with turned iron of the same diameter, the gain in strength is much greater. In turning, the skin is usually removed, while by the Kirkstall Forge Company's

process, which is applied while the iron is still hot from the rolling mill, the skin is not removed, but is smoothed down, at the same time the iron is compressed and stiffened. In this process Round Iron is produced equal in essential finish to that which has been turned, and much superior as to strength, and at a cost but slightly more than that of ordinary Rolled Iron in the rough.

The BARS OF ROLLED STEEL have been put through the same process as the Iron referred to above, and the same remarks apply to them.

The ROLLED SHAFTS AND SPINDLES are made both in Iron and Steel, of various sizes and lengths, as actually in use in various machines, some of them being fitted with gauges and arranged in different ways to show accuracy and regularity of finish. Round Iron or Steel finished by this process is peculiarly adapted for agricultural implements, the prices of which are in many instances materially reduced by its use. It is now very extensively used for this purpose, as well as in all kinds of other machines.

The SPECIMENS OF BEST (KIRKSTALL) MANUFACTURED BY THE EXHIBITORS are made entirely from cold blast Pig Iron, refined and selected for Engine and Railway purposes.

THE BEST BEST BEST TRIPLE-WORKED IRON is employed for special Smithing and Turning purposes.

THE ORDINARY BAR IRON is used for ordinary good Smithing and Turning purposes.

THE BUTLER'S PATENT FLANGES are employed for securing round iron or steel shafts or arbors in the wooden rollers of Washing Machines; the object being to utilize for such shafts or arbors the Exhibitors' Patent Rolled Iron or Steel, in place of square, octagon, or other heavy section, such as hitherto used; and the advantages of this system are the

avoidance of the bursting action upon the roller of the square or octagon shafts, which are forced through round holes in the rollers; and, further, the avoidance of any turning of the ends.

THE COUPLING, of various sizes, manufactured by the Exhibitors, has been brought out by them specially for their Patent Rolled Shafting, for which it is admirably adapted. It embraces all the advantages given by the friction couplings hitherto in use, while it is cheaper, and possesses other special advantages. There is no key; and no special fitting on the shaft is required. The grip is obtained entirely by friction, and is capable of transmitting the full power which the shafting coupled by it is called on to give out.

THE PATENT CART ARMS are made from the very best double forged Scrap Iron, selected and cleaned, and are forged out of the solid. They are egg-shaped in the barrel and have no sharp indent, the style of finish being peculiar to the Exhibitors, who claim great advantages for their system.

All the various parts of the PATENT LONG BOLT MAIL AXLES are made to gauge, and are interchangeable, and can therefore be supplied separately. They are also guaranteed to fit. The style of finish is new and special. The same care as to quality is used in all the axles manufactured by the Company, and all are guaranteed one-hardened.

Milner's Safe Company, Liverpool, Phoenix Safe Works, Liverpool, Milner's Buildings, Moorgate street, London, & Lord-street, Liverpool, and 25 Market-street, Manchester—Wrought Iron Safes, Fire and Thief Resisting; Gunpowder Magazines, Strong Rooms, Bank Doors, Gates, Locks, &c. Awarded First Order of Merit for Fire and Burglar Proof Safes (Gold Medal); and First Order of Merit for Bank Door and Lobby (Silver Medal).

Until the discovery in the year 1840 by the late Thomas and William Milner (the predecessors of Milner's Safe Company Limited) of an arrangement for resisting fire through the medium of a process of

non-conduction and evaporation, no effectual means existed for securing books, papers, and other valuable records from the ravages of fire.

The peculiar superiority of this arrangement consists in filling the chambers of Safes and Chests with the most perfect non-conductors of heat, in which are distributed materials evolving moisture on the application of heat, which pervades the whole interior of the Safe and its contents with steam when exposed to fire, keeping down the temperature or under that of boiling water or steam, viz., 212 deg Fahrenheit, in which books or papers will not burn. Without this neutralizing protection no Safe can resist the fire.

In Public Trials made by the Liverpool Polytechnic Society, the contents of other Safes (which depended upon dry anhydrous materials) were destroyed by the side of Milner's Safes, which remained uninjured in the same fire and in hundreds of other instances they have preserved valuable books, documents, and securities from destruction in the most severe fires.

The name of Milner has been associated for nearly a century with the perfecting of Fire and Thief resisting depositories.

Milner's Safe Company are the largest makers in the world of Bankers' Bullion Safes, Strong Rooms, Doors and Safes of all descriptions. The principal Banks, Public Offices, and Merchants in Great Britain and the Colonies are using them. Foreign Governments and Commercial houses abroad are also very largely supplied with Milner's manufactures, which include Locks for all purposes—house doors, hotels, public buildings, prisons, asylums, &c., in suites, with master keys to pass any number; also Locks for all cabinet purposes, money counters, &c.; Fire Resisting Boxes for the protection of deeds, &c., in lawyers' offices and private houses; Safes for business purposes, for safe custody against fire; Safes to resist Fire and Thieves; Safes for gold dust, bullion, and precious stones, of strength to meet various degrees of risk; Doors for fireproof rooms, Doors and Ventilating Gates for bankers' bullion vaults and

strong rooms; Iron and Steel Strong Rooms, with Doors and Ventilating Gates attached, specially designed for erection abroad. Safe Deposits, consisting of large Iron and Steel Rooms, subdivided into convenient compartments, fitted throughout with small Safes (or inner safes) which are let out to renters at a fixed charge per annum; each Safe having two locks, one under the absolute control of the renter, the other securing the renter's key-hole, and accessible only to the lessor's key, thus effecting double security.

The Great National Safe Deposit in London was fitted with safes—more than 5000 in number—by the Exhibitors.

A large Safe, as exhibited, constructed entirely of heavy wrought iron boiler plates, intersected throughout by horizontal drill-proof steel, and weighing 250 tons, has lately been completed by Milner's for the Liverpool Safe Deposit Company. It is divided into five compartments, one for the keeping of cash-boxes deposited at night and withdrawn during the day, two fitted with 1100 small Safes, ranging in sizes from 4½ inches by 5½ inches by 1 foot 8 inches, to 2 feet and 2 feet by 1 foot 8 inches, and let at rentals varying from £1 1s. to £8 per annum; and the remaining compartments are devoted to the custody of deed boxes, jewel cases, plate safes, and other valuables.

The rich mining districts of South America are for the most part supplied with Milner's Bullion Rooms and Safes, as exhibited, ingeniously constructed in sections for transport on the backs of mules over the passes of the Andes to the distant mines.

The Exhibit consisted principally of Safes in general use in mercantile offices and banks, and not of Safes designed to meet any extraordinary risk.

The agents for Milner's Safe Company at Melbourne are Messrs. Gibbs, Bright and Co.

Pringle, A. T., & Co., Edinburgh.—Wire and wire netting.
 Shot's Iron Co., The, Glasgow.—Specimens of shot.
 "Mottled," "Ordnance," "Rosecut," "Foige," "Mottled," and "Hematite" pig iron.
 Shropshire Iron Co. Limited, Wellington.—Dian annealed fencing wire, rolled fencing and other wires, &c.
 Sicker Safe & Strong Room Co Limited, Birmingham.—Fire and burglar proof safes.
 Smith, F., & Co., Halifax.—Iron wire, galvanised wire, telegraph and boiler wire.
 Spear & Jackson, Milln Works, Sheffield; and 22, Lichfield-street, Melbourne.—Steel; Saws; Files; Mangle, Quarrying, Engineering and other Tools. Awarded First Order of Merit for Edge Tools, Saws, Files, Engineers' Hammers, and Tools (Gold Medal).

The Collection exhibited by Messrs Spear & Jackson included—
 Steel of every shape and size, suitable for all purposes;

Saws of all kinds—Circular, Mill Cross cut, Hand, and Tread, all Machine Ground, and of the finest temper and quality.

Files of all sizes and shapes, for Engineers, Saw Mills, and other uses;

Edge Tools for Carpenters, Shipbuilders, and Engineers;

Mangle, Quarrying, and Railroad Tools;

Tanners' and Curriers' Tools;

Polished Steel Hay, Manure, and Digging Forks;

Steel Spades, Shovels, Hoas, Rakes,

Steel Mould Boards for Ploughs;

Scochers, Knives, and Cutters for Mowing and Reaping Machines.

Chaff Cutters, &c.

Steel Company of Scotland, Limited.
 Chief Office—150 Hope street, Glasgow; Works: Hudders, Newton, near Glasgow and Beckton, Glasgow.—Steel manufactured by the Siemens process. Awarded First Order of Merit for iron and steel (Gold Medal).

The mild Steel Plates, exhibited, are employed for Marine, Locomotive, and Stationary Boilers, Steel Plates, Angles, Rails, Tee Rails, and Bars of all kinds, being supplied to the British Admiralty and various Continental Governments, for Shipbuilding, &c.; for Suspension and other Bridge work, a special Steel of high tensile strength and elongation is manufactured.

The manufactures exhibited, in addition to the various kinds above-mentioned, include Steel Rails of all sections, Home, Foreign, and Colonial, from 10 to 100 lbs. per yard, Steel Forgings of all kinds, also Steel Castings of every description, including Pumps, Wheels, Hydraulic Cylinders, Propeller Blades, &c.

Thomas, S., & Sons, Redditch.—Needles for hand sewing, sewing-machine, packing, sail-making, netting, upholstery, and gunnery.
 Thompson, J., & Co., Rotherham.—Swedish iron wire, and clothing for woolen clothing engines.

Turner, R., & Sons, Redditch.—Needles of all descriptions, bars and steel pins.

Turton, Brothers, & Matthews. Steel File and Spring Works, Westworth street, and Neepsend Spring Works, Neepsend and Bath Forge, Pennine Road, Sheffield.—Steel, Files, Hammers, Engineers' and Contractors' Tools, Railway Coupler and Valve Springs, Tinsmiths' Patent Unequal Section Springs. Awarded First Order of Merit for Steel (Gold Medal); First Order of Merit for Edge Tools, Files, Hammers, and Tinsmiths' Springs (Gold Medal); and First Order of Merit for Axle Arms (Bronze Medal).

The Collection exhibited by Messrs Turton, Brothers, and Matthews included—Steel of various Sizes and Shapes, suitable for Engineers, Miners, Contractors, and others, Files from the largest to the smallest sizes, and of different shapes and cuts for Engineers and Benchmen; Hammers used by Engineers, Smiths, and Boiler Makers, and in Quarries, Mill Poles and Engineers' Tools, &c.; Coupler and Valve Buffer Springs. The Collection also included Tinsmiths' Patent Unequal Section Spiral and Coupler Springs, of which the Exhibitors are the Sole Makers.

At the Sydney International Exhibition Messrs. Turton, Brothers, and Matthews were awarded a First Prize, ranking as Gold Medal.

The Australian Agents of the Firm are—for Sydney, Mr. T. B. Linsley, 563 George-street; for Melbourne, Mr. D. G. Bunnell, 61 Flinders Lane, West.

Vickers, Sons & Co. Limited, Sheffield.—Steel bells, belting plant, &c.

Walker, W. B. & G. G., Dudley.—Galvanised sheet iron, galvanised chains, anchors, and other manufactures.

Weller, J., & Co., London.—Marble monuments, specimens of Italian marble.

Woot Cumberland Iron and Steel Company, Limited, Workington.—Materials used and Products obtained in the Manufacture of Bessemer Pig Iron, Spiegel Eisen, Steel Rails, Plates, and Steel Castings. Awarded First Order of Merit for Manufactured iron and steel (Gold Medal); and First Order of Merit for Steel Rails and Plates (Gold Medal).

Every branch of the manufacture of the articles as now exhibited is carried on under the strictest scientific supervision, and excellence of quality is the object aim. The Works of the Company are admirably situated for producing the Finest Pig Iron, Steel Rails and Plates, and for exporting these cheaply and expeditiously. They possess the advantage of being on the Sea Coast, and yet within a few miles of the Cleator Iron Ore District, from which the finest ores in the world, for Bessemer Steel making, are obtained. They have a private railway to the Workington Dock, where tonnage of 1000 tons burden can be loaded in a very short time.

The Company possess large Collieries within three miles of the Works, whence they derive their supply of coal and a certain portion of the coke used at the Blast Furnaces. The Lion and Steel Works consist of six Blast Furnaces—seventy feet high, capable of treating over 500 tons of Bessemer Pig Iron per furnace per week; a

Boiler-making establishment with four seven-ton converters, two Steel Rail Mills (one of these being nearly the finest of its kind in the world, and capable of rolling 1000 tons of heavy steel rails per week, in lengths up to eighty feet, it necessary), two very fine 15-ton Siemens-Martin Furnaces for Making soft and special Steel, and two Plate Mills. These latter have lately been engaged in rolling steel plates for the British Admiralty Corvettes. The material used for this purpose is of marvellous quality, surpassing the famous Low Moor iron in all its properties, and yet being very much cheaper. It is in consequence extensively used by the first boiler makers in the kingdom for boilers of all classes.

Mr. Kitchin has tested some of these Steel Plates with the following results—Tensile Strain, 29 tons per square inch; Elongation, 30 per cent.

Every Plate is tested by plunging a red-hot strip into cold water, and then doubling it up under the hammer.

A stronger class of Steel is being used for girders, whereby greater spans can be built, and with less weight of material than when iron is used, while a higher degree of safety is ensured.

At the recent Sydney Exhibition a First-Class Award was obtained by the Company, Gold Medals having been previously awarded to them at the International Exhibitions of Cape Town (South Africa), 1877, and Paris, 1878, and the highest Prize at Philadelphia, 1876.

Whitcross Wire Co.—Warrington—Oval, Sanson, and round fencing wires, and wire netting.
Woodfield, W., & Sons, Redditch—Needles for hand-sewing and sewing-machines.

BRITISH INDIA.

MADRAS EXHIBITS.

Class 17.—Cheap and Fancy Furniture.
Deschamps & Co., Madras—Large cabinet, in rosewood and carved sandalwood.

Class 21.—Carpets, Tapestry, and other Stuffs for Furniture

Madras Government—Mats made of the bamboo, rattan, coloured grass, screw-jute, *Palmyra* palm, and wild date palm.

Palghat, Malabar District—Coloured grass mats.
R. Hurry Row, Tanjore—Coloured grass mats.
The Nizam of Hyderabad—Bamboo and tadpat rug, gunny bag for packing, wangan cotton caps, and kus-kus door-blinds.

Class 25.—Bronze and various Art Castings and Repousse Work.

Madras Government—Plain and chased brass lamps, chomboos, poplets, trays, &c.; brass chomboos, inlaid with copper and silver; copper chomboos and trays, copper chomboos and trays, inlaid with silver, and native brass comb, limeholder, and mango shaped bottle (old).

N. Sankuini Wariyar—Brass chomboo, cup and spoon; betel-nut set.

Class 28.—Perfumery.
The Nizam of Hyderabad—Attar.

Class 29.—Fancy Articles in Sandalwood and Ivory, Basket-work, &c.

G. Chinnu Veeraruna, Vizagapatam—Native ornith, bracelets, solitaires, ivory baskets; book slides, blotting books, boxes, glove boxes, &c.; made of bison horn; and sandalwood card-cases, book slides, &c.

Madras Government—Boxes and other articles, made of the leaves of the *Palmyra* palm.
Tiffin basket (Wesley's pattern), made at the Madras Friend-in-need Society's workshop.
Liquor-case, trunk, cricket-stand, key-basket.

Class 30.—Textile Fabrics, Clothing and Accessories.

Grimes, G. D.—Cotton drill, made by prisoners in Central Gaol, Cannanore; cotton drill.

Class 36.—Lace, Net, Embroidery, and Trimmings.

Madras Government—Table covers, with embroidery, cushion covers, doilies; embroidery in muslin, with beetles' wings; muslin puggies, with embroidered ends.

Class 38.—Native Costumes for both Sexes.
Madras Government—Native women's cloths, palampores, Madras handkerchiefs.

Class 39.—Silver Jewellery.
Grimes, G. D., Cannanore—Silver salt-cellars and spoons, puzzle bracelets, plain and spring bangles.

Class 43.—Products of Cultivation, Pith, &c.
Madras Government—Raw pith; pith bottle-covers, lined with zinc; pith hats, covered and uncovered.

Class 44.—Products of Fishing, Fish Oils.
Madras Government—Shark, swordfish, sardine and catfish oil.

Class 45.—Agricultural Products, not used for Food; Fibres.

Barter, C. H.—Cigars.
Croyedale & Co., Madras—Insigo, various.
Baton, C. W., & Co.—Raw tobacco, prepared tobacco for seamen; "Eaton's Express," and other cigars.

Madras Government—
Dukhim, sun, and bowstring hemp.
Musk mallow, country mallow, bastard cedar, *Isora corymbosa*, mudat, plantain, pineapple, *Palmyra*, American and great aloe, and Sanseriva fibres.
Laccadive, Kollam, Quilandy, Kapud, Murad, Calicut, Thala Kolathun, and Madras (best sample) oil.

Lamp oil, castor, and gingelly seeds.
Castor, Russia, ground nut, gingelly, lamp and coconut oil.

Tobacco, first, second, and third sorts.
Davson's Havannah and Lunkah-shaped cigars; Manila, Havannah, barrel, and Dindigul shaped cigars.

Turnerie, kamela, chay root, myrabolans, appanwood, and red-wood.

Nizam of Hyderabad, The—Dukhim hemp, indigo, safflower, &c.
Neelamagum, Pillay & Co.—Prepared tobacco, various kinds; cigars of different makers.

Roberts & Co.—Tobacco, various kinds; cigars of different makers.

Class 46.—Chemical and Pharmaceutical Products.
Madras Government—Anabona—natural, unseeded, and reserved bark; cassia, sunna, jalap root, taraxacum, Indian hemp; sun women and cocoa seeds.

Class 47—Dyed Threads.

Nizam of Hyderabad, The—Red and blue twist

Class 48.—Leather and Tanned and Dyed Skins.
N Sooboo Pillay & Co, Madras—Tanned sheep and goat skins, coloured and uncoloured.

Class 67.—Cereals and Pulses.

R. Hurry Row, Tanjore—Paddy, kar, &c. (various)
W. P. Dique, Tiruvannam—Paddy, rice, millet; Kandi-gingy, samany, &c. with and without husk
Madras Government—Tapioca, arrowroot.

Class 72.—Condiments and Stimulants, Sugar and Confectionery.

Avenue Estate.—Orange and lasken pekoe, sou-choing and green teas

Balmadras Estate.—Plantation coffee, in parchment; peaberry and plantation coffee (classes C, B, A)

Chowdickadu Estate.—Plantation and peaberry coffee

Cootanundra Estate.—Plantation coffee, in parchment; peaberry coffee and plantation coffee (classes C, B, and A)

Eliza Estate.—Plantation coffee, in parchment, peaberry and plantation coffee (classes C, B, A)

Ellenbally Estate.—Plantation coffee, in parchment; peaberry coffee and plantation coffee (classes C, B, A)

Fairlands Estate.—Plantation coffee, in parchment, and plantation coffee (class B)

Glendals Estate.—Orange and flowery pekoe, and Congou teas

Glenvars Estate.—Plantation coffee, in parchment, peaberry and plantation coffee (classes C, B, A)

Gottel Estate.—Peaberry coffee and plantation coffee (classes C, B, A)

Halsicary Estate.—Plantation coffee, in parchment; peaberry and plantation coffee (classes C, B, A)

Hilgrove Estate.—Plantation coffee, in parchment; peaberry and plantation coffee (classes C, B, A)

Hoyeton Gardens Estate.—Orange pekoe tea.

Inglewood Estate.—Plantation coffee, in parchment; peaberry and plantation coffee (classes C, B, A)

Kodensad Estate.—Pekoe, orange and flowery pekoe, sou-choing, Congou, hyson, and young hyson teas

Laddelsdale Estate.—Pekoe and sou-choing teas.

Madras Government.—Turmeric, ajowan, cardamom, chillies, pepper, ginger, Palmyra sugar candy and jaggery; refined cane, raw cane, white cane sugar, &c

Nedimbaley Estate.—Plantation coffee, in parchment; peaberry and plantation coffee (classes C, B, A)

Perindothy Estate.—Tea

Senforth Estate.—Plantation coffee, in parchment; peaberry and plantation coffee (classes C, B, A)

Stanes & Co.—Produce of several estates mixed; plantation coffee, in parchment; peaberry and plantation coffee (classes C, B, A)

Stanes, W. H. Connor.—Specimen of coffee plant in blossom and in fruit, prepared in a concentrated solution of salt; coffee seed; photographs of the Columbian Estate.

Sussex Estate.—Plantation coffee, in cherry and parchment; peaberry coffee and plantation coffee (classes A and B)

Tilly Estate.—Plantation coffee, in parchment; peaberry and plantation coffee (classes C, B, A)

Venontachellum, P., Madras.—

Mango and lime pickle; mixed, sliced, hot, sweet, and tender bamboo pickle, in oil and vinegar.

Benget, Madras, mango, lime, prawn, tinned, chow-chow, Cushman's, Hydrabad, and Delhi sweet chutneys; preserved tamarinds.

Chyenne, Tapp's, Nepal, and ground pepper.

Madras curry-powder and paste, milligutawry paste, jams, jellies

Waverley Estate.—Plantation coffee, in parchment; peaberry and plantation coffee (classes C, B, A)

BOMBAY EXHIBITS.

Class 15.—Mathematical and Philosophical Instruments.

Hormusjee Sorabjee Poonaghur, Bombay—Box of various coins.

Class 17.—Cheap and Fancy Furniture.

Bombay Committee.—Carved blackwood and teak cabinet

Jaffer, Sullivan & Co.—Chairs, couches, tables, &c. of carved blackwood

Watson & Co., Bombay.—Carved blackwood furniture, couch, chairs, and other furniture

Class 20.—Pottery.

Perozabaw Pottery Works—Earthenware

Terry, G. W., Bombay School of Arts—Specimens of pottery

Class 21.—Carpets, Tapestry, and other Stuffs for Furniture.

Jaffer, Sullivan & Co.—Persian and carpets

Superintendent Tanna Gaoi—Carpets, window-hangings, diapers, and various manufactured cloth.

Superintendent Yerroda Central Gaoi—Woolen carpets.

Class 24.—Goldsmiths' and Silversmiths' Work.

Cursetjee, Nusservanjee & Co., Ahmadnagar—Silver-ware, chased and repousse

Jaffer, Sullivan & Co.—Cutch silver-ware, chased and repousse work.

Watson & Co., Bombay.—Silver-ware, in Cutch, chased, and repousse work.

Class 25.—Bronzes and various Art Castings and Repousse Work.

Cursetjee, Nusservanjee & Co., Ahmadnagar.—Collection of brass-ware.

Grant, Mrs C.—Artistic and fancy articles.

Class 29.—Leather-work, Fancy Articles, and Basket-work.

Bombay Committee.—Fancy articles, box of ivory from the State of Junagadh.

Cursetjee, Nusservanjee & Co., Ahmadnagar.—Ivory-ware, with models.

Jaffer, Sullivan & Co.—Collection fancy articles, in sandalwood, ebony, and ivory

Wijayarayane, Don A.—Tortoise-shell ornaments, consisting of necklaces, earrings, brooch, studs, bangles, &c.; blue sapphire rings; silver bead necklaces
Wijewardana Abeynarayane, Don C.—Silver puzzle-rings and earrings

Class 40.—Portable Weapons, and Hunting and Shooting Equipments.

Fernando, G., Mudaliyar.—Model cross (pointed).
Government Agent, Kandy.—Spear-heads, axes, Kandyan knives, &c.
Palipane, P. B., Ratamahatmeya.—Desawa's waist-knife, mounted with gold, above 200 years old; Ratamahatmeya's waist-knife and stylus, mounted with silver (recent); Lehiya's waist-knife, brass-mounted (recent).

Class 42.—Toys

Ceylon Government.—Jaffa and Galle wooden lacquered toys.

Class 43.—Products of the Cultivation of Forests and of the Trades appertaining thereto.

Andra, Don B. G.—Specimens of Ceylon woods.
Ceylon Government.—Specimens of Ceylon woods; the palm-leaf, its products and their uses; basket work.

Dissanayake, H. L., Mudaliyar.—Specimens of Ceylon woods, nuts, baskets, spoon-holder; talipot umbrella, fan, and bowl.

Drieberg, J. F.—Cinnamon sticks, leaves, and bark
Gabriel, F., Mudaliyar.—Specimens of Ceylon woods.

Government Agent, Kandy.—Kakama and gingerly seed.

Leechman, G. & W.—Complete collection of the products of the coconut palm, consisting of the plant, fruit, leaves, &c., and articles manufactured from them.

Martos, R. H.—Specimens of Ceylon woods
Peiries, H. B.—Specimens of Ceylon woods
Subbami, A. W.—Specimens of Ceylon woods
Wijayarayane, Don A.—Specimens of Ceylon woods.

Class 44.—Products of Hunting, Shooting, Fishing, and Spontaneous Products. Machines and Instruments connected therewith.

Ceylon Government.—Marine and pearl oyster shells.

De Domenico, Antonio.—Black coral-tace, fished off the coast of Ceylon.

Delmege, Reid & Co.—Banile deer-horns
Government Agent, Kandy.—Net for fishing, net to catch hares, elephant tusks.

William, J. P.—Seven carpenter birds' nests

Class 45.—Agricultural Products, not used for Food.

Ceylon Government.—Tobacco; cocoanut, gingerly, mangoes, and kippud oil; resin.

Ceylon Government (from the Royal Botanic Gardens).—Ginger, oil, resin, starches, fibres, ropes, warts, medicines, roundings, and products of the areca and talipot palms; bamboo, domestic articles made from bamboo, rattan, &c.

Delmege, Reid & Co.—Tobacco; cocoanut, citronella, and cinnamon bark oils, fibres.

Dissanayake, D. A. T., Mudaliyar.—Beeswax, cashew gum, fibres; cocoanut, gingerly, mangoes, castor, kippud, and other oils.

Drieberg, J. F.—Cinnamon bark and leaf oil.
Government Agent, Kandy.—Dumbara cigars, salfron, aoca nut, gamboge, and cotton.

Ingleton, J. K., Raynolds Estate.—Dumbara cigars, cheroots, &c.

Mackwoods & Co.—Fibre from the noyandoo plant.

Sturges, A. C.—Rattan tiffin basket; paper, work, and hanging floor or benches; bamboo, rattan, fibre, and kippud latex.

William, J. P.—Tobacco, cocoanuts, haluts, cashew gum, madnut seed and plant, &c.

Class 46.—Chemical and Pharmaceutical Products.

Garneron, E. H.—Cinchona bark.

Lee, Hedges & Co.—Cinchona succubula bark-mill.

Mackwoods & Co.—Cinchona succubula bark.

Owen, T. C., Oncoconquilla Estate.—Cinchona bark.

Class 49.—Agricultural Implements and Processes used in the Cultivation of Fields and Forests.

Ceylon Government.—Agricultural implements—mamoti, plough, yoke, plowman, axe, grass-cutting, sickle, and spade, models of double bullock-cart, hackery, and hand-cart.

Dissanayake, D. A. T., Mudaliyar.—Models of agricultural implements—mamoti, plough, road, &c.

Drieberg, J. F.—Specimens of implements used in the preparation of cinnamon—cutty (bull-hock), peeling-knife, scraping-knife.

Fernando, G., Mudaliyar.—Models of agricultural implements—adze, mamoti, cutty or billhook, axe, reaping-knife.

Government Agent, Kandy.—Bill-knife, grass-cutting, adze, manoties and smoothing-board. Agricultural implements.

Hermanis Dias.—Models of hackery and double bullock-cart.

Class 50.—Apparatus and Processes used in Agricultural Works, and in Works for the Preparation of Food.

Ceylon Government.—Models of grindstone and rollers, coconut scraper; arcanut, vegetable, and fish cutter.

Fernando, G., Mudaliyar.—Arcanut cutter
Government Agent, Kandy.—Coconut scrapers, arcanut-cutter, pestle and mortar, &c.
Halpe, Ratamahatmaya.—Arcanut-cutter.
Harmanis Dias.—Model ehokoo (oil mill)
Palpane, P. B., Ratamahatmaya.—Silver and brass mounted arcanut-cutter

Class 54.—Apparatus and Processes used in Spinning and Rope-making.

Delmege, Reid & Co.—Coir rope, various sizes, from $\frac{1}{8}$ in. to 6 in.
Government Agent, Kandy.—Kandyan rope (wainandu).

Class 55.—Apparatus and Processes used in Weaving.

Government Agent, Kandy.—Kandyan spindle and weaver's comb

Class 61.—Harness and Saddlery.

Government Agent, Kandy.—Set of reins for bullocks.

Class 64.—Apparatus and Processes of Civil Engineering, Public Works, and Architecture.

Fernando, G., Mudaliyar.—Chisel
Kyle, J., Engineer, Colombo Breakwater.—Specimen block of concrete used in construction, with plan and description of breakwater
Mackwoods & Co.—Specimen of block-building notebook (Jatanto).

Class 65.—Navigation and Life-saving.

Ceylon Government.—Model of Pula boat, double and single canoe, kallamara, ontugget boat, and fishing boats

Class 67.—Cereals, Farinaceous Products, and Products derived from them.

Braune, C. F., Rochester Estate.—Sample of arrowroot
Ceylon Government.—Native grains, paddy
Dissanaike, D. A. T., Mudaliyar.—Paddy, rice, dry grain, and pulse
Government Agent, Kandy.—Paddy, dry grain, and rice.
Hallugalle, Ratamahatmaya.—Eleven kinds of native grains
Wattagama, Ratamahatmaya.—Ten specimens of paddy

Class 69.—Fatty Substances used as Food. Milk and Eggs.

Government Agent, Kandy.—Cow ghee.

Class 71.—Vegetables and Fruit.

Ceylon Government.—Arrowroot tubers.
Government Agent, Kandy.—Jack seeds and luscans.

Class 72.—Condiments and Stimulants, Sugar and Confectionery. Tea.

Armitage Bros.—Plantation coffee.
Armstrong, C. S., Rookwood Estate.—Tea—pekoo, pekoo souchong, souchong, congou, broken pekoo, broken tea.
Baker, J. F.—Plantation coffee, from Yakkabenda-kello Estate

Bawa, A.—Ceylon patent safe-milk, or coffee and milk condensed, prepared coffee, milk, and sugar, compressed into cakes.

Ceylon Co.—Tea—pekoo souchong, flowery, silver, orange, souchong, and broken pekoo, hyson, young hyson, pekoo type, &c.

Colombo Commercial Co.—Plantation coffee
Courthope, Bosanquet & Co.—Plantation coffee—pachment, No. 0 elephant beans, No. 1 bulk size, peaberry

Dasanayaka, H. L., Mudaliyar.—Pepper, mustard, bud pepper, kital syrup, and bee honey

Delmege, Reid & Co.—Plantation coffee, the produce of Langdale, Kintyre, and Tillsouthy Estates; cinnamon

De Silva, H.—Cinnamon.

Drieberg, J. F., Ekelle Estate.—Cinnamon, and cinnamon chips

Government Agent, Kandy.—Cinnamon, mustard, and pepper

Haldane & Anton.—Samples of Calsey Estate tea

Hay, C. A., Windsor Forest Estate.—Tea—orange pekoo, pekoo dust, broken pekoo, pekoo, pekoo souchong, souchong, coffee

Henty, J., & Co.—Samples of pekoo, pekoo souchong, and souchong

Jayatilaka, S., Mudaliyar.—Vanilla

Kair, Dundas & Co.—Samples of Loolescondra Estate tea

Lea, Hedges & Co.—Tea—pekoo, pekoo souchong, flowery pekoo, broken pekoo, souchong, unassorted; cinnamon; coffee

Leachman, G. & W.—Tea, from Agrawatte Estate—orange pekoo, pekoo souchong, souchong, congou

Mackwoods & Co.—Tea, from Galbedda Estate—pekoo tea, souchong, pekoo souchong, broken pekoo, pekoo dust, orange pekoo, coffee

Nelson, J.—Sample of tea prepared from the plants in the Royal Botanic Gardens

Owen, T. C., Oconongalla Estate.—Coffee, tea, and cardamoms

Rajapakse, S., Mudaliyar.—Cinnamon

Shand, P. R.—Tea—pekoo, pekoo souchong.

Shand, C.—Thirty samples tea

Smith, J., Arbuthnot, Lonardly.—Sample Ceylon-grown tea

Storck, A. J.—Tea, from Black-stone and Oodavurina Estates

Voller, H. G.—Vanilla.

Whitall & Co.—Plantation coffee.

Class 76.—Flowers and Ornamental Plants.

Ferguson, W.—Specimens of two ferns (*Hemitelia Walkeri*, Hooker), with rough ends of fronds removed

Class 82.—Mining and Metallurgy.

Armitage Brothers.—Plumbago lumps, chips, and dust.

Ceylon Government.—Plumbago; sample of a species of plumbago, generally found in the beds of rivers

Delmege, Reid & Co.—Plumbago

Dixon, A. O.—Specimens, illustrative of the geology and mineralogy of Ceylon

Ferguson, W.—Ireocia, or Panamugama stone.

Ferguson, W.—White sand, Cinnamon Gardens, Colombo, natural state, and washed and freed from vegetable matter; black sand, mouth of Kelani River, natural state, and washed and freed from vegetable matter.

Fernando, W. A., Mudaliyar.—Plumbago of the first quality.

Government Agent, Kandy.—Plumbago

Lee, Hedges & Co.—Plumbago—lump, dust.

Palpane, P. B., Ratamahatmaya.—Plumbago, from the Kuwagala district.

JAMAICA EXHIBITS.

Class 43.—Products of the Cultivation of Forests and of the Trades appertaining thereto.

Rend, W, Kingston.—Walking sticks

Class 45.—Agricultural Products, not used for Food.

Desnoux, P, & Co, Kingston.—Cigars

Class 72.—Condiments and Stimulants, Sugar, and Confectionery.

Davidson, J, Sherwood Forest.—Coffee

Desnoux, P, & Co, Kingston.—Sugar

Class 73.—Fermented Drinks.

Desnoux, P, & Co., Kingston.—Rum.

MAURITIUS EXHIBITS.

Class 9.—Printing, Books.

Daruty, J. B.—"Recherches sur le Rite Kéroul"
Duverge, F., Pict Louis—"Les Mammifères"
L'homme, P. C.—"La Femme, ses Droits et ses Devoirs"

Leal, C. H.—"Un Voyage à la Réunion"
Royal Society of Arts and Sciences of Mauritius.—Transactions.

Class 10.—Stationery, Bookbinding, Painting and Drawing Materials.

Atasse, F.—Bookbinding.—Transactions of the Royal Society of Arts and Sciences of Mauritius

Class 16.—Maps, and Geographical and Cosmographical Apparatus.

Crook, W.—Plan of "Curepipe," village, plan of Port Victoria, maps of Grand Port, Placé, Plaines Wilhems, Moka, Port Louis, &c.

Class 43.—Products of the Cultivation of Forests and of the Trades appertaining thereto.

Bewsher, C. H.—Nuts of the coco-de-mor.

Cantley, N., Mauritius.—Indigenous woods.

Dupont, E.—Brooms, made of the flowering spikes of the fatique grass; chairs, of colonial wood and wicker last of, etc.—chairs.

Fressanges, Dr.—Fruits of coco-de-mor palm, and sugar-cane made from the leaves

Gaidemay, A.—Flower baskets, peduncles of the raphia palm.

Joly, J.—Fruit spikes of the raphia palm

Class 44.—Products of Hunting, Shooting, Fishing, and Spontaneous Products. Machines and Instruments connected therewith.

Caze, S.—Two hen's eggs—curious case of malformation.

Chery Montou.—Collection of corals.

M'Millan, Miss.—Pony seaweed articles

Robillard, V. de.—Collection of natural history

Class 45.—Agricultural Products, not used for Food.

Cantley, N.—Collection of fibres.

Chazal, E. de, Ruege Taro.—Bale also fibre

Coura, Mdme.—Snuff, tobacco, cigars

Desjardin, N.—Benevent

Le Magasin general des Huiles.—Cocconut oil.

Leveux, X.—Samples raphia fibres

Vally, C.—Xigars.

Class 49.—Agricultural Implements and Processes used in the Cultivation of Fields and Forests.

Mauritius Sanitary Improvement Co.—Machinery for sugar-cane and beetroot.

Class 54.—Apparatus and Processes used in Spinning and Rope-making.

D'Unieville, P., Plaisance.—Rope manufactured with also fibre.

Class 64.—Apparatus and Processes of Civil Engineering, Public Works, and Architecture.

Chery Montou.—Lime, and specimens of the madrepora from which lime is obtained

Lebourg, C.—Plan of patented stone tramway.

Class 67.—Cereals, Farinaceous Products, and Products derived from them.

Baye, E.—Manioc fecula the only starch used in the colony

Bonneux, N.—Tapioca.

Pipon, Mrs. O., Chauxmère.—Arrowroot fecula, prepared without indigo blue.

Class 68.—Bread and Pastry.

Riviere, E.—Biscuits.

Class 70.—Meat and Fish.

Tonnet, N.—Spiced beef (hump).

Class 72.—Condiments and Stimulants, Sugar and Confectionery.

Arnaud, A., & Co.—Sugar (white crystals and yellow counter).

Aubin, G., Constance.—Sugar (white crystals and yellow counter).

Barlow & Co., Plaisance.—Sugar (yellow-brown crystals, yellow browner crystals, and grey counter)

Baudon, A., Verailles.—Vanilla

Bourguignon, Mrs., Mon Songe.—White crystals and yellow counter.

Bouton, H.—Vanilla

Chastellier, P. L., & Co., Bar-le-Duc.—Sugar.

Chazal, E. de, & Co., Mon Rocher.—Sugar.

Chauvin, Mrs. H., Mon Tabor.—Sugar, syrup.

Chere Llenard, C.—Vanilla.

Collin, A.—Coffee

Constantin, D., Bénarès.—Sugar, for jams and preserves, large white crystals, small crystals,

second boiling syrup, best brown.—Sugar.

Courtols Bros., Vallée du Pouco.—Coffee.

D'Arifat Bros., Constance.—Sugar.

D'Arifat Bros., La Gâté.—Sugar.

D'Emmerez, —, Grand-Donjon Estate.—Cloves.

Desjardins, N.—Honey.

Desvaux Bros., Cote d'Or.—Sugar.

Gilmer & Co., Deux Eaux.—Sugar (white & stale, white grainy crystal, yellow counter).

Georday, B., Bon Accord.—Sugar

Gourtege & Co., Beau Séjour.—Sugar (grayish white, cream-crystals, grey counter).

Hardy, H., Minney.—Sugar (first and second boilings).

Heus, Pellegrin & Co., Constance.—Sugar.

Heus, Rouge, Genon.—Vanilla

Hewetson, W., St Julien.—Sugar (grey counter).

Jainin, Mrs., Savane.—Sugar.

Jolly, J., Solitude.—Vanilla

Jeffray, A., & Co., Argy.—Sugar.

Jeffray, Mrs. O., & Co., Bellevue.—Sugar (light and yellow counters).

Koenig, Mrs. H., Medina.—Sugar (white crystals, grey and yellow counters).

La More, M.—Pickles and preserves.

Le Boucher, C., Notre Dame du Bocoug.—Vanilla.

Louvet, Nayl & Co, Albion—Sugar (grey crystallised and grey nondescript sugar)
 Mauritius Sugar Estates Co.,
 Asinau—Sugar (white crystals, Nos 1 and 2).
 Etrole—Sugar (white crystals)
 La Royale—Sugar (white crystals and yellow counter)
 Ritchie Doss—Sugar (white semi-crystals)
 Menage & Desjardins, L'Amiot—Yellow sugar
 Montocchio Sons, Sans Souci—Sugar (greyish white, semi-crystals, and grey counter)
 Nossut, A., & Co, Mon Repet—Sugar (yellow crystals and yellow counter)
 Peguillan, J—Sample vanilla
 Pilot, H & L, St Ambre—Sugar (white, large white, brewing, and large crystals)

Robinson, G, Ramon—Sugar (white crystals)
 Richer, F, Chanaud—Sugar
 Rochecoste, de A K, Desu Vallon—Sugar (brewers' yellow brewers crystals, grey nondescript sugar)
 Samouilhan & Co, Union Paik—Sugar.
 Samouilhan & Co, Union Vale—Sugar
 Semenville & Co, Mon Lomi—Sugar (white crystals and yellow counter)
 Vallet & Co, Joh Doss—Sugar

Class 78.—Fermented Drinks.

Baker, S., & Co, Balacava—Rum, reduced to 22° for consumption
 Martin, H, Bellevue—Rum, reduced to 22° for consumption

STRAITS SETTLEMENTS EXHIBITS.

Class 12.—Photographic Proofs and Apparatus.
 Government The—Photographs of the Straits Settlements and Malay Peninsula.

Class 13.—Musical Instruments.
 Johor, H.H. the Maharajah of G.M.G., K.C.M.I., Johor—Native musical instruments (gubana, gundang)

Class 15.—Mathematical and Philosophical Instruments
 Selangor, H.H. the Sultan of Selangor—Silver money (pabang).

Class 28.—Perfumery.
 Fisher, J, Singapore—Essential oils—citronella, patchouli, nutmeg, mace, pepper, expressed oil of mace.
 Hardoun, C, Penang—Essence of patchouli, oils—citronella, nutmeg, and lemon-grass.

Class 29.—Leather-work, Fancy Articles, and Basket-work
 Swettenham, F. A., Singapore—Cigarette-cases of vegetable fibre, made at Ipoh.
 Westerhout, J. B., Malacca—Basket work, broom-stick baskets

Class 67.—Cereals, Farinaceous Products, and Products derived from them.

Captain China, Selangor—Tapioca (flake, pearl, and flour)
Gilliland, Wood & Co, Singapore—Tapioca (flake, pearl, and flour), pearl sago, sago flour.
Guthrie & Co, Singapore—Tapioca (pearl, flake, and flour), sago (pearl and flour), white rice
Knaggs, W., Singapore—Tapioca (pearl, flake, and flour)

Koh Seang Tat, Penang—Rice, paddy.
Lim Tek Hee, Malacca—Rice, paddy
Mornay, H. de, Penang—Tapioca and tapioca flour, from the Malakoff Estate
Penang Plantation Co., Penang—Tapioca
Roberts, E. L., Penang—Tapioca
Si Bun Thong, Sungai Ujong—Tapioca (pearl, flake, and flour)
Tan Tek Guan, Malacca—Tapioca (flake, pearl, flour, and husk)
Westerhout, J. B., Malacca—Tapioca
Yap Ah Loy, Selangor—Pearl tapioca

Class 71.—Vegetables and Fruit.
Bastiani, J., Singapore—Pineapples preserved without sugar.

Koh Seang Tat, Penang—Copra.
Westerhout, J. B., Malacca—Scented yams, sweet potatoes, oil of yam.

Class 72.—Condiments and Stimulants, Sugar and Confectionery.

Bastiani, J., Singapore—Pineapples, in syrup; mangosteens, in juice; pineapple syrup

Brown & Co, Penang—Sugars, squares
Favre, C., Singapore—Pineapples in syrup, pineapple syrup, pineapple syrup, preserves, crystallized fruits
Poo Tye Sin, Penang—Black and white pepper
Gilliland, Wood & Co, Singapore—Pepper, black and white, Zanzibar cloves

Government, The, Sungai Ujong—Coffee, in parchment, black pepper

Guthrie & Co, Singapore—Coffee, white and black pepper, cloves, nutmegs, &c.

Hardour, C., Penang—Tea from Bukit Tambu.

Koh Seang Tat, Penang—Coffee, cloves, nutmegs, mace, Tring whole and black pepper.
Penang Sugar Estates Co Limited, Penang.
 —Sugars

Read, W. H., The Hon., Rhio—Black and white pepper.

Vermont, J. M. B., Penang—Sugar.

Westerhout, J. B., Malacca—Scented jelly

Class 73.—Fermented Drinks.

Lamb, J., Penang—White rum.

Penang Sugar Estates Co Limited, Penang—Old and new rum.

Vermont, J. M. B., Penang—White and coloured rum, rum shrub

Class 82.—Mining and Metallurgy.

Borneo Co Limited, Sarawak—Minerals and ores from the mines at Sarawak, Perak, Selak, and the central mines at Teyem

Captain China, Selangor—Fine tin and sand, coarse tin and quartz, coarse tin, tin ore in sand, tin ore in mica, sample of clay.

Daly, D. D., Selangor—Tuwate—cheese and vegetable dishes, biscuit-boxes, bear mugs, goblets, &c.

Poo Tye Sin, Penang—Tin ores of Topa, Assam Kambang, and Kambang

Government, The, Perak—Strata and tin sand, specimens of tin, tin ores, tin ingots, tinware—goblets and tiara, mugs with champagne cups

Lim Teck Hee, Malacca—Tin ores

Resident, H. B. M.'s, Selangor—8 manvams alluvial gold, from the gold mines at Pahang, Malay Peninsula

Si Bun Thong, Sungai Ujong—Tin ore

Tan Tek Guan, Malacca—Clay peculiar to the island of Pulo Opey, used for colouring walls.

Westerhout, J. B., Malacca—Tin ore.
Whampoa & Co, Singapore—Tuwate.

AUSTRALASIAN COLONIES.

FIJIAN EXHIBITS.

The late period at which the Exhibits from Fiji were received in Melbourne prevented the Compiler of the Fijian Catalogue from attending to the classification of the different products.

Barrack, Capt., Suva Bay—Turmeric, hand-eggs chilies.

Blatchford & Scott, Nadi—Hams from o-mashed angora goats, maize and white beans.

Boyd, J. A., Wesside, Ovalau—Bibble seaweed.

Busch, A. & Co, Levuka—Admoy cotton.

Burness, T. P., Rakhi Rakhi—Leaf tobacco, tapioca, peanuts, copra.

Cove, H., Levuka—Ivory nuts, candlesticks.

wood and stone.
J. A., Sydney.—Drawing-room furniture.
J. A., Sydney.—Decorative furniture.
J. A., Sydney.—Venetian and wire
chairs.
J. A., Sydney.—Ornamentation, fancy goods
in plaster of Paris.

Class 19.—Crystal, Glass, and Stained Glass.
J. A., Sydney.—Chestnut-headed
stained glass window.
J. A., Sydney.—Bent glass, show-case.
J. A., Sydney.—Stained glass windows.

Class 20.—Pottery.

Baldock Bros., Campbelltown.—Pottery
Davis, J., Campbelltown.—Pottery work.
Stevens & Kyle, Albany.—Various of ware.

Class 21.—Carpets, Tapestry, and other Stuffs
for Furniture.

Alderson & Sons, Sydney.—Colonial morocco
leather, rose light hard-grained, uncoloured India,
bright and hard stain.
Read, J. C., Darlinghurst.—Matting, hammocks,
network, &c.

Class 22.—Cutlery.

Kerr, E. Sydney.—Improved W & P sheep-shear,
tool-sharpener, cut-throat steel cutters, tin-opener,
corkscrews.

Class 24.—Goldsmiths' and Silversmiths' Work.

Bartlett, S., Sydney.—Gold jewellers.
Jones, E., Sydney.—Gold and silver plate, &c.
Joubert, J., Sydney.—Tea and coffee service,
presented to exhibitor in 1875.
Lloyd, H. G., Sydney.—Silver goblet, presented to
Lieut. Williams, 2nd Light Dragoons, by brother
officer, in 1875.
Roberts, C. J., Chesham.—Silver candle,
presented during majority of exhibitor by Municipal
Council of Sydney.
Various Exhibitors.—Pile cups, presentation
plate, &c.

Class 25.—Brasses and various Art Castings
and Reposee Work.

House Committee Sydney Infirmary.—
Brass plate found at foundation.
Smith, R. B., M.P., Sydney.—Model of the statue
of Captain Cook.

Class 26.—Clocks and Watches.

Smith, J. M., Sydney.—Watch and clock wheels,
barrel wheels.

Class 27.—Apparatus and Processes for Heating
and Lighting.

Marshall, A. A. & Co., Sydney.—Gas cocks,
Penson, J. A., Sydney.—Two kerosene gas-lights,
kerosene lamp.

Class 29.—Leather-work and Fancy Articles.

Alderson & Sons, Sydney.—Embossed morocco
(blackstone bag, suitable portfolio-cases, &c.
Alexander, Mrs., Sydney.—Flowers made from
wheat and tobacco-shell.
Hunt Mrs. G. H., Parramatta.—Seed-work, shells.
Stratton, E. T., Tinsworth.—Two miniature chairs
carved in wood.

Class 30.—Cotton Thread and Fabrics.

Humberstone, L., Sydney.—Chester, embroidered
with needle-work.

Jenkins, Mrs., Fremont.—Knitted quilt.

Class 31.—Thread and Fabrics of Flax, Hemp, &c.
Forsyth, R., & Co., Sydney.—Manila hemp rope.

Class 33.—Woollen Yarn and Fabrics.

Humberstone, Laura, Sydney.—Wool-work.

Class 34.—Silk and Silk Fabrics.

Affleck, T., Albany.—Killed silk and cocoons.
Nell, Mrs. Bladen, Cairns.—Silk, in cocoons
and killed, silk goods woven therefrom.

Class 35.—Lace, Net, Embroidery, and Trim-
mings.

Calvert, May M., Maitland.—Silk lace,
netting.
Hawland, Lucy M., Maitland.—Collar and cuffs.
Humberstone, Laura, Sydney.—Lace apron,
collar, handkerchief.
Hunt, Mrs. G. H., Parramatta.—Embroidery, &c.

Class 37.—Hosiery and Underclothing, and
Accessories of Clothing.

Alderson & Sons, Sydney.—Patent leather
hosiery, patent hosiery and hosiery.
Hunt, Mrs. G. H., Parramatta.—Knitted stockings
and gloves.
Magrath, P., Yass.—Knitted woollen gloves.

Class 38.—Clothing for both Sexes.

Alderson & Co., Sydney.—Hosiery and shoes.
Gillespie, C., Goulburn.—Ladies' men's, and chil-
dren's boots and shoes, lawn-tennis made boots.
Taylor, E., Sydney.—Boys and shoes.
West, A., Maitland.—Copper-top-tips for children's
boots.

Class 39.—Jewellery and Precious Stones.

Alonso, E., Sydney.—Jewellery; process
of manufacturing imitation jewellery.
Altman, L. J., Sydney.—Silver trinkets.
Moonen, L., Campbelltown.—Colonial gold, enamel,
and other jewellery.

Class 41.—Travelling Apparatus and Camp
Equipment.

Alderson & Sons, Sydney.—Trunks;
saddles, portmanteaus, saddle and patent leather,
valises, brown and patent leather.

Class 42.—Toys.

Altman, L. J., Sydney.—Lighting, for athletes,
cycling and lawn-tennis goods.
Kerr, E., Sydney.—Mechanical and scientific toys.
Lasseter, F., & Co., Sydney.—Italian plates,
Indian clubs, skittles of colonial wood.

Class 43.—Products of the Cultivation of Forests,
and of the Trades appertaining thereto.

Crawford, A. R., Moore Plains.—Gums and resins
Department of Mines, Sydney.—Collection of
samples of New South Wales woods.
Fagan, W., Woolloomooloo.—Gilding imitations
of various woods and metals.
Field, H. H., Sydney.—Collection of mounted fauna.
Magrath, P., Yass.—Specimens of timber.
Milton, H. M., Parramatta.—Coal in various stages
from raw to manufactured.
Page, T., Grafton.—Clarence River wood.
Walker & Halliday, Melbourne.—Wood from
cylinder of bridge between Mornah and Schuon.

Class 44.—Products of Hunting, Shooting, Fish-
ing, and Spontaneous Products.

Australian Museum, Sydney.—Collection of
Australian birds, &c.
Bray, J. S., Sydney.—150 specimens of birds.

Class 45.—Agricultural Products, not used for
Food.

Campbell, D. H., Cunningham Plains.—Sheep
skins (Pachyderm ungulates).
Chard, W. H., & Co., Sydney.—Samples of wool.
Page, T., Grafton.—Tobacco-leaf and cotton grown
in district, &c.

King, P. G., Goulburn.—Wool.
Samuel, Ron. B., U.N.G., Sydney.—Glue made
from sheep's pelts and pieces of ox-hides.

Class 46.—Chemical and Pharmaceutical Pro-
ducts.

Altman, L. J., Sydney.—Cement for glass and china.

Barratt & Co, Sydney.—Aerated condoms, &c; ;
bakers of aniseed

Brierly, G. & Co., Botany.—Gelatine and glue
Davies, W., Goulburn.—Dr. Waugh's laking-
powder

Gibson, G. W., Surrey Hills.—Odontalgic essence
Grogan & Co., Sydney.—India rubber stamps

Holtermann, B. O., Sydney.—Furniture polish,
Holtermann's life drops

Hudson Bros., Rechen.—Non-poisonous paint
Icke, C., Newcastle.—Fine soldering liquid

Kerr, E., Sydney.—Cement for veneers, exhaust-
work, household purposes

Mulcahey, J. & J., Redfern.—Toilet and other
soaps, candles

Orchard, A., Redfern.—Exhibition cement and
marking-ink

Peate, L., Bathurst.—Baking-powder
Pottier, J., Sydney.—Patent arches

Saunderson M., Pyrmont.—Botaniza
Schweppes, J. & Co., Sydney.—Mineral waters
(non-combustible)

Starkey, J., Sydney.—Aerated waters
Watson & Young, Albury.—Aerated waters

Class 47.—Chemical Processes for Bleaching,
Dyeing, Printing, and Dressing.

Holtormann, B. O., Sydney.—Leather dressing

Class 48.—Leather and Skins.

Alderson & Sons, Sydney.—Sole, wax kip, hanc-
ies, strap, null belt hanc, and other leathers

Davenport & Alcock, Sydney.—Sole, calf, and
kangaroo leathers

Ewington, E. R., Waterloo.—Rennet (calf's) for
cheese-makers, sausage skin

Forsyth & Sons, Sydney.—Leather of various
kinds, kips, &c.

Watson, G. C., Alexandria.—Patent and enamelled
leathers

Class 49.—Agricultural Implements and Pro-
cesses used in the Cultivation of Fields and
Forests.

Drysdale & Roberts, Sydney.—Automatic pump
Forsyth, J.—Bone dust, and bone and animal
manure

Manners, J., Tarco.—Double-headed plough,
cush-shield

Wolsely, F. G., Walgett.—Earth scoop
Wright, J., Sydney.—Ploughs, wharfed-trees, and
zig-zag harrow

Class 50.—Apparatus and Processes used in
Agricultural Works, and in Works for the
Preparation of Food.

Brierly, G. & Co., Botany.—Gelatine used in
preparation of food

Johnston, W. J., Surrey Hills.—Colonial ovens
Lewis, C., Sydney.—Patent steam cooking appa-
ratus

Smith & Hamilton, Sydney.—Soda-water machi-
nery and fountain

Warren, W., Toxofold Bay.—Oscillating cylinder
churn, without a dash

Class 52.—Machines and Apparatus in general.

Alderson & Sons, Sydney.—Machine belts, hose-
leather, fire-buckets, solid leather and in steel

Forsyth, S., & Sons, Sydney.—Mackenzie's patent
differential compound steam-engine

Hack, H. J. O., Globe.—Electric machine for doing
away with quicksilver and lead

Knibbs, J. E., Sydney.—Leather mill-belt, fire-
engine hose, lines, fastenings, &c.

Marshall, A. & A. & Co., Sydney.—Couplings,
brake castings, &c., at a lower cost than
Mort's Dock & Engineering Co., Sydney.—
Compound launch-engines, 12 h.p. (nominal), non-
condensing, compound

Pitkethly, B.—Windmill
Smith & Hamilton, Sydney.—Gas machinery,
plumb-line and engineer's work

Warren, W., Toxofold Bay.—Compressor washing-
machine

Class 53.—Machine Tools.

Drysdale & Roberts, Sydney.—Tangle-machine,
horizontal engine, drilling machine, shaving
machine, swing cut off saw

Lasseter, F. & Co., Sydney.—Pyramid or trophy
of sundstones

Millman, R. & Sons, Sydney.—Saws and tools,
plasterers' trowels, joint-rules, chaff and machine
knives

Class 57.—Apparatus and Processes for the
Manufacture of Furniture and Objects for
Dwellings.

Millson, A., Sydney.—Furnace for builders
Tall, G., Sydney.—Locks, saws, plasterers' tools

Class 59.—Machines, Instruments, and Pro-
cesses used in various Works.

Barrett & Co., Sydney.—Patent stoppers
Jones, E., Sydney.—Stamping press, for medals

Stevens, J., Sydney.—Machine newly designed and
made for bottling aerated waters

Class 60.—Carnages and Wheelwrights' Work.

Angus, W. T., Sydney.—Two "Amalgam" huggers
Drysdale & Roberts, Sydney.—Heavy hood

Fitzgerald & Collins, Sydney.—Sensible, sub-
under braces, flangeless buggy, patent saddle

Haining & Schimmel, Sydney.—O-spring buggy,
heavy brose, Sydney—Cubander buggy, patent
two row top

Marshall, J. O., Sydney.—Battleside car
Ristoul, B., Sydney.—Two wheeled car, in a finished
wood

Class 61.—Harness and Saddlery.

Alderson & Sons, Sydney.—Carriage and buggy
harness, collars, saddles, in India, &c.

Dodd, E., Sydney.—Horse-shoes of various kinds
M'Eacharn, J. T., Albury.—Horse-shoes

Class 62.—Railway Apparatus.

Commissioner for Railways.—O'Connell's
timberway rail and chair, O. T. Evans' patent self-
acting, Lauriat's points, &c., model of Lachow
Valley railway, or Zagraw

Hudson Bros., Redfern.—Sleeping-car, tram car,
Icke, C., Newcastle.—Locomotive side-valve, & phos-
phor-iron bearings, invented and produced by
exhibitor

Wearne, T., Sydney.—Tram-car, patent oil-lub-
ricated wheels and axles

Class 63.—Telegraphic Apparatus and Processes.

Smith, J. M., Sydney.—Scape or putted wheels for
telegraphic instruments

Superintendent of Telegraphs, Sydney.—
Telegraphic, philosophical, and scientific instruments;
torpedo apparatus

Class 64.—Apparatus and Processes of Civil En-
gineering, Public Works, and Architecture.

Gardner, J., Young.—Patent keyless locks for safe-
Marshall, A. A., Sydney.—Water works

Palmer, H., Sydney.—Model of centre span of
railway bridge over River Macquarie, Bathurst

Parrott, T. E., Sydney.—Plans, section, and eleva-
tion of proposed high-level girder-bridge connecting
Sydney and North Shore

Class 65.—Navigation and Life-saving.

Buckingham, W., Woolloomooloo.—Model of 10-
ton yacht, scale 1 inch to the foot

Kinnermann, E., Esplanade.—Sailing-boat
Marshall, A. A., Sydney.—Port light for ships,
diving gear

Mort & Co., Sydney.—Models of vessel built
by the Co., river steamers, wharf-boats, tanneries

O'Dwyer, E., Sydney.—Model of self-adjusting,
feathering floats, for palliser of steamships

Stephenson, M., Sydney.—Oars, sails, and steering-
gear

Class 67.—Cereals, Farinaceous Products, and Products derived from them.

Brown, J. D., Sydney.—Wheat
Crole, W. & Sons, Tongue.—Manufactured arrow
root
Connell, J., Yass.—English and Cape barley, wheat,
oats, &c.
Davies, G., Windsor.—Maize trophy—maize, wheat,
and other cereals
Faint, G., Armidale.—White wheat, red wheat,
mammoth rye, oats, flour, &c.
Lawrie, A. T., Rawdon Vale.—Arrowroot
Manning, J., Bega.—Fruit produce
Munn, M. & Co., Melbourne.—Maize
Page, T., Grafton.—Maize meal, arrowroot, millet
for cattle food
Wade, J., & Co., Sydney.—Oats, flour, and starch

Class 69.—Fatty Substances used as Food. Milk and Eggs.

Candelo Butter Co., Sydney.—Butter, in tins and
pails, preserved to keep in tropical climates
Klarna & Goringery Milk Condensing
Butter, & Cheese Co. Limited.—Condensed
milk
Manning, J., Bega.—Fruit produce

Class 70.—Meat and Fish.

Manning, J., Bega.—Fruit produce

Class 71.—Vegetables and Fruit.

Davies, G., Windsor.—Fruit of the date, pump-
kins, &c.
Graud, L., Sydney.—Preserved fruits
Manning, J., Bega.—Fruit produce
Page, T., Grafton.—Sugar-cane, potatoes, preserved
fruits and pickles

Class 72.—Condiments and Stimulants, Sugar and Confectionery.

Colonial Sugar Co., Sydney.—Sugar
Graud, L., Sydney.—English and French con-
fectionery
Morr, D. J., Sydney.—Vine malt and wine vinegar,
free from adulteration or acid
Page, T., Grafton.—Sugar, jams, and jellies
Starkey, J., Sydney.—Candies
Watson & Young, Albany.—Candies

Class 73.—Fermented Drinks.

Bouffier, F., Sydney.—White Pilsener and Madena,
red Hermitage, and white Chateau
Brecht, C.—Red Chateau, white Pilsener, red Hermit-
age, white Riesling
Buckholts, H., Mudgee.—Red Hermitage and
Muscatel, white Vendelino, and Riesling
Carmichael Bros.—Porphyrus, Senham, white
light Porphyrus (4 kinds)
Davies, A. & E., Lochinvar.—White light Shiraz,
red Riesling, Tokay, full bodied Riesling, Madena,
and Pilsener, and other kinds
Doyle, J. F., Lochinvar.—White Vendelino and
Shiraz
Drinan, J. J., West Maitland.—Red light Hermit-
age
Falcon, J. P., Albany.—Tokay, Riesling, Shiraz,
Hermitage, Burgundy, Champagne, Port
Fenn, J. H., Port Macquarie.—Red full Isabella,
Forsyth, Mrs. E. M., Parramatta.—Rish orange
wine
Gow, J., Mudgee.—Red Isabella, new-coloured
Tokay, red Greenhatche, and rose Tannier
Greer, W. E., & Co., Albany.—Shiraz, Burgundy,
Cabernet, Malaga, Muscatel, Vendelino, Aurore,
Malbec, &c.
Hill, J., Wingham.—Red light Verdelot and Chateau,
white light Riesling, white full-bodied sweet Riesling
Jock, D., Inverell.—Red Hermitage, white Shiraz,
red Malaga, white Madena
Kelman, J., Buxton.—Red Hermitage, Vendelino,
and Blauquette, Pilsener and Shiraz, Hermitage,
Riesling
Klauss, V., Grafton.—White full-bodied Riesling,
red full-bodied Burgundy
Lindsay, H. L., Hay.—Beers, cordials, &c.

Macarthur, J. & W., Camden Park.—Red sweet
Muscatel, red light Riesling, white light Riesling
Mills, G. M., West Maitland.—Beers
Meyer, S. A., Cooma.—Red Shiraz and Malbec,
white Anjou and Tokay
Munro, A., Singleton.—Vendelino, Shiraz, Riesling,
Pilsener, white Hermitage
Page, T., Grafton.—White Riesling, red Burgundy
Powell, E., Richmond.—White full-bodied Shiraz
Schofield, J. E., Windsor.—Red full-bodied
black Hermitage
Stephen, G. H., Hunter River.—Red Ivanhoe
Hermitage, white Isabella Riesling
Vile Bros.—West Maitland.—Hermitage, Lamberet,
Burgundy, Vendelino

Class 76.—Flowers and Ornamental Plants.

New South Wales Commission. The.—
Collection of ferns indigenous to the colony; orange
trees, in various stages of growth

Class 81.—Apparatus and Processes of the Art of Mining and Metallurgy.

Department of Mines.—

Gold trophy, quantity, 9,066,601 oz.; value,
£357,13,019
Silver trophy, quantity, 681,270 oz.; value,
£101,672

Phototypes of the Bundra or Fish River cases
Herrin Schmidt, H., East Kempsey.—Model of
antimony smelting works

Purified Coal & Coke Co., Walsend.—Model of
coal-washing machine

Class 82.—Mining and Metallurgy.

Atkinson, J. J. O., Oldbury.—Block of iron ore
Australian Asbestos Co., Onondaga.—Asbestos
and its connections; asbestos, in the crude and in
its various prepared states
Australian Kerosene Oil & Mineral Co.—
Australian highest mineral from Gleda Creek
Banks, J. H., Sydney.—Specimens from tin lode,
"Gulf Stream Mine," New England
Barber, R. A., Yass.—Galena
Barnet, J.—Building stones
Barton, R., Rydney.—Copper ores, with gold, &c.,
from the Great Colonial Copper Mine
Brown & Brown, Pyrmont.—Trophy of bar and
angle iron, tee and bridge nails, samples, &c.
Brown, T., West Maitland.—Sandstone, from
Ravensfield quarries
Butchart, J. H., Sydney.—Tin ore, from The Gulf,
New England, New South Wales
Byers, H. L., M.P.—Gold, in quartz, from Rivers
and Robinsons claim, Hill End
Coal Cliff Colliery Co.—Vertical section of seam
worked at the Coal Cliff Company's Colliery, county
Camden
Cochrane, A.—Marble, from Kempsey
Cochrane, G., North Willoughby.—Bricks and
earthenware clay
Cook Brothers, Ultimo.—Antimony ore, star
antimony, &c.
Co-operative Colliery Co., Newcastle.—Coke
made from Co-operative Colliery Co.'s coal
Copeland, H., M.P.—Quartz crystals, from Peel
lode
Douglas, W., Sydney.—Slate
Eskbank Iron Co., Lithgow Valley.—Coal coke,
iron ores, limestone, fire-bricks, &c., pig iron, rails,
and stampers
Fountain, J., Dubuque Water.—Iron ore and fire-
clay
Francis, H., Sydney.—Iron ore, paint ochres, sand-
stone, fire clay, &c.
Gibbs, W. R., Wagga.—Flashing
Great Copper Copper Mining Co.—Copper ores
Great Colliery Co.—Part of vertical section of
seam worked at the Gruta Colliery
Hayton, G.—Iron ore, from Newbridge
Herrin Schmidt, H.—Natural oxide and sulphide
of antimony, crude antimony, regulus of antimony,
with paints and chemicals produced
Hume, J. K., Cooma House, Yass.—Amiferous
quartz, from Dalton

Hurley, J., & Shepherd, J.—Auriferous and argenticiferous sulphides of iron, copper, and lead.
 Locke, C., Newcastle.—Nickel ore from New Caledonia; ingot of pure nickel, ingot of German silver, and ingots of white metal.
 Illawarra Coal Co.—Vertical section of seam worked at the Company's colliery.
 Isaacsohn, M., Sydney.—Collections of gold, minerals, and fossils.
 Liversidge, A., Sydney.—Specimens of gems and precious stones, from New South Wales.
 Lucas, J., Campedown.—Stalactites, from Binda or Fish River caves.
 McCallum, A., Yass.—Copper ore and galena.
 Mackenzie, W. H., Exchange Corner.—Crystallized blue, carbonate of copper, azurite.
 Mackenzie, D. F., & Moore, C. K.—Boghead coal, from Mount Victoria and Batfagat.
 Magrath, P., Yass.—Specimens of rolls.
 Mining Department.—Amethysts quartz, silver, iron, antimony, lead, and copper ore; refined tin and copper, in ingots, lode and stream tin, marbles, unfused earth, iron stones, fossils; blocks of coal from seams worked in the colony, and strata bored through by the diamond rock-drill, to a depth of 2170 feet, on the Sutherland Estate.
 Newcastle Coal Mining Co.—Vertical section of seam.
 Newcastle Wallend Coal Co.—Vertical section of coal seam.

New Lambton Colliery Co.—Vertical section of seam.
 New South Wales Shale & Oil Co.—Australian boghead mineral, or torbentonite.
 North, J. B., Sydney.—Section of coal, from Katoomba.
 O'Neil, D. J.—Flagging, from Burrowa.
 Osborne Wallend Colliery Co.—Vertical section of seam.
 Powrie, J., Sydney.—Antimony ore and stanniferous, from Garn Anthony Mine, near Armidale.
 Purified Coal and Coke Co., Wallend.—Small coal and coke.
 Rudder, E. sen., Macleay River.—Collection of minerals made from minerals.
 Rudder, E. jun., Macleay River.—Collection of lead and silver ores, and marble.
 Samuel, Hon. S., M.L.C.—Vestibular basalt, containing opal from Rocky Bridge Creek.
 Saunders, R. Ultimo.—Pneumatics (12 blocks).
 Suttor, W. H., Bathurst.—Gold in quartz, part of the "Key Hundredweight," found at Ophir in 1851.
 Towns, B. & Co., Sydney.—Bismuth lode stuff, from the "Bruce Mine," New England, tin lode stuff, from "Silent Grove Mine," "Cameron's Lode," and from "Duchess's Lode," New England.
 Vale of Clwydd Coal Co.—Coal, from Vale of Clwydd, Llanfyr, Western district.
 Young, J., Sydney.—Samples of sandstone, from Mr. J. Young's quarries, Sydney.

NEW ZEALAND EXHIBITS.

Class 6.—Education of Children. Primary Instruction, Instruction of Adults.

Board of Education, Napier.—School apparatus and school appliances.
 Buller, Dr. W. L., & Dr. C. M. G., F.L.S., F.R.S., Wellington.—A History of the Birds of New Zealand.
 Hill, H., Napier.—Reading tablets (10 sheets).

Class 8.—Organisation, Methods, and Appliances for Superior Instruction.

Daniel, W., Dutton.—Specimens of fossils, stones.
 Driller, S., New Plymouth.—Horse's foot (showing the formation).
 Haast, Prof. J. von, Ph.D., F.R.S.—Collection, illustrating the ethnology of New Zealand and of pre-historic races beyond the Australian colonies; skeletons of Dinornithidae, drawings, illustrating the ethnology of New Zealand, report on geology of Canterbury and Westland.
 Hamilton, A., & Hill, H., Napier.—Specimens of fossils, illustrating the geology of Hawke's Bay.
 Hamilton, A., Napier.—Specimens of ancient printing and writing, enamel, ethnological collection, illustrations of New Zealand zoology—boar's skull.
 Harding, J., Napier.—Stone axes, Maori carvings, limestone fossils.
 Hector, J., M.D., C.M.G., F.R.S.—Collections, illustrating the geology and mineralogy of New Zealand; sketches of New Zealand scenery; publications relating to New Zealand.
 Monckton, C. H., Wellington.—Maori war flag ascribed to Opotiki.
 Parker, Prof. T. J., Dunedin.—A series of vertebrate skulls (15 in number).
 Thomas, J. A., Nelson.—Fossil shell and timber found at Moutere.

Class 9.—Printing, Books.

Colenso, W., F.L.S., Napier.—First book and public papers printed in New Zealand.
 Cumming, R., Dunedin.—Six copies of masonic news-papers printed in two colours.
 Edwards & Greene, Wellington.—Printing.
 Enys, J. D., F.R.S., Canterbury.—Illustrated catalogue of New Zealand butterflies.
 Gordon, W., Taranaki.—Maori publications.
 Wilkinson, W., Taranaki.—Printing.
 Wise, H. & Co., Dunedin.—New Zealand directory.

Class 10.—Stationery, Bookbinding, Painting and Drawing Materials.

Burrett, R., Wellington.—Bookbinding, engraving.
 Colenso, W., F.L.S., Napier.—Paper made from Phormium tenax before 1838.
 Didsbury, G., Wellington.—Bookbinding.
 Fergusson & Mitchell, Dunedin.—Account-books.
 Hammond, J., Nelson.—Ink.
 Invercargill Paper Bag Factory, Invercargill.—Paper bags.
 Mataura Paper Mill Co., Otago.—Wrapping-paper, manufactured chiefly from native grass.
 Otago Paper Co., Dunedin.—Wrapping-paper.

Class 11.—General Application of the Arts of Drawing and Modelling.

Colenso, W., F.L.S., Napier.—Ancient Maori bowl (cast of); plate of iron, flattened and glazed.
 Duncan, A., Queen Charlotte Sound.—Bronze medal struck in commemoration of Captain Cook leaving England, 1772.
 Graham, R., Auckland.—Carved Maori bowl.
 Halcombe, Mrs. E., Fielding.—Lithographs of the Manchester Block, Fielding, by the exhibitor.
 Hume, J., Dunedin.—Walking stick, carved from New Zealand wood—maka maka.
 Johnston, W. G., Hokitika.—Scenes and artistic designs, arranged with ferns, mosses, and lichens.
 "Lyttelton Times." Proprietors of, Christchurch.—Lithography, engraving.
 Lyon & Blair, Wellington.—Engraving.
 Mackay, H., Dunedin.—Punka carving of ox-bow, handle, and corranat eskat.
 McDuff, J., Wellington.—Hand-painting.
 Stodart, Mrs. J., Auckland.—Copies of flowers grown in exhibitor's garden, modelled in wax-paper.
 Surveyor-General of New Zealand, Wellington.—Lithographs.
 Trevithick, F., Wanganui.—Carving on burnt kauri.
 Wilson, W., Wanganui.—Carving on burnt oak.

Class 13.—Musical Instruments.

Falconer, W. S., Blenheim.—Violin and case, of New Zealand wood.
 Simpson, A., Southland.—Set of bagpipes, made of native material.

Class 14.—Medicine, Hygiene, and Public Relief.
Burt, A. & T. Dunedin.—Washstands.
Packer, J. A. Nelson.—Artificial leg, with movable joints at knee, ankle, and toe.

Class 15.—Mathematical and Philosophical Instruments.

Burt, A. & T. Dunedin.—Copper spirit mercuries.
Stowe, L., Wellington.—Original models of Stowe's calculating machine patented.

Class 16.—Maps, and Geographical and Cosmographical Apparatus.

Ayers, A. Christchurch.—Views of Christchurch, with statistical information about Canterbury.
Dreverell, W., Invercargill.—Specimens of native shales, bound in book form.
Hector, J. M. P. O. M. T. P. R. S.—Geological map of N.Z. with plans and sections.
Mueller, G. Hokitika.—Map of Westland, showing position of valuable minerals discovered since 1861.
Miller, M. R., Napier.—Sketch and section of a deposit, showing strata of Hawke's Bay Province.
O'Neill, O. C. S., Wellington.—Plan of the city of Wellington prepared from official documents.
Spence, W. W. J. Wellington.—Map of Otago.
Sydenham Borough Council, Canterbury.—Chart of statistics, and views of borough buildings.

Class 17.—Cheap and Fancy Furniture.

August H. Invercargill.—Spring bottoms for fire-sided beds.
Bernasconi, G., Wellington.—Inland table.
Fleming, G. N. N.—Inland table, &c.
Guthrie & Larnach's Co., Dunedin, &c.
Larson & Townend, Napier.—Wood table, inland.
Lawson, Mrs. H., Wellington.—Gipsy tables.
Nicholson, W., Wellington.—Sideboard, of New Zealand woods, made by an apprentice.
Peters, G., Wellington.—Otago table, and variety of New Zealand woods.
Petherick, J. jun., Wellington.—Table, inland.
Scudmore, A., Auckland.—Inland table.
Wallis, E., Timaru.—Inland clock-table.
Warburton, P. S., Palmerston.—Two tables.
Williams, E., Dunedin.—Panel of real pine.

Class 18.—Upholsterers' and Decorators' Work.

Guthrie & Larnach's Co., Dunedin.—Gilt console table, with marble top.
Maxwell, Mrs., Wellington.—Curtains, N.Z. furs done in China silk.
Myers, T., Wellington.—Sample picture-frame.
Peterson, Burt & Co., Dunedin.—Venetian blinds.
Taylor, J., Dunedin.—Venetian blind.
Thompson, Mrs., Napier.—Screened picture.
White, Mrs. S., Wanganui.—Picture-frame in N.Z. woods.

Class 20.—Pottery.

Austin, Kirk & Co. Limited, Christchurch.—Stoneware drain-pipes, pottery, and ornamental specimens of fine clay goods. Awarded by the Jury First Order of Merit (Silver Medal). (See advt., page viii.)
Capestick, R. W., Dunedin.—Jugs, vases, teapots.
Cochrane, T., Canterbury.—Terra-cotta, coin-crowns, busts, basins, vases, &c.
Ford & Ogden, Canterbury.—Drain-pipes, fire-bricks, from fire-clay and gamsier; ornamental bricks.
Mortbury, G., Wellington.—Drain-pipes, glazed.
Plant, W., Thames.—One jug mould, with handle, complete in one mould.
Reeves & Co., Dunedin.—Earthenware, manufactured solely of N.Z. materials.
Waite, J. B., Thames.—China dish, 200 years old.
Wright & Vincent, Auckland.—Pottery clays.

Class 21.—Carpets, Tapestry, and other Stuffs for Furniture.

Cook, W., Wellington.—Flax and wool mats.

Hislop, A. R. Wellington.—Tapestry, executed by Mrs. J., (name of artist).

Oldham, A., Otago.—Flax matting.

Class 24.—Goldsmiths' and Silversmiths' Work.
Percenson, B. & Co., Christchurch.—Silver chair legs and cups, made from N.Z. silver.
Sandstead, M., Christchurch.—Silver cigarette.

Class 27.—Apparatus and Processes for Heating and Lighting.

Atkinson, T., Christchurch.—Cooking, lamps, capable of being entirely closed or used as an open lamp.

Barningham & Co., Dunedin.—Patent cooking and hot water range, "Zephora."

Burt, A. & T. Dunedin.—Gas-stoves, bilhard, bracket, pillar, and other lights.

Douglas, W., Blenheim.—Patent candle sticks.

Fisher, H., Thames.—Colonial oven and plate.

Class 29.—Leather-work, Fancy Articles, and Basket-work.

Burt, A. & T. Dunedin.—One lady's red-stand, electro-plated and mounted with silk, rock.

Byrdon, Mrs. A., Wellington.—Hand basket, ladies oval, red cloth, basket.

Ellery Miss E. F., Dunedin.—Cotton crochets, table-covers.

Ellery Miss M. F., Dunedin.—Floral flowers, and just time frame with ferns.

Harbutt, T. J., Auckland.—Bread-baker, &c.

Henry, Miss B. J., Dunedin.—Picture in Berlin wool and silk.

Jennings, D. H., Nelson.—Nest of three baskets made of native material; Pawa-shell ornaments.

Lockwood, Mrs. J., Timaru.—Antique-marble.

Macfarlane, Mrs. D., Jackson's Bay.—Seaweed and shells.

Malcolm, Miss A. J., Dunedin.—Picture, in Berlin wool and silk.

Malcolm, Miss C. A., Dunedin.—Picture, in Berlin wool and silk.

Maxwell, Mrs., Wellington.—Menu cards, ornamented with New Zealand flowers.

Munro, G., Dunedin.—Clock case, made from Kaka-hu alone.

Murdoch, Miss L., Upper Hut.—Natural fern stencil-work, combined with water-colours.

Porter, J., Thames.—Puzzle, in diamond.

Powell, Mrs. H., Camaru.—Picture in wool and silk.

Salmon, Mrs. K., Patea.—Cotton bracket and picture frame, screened and ferns.

Sim, Mrs. J., Dunedin.—Stocks, stockings, baby's petticoats.

Stott, Mrs., Auckland.—Flowers, in red wool.

Strong, Miss A., Port Chalmers.—Collection of crochets-work.

Thompson, W., Dunedin.—Draught-board, made from painter's lining-block—imitation of inland wood.

Class 31.—Thread and Fabrics of Flax, Hemp, &c.

McTavish, Miss, Thames.—Specimens of needle-work from New Zealand flax.

Nairn, L., Nelson.—Jug, made of New Zealand flax.

Potts, E., Christchurch.—Table-covers, fringe.

Class 33.—New Zealand Yarn and Fabrics.

Brathwaite, A., Hutt.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Moore, W., Wellington.—Yarn, house quilt (made by a station hand).

Logan, Miss J. B., Dunedin — Lace-work.
O'Connell, Mrs J., Auckland — Linen lace.
Wilson, Miss A., Dunedin — 1 high model in point lace.

Class 37. — Hosiery and Underclothing, and Accessories of Clothing.

Black, Mrs M. A., Wellington — Hosiery.
Greenshields, W., Auckland — Hosiery.
Honry, Miss M., Nelson — Woolen scarf.
Moore, Woolen Factory Co. Limited, Dunedin — Hosiery.
Rother, L., Dunedin — Hosiery.

Class 38. — Clothing for both Sexes.

Almao, V., Dunedin — Hats.
Becker, J. G., Napier — Two Maori hats.
Bathurst, D., Napier — Kiri mat.
Bertshaw, G., Dunedin — Felt hats, made from rabbits' fur.
Harris, W., Christchurch — Boots and shoes.
Lightband, Allan & Co., Christchurch — Boots and shoes.
Marriott, Mrs T., Wellington — Bonnet, made from lace and silk.
Munden, J., Dunedin — Boot and shoe uppers, ladies' and gentlemen's.
Nicholls, W., & Sons, Christchurch — Boots and shoes.

Class 39. — Jewellery and Precious Stones.

Cogan, J., Napier — Chain and pin.
Williams & Son, Pictou — Pearl (black), found by a Maori in a mussel.

Class 41. — Travelling Apparatus and Camp Equipment.

Harris, J., Dunedin — Portmanteaux.

Class 43. — Products of the Cultivation of Forests and of the Trades appertaining thereto.

Auckland Harbour Board, Auckland — Specimens of Australian and New Zealand timber, showing the action of the "Torreio Naval".
Bagnall Bros & Co., Thames — Sample board of Kāhikatea.
Blair, W. N., Dunedin — New Zealand woods.
Campbell, Dr. L., Auckland — Kauri pine.
Colonial Museum of New Zealand, Wellington — Collection of timbers, showing results of experiments for determining strength.
Denne, J. G., Nelson — Block of totara wood, suitable for veneering.
Fletcher, J. E., Collingwood — Plank of yellow pine timber, and section of same with bark.
George, J. O., Taranaki — New Zealand woods, polished and rough.
Graying, W. I., Taranaki — Tanning, dyeing, and medicinal extracts.
Guthrie, R., Dunedin — New Zealand timbers.
Haast, Prof. J. von, Ph.D., F.R.S. — Timbers of Canterbury and Westland.
Halcorn, A. F., Wellington — Native woods; table top, showing totara knot and honey-suckle.
Hokitanga Saw Mill Co., Hokitanga — Kauri.
Hokitanga Local Committee, Hokitanga — Timber.
Holdship, G., Auckland — Large kauri timber.
Hornby, J., Pictou — Two planks of rum, polished; New Zealand woods.
Isaacs, E., Auckland — Kauri timber, showing the natural formation of kauri gum.
McConnon, W., Hokitanga — Totara timber knot.
New Zealand Commissioners, Wellington — Fine specimen of kauri timber.
Norrie, W., Auckland — Ornamental timbers.
Otago Museum, Dunedin — Native timber of Otago, portion of totara log worked with stone adzes.
Robertson & Co., Otago — Native totara.
Stone, E., Thames — Veneers of colonial woods.
Sullivan, M., Dunedin — Baskets, made from supplejack.
Tapper, E. & A., Invercargill — Southland timber.
Whiting & Ball, Napier — N.Z. timber and bark, for tanning.

Class 44. — Products of Hunting, Shooting, Fishing, and Spontaneous Products. Machines and Implements connected therewith.

Baker Bros., Wellington — Kauri gum goods.
Bertshaw, G., Dunedin — Rabbit and hare skins, and furs.
Burton, J. B., Wellington — Stuffed fish.
Bush, Capt H., Thames — 350 specimens of kauri gum, comprising all known qualities found in New Zealand.
Carpenter, W., Thames — Kauri gum.
Daniel, W., Pictou — Rabbit skins.
Elder, W., Dunedin — Sea-elephant oil.
Hull Bros., Auckland — Kauri gum, in its various forms and conditions.
Hull, jun., & Co., Auckland — Kauri gum.
Invercargill Local Committee, Invercargill — Stuffed specimens of fish.
Lizard, H. E., Wellington — Muffs, sippets, and other articles, made from N.Z. skin and leathers.
Mitcheson, E., Dunedin — Kauri gum.
Parker, Prof. T. J., Dunedin — Stuffed king penguins, also, skeleton and egg.
Scaevola (Pahutu Edwards), preserved as is to retain its natural colour and flexibility.
Paton, H. I., Bay of Islands — Kauri gum ornaments.
Reischek, A., Auckland — Groups of N.Z. birds.
Ross, A. Y., Gresham — Petroleum (kauri oil).
Thames Produce Co. Limited, Thames — Kauri gum.

Class 45. — Agricultural Products, not used for Food.

Bevan, T. jun., Pictou — Rope and lines made from N.Z. flax.
Cameron, H., Hokitanga — Bale of flax.
Canterbury Agricultural & Pastoral Association, Christchurch — Dried hide, from European stag, grown in New Zealand, ploughlines.
Chinnery, C., Canterbury — New Zealand flax (dressed), twine.
Colonial Museum of New Zealand — Thorium tannin, showing application to useful purposes.
Fulton, C., Glenburn — Sample of flax.
King, W. R., New Plymouth — Flax hats, made by Maori.
Robertson, A., Nelson — Thorium tannin, or New Zealand flax.
Ross, A. Y., Gresham — Tobacco leaf.
Scaevola, E., Wellington — Hand-made cigarettes.
Seed, J., Southbrook — Flax, tow, rope, and twine.

Class 46. — Chemical and Pharmaceutical Products.

Bennett, F., Thames — Raw, manufactured, and calcined hematite, and specimen board showing tint effects.
Hitchens, H. A. H., Auckland — Vegetable compound for purifying the blood.
Hokitanga Local Committee, Hokitanga — Mineral waters, from Whakau, Westland.
Innes, W., Port Chalmers — Cod liver oil.
Kitchen & Sons, Wellington — Candles and soaps.
M'Leod Brothers, Dunedin — Stearine candles, soap.
Neil, J., Dunedin — Botanic medicine.

Class 48. — Leather and Skins.

Collier, T., Nelson — Hand-made parchment.
Crossley, H., & Co., Wellington — Salted pelts.
Walton, H., Glen Craig, Wellington — Bessils.

Class 49. — Agricultural Implements and Processes used in the Cultivation of Fields and Forests.

Duncan, P. & D., Christchurch — Double and single furrow plough.
Maydwell, D., Christchurch — Bone-dust.
Moorhouse, T. O., Christchurch — Superphosphate of lime and artificial bone manures.

Reid & Gray, Dunedin.—Double-furrow ploughs, with solid coulters, set of iron zigzag harrows, assortment of machine made castings.

Extract from Jury report, page 135.—“In ploughs there was one exhibit to which we wish to draw special attention as being the best, and that is the double-furrow, with curved coulters, of Reid and Gray, Dunedin. In finish and construction it was far superior to any other.” Awarded Gold Medal.

Walker, J. C. E., Thames.—Designs for farm buildings.

Class 50.—Apparatus and Processes used in Agricultural Works, and in Works for the Preparation of Food

Arnold, E., Wellington.—Revolving beehive, to obtain honey without destroying the bees.

Bagnall Bros & Co., Thames.—Bee-framed beehive.

Burt, A. & T., Dunedin.—Brewer's refrigerators, mashing-machines, bottling-jumps, and casking-machine, water-cupping and pumps, pipes, &c.

Ellis, T., Wanganui.—Butter-churn.

Class 52.—Machines and Apparatus in general.

Bush, Capt H., Thames.—Double-purchase blocks.

Crow, A., Dunedin.—Model of beam engine.

Dungen P. J., Dunedin.—Box-mangle.

Thomson, T., The Bluff.—Washing-machine.

Class 58.—Apparatus and Processes used in Paper-making, Dyeing, and Printing.

Frost, J. W., Wellington.—Rubber stamps.

Fuschel, Jannoy & Co., Christchurch.—Paper mills, paper-mills, and sheet-mills, from N. Z. fax.

Stansell, J. B., Christchurch.—Half-stuff and paper-mills, manufactured from N. Z. fax.

Class 60.—Carriages and Wheelwrights' Work.

Moore, W. & Sons, Christchurch.—Omnibuses, fitted with springs.

Robbin, J., & Co., Dunedin.—Laudan.

Class 61.—Harness and Saddlery.

Brown, G. & Son, Invercargill.—Riding saddle, with improved knee-pad.

Dunbar, A., Christchurch.—Saddles.

Class 62.—Railway Apparatus.

Alves, J., Dunedin.—Working model of Alves' patent aerial tramway, with specimen full-size clip and hanger.

Reid & Duncan, Dunedin.—General plan and details of wire-rope railway.

Class 63.—Telegraphic Apparatus and Processes.

Hayes, J. B., Wellington.—Electric office indicator.

Class 64.—Apparatus and Processes of Civil Engineering, Public Works, and Architecture.

Alves, J., Dunedin.—Salt elevator and carrier.

Boyd, G., Auckland.—Brick, tiles.

Brown, E., Wellington.—Model of Cape Farewell Lighthouse.

Burnside, H., Dunedin.—Model of the residence of Hon. R. Campbell, Otago.

Burt, A. & T., Dunedin.—Base castings and brass-work, consisting of fittings, valves, hydraulic, in machine couplings, &c.

Canterbury Marble Co., Christchurch.—Marble.

Daniel, W., Otago.—Stone from Dighton quarry.

Ellis, J. C., Moravia.—Easily-worked, durable buildings.

Guthrie & Larnach's Co., Dunedin.—Ornamental iron, &c.

Haast, Prof. J. von, Ph.D., F.R.S.—Building stones from Canterbury.

Hackett, T. R., Nelson.—Marble.

Halley & Ewing, Wellington.—Red pine door.

McCallroy, E., Queenstown.—Prestone, dressed and partly dressed.

McGeorge, L. D., Clyde.—Plan of suspension-bridge over River Otaheke.

Munro, G., Dunedin.—Marble; hydraulic cement in its native state.

New Zealand Commissioners, Wellington.—Carved panels of an ancient Maori house.

Oamaru Stone Co., Oamaru.—Stone column.

O'Connor, B. C. E., Blenheim.—Plans and photographs of Nelson Creek water-race.

O'Neill, C., Wellington.—Artificial Calisthenic.

Stansell, J. B., Christchurch.—Marble.

Stewart & Co., Wellington.—Joints.

Thomson, T., The Bluff.—Method of lifting weights.

Waddell, M'Leod & Weir, Wellington.—Boats.

Class 65.—Navigation and Life-saving.

Blackett, J., Wellington.—Lighting chart of New Zealand.

Forster, W., Christchurch.—Life-saving vest, which can also be used as an air-cushion.

George, T., Dunedin.—Plans and soundings of Otago Harbour.

Hargraves, T., Nelson.—Model wave-power machine.

Holliday, Captain J., Wellington.—Plan of Wellington Harbour.

Luxford, G. H., Wellington.—Model of a Maori canoe.

Lyttelton Harbour Board, Christchurch.—Model and plan of Lyttelton and Inner Harbour, showing the improvements.

McLennan, W., Dunedin.—Working model of boat with propeller (convertible into life boat, pleasure boat), and of self-discharging self-larger.

Thomson, T., The Bluff.—Models of ships' compasses, anchors, wind-power, water-power.

Union Steam Shipping Co., Dunedin.—Models of steamers, "Rotomahana" and "Wahatapu," &c.

Warburton, P. E., Palmerston.—Canvas boat, to fold up (for one person).

Weymouth, J., Auckland.—Models of yachts.

Class 67.—Cereals, Farinaceous, Products, and Products derived from them.

Banks, E. H., Christchurch.—Oatmeal seeds, pearl barley, peas, beans, oats, &c.

Batal, P. & Co., Arrow.—Wheat and flour.

Capper, J., Wellington.—Potato flour.

Chambers, J., To Matua.—Rye-grass seed.

Claydon, S., Wakefield.—Barley, grown on newly broken-up land after oats.

Cleave, R., Invercargill.—Perennial 11-grass seed.

Coe, J., Canterbury.—Varieties of wheat, Christchurch barley, oats, peas, and champion wheat.

Cuddon, W., Christchurch.—Pale potter and amber with (on a manufacturing).

Cunningham, P. & Co., Christchurch.—Varieties of wheat, oats, barley, beans, and grass seed.

Dudley, C. T., Invercargill.—Wheat.

Duncan & Son, Christchurch.—Farnington seed.

Dwyer, M., Franklin.—Red wheat.

Fleming, Gray & Co., Invercargill.—Oatmeal, pearl barley, wheat, flour.

Harley, T., Nelson.—Hops and malt.

Harley & Sons, Nelson.—Barley, and malt made from a similar sample.

Hoadley & Lyon, Napier.—Meadow fescue, 13 c.

Holdaway, D. T., Richmond.—White Tuscan spring wheat.

Hudson, E., & Co., Dunedin.—Flour, infant's food.

Irvine, W., & Co., Palmerston.—Oatmeal.

Kelly, W., Tapanui.—Cereal.

King, G., & Co., Christchurch.—Wheat, barley, oats, beans, peas, &c.

Manning, S. & Co., Christchurch—Malt and barley.

Marshall & Copeland, Dunedin.—Malt, barley.

McGill, P., Tokomaitiro—Oatmeal, flour.

McIntyre, D., West Clive—Malt.

Metcalfe Bros., Hawke's Bay.—Flour.

Mitchell, J., Invercargill.—Baker.

Mour, W., & Co., Canterbury.—Oatmeal.

Moore, A., & Co., Christchurch.—Wheat, oats, barley.

Palmer, C. A., Welma West.—Hops.

Pannell, G., Christchurch.—Wheaten flour.

Paul, J. & E., Marlborough.—Barley.

Preston, J., Otago.—Perennial rye-grass seed.

Reid & Sons, Invercargill.—Rye-grass seed.

Royce Stead & Co., Christchurch.—Wheat, oats, barley, oatmeal, colonial malt.

Sturman, G., Oamaru.—Sample of oats.

Surman, T., & Co., Invercargill.—Malt, barley.

Tanner, T., Ravenslea.—Rye-grass seed.

Vile, J., Wellington.—Varieties of wheat and oats, flour, rye-grass seed.

Ward & Co., Christchurch.—Colonial malt.

Western District Agricultural and Pastoral Association, Invercargill.—Oats.

Wilkin, R., & Co., Christchurch.—Oatsfoot-grass seed, rye-grass seed, perennial.

Wilson, Harraway & Co., Dunedin.—Flour, from Oamaru wheat.

Wood, W. D., Christchurch.—Flour, sharps, bran, semolina.

Class 68.—Bread and Pastry.

Bycroft & Co., Auckland.—Biscuits.

Douglas, R. T., Thames.—Biscuits.

Mennie & Day, Thames.—Biscuits.

Newbury, P. J., Dunedin.—Charknell biscuits.

Renton, J. C., Dunedin.—Biscuits.

Class 69.—Fatty Substances used as Food. Milk and Eggs.

Blackwood, W., & Co., Invercargill.—Cheese.

Goodwin, J., Canterbury.—Cheese made on the Cheddar system, expressly for export purposes.

Graham, J. A., Sumner.—Cheese.

Graham, J., Dunedin.—Cheese.

Kirkland, W., East Taranaki.—Cheese.

McConnell Bros., Christchurch.—Cheese.

Pioneer Cheese Co., Dunedin.—Cheddar cheeses.

Sutherland, R., Christchurch.—Cheese.

Watson, W., Breckside.—Cheese.

Class 70.—Meat and Fish.

Blake, O. & Sons, Pictou.—Preserved fish.

Eagle, J., Christchurch.—Hams and bacon.

Gear, J., Wellington.—Turned soups, preserved meats.

McConnell Bros., Christchurch.—Hams, bacon.

McDonald & Miller, Dunedin.—Hams, bacon.

Mann, W. H., Christchurch.—Preserved meats.

Sheedy, E., Dunedin.—Hams and bacon.

Watkins, McNally & Co., Dunedin.—Hams, bacon.

Class 72.—Condiments and Stimulants, Sugar and Confectionery.

Carew & Co., Dunedin.—Sauces.

Chilton, F., Invercargill.—Mustard ketchup.

Ferland, J. D., Clyde.—Syrups, liqueurs, and bitters.

Garratt, W. T., Wellington.—Sauce.

Gee, A., Christchurch.—Jellies.

Gomez, J., Rangoon.—Soda-water, sarsaparilla, lemon, raspberry, peppermint, and clove syrups.

Gregg & Co., Dunedin.—Coffee, peppers, spices, chocolate.

Harding, J., Waipara.—Honey.

Hudson, R., Thames.—Preserved peaches.

Hudson, W. H., & Co., Wellington.—Sauce.

Kessell, T. N., Dunedin.—Sauce, ginger wine, peppermint cordial.

Koeford, H. L., Thames.—Tomato sauce.

Lane & Co., Dunedin.—Cordials, liqueurs.

Moffett, W. J., Invercargill.—Soda-water, cordials.

O'Meara, M., Queenstown.—Cordials.

Steadman, J. B., Thames.—Canned peaches.

Strang, D., Invercargill.—Prepared coffee, pepper, and spices.

Thomson & Co., Dunedin.—Cordials, liqueurs.

Trent Bros., Christchurch.—Cherry in each stage of manufacture, peppers, spices.

Walter, J., C. E., Thames.—Tomato sauce.

Class 73.—Fermented Drinks.

Blunck, D., Hokitika.—Erieberry wine.

Cochran, E. W., Dunedin.—Mild ale, bottled ale and stout.

Crowe, W., & Co., Christchurch.—Bottled ale and stout.

Crown Brewery Co., Christchurch.—Ale, bulk and in bottle; bottled stout.

Dungan & Lloyd, Wanganui.—Ale made entirely from N.Z. malt and hops.

Ehrenfeld Bros., Thames.—Ale and porter.

Faiaud, J. D., Clyde.—Samples of wine.

Franka, P., Tainui.—Stout ale.

Hargan & Co., Dunedin.—Bottled ale and stout, brewed by Speight & Co.

Harley & Sons, Nelson.—Ale, in bulk.

Hogg, A., Thames.—Ale.

Innes, F., & Co., Christchurch.—Light and strong ale, in bulk.

Joel, M., Dunedin.—Ale and stout, in bulk and in bottle.

Keast & McCarthy, Dunedin.—Light and medium ale, in bulk, bottled ale and stout.

Kofed & Olive, Milton.—Ale, in bulk.

Mandl & Stennard, Hokitika.—Ale, in bulk.

Manning, S., & Co., Christchurch.—Ale and stout, in bulk and bottle.

Marshall & Copeland, Dunedin.—Bulk ale, bottled ale and stout.

Martin, J. T., Invercargill.—Ale, in bulk.

O'Meara, M., Queenstown.—Cairn and gooseberry wines, five years old, not fermented.

Pascoe & Co., Wellington.—Mild, pale bitter, and strong ale.

Roberts, E. T., & Co., Wellington.—Tonic beer and ginger ale (non-alcoholic).

Schwartz & Co., Christchurch.—Wines.

Smith, J., Nelson.—Fruit wines (red grapes).

Soler, J., Wanganui.—Wines.

Speight, J., & Co., Dunedin.—Ale, mild, pale, and strong.

Strachan, W., Dunedin.—Ale in bulk (strong, mild, and pale).

Surman, T., & Co., Invercargill.—Beer.

Thomson & Co., Oamaru.—Bottled ale (old).

Thomson & Co., Dunedin.—Wines.

Tod, A., Wanganui.—Wine, from grapes grown by natives.

Vincent & Co., Christchurch.—Ale and stout.

Walker & M. Taggart, Palmerston.—Bottled Dunedin ale (Speight's).

Ward & Co., Christchurch.—Strong ale.

Wood & Co., Ashburton.—Beer, from Canterbury barley and malt and Nelson hops.

Class 76.—Flowers and Ornamental Plants.

Armstrong, C. O., Dunedin.—Collection of New Zealand ferns in natural colours (dried).

Armstrong, Mrs. C. O., Dunedin.—Book, containing Victorian wild flowers and N.Z. ferns.

Craig, E., Auckland.—New Zealand ferns.

Dall, J., Nelson.—A complete collection of N.Z. ferns, as found in the Nelson district, with hanging baskets two Wairarapa cases.

Green, A. G., Westport.—Ferns (140 varieties).

Hardy, C. A., South Dakota.—Dried specimens of N.Z. ferns.

Helms, R., Greymouth.—Ferns and lichens.

Jeffs, C. K., Wellington.—Dried New Zealand ferns and fern allies.

Logan, H. F., Wellington.—Dried N.Z. ferns.

Regan, J., Thames.—Collection of colonial ferns.

Spence, Mrs. C., Dunedin.—Specimens of N.Z. ferns, bleached, with skeleton leaves.

Stewart, P., Wellington.—Dried N.Z. ferns.

Thomson, J., Dunedin.—Book of N.Z. ferns, from the neighbourhood of Dunedin.

Tizard, Mrs. H., Thames.—Collections of N.Z. ferns.

Class 79.—Seeds and Saplings of Forest Trees.

Potts, T. H., Christchurch.—Cones of N.Z. forest trees; statistical information on forestry.

Class 81.—Apparatus and Processes of the Art of Mining and Metallurgy.

Brunner Coal Co., Grey River.—Fire-clay retort for gas making and other fire clay goods.
 Climo, W., Thames.—Specimens illustrating a chemical process for obtaining gold from tailings.
 Hector, J., M.D., C.M.G., F.R.S.—Plugs and sections of coal and other mines of New Zealand.
 Hokitika Local Committee, Hokitika.—Model of mining claim—"Morning Star" (Ross).

Class 82.—Mining and Metallurgy.

Austen Kirk Co. Limited, Christchurch.—Fire-clay, raw and prepared.
 Bank of New Zealand.—Specimens of N.Z. gold, models of reefs.
 Bay of Islands Coal Co., Auckland.—Block of coal from Kawā Kana Colliery.
 Birley, P., Auckland.—Wrought iron work. Fuel-iron on a stick, leaves and flowers.
 Black, G. T., Akaroa.—Red ochre, from Okate Valley, Little River.
 Boulton, P., Queenstown.—Chopper ore.
 Boyd, G., Auckland.—Fire clay and porcelain.
 Brunner Coal Co., Grey River.—Coal.
 Coal Pit Heath Coal Mining Co. Limited, Grey mouth.—Coal.
 Comer, R., Thames.—Gold-bearing quartz.
 Douglas, G. B., Macetown.—Quartz specimens.
 Driver, H., Thames.—Specimens of stone from Hapu and Kawā Kana Colliery.
 D'Urville Island Copper Mining Co. Limited, Queenstown.—Copper ore.
 Edgar, J., Queenstown.—Preserved fern roots and leaves.
 Edwards, E. R., Thames.—Gold-bearing quartz.
 Edwards, E. R., Thames.—Fragments and minerals.
 Ford & Ogden, Canterbury.—Clays, ironstone, manganese waste, glass-ware.
 Gardiner, W., Mokai Coal.—Copper ore.
 Graham, M., Waikanae.—Tuto, found at Roturua Hot Springs. Found frozen by mud by Maori.
 Greig & Hunter, Christchurch.—Specimens of granite and gneiss.
 Hackett, T. R., Nelson.—Copper ore, chrome ore with accompanying rock, and preparations of chrome, selenite.
 Hokitika Local Committee.—Coal.
 Hon. Minister of Public Works, Wellington.—Rough castings of railway wheels, manufactured from Taranaki iron sand.

Hooper & Dodson, Nelson.—Coke.
 Ingram & White, Canterbury.—Native chalk, taken from the surface at View Hill Oxford.
 Invercargill Local Committee.—Stone.
 Irvine, Dr. F. W., Mangatapu.—Chrome iron ore.
 Jackson, H. D., Nelson.—Silver ore, copper.
 Johnston Bros., Nelson.—Galenic and silver ore, zinc blende, mineral ores, kauri gum, products of one.
 Kaitangata Coal Co.—Coal, ordinary seam.
 Lessee's Orepuki Coal Reserve.—Shale.
 Lousigan, T. B., Nelson.—Hematite ore and paint.
 Low, W., Auckland.—Special ironstone.
 McCaffrey, E., Queenstown.—Marble, firestone, limestone, gypsum, &c.
 Milne, J. A., Canterbury.—Fire clay bricks, brown coal, glass sand, mineral paint.
 Munro, G., Dunedin.—Pottery-clay ware, blocks of Kaitangata stone.
 Murray, Dalgleish & Co., Invercargill.—Coal obtained at the Nigheas.
 New Zealand Commissioners, Wellington.—Trophy representing the total quantity of gold exported from New Zealand, and firestone quartz.
 New Zealand Hematite Paint Co., Nelson.—Hematite iron ore, calcined ore, paint.
 Nelson Local Committee.—Blocks marble and coal scabbie.
 Pawa Rika Lithographic Stone Co., Westland.—Slabs of lithographic limestone.
 Pearce, A. E., Canterbury.—Firestone.
 Plant, W., Thames.—Chude gypsum, plaster of paris made from same.
 Port Chalmers Quarrying Co.—Limestone.
 Rodding River Copper Mine Co., Nelson.—Copper and chromite ore and hypersthenite.
 Smith, E. M., New Plymouth.—Tasmanian iron-sand, in various stages of manufacture; minerals, &c.
 Stansell, J. E., Christchurch.—Iron ore and ingots, glass making sand, pottery clay.
 Tatton, J. W., Nelson.—Chrome iron ore.
 Thompson, T. J., Bluff.—Specimen of sulfur.
 Vivian, J. M., New Plymouth.—Iron-sand, soil used as flux in blast furnace for smelting.
 Waipori Antimony Mining Co.—Antimony.
 Warren, W., J.P., Queenstown.—Copper ore.
 Watt, A., Campbelltown.—Glanite, rough and smooth.
 Westport Colliery Co.—Coal.
 Williams, C. J., Thames.—Silver-lead ore.
 Wilson, W., Christchurch.—Coal and stone.
 Worthington, J. S., Queenstown.—Iron-sand.

QUEENSLAND EXHIBITS.

Class 6.—Education of Children, Primary Instruction, Instruction of Adults.

Beenleigh State-school, Logan River.—Two maps, by Otto Barth (age, 13½ years).
 Department of Public Instruction.—Sample of school wall construction, school window, desk, &c.
 Department of Mines.—Geological maps.
 Fox, H. W., Brisbane.—School map of Queensland.
 Hurworth, C., Fortitude Valley.—Pupil-teacher's cabinet, pupil-teacher's stool.
 Knight, W., Brisbane.—New school map of Queensland, lithographed by H. W. Fox.
 Municipal Council, Bowen.—Plan of Damtree coal seam, Bowen River, with block of coal.
 Normal School, Brisbane.—Lawnings.
 Normal School, Fortitude Valley.—Maps prepared by pupil-teachers and scholars.
 Superintendent of School Buildings, Queensland.—Two plans of school construction.

Class 9.—Printing, Books.

Gardiner & Co., Brisbane.—Rubber stamps.
 Thorne, W., Brisbane.—Pugh's Almanac, 1890.

Class 10.—Stationery, Bookbinding Materials.
 Boal, J. C., Government Printer.—Commercial law, and library binding and ruling.

Macpherson, A., Brisbane.—Papers made from Sida (Lusa, Ficus macrophylla), and tea tree bark.

Class 11.—General Application of the Arts of Drawing and Modelling.

De Stacey, M.D., Brisbane.—Clay flowers.
 Uther, S. H., Brisbane.—Model for a town-hall.

Class 14.—Medicine, Hygiene, and Public Relief.

Walker, J. H., Brisbane.—Lady's cork foot.

Class 15.—Mathematical and Philosophical Instruments.

Woeber, H., Brisbane.—Spectacles.

Class 17.—Cheap and Fancy Furniture.

Bowden, W., St. Helena.—Inlaid table and writing-desk.
 Carey, J. W., Brisbane.—Cedar show-case, in two parts, designed for cards or wall paper.
 Kasch, J., Rockhampton.—Inlaid table and cabinet, made of native woods.
 Macintosh, —, Rockhampton.—Dressing-table.
 Pettigrew, Hon. W., M.L.C., Brisbane.—Cedar hall door and mantelpiece, complete.

Petrie, J., Brisbane — Polished dressing table, with looking-glass, made of silky oak and typico pine
Queensland Government — Wardrobe, mirror, Queensland woods, brass and iron work
Rockhampton Committee — Furniture

Class 18.—Upholsterers' and Decorators' Work.
 Gair, B. N., Mrs., Brisbane — Ornamental basket.
 Haslop, J. & J., Brisbane — Drawing-room suite, Queensland oak, and coloured black and gold.
 Murdoch, J. S., Brisbane — Chairing and skimming imitation woods.
 Sturgeess, H., Rockhampton — Hall chairs.
 Thomlie, P., Brisbane — Inlaid writing and tea table, jewel case, book-case, and chest of drawers, made of native woods.

Class 20.—Pottery.

Fensom D., South Brisbane — Pottery.
 Fischer, G., Dickhead Creek — Fire-bricks.
 Petrie, J., Brisbane — Fire bricks, building bricks (white and red, glazed).
 Simpson, A., Clifton — Cement, fire clay goods, crucibles, refractory bricks, &c.
 Stager, K. T., F. L. S., Brisbane — Fire bricks.

Class 21.—Carpets, Tapestry, &c.

Baker, A., Maryborough — Painted table cover.
 Dundson, Mrs. G., Ipswich — Patchwork quilt.
 Rawlins, Mrs., Warroo — Two marsupial rugs.

Class 33.—Woolen Yarn and Fabrics.

Queensland Woollen Manufacturing Co., Ipswich — White blankets, white flannels.

Class 34.—Silk and Silk Fabrics.

Chubb, C. F., Ipswich — Silk material, from the plant to the manufactured article, grown in Queensland, and manufactured at Maclefield, reeled silk.

Class 36.—Lace, Net, Embroidery, &c.

Kunzli, B., Rockhampton — Hand-work.

Class 38.—Clothing for Both Sexes.

Davidson, J., Durling Downs — Calhage-tee hat.
 Dougherty, Mrs., Upper Barnet — Lady's hat, made from kangaroo skin.
 McDonald, J., Penal Establishment, St Helena — Boots, caps, shoes, clothing for native police, &c.
 Shields, M., Olympic — Boots and shoes.

Class 39.—Jewellery and Precious Stones.

Powell & Campbell, Wilson River — Opals.

Class 41.—Travelling Apparatus.

Lade, N., Brisbane — Portmanteaux.

Class 42.—Toys.

Thomlie, P., Brisbane — Automaton boy and theatre.

Class 43.—Products of the Cultivation of Forests and of the Trades appertaining thereto.

Botanic Gardens — Collection of Queensland timbers, medicinal and tanning barks.
 Byerley, T. S., Rockhampton — Pieces of timber.
 Byerley, T. S., Rockhampton — Stalks of timber.
 Cook, W. D., Westwood — Native woods (polished).
 Gordon, J., Townsville — Mangrove bark.
 Macpherson, A., Brisbane — Polished specimens of useful and ornamental timber.
 Petrie, J., Brisbane — Timbers, cedar board and pure yellow-wood.
 Pettigrew, Hon. W., M. L. C., Brisbane — Trophy of bushings, illustrative of varieties of Queensland woods.
Queensland Commission — Timbers, polished.
Queensland Government — 275 cups turned and polished, illustrating the varieties of indigenous timbers, kangaroo, Queensland timbers.
Rockhampton Committee — Native timbers of the district.
 Spence, D., Carru — Collection of indigenous woods.
 Sturgeess, H., Rockhampton — Trophy of turnery work, executed to display indigenous timbers.
 Stager, K. T., F. L. S., Brisbane — Duboisia leaves, bitter bark, guinea bark.

Class 44.—Products of Hunting, Shooting, Fishing, and Spontaneous Products. Machines and Instruments connected therewith.

Alder, A., Brisbane — Natural history specimens.
 Bell, Hon. J. P. — Fan of antlers from the progeny of deer presented by Her Majesty.
 Boyd, J., Brisbane — Aboriginal canoes.
 Bracher, H., Warroo — Two marsupial rugs.
 Coxen, Mrs. C., Brisbane — Stuffed birds, called martlets shells, canoes, &c.
 Crate, J. S., Brisbane — Vegetable sponges, colander, doth or lattice cucumbers, &c. of some.
 Diggles, S., Brisbane — Beetles and butterflies.
 Gulliver, T. A., Thornborough — Native birds.
 Hartmann, C. H., Toowoomba — Collection of insects injurious to trees and plants.
 Johnstone, R., Harbottle River — Aboriginal weapons.
 Marwedel, E., Toowoomba — Marsupial skins.
 Palmer, Hon. A. H., M. L. A. — Native implements, two mummies and curiosities, from New Guinea.
 Parbury, Lamb & Knox, Sydney — Pearl shell, from the Torres Straits fisheries.
 Pilcher, G. L., Rockhampton — Entomological specimens.
Queensland Government — Shells coral, lamps' heads, preserved and mounted, stuffed dunging; scented non-hark gum leaves, and essence.
 Rainbird, J., Bowen — Land and marine shells.
 Robinson, W. R., Toowoomba — Queensland scrub birds.
Rockhampton Committee — Natural history specimens.
 Sachs, F. L., Brisbane — Stunmy, from Central Queensland.
 Sandrock, G. F., Bowen — Coral and shells.
 Stager, K. T., F. L. S., Brisbane — Aboriginal weapons, spears.
Trustees Queensland Museum — Native cats, water rat, south wallabies; conchological specimens, part of Aquaria, &c.
 Wickham, G. J., Roseathal — Opesun's fur.
 Williams, A., Brisbane — Chumion bark.
 Wilson, J., Rockhampton — Nest-wood oil.

Class 45.—Agricultural Products, not used for Food.

Botanic Gardens, Brisbane — Indigenous pasture grasses and fodder plants, fibres, gum resin.
 Bridgman, E., Mackay, Queensland — Tobacco.
 Corten, C. G., Rockhampton — Tobacco.
 Cribb & Foote, Ipswich — Cotton, ginned and in the boll, grown near Ipswich.
 Hocker, J. H., Brisbane — Tobacco leaf.
 Jones, A., Rockhampton — Tobacco leaf.
 Macpherson, A., Brisbane — Indigenous grasses, dried and growing in tufts, perennials, New Zealand, prairie, and Italian grasses; white and grey mullet; rye plants; rye, flax, rosella hemp, and other fibres; textile fabrics made from fibres, and cloth and twine from rye and rosella hemp.
 Soegard, H., Logan River — Tobacco, manufactured from Queensland leaf.
 Turner, F. — Indigenous fodder grasses.
 Wickham, H. A., Lower Herbert — Fibres.
 Wyatt, A., Rockhampton — Zama fibre.

Class 46.—Chemical and Pharmaceutical Products.

Baker, T., Maryborough — Coal-tar.
 Berkeley, Taylor & Co — Dugong oil, refined and refined.
 Boldemann, W., Rockhampton — Plain soap.
Botanic Gardens, Brisbane — Essential oils, tinctures, &c., prepared by L. Carmichael.
 Clarke, D., Warwick — Essences, perfumes, and tooth-powders.
 Larned, A., Brisbane — Mineral waters.
 Ruddell, E., Brindberg — First quality soap.
 Stager, K. T., F. L. S. — Chemical and pharmaceutical preparations, acids, essential oils, and essences; wood tar, kerosene, paraffin, &c.; indigenous medicinal barks and preparations.
 Stillier & Co., Moreton Bay — Dugong oil.
 Yeo, C. H. F., Brisbane — Essences and perfumes.

Class 47.—Chemical Processes for Dyeing.
Botanic Gardens, Brisbane.—Dyeing materials

Class 48.—Leather and Skins.

Alderson & Sons, Brisbane.—Dugong leather.
Hutton, W., Maryborough.—Dugong leather.
Mortimer, W., Stanthorpe.—Kangaroo and wallaby skins

Queensland Government.—Marsupial rugs and mats; skins, tanned with hair on, leather.

Class 49.—Agricultural Implements and Processes used in the Cultivation of Fields and Forests.

Booth, J. S., Fortitude Valley.—Bone-draw Fitzgibbon, E. B.—Model rake, showing improved fastening that can be easily opened on horseback.
Macpherson, A., Brisbane.—Machine and appliances for dressing rice

Class 54.—Apparatus and Processes used in Spinning and Rope-making.

Forreth, A. & Co., Brisbane.—Rope.

Class 56.—Apparatus and Processes for Sewing and for Making-up Clothing.

Wilson, J., Rockhampton.—Sewing-machine no.

Class 60.—Carriages and Wheelwrights' Work.
Morris, G. B., Bowen.—Model wagon, made by exhibitor

Queensland Government.—Whitethapel cart, to show suitable Queensland woods

Class 61.—Harness and Saddlery.

Johnston, J., Ipswich.—Stockwhips.
McDonald, J., St. Helena.—Saddlery.
Vaughan, —, Rockhampton.—Stockwhips

Class 62.—Railway Apparatus.

Locomotive Department, Southern & Western Railway, Ipswich.—Double saloon bogie carriage.

Stanley, H. C., Public Works Department.—Views of recent railway construction in Queensland.

Class 65.—Navigation and Life-saving.

Norris, C. S., Townsville.—Models of centre-board skiff and yacht; boat.
Temple, D., Rockhampton.—Wave motor.

Class 67.—Cereals, Farinaceous Products, and Products derived from them.

Atherton, J., Rockhampton.—Arrowroot, tyapoca, Baker, T., Maryborough.—Arrowroot, white and purple; varieties from wheat, maize, arrowroot, butyrate, rice, and wheat.
Botanic Gardens, Brisbane.—Arrowroot, tyapoca, sugar cane, rice, oats, and collection of roots

Burnett, J., Brisbane.—Tyapoca.
Cassidy, W., Finsbury.—Arrowroot, purple.
Cribb, J. B., Gatton.—Ninety-day maize

Grimes, G. & S., Brisbane.—Arrowroot.
Horwitz & Co., Warwick.—White and yellow maize meal, yellow maize

Kates, F., Allora.—Wheaten flour; wheaten, maize, buckwheat, and rice meal.

Lahey & Sons, Finsbury.—Arrowroot trophy.

Macpherson, A., Brisbane.—Rice, unshelled; paddy and dressed rice, rice, brown millet

Madden, —, Townsville.—Maltese arrowroot.
McDonald, W., Oxley.—Maize.

O'Leary, A., Warwick.—Maize, ninety-day.

Oxenford, W. B., Coomera.—Rice grown on alluvial scrub land, without irrigation, average yield two tons per acre; improved, six seed.

Pettigrew, Hon. W., Brisbane.—Maize meal, ground rice.

Robson, R. F., Lawley.—Maize, ninety day.
Sachs, L., F. H. Finsbury.—Wheat and oats.

Strong, J., Rocky Waterholes.—Maize, yellow.
Wagner, Mrs., Brisbane.—Rice, paddy.

Wilson, J. T., Warwick.—Wheat, propagated from Tasmania wheat.

Class 68.—Bread and Pastry.

Clarke, D., Warwick.—Baking powder.
Sanderson, F., Brisbane.—Baking powder.

Wilson, F. W., & Co., Brisbane.
Yeo, C. H. F., Brisbane.—Baking powder.

Class 70.—Meat and Fish.

Beardmore, F. J. W., Cooktown.—Bêche de mer, preserved in spirits, bêche de mer, dried.

Hartley, W. J., & Co., Cooktown.—Bêche de mer.
Lake, Captain, Sydney.—Bêche de mer, preserved in spirits

Municipal Council, Bowen.—Bêche de mer, dried.

Skinner, B., Fortitude Valley.—Preserved turtle and mussels potted diagon.

Stanger, K. T., F. L. S.—Bêche de mer, in spirits.
Stiller & Co., Morison Bay.—Dugong bacon and lard

Class 71.—Vegetables and Fruit.

Baker, T., Maryborough.—Preserved potatoes.
Botanic Gardens.—Collection of fruits, banana, guava, sweet sop, Chinese table plum, &c.

Chubb, C. F., Ipswich.—Olives, bottled.
McDonald, J., St. Helena.—Olives, bottled.

Marwedel, E., Toowoomba.—Orange marmalade.

Skinner, B., Fortitude Valley.—Fruits preserved in syrup, jams, jellies, and marmalade.

Thozet, Mrs., Rockhampton.—Preserved fruits.

Class 72.—Condiments and Stimulants, Sugar and Confectionery.

Acheson & Allen, Rockhampton.—Chutney, jelly.

Amhurst, F. T., Mackay.—Sugar (1st, 2nd, 3rd), any process, open or vacuum pan, boiled, but not refined; golden syrup

Black, M. H., Mackay.—Sugar (1st, 2nd, 3rd), common process, open pan, boiled.

Boreham, J. H., Brisbane.—Chutney, chili.

Botanic Gardens, Brisbane.—Tea, coffee, spices, sugar

Carroll & Avery, Mackay.—Sugar (1st, 2nd, 3rd), common process, open pan, boiled.

Cannay & Morton, Laid Vale.—Sugar (1st), vacuum pan, boiled, unrefined.

Conley, B.—Sugar (2nd), open pan.

Couldery, W. H., Agoston Plantation.—Sugar (2nd), vacuum pan, unrefined.

Cowley, A. S., Herbert River.—Cayenne.

Cross & Co., Yungah Plantation.—Sugar (1st), vacuum pan, boiled, refined.

Devey and Gooding, Boomleigh.—Sugar (1st), open pan, boiled, unrefined.

Davidson, J. B., Mackay.—Sugar (1st, 2nd, 3rd), vacuum pan, boiled, unrefined.

Donaldson & Co., Mackay.—Sugar (1st, 2nd, 3rd), vacuum pan, boiled, unrefined.

Durval, L., Mackay.—Sugars (brewers') crystals, white vacuum pan, common process.

Gibson & Sons, Clarendale Plantation.—Sugar (1st), vacuum pan, boiled, unrefined.

Heaville & Co., Mackay.—Sugar (1st, 2nd, 3rd), common process, open pan, boiled.

Holland, Miskin & Co., Netrang Creek.—Sugar

Hyne, W., & Co., Rainton and Meadows lands.—Sugar (1st, 2nd, 3rd), common process, open pan, boiled.

Jack, D., & Sons, Mackay.—Sugar (1st, 2nd, 3rd), common process, open pan, boiled.

King, G. H. M., Mackay.—Sugar (1st, 2nd), common process, open pan, boiled.

Lloyd & Walker, Mackay.—Sugar (1st, 2nd, 3rd), common process, open pan, boiled.

Logan Sugar Co., Logan.—Sugar (1st and 2nd), open pan, boiled, unrefined.

McDonald, J., St. Helena.—Sugar (yellow counter) and molasses, open pan, unrefined, manufactured by person labour at the Penal Establishment.

McCreedy, H., Mackay.—Sugar (1st).
Muir, R., Bowen.—Two sorts sugar.
Pfeiffer, —, Junction.—Sugar (3rd), open pan, boiled, unrefined.

Palmer, H., Hinew Plantation.—Sugar (1st, 2nd, 3rd), vacuum pan, boiled, unrefined.

Queensland National Bank, Otmoot.—Sugar (1st), open pan, boiled, unrefined.

Raff, G. & Co., Mackay.—Sugar (1st, 2nd, 3rd), common process, open pan, boiled.

Sloane, W. & Co., Nelson and Tekowai Plantations, Mackay—Sugar (1sts, 2nds, 3rds), any process, open or vacuum pan, boiled, unchined.
 Spiller, J., Mackay—Sugar (1sts, 2nds, 3rds), vacuum pan, boiled, unchined.
 Staiger, K. T., F. L. S., Brisbane—Spice of a Queensland nutmeg tree.
 Vincent, J. E. M., & Co., Brisbane—Samples of sugar made by "Victor" horse-power mill.
 Watt, A., Beenleigh—Two mats sugar.
 Williams, A., Night Mile Plains—Ginger, cinnamon, coffee beans.
 Witty, W. K., Beenleigh—Sugar (2nds), open pan, boiled, unchined.

Class 73.—Fermented Drinks.

Childs, D. J., & Son, Brisbane—1877, red, dry, and full-bodied wines, 1877, red dry wines.
 Chubb, C. F., Ipswich—Spain, 1877.
 Couldery, W. H., Beenleigh—Rum, gin.
 Davidson, J. E., Mackay—Rum.
 Gerler, O. T., & Son, Brisbane—Light, sweet, and dry red wines.
 Hewitt & Co., Mackay—Rum.
 Kircher, J., Warwick—Red and white wines—Verdelho, Salvia, Hermitage, Maturo, &c.
 Lade, J. J., Brisbane—Wines—Hermitage and Isabella.
 Raff, G., Caboolture—Rum, 11 years old.
 Bomer, O., Warwick—Red and white wines—Tokay, Riesling, and black Spanish.
 Sloane, W. & Co., Mackay—Rum.
 Yearwood, R. B., Mackay—Rum.

Class 76.—Flowers and Ornamental Plants.

Bailey, F. M.—Illustrations of botany of Queensland
 Queensland Commission—Two macranthas, from the Leichhardt district.

Class 79.—Seeds and Saplings of Forest Trees.

Fitzallan, E., Bowen.—Rare indigenous seeds, of the colony; collection of oolids.
 Hartmann, C. H., Toowoomba—Box constructed of seeds and seed cones.
 Hill, W., Brisbane.—Cones of bunya-bunya nuts.
 Shann, W., Bowen.—Queensland grasses.
 Tulloch, W., Warwick—Lucerne seed.
 Turner, F., Brisbane.—Indigenous grass seeds.
 Way, E., Toowoomba.—Seeds of indigenous grasses.

Class 82.—Mining and Metallurgy.

Alger, J., Sydney—Peak Downs malachite.
 Bennett, Captain—Red oxide copper, copper regulus, chalcocypites, and copper ores, from Mount Perry.
 Beardmore, F. J. W., Cooktown.—Tin ores, from Granite Creek, Palmer River.
 Bowen Municipal Council—Block of coal, from the Duntroon seam, Bowen River.
 Christie, J. P., Peak Downs—Copper, precipitate of copper, native copper, sulphate of copper, &c.
 Clarke, D. S., Cairns—Tin ore, from the Palmer.
 Couldery, W. H., Gympie—Gold specimens.
 Critchley, R., Gympie—Antimony ore.
 Dawson, J. B., Boyne River—Auiferous tailings.
 Department of Mines—Ores of antimony, galena, rhombo, manganese, cinnabar, bismuth, &c.
 Doctor's Reef, Proprietors, Gympie—Mundie stone.
 Draper, Rev. W., South Brisbane—Two pebbles, Derbyshire.
 Eldred, Capt. W. H., Sydney.—Cinnabar, or sulphuret of quicksilver, in various forms of occurrence.
 Fischer, G., Breakfast Creek.—Fire-clay.
 Friend, H., jun., Gladstone—Tailings.
 Glamore North Gold Mining Co., Gympie.—Rich auiferous quartz.
 Gregory, A. O., C.M.G., Brisbane.—Specimens of coal, from various districts.
 Gympie Committee—Pyrites; rock ores, extracted by the diamond drill.
 Henry, E., Cloncurry—Collection of copper ore.
 Hodgkinson, W. O., Warden, George Town.—Geological collection, consisting of gold-bearing stone, mundie-stone, tailings, &c., from various claims on the Etheridge River.

Hays, W., Townsville—Copper ores, from Star River.
 Hill, W. R. O., Ravenswood—Galena and silver lead ore.
 Hunter, Capt. R. M., Rockhampton—Marbles.
 Jack, E. L., Townsville—Fossils.
 Maytown Residents.—Column, representing bulk of gold extracted from Palmer River goldfield.
 Miller, H. C., Etheridge—Granite and gold-bearing ores of copper, lead, iron, &c., from various reefs of Etheridge district; rich specimens of gold, argent, &c.
 McDonald, J., St. Helena—Tinware.
 Moffatt, D. & J., Brisbane—Waterstown coal.
 Morgan Bros., Charters Towers—Gold specimens.
 Mount Orange Copper Co., Mackay—Copper ore.
 Nicholls Leasehold, Proprietors, Gympie—Gold, in quartz.
 Palmer, E., Cloncurry River—Minerals.
 Peak Downs Copper Mining Co.—Refined and precipitate copper.
 Pearce & Co., Gu Gu—Silver ore.
 Pearin, J., Brisbane.—Rich gold specimens.
 Petrie, J., Brisbane—Hard and freestone, fire-clay, silica powder.
 Queensland Commission.—Column representing gold raised in colony from 1818 to 1879, amounting to 3,244,777 ozs.
 Trophy of Queensland tin and copper.
 Queensland Government—Gold, in various forms of occurrence, polished sections of gold and quartz, auiferous specimens, containing ore of iron, lead, &c., blocks of antimony, galena, cinnabar, and calcite.
 Granite, carboniferous sandstone, red oxide, and copper ore, native copper, malachite, black oxide, green carbonate of copper.
 Manganese ore, oxide of manganese, cobalt, and nickel ore, from New Caledonia, bismuth, zinc blende, lode tin, iron ore, from Queensland and other countries, antimony ore, from Victoria and other countries.
 Statuary marble and black Turkey stone; fossils, coral oxides, sulphides, carbonates, silicates, and chlorides of copper, and native metals.
 Collection of alabaster, marbles, rhinoceros, talena, lead, silver ore, chamois ore, lode tin, Koch's crystals, Turkey stones, China clay, and antimony, from various countries.
 Precious stones—opals, aqua-marina, amethysts, agates, jaspers, cornelian, onyx, sardonyx, &c., also a collection from various countries.
 Aboriginal stone axe (Dulling Downs).
 Queensland Department of Mines—Refined lead and antimony.
 Roberts, W. B., Piccadilly—Tailings.
 Rockhampton Committee—Marble, limestone, calcite, fire-stone, copper ore; marble, &c.
 Selheim, P. F., Maytown—Stream and lode tin; ores and rocks, gold in quartz, &c.
 Sheaffe, R. H., Cloncurry—Copper ores.
 Simpson, A., Chilton—Coal.
 Smellie & Co., R. E.—Moulding sand.
 Staiger, K. T., F. L. S.—Chromic colours, prepared from Ipswich ore by exhibition; a jet pin, made from Ipswich jet coal.
 Sutton, J. W., Brisbane—Queensland and foreign ores, including gold, silver, copper, tin, antimony.
 Trustees Queensland Museum—Gypsum, steatite, China clay, native snail and soda, plumbago, marbles, statuary marble.
 Precious stones—diamonds, agates, topaz, garnets, opals, guano, amethysts, serpentine, &c., &c.
 Native copper, non ore, tin, bismuth, malachite, copper ores, coal and gold, felspar, galena, antimony.
 Coal fossils, fossil wood and trees, palaeozoic fossils.
 Freshwater shells (extinct, and of the present day).
 Rock specimens.
 Aboriginal stone axes.
 Tyrell, J. de P., M.L.A., Stanthorpe.—Section showing the strata of alluvial tuffs at Stanthorpe, to scale; stick of smelted tin; stream lode tin ores; ingots of tin.
 Whitley, W., Maryborough.—Block of coal, from seam 4 feet thick, 115 feet from surface.
 Wills, K. H., Mackay.—Clay.

SOUTH AUSTRALIAN EXHIBITS.

Class 8.—Education of Children, Primary Instruction, Instruction of Adults.

Hartley, J. A.—Kindergarten work, specimens of needlework, ground-plan of Hindmarsh school

Class 9.—Printing, Books.

Chamber of Manufacturers, Adelaide.—Papers read before the Chamber

Commissioners for South Australia, The.

—Various publications

Schomburgk, E.—Report and catalogue of plants in the Botanic Gardens

Twoopeny, R. E. N., Mackay.—Sketch of South Australia

Class 10.—Stationery, Bookbinding, Painting and Drawing Materials.

Braddock & Sons, Brighton.—Printing inks

Cargoe, G. H., Adelaide.—Chronograph copying apparatus

Commissioners for South Australia, The.

—Bookbinding

Spiller, E., Adelaide.—Printing, bookbinding

Williams, J., Adelaide.—A count-book, embroidery, lithograph, &c.

Class 11.—General Application of the Arts of Drawing and Modelling.

Commissioners for South Australia, The.

—Wax models of fruits given in the colony

Roach, T. W., Adelaide.—Pendant, for enrichment; bracket, iron clock

Class 12.—Photographic Proofs and Apparatus

Commissioners for South Australia, The.

—Photographs of scenery, buildings, &c.

Dunn, J., & Co., Adelaide.—Photographs of Dunn's steam-mills

Hambridge, Miss H., Kensington.—Coloured photographs

Niesche, C. F., Adelaide.—Dramatic photographs

Sweet, S. W., Adelaide.—Landscape photographic views

Wright, A. E., Adelaide.—Photograph of the Bank of South Australia

Class 13.—Musical Instruments.

Robertson, J. N., Overland Corner.—Three colonial music violins

Class 16.—Maps, and Geographical and Cosmographical Apparatus.

Commissioners for South Australia, The.

—Statistical plans and diagrams, register, and sketch

Goyder, G. W., Adelaide.—Maps and plans

Kelly, R. S., Adelaide.—Diagram, showing the rate of interest corresponding to the selling price of 4 per cent. 100 pounds

Smith, C. W., Adelaide.—Position plan of Adelaide, 50 feet to 1 inch

Class 17.—Cheap and Fancy Furniture.

Brice, R., Adelaide.—Inlaid octagon tea-table.

Buttery Brothers, Adelaide.—Inlaid cabinet

Francis, W. S., Girrald.—Ornamental inlaid chest, composed of about 100 species of trees.

Fraser, H., Adelaide.—Inlaid mantelpieces

Gay, P., Adelaide.—Inlaid table, chest of drawers, wardrobe

Glasford, Miss A. C., Semaphore.—Fancy frames, bookcases, &c.

Graham, F. W., Adelaide.—Inlaid tables

Herring, E. N., Adelaide.—Mantelpiece of Italian marble

Landsberg, Mrs., Kapunda.—Wool-work picture

Pratt, W. A., N. Adelaide.—New cooking apparatus, "Little Wanda" stove, cooking-stove, grillstone's torch

Watson, G. G., Adelaide.—Table, inlaid (stone).

West-Making, W. A. E., Adelaide.—Coal-scuttle and scoop combined.

Class 20.—Pottery.

South Australian Brick Co., Brighton.—Fire-bricks, plain and fancy white, pie-sail and sloped brick

Class 21.—Carpets, Tapestry, and other Stuffs for Furniture

Commissioners for South Australia, The.—Hearths, and mats, made of skins of colonial animals

Neelson, J. P., Adelaide.—Curled horse hair.

Class 23.—Cutlery.

M'Lean Brothers, Riggs & Co., Adelaide.—Knives, &c., of South Australian manufacture

Class 24.—Goldsmiths' and Silversmiths' Work.

Steiner, H., Adelaide.—Ornamental ware, in sterling silver

Class 26.—Clocks and Watches.

Perryman, Mrs. E. M., Adelaide.—Marine clock, striking ship's bells.

Class 27.—Apparatus and Processes for Heating and Lighting.

Brown, O., U.E., Adelaide.—Model of patent ventilator and chimney-top, for preventing down draught, and creating up and current of air.

Chambers, A. O., Adelaide.—Two "Perfect Cure" washing-machines

Fischer, A., Adelaide.—"Star" washing-machine

Genner, F., Adelaide.—Hutton's washing-machines

Gray, W. F., Adelaide.—Model of ventilator used in the public schools

Simpson, A., & Son, Adelaide.—Bedsteads, patent covers, portable heater, wire stairer

West-Eskine, W. A. E., M.P., Adelaide.—Patent ventilator and room-cooler

Class 28.—Perfumery

Burford, W. H., & Sons, Adelaide.—Toilet soaps, silver-smiths and emery soaps

Class 29.—Leather-work, Fancy Articles, and Basket-work

Bennet, R. H., Morgan.—Lain eggs, carved and painted

Commissioners for South Australia, The.—Basket-work, consisting of chairs, music cabinet, and fruit-stands

Cox, Miss E., Hampton.—Inlaid work on velvet

Orabb, Miss E. A., North Adelaide.—Poultice painting—front of pole in seven

Pineash, Miss M. E., North Adelaide.—Flower painting on white velvet table-drap

Malpas, W. H., Adelaide.—Furniture

Nelson, Mrs. & Miss, Port Adelaide.—Ornaments worked in silk

Thurmer, O. E., Adelaide.—Basketware

Timney, Miss M. A., Adelaide.—Colonial seaweed, in basket-work frames

Wadham, W., Adelaide.—Shell-work basket

Class 31.—Thread and Fabrics of Flax, Hemp, &c.

Chamber of Manufacturers, Adelaide.—Flax, and linen made therefrom, cotton.

Class 34.—Silk and Silk Fabrics.

Chamber of Manufacturers, Adelaide.—Reeled and raw silk, and cocoons

Thorpe, E., Geelong.—Silk, twisted

Wurra, E., Adelaide.—Reeled and raw silk, and cocoons

Class 33.—Clothing for both Sexes.

Willis, G. R., & Co., Adelaide.—Boots and shoes

Class 39.—Jewellery and Precious Stones.

Honour, Rev. A. H., Woodside.—White spinelle (crystallised ruby)

Steiner, H., Adelaide.—Jewellery.

Class 40.—Portable Weapons, and Hunting and Shooting Equipments.

South Australian Institute, The, Adelaide — Native weapons and implements.

Class 41.—Travelling Apparatus.

Polhill, B., Adelaide — Portmanteaus, &c.

Class 43.—Products of the Cultivation of Forests and of the Trades appertaining thereto.

Brown, J. E., Adelaide — South Australian timber

Cornish, J., & Co. Gorge — Ground gumms bark, umbers powder, and bundle of stick bark

Davenport, S. Beaumont — Myall and sandalwood

Hardy, Arthur, M. P., Mount Lofty — Cork from Quercus suber, grown at Mount Lofty

Peacock, W., & Sons, Adelaide — Chopped bark, tannin and lime ground

Pfaffm & Co., Blumberg — Black wattle bark, ground for tanning purposes

Schomburgk, E., Adelaide — South Australian timber, comprising specimens of forest trees

Wilke, H., & Co., Port Adelaide — Ground wattle bark, wattle guni, Yacca guni.

Class 44.—Products of Hunting, Shooting, Fishing, and Spontaneous Products.

Bean Bros., Adelaide — Stuffed birds.

Bright, C. E., M. P., Gawler — Alligator's egg and shells, fossils.

South Australian Institute, The, Adelaide — Collection of birds and native animals, stuffed.

Class 45.—Agricultural Products, not used for Food.

Anderson & Co., Adelaide — Olive oil.

Angas, J. H., Collingrove — Lincoln lambskin, dressed; samples of wool

Barnard, G. L., Walkerville — Olive oil.

Chiles, S., Unley — Olive oil.

Davenport, S., Beaumont — Olive oils.

Goyder, G. jun., Adelaide — Almond, coiza, linseed, and sunflower oils.

Hardy, T., Banksdale — Almond oil, olive oil.

Holtze, M., Palmerston — Oils, ground-nut seed and plant; Upland cotton, Ramie fibre and tobacco

Howell, J., Adelaide — Olive oil.

Murray, J., Mount Crawford — Wool.

Nitschke, W., Hackney — Eucalyptus oil, oil of Melaleuca uncinata, and fuel oil.

Rogers, A. H., Ashburton — Beeswax

Sanders, J., & Co., Mount Crawford — Wool.

Todd, C., M. G. — Wool grown off station sheep at telegraph station in centre of Australia.

Class 46.—Chemical and Pharmaceutical Products.

Bickford, A. M., & Son, Adelaide — Soda-water, lemonade, ginger ale, sarsaparilla, &c.

Burford, W. H., & Sons, Adelaide — Yellow soap.

Conkaur, A., Adelaide — "Time" metal polish

Conigrove, B. H. & N., Macclesfield — Aerated waters, assorted.

Evans, W., Adelaide — Boot varnish.

Hall, G., & Sons, Norwood — Soda, seltzer, tonic, lemonade, sarsaparilla, &c.

Malpas, W. H., Adelaide — Patent anti-rust compound.

Tidmarsh, J., Adelaide — Stearic, stearic candles, soap

Toochi, A., Yorketown — Salt — unrefined, fine, butcher's, table, and lump.

Class 48.—Leather and Skins

Commissioners for South Australia, The. — Hides and skins of indigenous animals.

Green, J. J., Adelaide — Leather — harness, sole, kids, calfskins, walkies, basins, boot uppers

Class 49.—Agricultural Implements and Processes used in the Cultivation of Fields and Forests.

Commissioners for South Australia, The. — Bone-dust and guano.

Dobbie, A. & J., Adelaide — Broadest seed-sower

Martin, J., & Co., Gawler — Damp weather reaping-machine, with patent beatings and axes; ordinary reaping machine, shaft cutters, &c.

Mellor Bros., Adelaide — Double plough, with patent wheels and axes; pony reaping-machine.

Ramsay, J. G., & Co., Mount Barker — Reaping machines.

Class 50.—Apparatus and Processes used in Agricultural Works, and in Works for the Preparation of Food.

Adams, E. J., Adelaide — Box and oval churn, oval miniature cask and vat

Gerner, F. K., Adelaide — Cheese vats

Moody, T., Adelaide — Churn, emd milk.

Warren & Hogarth, Mount Crawford — Model of wool scourer

Williams & Dixon, Adelaide — Grape-mill.

Class 52.—Machines and Apparatus in general.

Bird, J., Adelaide — Brassfounders' ware.

Hooker, J., Adelaide — Boiler plates, iron castings.

Smith, C. A., Adelaide — Machinery work.

Class 54.—Apparatus and Processes used in Spinning and Rope-making.

Tamlin & Coombe, Adelaide — Manila and New Zealand hemp rope.

Class 60.—Carriages and Wheelwrights' Work.

Barlow, T., & Sons, Adelaide — Landau carriage

Cottrell, T. L., Adelaide — Excelsior jump-seat buggy, Farnham phaeton, spring park barouche.

Ray, W. H., Adelaide — Spider buggy.

Starnes, W., Kent Town — Spider buggy, with lock under.

Class 62.—Railway Apparatus.

Hossack, D., Adelaide — Model of Mansell's patent railway-carriage wheel

Class 64.—Apparatus and Processes of Civil Engineering, Public Works, and Architecture.

Allen, J., Willunga — Roofing slates.

Commissioners for South Australia, The. — Building-stone.

Cromer, J., Adelaide — Gypsum.

Erskine, W., Adelaide — Model of breakwater.

Frew, J., Mount Gambier — Freestone (white and grey), and red dolomite.

Gawler & Willaston Lime Co., Linn.

Prnest, T., Minto — Flagstones.

Toochi, A., Yorketown — Gypsum, plaster-of-Paris.

Turner, J., Mount Torrens — Limestone.

Vernon, C., Adelaide — Plaster-of-Paris.

Class 66.—Materials and Apparatus for Military Purposes.

Downes, Col. R. A. — Model of projectiles, cartridges, and Mowbray battery.

Class 67.—Cereals, Farinaceous Products, and Products derived from them.

Angas, J. H., Collingrove — Purple-straw, white Lammas and Tuscan wheat.

Brook, W., Woodchester — Purple-straw, white wheat.

Commissioners for South Australia, The. — Wheat; Cape Scotch, and English barley; Cape oats, rye, and field peas

Cowan, J., & Co., Adelaide — Flour.

Duffield, W., & Co., Gawler — Flour, roller-made and ordinary

Finck, C., Greenock — Flour.

Frame, J., Mount Barker — Oats.

Giles & Smith, Adelaide — Flour.

Harrison, W., & Co., Port Adelaide — Flour.

Holtze, M., Palmerston — Hill rice, ninety-day maize, Egyptian corn, millet, arrowroot

Knoese & Stoneman, Crystal Brook — Flour from purple-straw wheat.

Magarey & Co., Adelaide—Flour.
 Paterson, R., Smithfield.—Purple straw wheat.
 Perryman, J., Koolunga.—"Scotch Wonder" wheat
 Primrose, J., & Co., Adelaide—Malt.
 Thomas, W., & Co., Port Adelaide—Flour.
 Thyer, J., Soles—Gallaghy's purple—straw and
 Flanin's white Tuscan wheat.
 Venning, W. J., Crystal Brook—Old red straw,
 white Lammus, and pulpe-straw wheat.
 Webb, A. W., Lonsdale Valley.—Flour.

Class 68.—Bread and Pastry.

Commissioners for South Australia, The.
 —Biscuits (various kinds).

Class 70.—Meat and Fish

Bourbaud, E., North Adelaide—Preserved meats

Class 71.—Vegetables and Fruit.

Commissioners for South Australia, The—
 Field peas.

Ethell, J., Adelaide—Amseed grown wild on banks
 of River Torrens.
 Hackett, E. & W., Adelaide—Peas, beans, &c.
 Hardy, T., Bankside—Lemons and currants, dried
 figs, pines, squashes, apples, &c.; preserved olives
 Hay, Hon. A., Linden—Raisins from 1879 vintage
 Robson, T. B., Pynelham—Muscatel raisins, in
 layers; pudding raisins.
 Schomburgk, R., Adelaide.—Collection of fungi.

Class 72.—Condiments and Stimulants, Sugar and Confectionery.

Amberg, J. M., & Co., Kent Town.—Pickles.
 Blackford, A. M., & Sons, Adelaide—Cordials.
 Bourbaud, E., Adelaide—Jams.
 Burton & Co., Adelaide.—Vinegar.
 Bell, G., & Sons, Norwood.—Cordials.
 Hammer, J., Adelaide.—Mushroom ketchup, tomato
 sauce.
 Hardy, T., Bankside.—Vinegar, crude tartar, caudied
 pool.
 Holtze, M., Palmerston.—Sugar-cane.
 Irwin & Miller, Adelaide.—Confectionery.
 McEwin, G., & Sons, Glen Elgin.—Jams.
 Nitschke, W., Hackney.—Boonek-wamp and stornach
 billes, Kimmel.
 Seppelt, B., Seppeltsfield.—Cordials.
 Stark, C. A., Warburton—Tomato sauce
 Terry, W. D., Belair—Jams.
 Whitehead, J., Mount Gambier.—Tomato sauce.

Class 73.—Fermented Drinks.

Auld, W. P., Adelaide—Wines—Muscatel, ruby;
 Muscat, ruby cup, &c.
 Baker, R., Adelaide—Wines—Madenas, Shiraz,
 Morillon, liquor (Frontignan).
 Congrave, B. N. & H., Marsdenfield—Ales.
 Crompton, J., Stonyfell—Wines—Beclat, Tokay
 Davenport, S., Beaumont—Wines—Shiraz, Oen-
 ache, Acrolal.
 Elder Sir T., Birksgate.—Wines—Birksgate Hermit-
 age, Madela (Sercial), Port.
 Faulding, F. H., & Co., Adelaide.—Sparkling
 wines.
 Gilbert, J., Pewsey Vale.—Wines—Riesling,
 Carinat, Frontignan.
 Gilliard, J., Norwood—Wines—Malaco, Shiraz,
 Constantin, Madela, Sherry.
 Goodier, W., & Co., Glenville—Ales, porter.
 Hardy, T., Bankside—Wines—Riesling, Claret No.
 1, Sauvignon Blanc, Highcraze red, Shiraz,
 Muscat, Donzelino.
 Hay, Hon. A., M.L.C., Linden—Wines—Tokay,
 Linden red.
 Holbrook, J. D., Underdale.—Wines—Madenas,
 Shiraz, sherry, old light, port, red wine, old red.
 Jacob, W., Norwood—Wines—Yardello, Carbi-
 net, Shiraz, Frontignan.
 Kaines, J. H., Adelaide—Wines—Tokay, Verdello,
 Shiraz.
 Knapman, W., Port Adelaide.—Porter, bottled.
 Laura Brewery Co., Laura.—Bottled ale.
 Lunde, H., Adelaide.—Spirits of wine.
 Nitschke, —, Hackney—Old Tom gin, spirits of
 wine, brandy, rum, rum punch.

Penfold & Co., Magill.—Wines—Pedro Ximenes,
 Malaco, Gienache, red Madela, Frontignan, Ver-
 dello, Hamillage, Constantia, Muscadine, Tokay.
 Salter, W., & Sons, Angaston—Wines—Sweet
 wine, No. 1 and 2; sherry, port, Shiraz, No. 1
 and 2, sweet red, Constantia.

 Limoux, A and B; Sherry, A and B, Frontignan,
 A and B; port, A and B; spirits of wine, brandy,
 whisky, ginger, and cherry brandy.
 Smith & Sons, Yalamilla.—Wines—Ruschilte,
 Claret, sweet Frontignan, sherry, Constantia, Ver-
 dello, Muscatel, port, and still Champagne.
 S. A. United Vineyards Association, Ade-
 laide—Wines—Muscat, Pedro Ximenes, Hock, Cha-
 bouet, Burgundy, claret, Madela, Tannin, Con-
 stantia, sherry, Muscatel, port.
 White, B., Fullarton.—Wines—Doradilla, Pedro
 Ximenes, Palo Muo Blanco; Shiraz, A and B;
 Burgundy, port, Pomado, &c.
 Wigg, R. H., & Sons, Adelaide—Wines—Hock,
 Doradilla, Verdello, Sauterne, Burgundy, claret,
 Shiraz, Muscat, sherry, port, old Constantia,
 Malaco, Tokay, Frontignan, &c.
 Wood, A., Yankilla.—Wines—Verdello, Seyras

Class 78.—Fruit and Fruit Trees.

Commissioners for South Australia, The—
 —Seasonable fruits, renewed once a fortnight
 Hackett, E. & W., Adelaide—Seeds of fruits,
 vegetables, &c.

Class 81.—Apparatus and Processes of the Art of Mining and Metallurgy.

Clark, F., & Sons, Adelaide.—Samples of tools and
 tubes for Artisan-well boring.
 Martin, J., & Co., Gawler.—Watson and May's
 patent ore separator (model).
 Sanders, J., Burna Burna—Jigging machine and
 ore separator (model).

Class 82.—Mining and Metallurgy.

Angus, J. H., Collingrove.—Soils from Collingrove,
 Hill River, and Mt. Remarkable districts.
 Atkinson, T., Willunga.—Soils from Willunga.
 Ayres, T. M., Gambier—Sulphurates, silicates,
 fossils and lava, from south-east district of colony.
 Brook, W., Woodhouse.—Muri.
 Cobbledick, P. B., York's Puntland.—Soils from
 the Hundreds of Maitland and Kalkereon.
 Cobbledick, J., Summerton.—Soils from Mt. Lefty
 Ranges.
 Commissioners for South Australia, The.
 —Collection of mineral and mineral oils.
 Crabbe, H. S., Adelaide.—Malachite, from Burna
 Burna Mine.
 Dobbie, A. & J., Adelaide.—Electro nickel, and
 silver plating.
 Edwards, J., Jamestown.—Soils, from Jamestown
 district.
 English & Australian Copper Co., Port Ade-
 laide.—Smelted copper, in ingots, tiles, bars, &c.;
 copper ores.
 Glen, G., Mayura.—Soils, from Riv. oil Bay district;
 limestone limestones.
 Harvey, W. L., Salisbury.—Soils, from Para Hills
 and Flinders.
 Howell, G., Adelaide.—Mosscham, found in
 Northern Territory; pipe and snail testator made
 therefrom.
 Jensen, O., Pino Creek.—Auriferous quartz spec-
 imens from exhibitor's claim.
 Klein, E., Friedrichsvalde.—Giltstones.
 Price, B. W., Northern Territory.—Auriferous
 quartz specimens from Pine Creek and the Howley
 Ranges, J., Gawler.—Soils, from Dunes and Gawler
 districts.
 Scott, J., Beautiful Valley.—Soils, from Beautiful
 Valley district.
 Way, T. B., Adelaide.—Noble opal, found in South
 Australia.
 Wallaroo Smelting Works, Proprietors of,
 Wallaroo.—Specimens, illustrating copper smelt-
 ing at the Wallaroo smelting works.

Class 46.—Chemical and Pharmaceutical Products.

Murray, W., Glenorchy.—Candles and soap
Fragrill, J., Hobart.—Tallow candles, white and coloured.

Royal Society of Tasmania, Hobart.—Oil, distilled in 1896 from blue gum leaves (*Eucalyptus globulus*).

Simpson, H., Hobart.—Soap and candles.

Class 48.—Leather and Skins.

Brown, W., Longford.—Leather and skins.

Button, W. B., Leven.—Dressed kangaroo skins, side of kypine leather.

Newton & Son, Cheshy.—Kangaroo, wallaby, deer, and black, grey, and rook opossum skins.

Class 49.—Agricultural Implements and Processes used in the Cultivation of Fields and Forests.

Crawford, H., Evandale.—Sets of sowing harrows, heavy, medium, and light.

Roberts, H., Long Bay.—Fish mangle.

Class 52.—Machines and Apparatus in general

Thomas, D., Perth.—Horse shoeing and sheep marking instrument, and garden clipper.

Class 67.—Cereals, Farinaceous Products, and Products derived from them.

Abbott, W. H., Launceston.—Malt.

Alwright, T., New Norfolk.—Hops of 1890.

Bowman, F. J., Chesham.—Grass seeds.

Collins, D., Evandale.—English barley, peas.

Cox, J., Chesham.—Tartarian oats.

Dalgely, Moore & Co., Launceston.—Wheat (four descriptions), Cape barley, oats.

Degraves, O. & J., Hobart.—Hops of 1890.

Dossetor, W. J., Hobart.—Wheat and flour, two descriptions.

Downie & Son, New Norfolk.—Hops of 1890.

Edginton, T., Launceston.—Early Angus, fox-shed, and white Tasmanian oats; peas, golden and grey tares.

Fletcher, M., Lark.—Wheat, grass seeds (Italian and English).

French, J., Glenorchy.—English rye-grass.

Gibson, W. G., Hobart.—Wheat and flour.

Hall, J., Deloraine.—Wheat (two descriptions).

Hingston, H. J., Glenorchy.—Wheat, grass seeds.

Hingston, W. J., Butleigh.—Wheat and peas.

Horne, R., Exton.—Oats, sparrow-bill.

Jeffery, R., New Norfolk.—Hops of 1890.

MacKenzie, A., Valley Road.—Wheat, Blacmer.

McKinnon, J., Innesess.—Wheat, Blacmer.

Monds, T., Carnock.—Oatmeal, flour, split peas.

Moore, J. A., New Norfolk.—Hops of 1890.

Nicholson, H., New Norfolk.—Hops of 1890.

Nicholson, R., New Norfolk.—Hops of 1890.

Pitt, T. & C., Hartree Ground.—Wheat, Armstrong's prolific; Chevalier barley.

Read, R. C., Redlands.—Hops of 1890.

Read, F. H., Evandale.—Wheat, peas, oats.

Richmond, D., Launceston.—Oats, oatmeal, penit barley, split peas, grass.

Sharland, W. G., New Norfolk.—Hops of 1890.

Shoobridge Bros., Valley Road.—Hops of 1890.

Smith, J. L., Cambock.—Oats.

Walden, J., Launceston.—Horns-beans, peas.

Wilmore, J., Longford.—Chevalier barley, grass seed, oats, and Blacmer wheat.

Class 69.—Fatty Substances used as Food. Milk and Eggs.

Dawson, W. C., Launceston.—Cheese.

Lade, W., St. Mary's.—Cheese.

Stewart, R., Innesess.—Cheese.

Woodberry, J., Exton.—Cheese.

Class 70.—Meat and Fish.

Joyce, J., Launceston.—Hams and bacon; two pigs cured whole.

Class 71.—Vegetables and Fruit.

Boyes, J., Circular Head.—Potatoes.

Horne, R., Exton.—Potatoes.

Commissioners for Tasmania.—Wax models of apples and pears.

Class 72.—Condiments and Stimulants, Sugar and Confectionery.

Bonnilly, Miss, Dunhuill.—Assorted jellies.

Haywood, C. D., Hobart.—Essents and confectionery.

Hickman, R., Providence Valley.—Jams, jellies.

Stewart, Mrs., Launceston.—Preserved currants.

Class 73.—Fermented Drinks.

Abbott, W. H., Pamp's Brewery, Launceston.—Ale and beer, in bulk.

Appleyard, Dr., Longford.—Gooseberry wine.

Brewer, A., Bond.—Mead.

Crowther, Dr. E. L., Hobart.—Acid syrups.

Degraves, C. & J., Hobart.—Ale, in bulk.

Dilger, C., Swansea.—Grape wine (one year old).

Glenwright & Boag, Launceston.—Ale, bottled.

Horne, R., Exton.—Gooseberry wine of 1890.

Kelly & Gordon, Hobart.—Aerated waters, cordials, and fabric vinegar.

Mitchell, J. C., Hobart.—Bottled ale.

Noake, Mrs., Longford.—Bottled ale.

Seabrook, G. S., Hobart.—Cider.

Stewart, D., Launceston.—Grape wine.

Weaver & Co., Hobart.—Aerated waters, cordials.

Class 82.—Mining and Metallurgy.

Bishton, W., Torquay.—Freestone.

Butler, F., Hobart.—Freestone, from Brighton.

Butler, R. W., Hobart.—Freestone, from Taylor's Bay.

Cocote, A., M.H.A., Hobart.—Coal, from Mount Nicholas and Pargal.

Commissioners for Tasmania, Hobart.—Stone trophy of building-stones; granite, marbles, freestone, and bluestone.

Commissioners for Tasmania, Launceston.—Minerals; tin, from Mount Bluff.

Crawford, H., Evandale.—Horse shoes.

Dooley, J. M., Lathrobe.—Minerals.

Edgell, H., Launceston.—Slate.

Gillon, J., & Sons, Hobart.—Freestone, from Kangaroo Point; gneiss, limestone, from Bridge.

Glover, C. A., Huon.—Granite.

Gregory, J., Hobart.—Freestone, from Hestercombe.

Gould, R., Longford.—Granite and freestone, granitoid, pudding, sharpening-stones.

Hansworth & Shire, Lathrobe.—Fossils.

Hayat & Son, Hobart.—Brass knobs.

Kernode, W. A., Moun Vale.—Freestone.

Lavers, Rev. J., Lenah.—Fossils.

Lawson, G., Longford.—Petrified woods.

Lyle & Gowan, Lathrobe.—Tasmanian slate, black marble, sweeten tin ore, tin, from the Don.

Moir, J. G., Queenborough.—Chilled and patent shot.

Noian, J., Lathrobe.—Dyewoods.

Pearson & Downie.—Freestone, from Spring Bay.

Rayner, E., Bridgewater.—Limestone and fossils, from Bridgewater.

Reilly, J., Lathrobe.—Coal, from Tadelton quarry.

Reynolds, E., Hobart.—Freestone, from Providence Valley.

Richards, T. M., Ross.—Freestone, from Ross; granitoid.

Robinson, R., Oklahton.—Devonian marble, from Maria Island; freestone, granitoid.

Scott, D. F., Pennan River.—Gold.

Scott, J., M.H.A.—Flint weapons of aborigines.

Shaw, B., Launceston.—Fossils.

Shield, R., Hobart.—Freestone, from Tadelton.

Simson, A., Launceston.—Alluvial gold.

Smith, J., Westwood.—Minerals.

Steghitz, F., Launceston.—Coal.

Town Surveyor, Launceston.—Road metal.

Wiggins, E. B., Hobart.—Stone, from String-lark quarry.

VICTORIAN EXHIBITS.

Class 6—Education of Children, &c.

- Axford, E. L., Tebucc—Specimens of Pitman's phonography.
 Axford, E. F., Tebucc—Specimens of Pitman's phonography, and 100 other systems.
 Bartlett, S., Richmond—Specimens of penmanship. The text an account of the early history of Victoria.
 Blundell, J. J., Brighton—Statistical chart of the Great Exhibition, 1851 (iron).

 Troedel, C., & Co., Melbourne.—Litho printing.
 Walsh, G., Melbourne.—Illustrated books. "Victoria in 1880."
 Ware, W., Fitzroy.—Bottle labels.
 Weigel, Madame, Melbourne.—Weigel's Journal and Catalogue of Fashion.

Class 10.—Stationery, Bookbinding, Printing and Drawing Materials

- Arnall & Jackson, Melbourne.—Lithograms.
 Buxton, J., Melbourne.—Artist materials—encls crayons, drawing-boards, models, &c.
 Clark, W. T., Melbourne.—Rubber stamps.
 Colman, E., Melbourne.—Patent dating stamps.
 Cooke, S., & Co., Melbourne.—Printing inks.
 Cowan & Co., Melbourne.—Account-books. Blank books, &c.
 Detmold, W., Melbourne.—Bookbinding. Account books. Machines along. Pocket-books, &c.
 Empress Chemical Works, Melbourne.—Writing inks.
 Hwing, T. A., Melbourne.—Marking ink.
 Fox, C. J., Melbourne.—Cardboard mount.
 Frame & Co., Melbourne.—Plain and fancy boxes for drawers, batons, stationers, chemists, &c. Manufactory—Corner of Flinders and Russell streets, Melbourne.
 In their report on this exhibit, Jury Section IV stated that—"Frame and Co., Melbourne, produced excellent articles, the ornamentation being by choice specimens of chromo-lithography, plain and embossed, and displayed great taste in the arrangement; the finish of the goods was first-class, and the list fitted perfectly. Awarded First Order of Merit (Bronze Medal)."

- Graham, G. L., Melbourne.—Writing inks.
 Harratt, H., Melbourne.—Copying-presses.
 Malett, J., Windsor.—Ink.
 Penal Establishment, Coburg.—Bookbinding.
 Ramsden, George, Melbourne, Paper Mills:—
 Printer's-bldgs.—Printing papers, white and coloured, napping papers.
 In their report on this exhibit, Jury Section IV, stated—"George Ramsden, of Melbourne also had well-made PAPERS for News and Bookwork; also coloured printings, which were pure in colour and free from clay. Awarded First Order of Merit for Printing Papers (Silver Medal). He likewise exhibited fine quality WRAPPING PAPERS, which were exceptionally free from clay. They were made from good stock, and were of very fine colour. Awarded First Order of Merit for Wrapping Papers (Bronze Medal)."

- Mr. George Ramsden has also received the following awards for Paper—London International Exhibition, Melbourne, 1873-4 (Silver Medal); Melbourne International Exhibition, Sydney, 1875 (Bronze Medal); Intercolonial Exhibition, Melbourne, 1875 (Silver Medal); and at the International Exhibition, Philadelphia, 1876, Certificate of Award.
 Roeszler, C. G., Melbourne.—Patent self-inking endorsing-stamp. Rubber stamp.
 Sands & McDougall, Melbourne.—Vellum-bound account-books. Envelopes. Pocket-books.
 In their report the Jury (Section IV) stated that "the largest exhibit of this class in the Exhibition was that of Sands and McDougall, Melbourne. It

occupied some large show-rooms and several smaller ones, and consisted of account books, publications, electrotypes and stereotypes, chromo and general lithography, engravings, etching, and a fine assortment of fancy reprints, clean-lined, blue-lined, and other envelopes. The ACCOUNT BOOKS of this firm were of an especially excellent character; they were well sewn, opened flat, and the paging was unexceptionally good. In publications they exhibited particularly their Australian diaries, which compare favourably with those of well-known English publishers; and their SUMMERS DIARIES are not excelled anywhere. The exhibitors of electrotypes and stereotypes were very good. The etching, engraving, and chromo and general lithography, consisting of seals, engravings, chrome for form, script, acceptance and other forms, the Australian copy-books, as well as the annual presentation chromos of the Art-Union of Victoria, are all excellent. The Jury have recommended Messrs Sands and M'Dougall for the Laurence of Germany's Prize, as the most meritorious colonial exhibitor coming under their examination.

Messrs. Sands and M'Dougall received FOUR First Awards for this exhibit, viz.—For Account Books (Silver Medal); for Electrotypes and Stereotypes (Silver Medal); for Chromos and General Lithography, Engraving and Engraving (Silver Medal); and for Publications (Bronze Medal).

Whitehead, E. & Co., Melbourne.—Embossing, engraving, &c.

Wimble, F. T. & Co., Melbourne.—Lithography and printing. Various Combined chases, Linchpin, and a ticket, as used in the Stamp Printing Branch of the Melbourne General Post Office, for economizing time and labour in changing the various denominations of stamps on the press. It was designed by J. P. Adkinson, Esq., Controller of Stamps and Printer in the Post Office and Telegraph Department, and manufactured for the Department by the Exhibitors.

Messrs F. T. Wimble and Co. obtained a First Order of Merit (Silver Medal) for their Vernishes, and awards for Printing Ink.

Class 11.—General Application of the Arts of Drawing and Modelling.

Alexander, A., Melbourne.—Longitudinal section of jawwork.

Anderson, J., Melbourne.—Heraldic and general engraving, on ivory and soft steel. Carved metal monograms. Heraldic paintings.

Brabson, W., Melbourne.—Models of figures.

Byrne, J. E., Collingwood.—Box of geometrical drawing models.

Murphy, E. F., Jun.—Plaster model of a fountain.

Penal Establishment, Colong.—Bone carving.

Rigby, B. J., Melbourne.—Longitudinal elevation of passenger steamer. Drawing of sugar-refining machinery.

Robertson, A., Emerald Hill.—Longitudinal section and elevation of brewery.

Roeszler, C. G., Melbourne.—Engraving in relief.

Rowlands, Melbourne.—Engraving and enamelling on metals.

Sands & M'Dougall, Melbourne.—Impressions from steel dies.

Stevenson, T., Melbourne.—Heraldic painting.

Trembling, G., Geelong.—Plans and designs for greenhouses.

Twentyman, A. C., Richmond.—Heraldic painting.

Twentyman, G. O., & Son, Richmond.—Heraldic engraving on stone, and heraldic die sinking.

Waters, S. T., Yarraville.—Cove of water wheel.

Whitehead, E.—Die-sinking, and embossing.

Class 13.—Musical Instruments.

Beal, R. L., West Melbourne.—Raupe.

Brown, J., Carlton.—Violas and bows.

Brown, W. J., Melbourne.—Violas by ancient makers.

Cloose, J. S.— Cottage pianoforte, trichord check-action, seven octaves, in walnut-wood case, and electrified sources, fittings, &c.

Dow, W. H., Emerald Hill.—Viola.

Fuller, A. Ken.—Organ.

Gilmoro, K., Carlton.—Bagpipes. Viola.

Haughton, O., Carlton.—Banjo, mounted in electroplate.

Haughton, J. T., Carlton.—Banjo.

James, S. W., Richmond.—Viola.

Marriott, J. W., Melbourne.—Banjo.

Peacock, T., Carlton.—Viola.

Perry, J., Melbourne.—Diamonops.

Weatherill, T., Richmond.—Pianofortes.

Whitehead, J., Emerald Hill.—Banjo.

Class 14.—Medicine, Hygiene, and Public Relief.

Altchison, E., Carlton.—Ladies' surgical appliances.

Armstrong & Gallagher, Melbourne.—Artificial limbs. Orisopelle instruments. Trusses. Bells.

Atkinson, E. K., Melbourne.—Surgical appliances for ladies. Bells. Corsets.

Bennet, F., Melbourne.—Parlor gymnasium, for the practice of muscular exercises.

Burkmyre, W., Melbourne.—Purified Yau Yau water.

Brown, D., Carlton.—Drawing, and key, of the anatomy of a horse.

Burston, L., Melbourne.—Surgical boots.

Celha, J., Carlton.—Ladies' surgical appliances.

Chambers & Clutton, Melbourne.—Drystone filters, &c.

Chatfield, A. W., Fitzroy.—Specimens dentistry.

Crisp, H., Ballarat East.—Medical oils.

Dahlke's Filter Co., Melbourne.—Dahlke's filters. Wine coolers. Ice chest.

Danks, J., Melbourne.—Baths. Corsets. Urinals.

Draper & Sons, Melbourne.—Ebon-pine patent on the closet commode, with pull action, ditto in deal, self-acting.

Duncan, G. & Co., Melbourne.—Water purifier.

Fournier, T. & Son, Fitzroy.—Dismantling eath-closet, self-acting.

Gilbrook Pottery, Dunawick.—Filters.

Gunn, Mrs. Ballarat.—Ladies' surgical appliances.

Gunn, W. R., Ballarat.—Surgical instruments. Trusses. Artificial limbs. Appliances for treatment of deafness.

Heath & Kernot, Melbourne.—Mechanical dentistry, apparatus used in construction of artificial teeth.

Higgins, J. F., Melbourne.—Patent distilling commodes and closets.

Holt, J. G., Carlton.—Stone-water filters.

Jean, S. R., St. Kilda.—Ocular phage-bath.

Jones & Co., Melbourne.—Surgical instruments and appliances.

Knight, G., Melbourne.—Galanio medical appliances. Long-staying apparatus.

M'Lean Bros & Rigg, Melbourne.—Portable Turkish bath.

Middleton, A. G., Melbourne.—Filters. Dental. John's. Juggles fountain.

Mitchell, G. F. & Co. V.S., Melbourne.—Vet. urinary supplements. Inoculating lymph. Still's. Veterinary plates.

Romanis & Cooper, Melbourne.—Artificial teeth.

Simmons & Dwyer, Melbourne.—Artificial teeth, plates, nostrils, and noses.

Stevens, H., Melbourne.—Artificial teeth and mechanical dentistry.
 Timperley Bros., Richmond.—Improved filters.
 Wilson, Corben & Co., Melbourne.—Enamelled baths, lavatories, &c.

Class 15.—Mathematical and Philosophical Instruments.

Barton, R., Royal Arms.—Dividing machine, divided glass tubes, &c.
 Crisp, H., Ballarat East.—Microphones.
 Gaunt, T., Melbourne.—Surveying, meteorological, and scientific instruments. Microscopes, telescopes.
 Jennings, J., Melbourne.—Spectacles. Eye-glasses.
 Joseph Bros., Melbourne.—Microscopes. Equatorial telescopes. Astronomical chronograph, &c.
 Kipatrick & Co., Melbourne.—Optical instruments. Theodolites. Levels. Compasses.
 Myers, W., Melbourne.—Goniometer, &c.
 Rasche, W., C.F. Melbourne.—Planimeter.
 Trowbridge, J. F. & G. F., Richmond.—Microscopic objects and specimens.
 Wood & Co., Melbourne.—Triple and prismatic dissolving view apparatus. Improved anemoids.

Class 16.—Maps, and Geographical and Cosmographical Apparatus

Bland, R. H., Clunes.—Plans and views of the Port Phillip and Colonial G.M. Co.
 Davidson, R., Ballarat.—Map of Ballarat, showing "deep leads."
 McCall, H., M.L.A., Melbourne.—Map of Victoria, showing its constitution.
 Mines Department of Melbourne.—Geological maps, as per departmental catalogue.
 Parker, W., Waihalia.—Plan of chamber and machinery of the Long Tunnel Extended G.M. Co., Waihalia.
 Queen G.M. Co., Black-hill Flat, Ballarat.—Section plan of underground workings.

Whitehead, I., Melbourne.—Gilt pier-glass and table, window cornices, brackets, picture-frames. Looking-glasses.

Whitelaw & Blair, Melbourne.—Console tables, Mirrors, Brackets, Cornices, Mouldings and other house decorations. Awarded First Order of Merit (Silver Medal).

In their report on this exhibit, Jury Section IX stated that the "designs for interior decorations, finished articles of furniture, specimens of mouldings, and objects modelled in composition, and lettering on glass, exhibited by Messrs Whitelaw and Blair, evinced excellent art workmanship." The factory and warehouse, which are very extensive, are on the Sandridge-road. At the factory is carried on the process of silvering plate-glass, both by the new patent process as well as by the old manual process; the tables are so extensive that they are able to silver plates of glass 144 inches by 36 inches. They firm also have the edges of glass—a new feature recently added; this work is done by steam power. Specimens can be seen in all the principal furniture warehouses in Melbourne. Messrs Whitelaw and Blair are also prize-takers at the following Exhibitions—"Flooking Exhibitions, 1857; Ballarat Exhibition 1860, Melbourne Exhibition, 1860, Ballarat Exhibition, 1860, Melbourne Exhibition, 1862. Messrs Whitelaw and Blair are ornamental house painters and decorators, as well as manufacturers."

Wilson, Corbett & Co., Melbourne.—Enamelled mantelpieces and tables. Awarded First Order of Merit (Silver Medal). Jury report, page 57. (See advt., page 14.)

Class 45.—Agricultural Products, not used for Food.

Borthwick, A., Melbourne—Oils, bottled and prepared.

Cameron Bros. & Co, Melbourne—Tobacco, manufactured and unmanufactured.

In their report the Jury (Section XX.) stated that—

"Cameron Bros and Co. showed a large and well assorted collection of manufactured hard tobaccos, consisting of plug, twist, negrohead, gold leaf, &c., of very good designs and finish; the leaf used externally and internally was of the best possible description. Splendidly prepared, and of excellent aroma and keeping qualities. They also showed a collection of excellent cut tobaccos, which were first-class in every respect." First Order of Merit (Silver Medal) was awarded to them for Manufactured Hard Tobaccos, and First Order of Merit (Silver Medal) for Cut Tobaccos; and in consideration of the uniform fine quality of their Manufactured Tobacco this firm was recommended by Jury XX. as being worthy to receive the Emperor of Germany's Prize. The Commissioners have awarded Messrs Cameron Bros and Co. their Embellished Certificate of this, officially endorsed; also, their large photograph of the prize, and have addressed the following letter to them:—

"Messrs. CAMERON BROS. & Co., Melbourne.

Melbourne, 26th April, 1881.

Gentlemen,

I have the honour and pleasure to express the gratification of the Commissioners at the high

degree of merit achieved by your exhibit, "Manufactured Tobacco," which was recommended for competition for the Emperor of Germany's Prize by the Jury appointed to adjudicate in this class.

Although your exhibit has not been fortunate in being selected by Professor Reichenow, yet the full recognition of its excellence as evinced by the recommendation of the Jury must be an amply satisfactory to yourselves individually, and to the important industry represented by you, in which you have so worthily upheld the honour of the colony.

I have the honour to be,
Gentlemen,

Your obedient servant,
(Signed) G. C. LEVEY, Secretary."

Department of Agriculture, Melbourne.—Grasses.

Doran, F., Gippsland.—Raw and manufactured flax.

Dudgeon & Arnell, Melbourne.—Manufactured tobacco and snuff. Awarded three First Orders of Merit (Silver Medals) for hand and cut Tobaccos and snuff. (See adv., page xx.)

McConnell, J., Rochford.—Grass seeds.

Moss, White & Co, Melbourne.—Cigars. Snuffs. Tobacco.

This exhibit was in the form of an elegant and lofty pyramidal case, ornamented with gilt pendants. The large assortment of calcs and cut tobaccos, arranged in the panels, were manufactured entirely from Virginia leaf, and included aromatic tobaccos in eight different varieties, as also Barret's flaked and fine cut, Cavendish, slugs, &c.

There was also a fine display of cigars, made from leaf grown at Havannah, Java, China, and Sumatra, and all kinds of plain and scented snuffs, from Scotch to Morton's mixture.

The Jury of Section XX. highly commended this exhibit, and awarded it the following:—First Order of Merit for Cut Tobaccos (Silver Medal); First Order of Merit for Cigars (Silver Medal); and First Order of Merit for Snuffs (Bronze Medal).

Schulze, C. G., Mount Sefton.—Sample of Tarragon seeds cut for hay.

Virginia Tobacco Manufacturing Co., Melbourne.—Manufactured tobacco. Snuffs.

Class 46.—Chemical and Pharmaceutical Products.

Adams, G., Geelong.—Eye lotion.

Alcock, P. C., Melbourne.—Inks, blackings, varnishes, cements, &c.

Apollo Stearino Candle Co., Melbourne.—Candles, oils, chemicals; glycerine, medicinal and auto

Askin, C. A., Hobart.—Quinine tonic made with colonial wine

Australian Lithofractor Co., Melbourne.—Sulphur, sulphure, and other acids.

Borthwick, A., Melbourne.—Paints and colours, ground and prepared. Varnishes.

Bonisto, J., Richmond.—Essential oils from Eucalyptus; others from indigenous trees, &c. Chemical products from snuff

Capper, S., & Co, Fitzroy.—Blue. Blacking. Washing-powder. Knife-polish. Epsom salts. Soda lenses, &c.

Cowardland, M. H., Sandhurst.—Soap.

Cuning, Smith & Co, Melbourne.—Chemicals.

Eve, J. B., Melbourne.—Hair dyes, &c.

Felton, Grimwade & Co., Melbourne.—Chemicals, drugs, &c.

Firth Bros, Melbourne.—Ghee. Animal oils.

Gardiner, G., Geelong.—Animal oils, glue.

Graham, G. L., Sandridge.—Imperial glass for bottles. Cements. Distinguishing liquid.

Hemmons, Laws & Co., Melbourne.—Pharmaceutical chemicals.

Hepburn Spring Water Co, Melbourne.—Aerated waters.

Hesse, L. St. Kilda.—Disinfectants.

Hood & Co., Melbourne.—Sheep-dipping composition. Proprietary medicines.

Hunter, A. D., Geelong.—Patent composition for destroying rabbits and other vermin.

Kingsland, G., Melbourne.—Chemical and pharmaceutical preparations.

Kitchen, J. & Sons, Melbourne.—Steamer candles, soda crystals.

Lewis & Whitby, Fitzroy.—Blue, blacking, sciditz-powders, soda crystals, extract of soap.

Longmore, F., Melbourne.—Drugs, chemicals, and pharmaceutical preparations.

M Gregor, T., Melbourne.—Castor and salad oils. Sciditz-powders, &c.

Malett, J., Windsor.—Blacking.

Marks, N. S., Melbourne.—Pharmaceutical and chemical preparations.

Peters, E. P., Dunolly.—Soap. Candles.

Rocke, Tompsett & Co., Melbourne.—Insecticide.

Smith, A. & Co., Melbourne.—Soap. Soda crystals. Candles. Disinfecting powders.

Sullivan, J., Fitzroy.—Disinfecting preparations.

Sutherland, J., Melbourne.—Soap, and the materials used in its manufacture.

Tasmanite Paint Co., Melbourne.—Silicate paints. Moulders' powder, for castings. Polishing-powders.

Tilley & Clack, South Yarra.—Woodlog's patent washing solution.

Wagner, W. H., Melbourne.—Insect destroyer.

Walker, F., Preston.—Glas.

Class 48.—Leather and Skins.

Abbott, J. H., & Co., Sandhurst.—Tanned and curried leathers, for boot and harness manufactures.

Alton, D., Melbourne.—Leather for harness and saddlery purposes.

Bailey, Mrs., Melbourne.—Rugs. Furriers.

Brache, J., Northcote.—Angora skins.

Breathley Bros., Melbourne.—Leather.

Clarke, J. B., Brunswick.—Dressed and manufactured furs, kangaroo leather.

Cunneack, G., Guelmorne.—Saddlers' and shoemakers' leather. Calfskins.

Dixon, J. & Co., Northam.—Japanned, enameled, coloured, dyed, and other leathers.

Evels, W., Emerald Hill.—Gold-brokers' skin.

Green, J. R., Fitzroy.—Furriers. Enu skins.

Hart, L. A., Melbourne.—Rugs. Muffs. Furs.

Hayman, J. B., Collingwood.—Leather, for shoe and harness making.

Keown, J., Glenlyon.—Opossum-skin rugs.

Lloyd Bros., Broadford.—Hogskins, harness leather, goat and kangaroo skins.

Lodge, T., Hawthorn.—Tanned and dyed fur skins—rugs, muffs, wool hats, &c.

McLean Bros., Melbourne.—Dressed leather.

Michaelis, Hallenstein & Co., Melbourne.—Leathers.

Moss, G., Melbourne.—Furriers.

Munday, J., Geelong.—Leather belting.

Nettleberg, M., Sandridge.—Furriers.

O'Neill, J., Melbourne.—Whip-gut. Gut-work.

Penal Establishment, Colong.—Leather.—Kangaroo leather and hoof-horns.

Schofield & Co., Yarrabanks.—Rugs, furs &c.

Smith, J. & Co., Melbourne.—Leather.

Wallis & Co., Melbourn.—Leather in various stages of manufacture.

Zimmermann, H., Collingwood.—Rabbit furs for the manufacture of felt hats.

Class 49.—Agricultural Implements and Processes used in the Cultivation of Fields and Forests.

Ararat Shire Council.—Model plough.

Australian Deodorising, Disinfectant, & Fertilising Co. Limited, Melbourne.—Artificial manures.

Birkmyre, W., South Yarra.—Residuum from purified Yan Yeat water, to be used as a manure.

Bromfield, J., Healesham.—Model plough.

Buncle, J., Melbourne.—Horse-work. Corn-crushes. Chaff, tobacco, and bark cutters.

Byrne, J. K., Echuca.—Model plough.

Clark, J., Majorca.—Ploughs. Harrows.

Cookrell, R., Melbourne.—Patent potato digging plough and rotary cultivator and harrow.

Cuning, Smith & Co., Melbourne.—Chemical and bone manures. Gunies.

Department of Agriculture, Melbourne.—Soils.

Edwards, D., Melbourne.—Stripper, reaper, and mower, patent land cultivator and sowers plough, single-furrow ploughs, zig-zag harrows made of twisted iron, and a wheel-harrow with a seat for the driver.

The tines of this harrow are pointed at one end and chisel-shaped at the other, and are reversible according to requirements. One of the two very highly finished ploughs is selected. A wheel is substituted in place of the usual sole, and fixed at a point about where the sole in ordinary ploughs terminates. It is claimed for this arrangement that the wheel lessens the amount of friction, and thus lightens the draught of the plough. Mr. Edwards is the inventor and patentee of many agricultural machines, amongst which may be specially mentioned the Patent Stripper (all rights secured by Royal Letters Patent), Edwards' Reaper and Mower, and an improved Land Cultivator. These implements have been most highly spoken of by the leading agriculturists in the colony of Victoria and elsewhere.

Grant, J. & Co., Melbourne.—Ploughs. Harrows. Swinglo-trees.

Groom, B., Brunswick.—Patent tobacco-cutters, binder heads. Wire cutters for reapers and binders.

Henderson, T., and Co., Melbourne.—Reaping, mowing, and winnowing machines. Ploughs. Harrows. Scudlers.

Hesse, L. St. Kilda.—Artificial manures.

Hoy, R., Ararat.—Farrier's shoe-furnishing hammer.

Howden, J., Danawest Gully.—Harrows.

Humble & Nicholson, Geelong.—Hand-power wool-press. Awarded First Order of Merit (Silver Medal). (See July report, page 125.)

Kelly & Preston, Bulahat.—Ploughs.

Lennon, H., Melbourne.—Mowers. Strippers. Winnowers. Reapers. Ploughs. Scudlers. Harrows. Horse-hoes &c.

Leslie, J., Marong.—Ploughs. Scudlers. Harrows. Swinglo-trees. Ploughshares.

Lugton, A. & Sons, Melbourne.—Chaffcutters.

Lyons, O. H., Ballan.—Crabbing-machine.

McCalman & Gardo, North Melbourne.—Improved double-furrow plough; set of zig-zag harrows; drag harrow, with wheels behind to regulate the depth; and a single-furrow plough.

In their report, Jury Section XXIV. and XXV. stated that—The Victorian Court contained a splendid exhibition of the varied work done in her numerous workshops and manufactories, which would reflect credit on many an older country with long-established agricultural machinery manufactories. . . . In agricultural implements and machinery generally there were marked evidences of constant improvements being made, which we were happy to be able to notice in our awards, and give to the inventor the benefit of our approval and the recommendation of his work to the agricultural world. In reference to these improvements, we must compliment the colonial manufacturers on the high position they have

attained, as shown by the quality of their work and the way they have adapted their machines and implements to the requirements of the Australian farmer."

Messrs McCallum and Garde received First Order of Merit (Gold Medal) for their Ploughs, First Order of Merit (Silver Medal) for their Scarifiers, Cultivators, and Diggers; and Second Order of Merit for Harrows. They have also taken FIRST PRIZES at the following Agricultural Shows, viz.—Sandhurst, 1878, Owens and Murray, 1878, National, 1879, Owens and Murray, 1879, Benalla, 1879, Victoria, 1880, Owens and Murray, 1881, Benalla, 1881, Victoria, 1881. Amongst the foregoing was the Special Prize offered by Messrs Banks Bros, Bell and Co. at Melbourne, 1879, and the Special Prize for the best invention of the

year at Benalla, 1881. They have also carried off FIRST PRIZES for the last four years at most of the ploughing matches at which they have competed, having taken Eighteen First Prizes out of twenty-two entries.

Messrs McCallum and Garde have also taken prizes at the following Shows, viz.—National Agricultural Society at Melbourne and Ballarat, Shepparton, Benalla, Wangaratta, West Bourke, Tatura, and Geelong.
McDonald, D., Coburg.—Field elevator.
Munro, D., & Co., Melbourne.—Horse power, with intermediate gear. This S. McCaughey patent automatic earth-scoop.
Munro, G., Ballarat.—Stripper Reaper, Horseworks.
Musgrove, J., Greenvale.—Horseworks. Mowing machines. Thresher.

Nicholson, Joseph, 28 Bonarero-street, Carlton, Melbourne.—Scissors, Winnowers, Reapers, and Mowers. Awarded THREE First Orders of Merit (Gold Medals) at the recent Melbourne International Exhibition. A field trial of agricultural machinery, under the direction of the Jury, was held at Mr Bonard's farm, near Rochester, on December 23rd and 24th, 1880, when the various scissers and winnowers exhibited were all tested, and the Jury reported as follows of the

STRIPPERS:—"The contest with the strippers excited great interest, as this is evidently the machine by which the principal work in the large, warm wheat-growing districts of the colonies is done in future to be made by the machine. It is not what would be called, in our sense, an economical farming implement, as it does not save the straw, which is lost; but where, as in warm climates, that is not required for fodder, &c., that is of little consequence when considered in connection with the rapidity and ease with which a crop is reaped by it, and (owing to its requiring so few men to work it) the comparatively small cost at which a crop is reaped for the market. For instance, it can be said taking the trial as a criterion, that the 13 acres were reaped, cleaned, and bagged ready for the market in two hours by the labour of three men and two horses. This winnowing and reaping accompanies the stripper in the field, and two men are required to work it, and one the stripper. While the stripper is reaping, the winnower is cleaning each load the stripper brings, so that in a few minutes after the crop is reaped it is ready for sale, clean and bagged in one operation—thus doing away with the double operation and large number of men required by the reaper and thrasher method. The representatives of the various countries who were on the ground were so much struck with the rapid and cheap manner of harvesting that the Australian colonies

were highly complimented for their adaptation of the machine. Eight of these machines were on the ground—viz., four from Victoria, three from South Australia, and one from England, constructed on the colonial model. The following are the times in which they respectively finished their work:

Joseph Nicholson, Victoria ..	1 hour 51 minutes
T. Robinson and Co. " ..	1 " 56 "
G. Munro " ..	2 hours 11 "
J. Martin & Co., South Australia ..	2 " 14 "
Ramsay and Co. (No 1) " ..	2 " 37 "
(No. 2) " ..	2 " 47 "

Hornaby and Co., England? No record kept.
J. H. Robinson & Son, Victoria? No record kept.
The quality of the work done by the machine of Joseph Nicholson was really splendid, and well deserves a premium position. Awarded a First Order of Merit (Gold Medal).

In addition to the Gold Medal obtained at the Melbourne Exhibition, the highest award at the International Exhibition, Sydney, and the Silver Medal of the National Agricultural Society at Melbourne, 1880, Mr. Nicholson has been awarded first prizes for his Patent Strippers at the following Agricultural Shows:—Sandford, 1881; Echunga, 1880; Deniliquin, 1880; Rupanyup, 1880; Tatura, 1880; Benalla, 1880; Inglewood, 1880; Shepparton, 1880; Dookie, 1880; Grand National, Sydney,

1879, Deming, 1879; Sandford, 1879, Deming, 1878, Stawell, 1878; Benalla, 1878; North Albury, 1878; Wangaratta, 1878; North Eastern, Melbourne, 1878; Inglewood, 1878; Moorabool, 1878; Lower Goulburn, Shepparton, 1878; Grand National, Stawell, 1877; Grand National, Sydney, 1877; Deming, 1877; Echuca, 1877; Sandhurst, 1877; Bulbinat, 1877; Ovens and Murray, 1877; Hordain and Wimmera, 1876; Tallint, 1878; Wangaratta, 1876; Ballarat, 1876; Echuca, 1876; Benalla, 1876; Grand National Society of Agriculture, Tallint, 1876; as well as a Special First Prize from the National Agricultural Society of Victoria, Melbourne, 1878; and Iron Medal at the Geelong Grand National Show in the same year.

The same Jury reported of the Winnowing that "the elevators and bagging appliances attached to the Victorian machines deserve special notice for their great saving of time and labour, and the cleanliness and rapidly with which they worked, and more especially was this remarked in Nicholson's machine, which worked without a fault or check, and is entirely self-acting." Nicholson's bags all. Each machine was allotted an equal quantity of wheat, as delivered from all the farmers, and mixed together. The times of doing the work are:—

Joseph Nicholson, Victoria ..	4 minutes
T. Hamer-on and Co., ..	51 "
Corbett and Peck, England ..	52 "
Holmes and Co., ..	6 "
Richardson and Son ..	6 1/2 "
Ilmit and Farrell ..	7 "
T. Robinson and Co., Victoria ..	8 "
Dickey and Pease, U.S.A. ..	9 "

The Jury awarded Mr. Nicholson's Winnowing a First Order of Merit (Gold Medal), and in addition to this he received a First Prize at the Sydney International Exhibition, 1879 SO, and First Prizes also at the following Agricultural Shows:—Deming, 1880, after trial; Echuca, 1880, after trial; Alara, 1880, after trial; Rupanyup, 1880, after trial; Tallint, 1880, after trial; Benalla, 1880, after trial; Shepparton, 1880; Stawell, 1879; Rupanyup, 1879; Deming, 1879; Sandford, 1879; Deming, 1878; Benalla, 1878; Albury, 1878; Wangaratta, 1878; Grand National, Geelong, 1878; North-Eastern (Special), Melbourne, 1878; Inglewood, 1878; Lower Goulburn, 1878; Shepparton, 1878; Moorabool, 1878; National Agricultural Society of Victoria, Melbourne (Special), 1878; Sydney Grand National Exhibition, 1877; Deming, 1877, Sandhurst, 1877.

The Jury also awarded a First Order of Merit (Gold Medal) to Mr. J. Nicholson for his exhibit of REAPERS and MOWERS, which consisted of a back-

delivery Reaper a double speed Reaper and Mower, and two unpaired Mowers

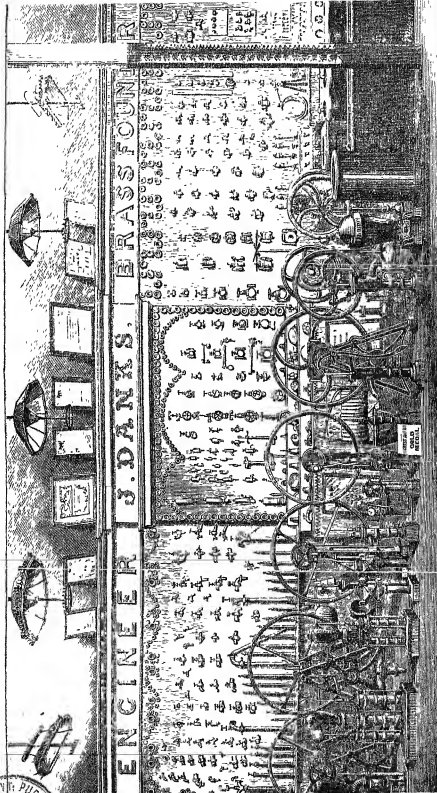

Obermeyer, J., North Maldon.—Tobacco-cutting machine, for hand or steam.
 Perry, J., Melbourne.—Fork, spade, and broom handles. Sieve and riddle rim. Rakes.
 Pettigrew, A., (Topley).—Extra heavy plough.
 Randall, T., & Co., Fitzroy.—Hay and drag takers.
 Robinson, T., & Co.—Stripper. Winner.
 This side machine. Wool-press, &c.
 Robinson & Sons, Melbourne.—Stripper. Wool-press. Plough.
 Roche, J. B., Hawthorn.—Plough.
 Rouse, F., Tallint.—Tobacco-cutting machine.
 Sugden, T., Footscray.—Patent manures.
 Swan & Co., Melbourne.—Reapers. Mowers. Strippers. Ploughs.
 Tynan, J., Ballarat.—Plough.
 Vulcan Foundry, Geelong.—Agricultural machinery. Wheel.
 Williams, G., Gippsland.—Model ploughs.
 Williams, P., Melbourne.—Hand-power wool-press.

Class 50.—Apparatus and Processes used in Agricultural Works, and in Works for the Preparation of Food.

Baker, J., Emerald Hill.—Meat-press.
 Bey, P., Tallint.—Patent double action churn.
 Boddington, E., Carlton.—Flour-mill machinery, and tools used in flour-making.
 Bull, G., Robina.—Cheese and cheese-rats.
 Burne, J., Jun., Sandhurst.—Wine-making model.
 Cherry, M., Geelong.—Churns.
 Consoli, L. B., Hotham.—Mangle-machines.
 Crighton, J., Murrumbidgee.—Reversing cheese rack.
 Faul, J. W., Sandhurst.—Cooling apparatus.
 Hall, A., Williamson.—Cheese bottle-neck.
 Harcourt, H., Hotham.—Cheese-presses and screws. Iron tea guards.
 Kent, W., Melbourne.—Cheese's coffee mill. Improved grocers' sugar-mill.

Lezza, S., Carlton.—Apparatus for the manufacture of confectionery, ice creams, &c.
 Long & Wylie, Prahran.—Aesthetic economic use of safes. Refrigerators, &c.
 Lugton, A., & Sons, Melbourne.—Sausage-machines. Brio-pump. Boue-mill.
 Mourant, J. & F., Collingwood.—Shives, spiles, pipes, &c.; cork rings.
 Parkes, W. H., Melbourne.—Machine for moulding, for kitchen use.
 Bedford, W. J., Melbourne.—Cheese-tubs. Vats. Milk, honey, and treacle cans. Syphon and curd-benken.
 Randall, T. & Co., Fitzroy.—Churns. Mill trucks. Hay and drag racks.
 Thirkettle, W. J., Kyneton.—Diagonal box-churns.
 Wolter & Eichberg, Melbourne.—Churns.
Class 52—Machines and Apparatus in general.
 Abraham, J., Ballarat.—Windmill.
 Apollo Steaming Candle Co., Footscray.—Apparatus for making tallow soap.
 Atlas Co. of Engineers, Melbourne.—Sleeper sizing and boring machine. Windmill.
 Baker, J., Emerald Hill.—Washing, wringing, and mangling machine.
 Brierly, W., Emerald Hill.—Boils, nuts, screws, &c.
 Briscoe & Co., Melbourne.—Mangles.
 Buchanan & Nodrum, Sandridge.—Single and double cylinder engines and boilers. Winding-gear.
 Colman, E., Melbourne.—Steam pumps, improved pulleys, exhaust steam condensers.
 Crowley & Davis, Ballarat West.—Improved method of drying clothes-hoses for household purposes.
 Crocker, M. & F. G., East Charlton.—Rabbit annihilator.
 Danks, J., Melbourne.—Engineers' and Plumbers' Brakes, Windmills, Steam and Hand Pumps.—This exhibit consisted of an extensive collection of **STEAM VALVES**, with four gun-metal faces, gun-metal spindle and nuts, 2½, 3, 4, 5, 6, 7, 8, 9, 10, and 12-in.
 Stand-pipe, for filling cart, double arm.
 Hydrant, double and single head.
 Hydrant, with universal head, for street watering.
 Directors' Fire Brigade Patent Distributing Nozzle.
 Hattersen and Møys's Fire Plug.
 Danks's Improved Milk Cooks.
 High-pressure Bib and Stop Cooks, ½, ¾, 1, 1½, 2, 2½, 3-in.
 High-pressure Union Cooks, improved patterns, 1-in. to 3-in.
 Ferrule Stop Cooks, for lead and iron, ½, ¾, 1, 1½, 2, 2½, 3-in.
 Ferrules, for lead and iron, bent and straight, ½-in. to 2-in.
STEAM VALVES, in iron, with gun-metal valve-seat and spindle through, right angle three way, 2½, 3, 4, 5, 6-in.
Steam Valves, gun-metal, to fit iron pipe, ½, ¾, 1, 1½, 2, 2½, 3-in.
Steam Valves, flange, straight and right-angle, ½, ¾, 1, 1½, 2, 2½, 3-in.
Safety Valves, gun-metal and iron, 1½, 2, 2½, 3, 4-in.
Improved Injectors, Nos. 2, 3, 4, 5, 6, and 8.
Injectors, non-lifting, Nos. 2, 3, 4, 5, 6, and 8.
Ejectors, Nos. 0, 1, 2, and 3.
Lubricators, displacements, 2, 2½, 3, 3½, and 4-in.
Lubricators, suited to, 2, 2½, 3, 3½, and 4-in.
Gun-metal Stop Valves, flange, 1, 1½, 2, 2½, 3-in.
Gun-metal Stop Valves, screwed, ½, ¾, 1, 1½, 2, 2½, 3-in.
 Bailey's Patent Sea-saver Gauges, ½, ¾.
 Bailey's Patent Saverer Pet Cooks, ½, ¾.
 Brass Pumps, on pump, 2½, 3, 3½, 4.
 Brass Deep Well Pumps, 2½, 3, 3½, 4.
 Double-action Pumps, 2½, 3, 3½, 4.
 Frame Pumps, with Gear, double and single action.
 Rotary Pumps, Remittors's, 1½, 2, 2½, and 3.
 Boilers Testing Pumps, fitted on tank.
 Hydraulic Ram, No. 8.
 Lavatory, fitted with tip-up basin.
 Lavatory, fitted with marble top and spile.
 Copper Boilers, various sizes.
 Four-pull and Three-pull Steokers's Beer Engine.
 Nickel-plated Bath Mountings, Juniper.
 Lubricators and Pumps.

Four-light Long and Round Gas Reflectors.
 Improved Windmill, with self-regulating vanes.
 For this exhibit four First Orders of Merit (one Gold Medal and three Silver Medals) were awarded to Mr Danks.
 Drysdale & Fraser, Melbourne.—Ship and crab winches. Patent double-acting pump.
 Falconer, J. R. R., Fitzroy.—Horizontal engine. Vertical boiler.
 Flood, J., Melbourne.—Washing-machines. Pumps. Water-lifts.
 Ford, B. G., East Brighton.—Patent boiler.
 Ford, B. G., jun., East Brighton, Melbourne.—Patent washing-machine and boiler.
 Ford, W. J., East Brighton.—Vertical steam-engine.
 Godfrey, R., Melbourne.—Bankers' and butchers' scales. Weighing-machines.
 Gray, F. G., Richmond.—Model heavy-engine, working saw-mill.
 Gray, R., Emerald Hill.—Washing-machines.
 Grayson & Co., Fitzroy.—Horizontal engine. Screw press. Saw-spindle.
 Harty, J., North Melbourne.—Stationary steam-engine.
 Jones, H. & Co., Melbourne.—Weighing-machines.
 Kitchen, J. & Sons, Melbourne.—Candle-making machinery, in operation.
 Langland's Foundry Co. The, Melbourne.—Portable 10-horse power steam-engine.
 Lugton, A., & Sons, Melbourne.—Steam-engines. Boilers. Cylinders. Models.
 McCall, Anderson & Co., Melbourne.—Stevard's hoisting-engines. Steam boilers.
 McLean & Co., Melbourne.—Water-lifters. Steam-engines and water-lifters combined.
 McComas Bros. & Rigg, Melbourne.—Windmill.
 Manual, R., Itham.—Bulldozers elevating and expanding scaffold.
 Mourant, J. T., Collingwood.—Wood taps, with glass, earthenware, and metal keys.
 Munday, J., Geelong.—Leather belting, &c.
 Munro, D. & Co., Melbourne.—Stationary engine, with hoisting-gear, boiler, centrifugal pumps; deep well pumps, &c. Windmill.
 Murray, R., Chiltern.—Model of steam engine.
 Forry, J., Melbourne.—Bull-heads.
 Parkes, W. H., Melbourne.—Windmill.
 Randall, T. & Co., Fitzroy.—Washing-boards. Knife-boards.
 Rasche, W. C. E., Melbourne.—Steam-engine.
 Reside, R., Talbot.—Model of winding engine.
 Richmond, S. G., Melbourne.—Mangles.
 Robinson & Sons, Melbourne.—Washing-machines. Boils, nuts, rivets, spikes, &c.
 Union Foundry, Ballarat.—Model of traction engine.
 Victoria Ice Co. Limited, Melbourne.—Ice chests and cabinets.
 Victoria Rolling Mill, Melbourne.—Marine engine shaft, with collar; two-throw crank shaft.
 Vulcan Foundry, Geelong.—Steam engines. Washing-machines.
 Walls, J., Campdown.—Washing-machine.
 Watson, W., Melbourne.—Knife-cleaner and sharpener combined with boot and shoe cleaner.
 Williams, P., Melbourne.—Washing-machine; wringer; and washing-boiler.
 Willis, W. & Co., Melbourne.—Weighing-machines. Carriage-lifts.
 Wolter & Eichberg, Melbourne.—Washing-machines.
 Wright & Edwards, Melbourne.—Steam engines and boilers. Hydraulic stump-extractor and jucker. Centrifugal pump.
 For their Steam Engine in the Victorian Machinery Court Messrs. Wright & Edwards were awarded a First Order of Merit (Gold Medal), and were strongly recommended by the Jury Section XXVI, page 128, for the Emperor of Germany's Prize. They also received First Order of Merit (Gold Medal) for their Centrifugal and Rotary Pumps; First Order of Merit (Silver Medal) for Steam Boilers; and First Order of Merit (Silver Medal) for their Artesian Boring Machine. (See also page xiii.)
 Young, W. C., East Melbourne.—Small vertical engine and boiler.

ENGINEER J. DANKS. BRASSFOUNDER

MR. JOHN DANKS' EXHIBIT OF STEAM AND HAND PUMPS AND BRASSWARE IN THE VICTORIAN COURT.

Class 53.—Machine Tools.

Atlas Co. of Engineers, Melbourne.—Moulding, planing, tonguing, and grooving machine
 Drysdale & Fraser, West Melbourne.—Punching and shearing machine.
 England, B., Richmond.—Machine for punching Venetian blind laths
 How, H. M. C., Collingwood.—Post-borer
 Lankester, E., Colac.—Foot-power drilling-machine, after-machine circular saw
 Latham, J., Carlton.—General machine tools
 Munro, D. & Co., Melbourne.—Patent travelling self-acting break-down circular-saw bench Vertical saw-frame.
 Royal, J. & Sons, Carlton.—Bench screws. Patent saw cutting laths, in motion.
 Walker, T., Emerald Hill.—Machine tools.
 Willis, W., & Co., Melbourne.—Post-borer

Class 54.—Apparatus and Processes used in Spinning and Rope-making.

Donaghy, M., Geelong.—Rope Cordage
 McDougal, D. E., Melbourne.—Rope
 M'Nally, J., Brunswick.—Rope Twine. Rope plough-tens. Hatters, &c.
 Miller, J., & Co., Melbourne.—Ropes Cordage.

Class 55.—Apparatus and Processes used in Weaving.

Jackson, E. A., Richmond.—Machine for manufacture of knitted hosiery.
 M'Gillivray, S., Emerald Hill.—Knitting machine
 Macintosh, H., Melbourne.—Loom for wire-weaving
 Youl, T. B., Emerald Hill.—Knitting-machine

Class 56.—Apparatus and Processes for Sewing and for Making-up Clothing.

Crowley, C., Melbourne.—Stands for clothing
 Groom, B., Brunswick.—Hatters' lions, &c.
 Shelmardine, T., East Collingwood.—Machines and appliances used in the manufacture of hats.
 Wilson, H. & Sons, Flemington-road, Melbourne.—Machines and Knives used in the manufacture of Boots and Shoes, Lasts, Envelope and Label Cutting Machines. Awarded First Order of Merit (Silver Medal).

The Jury, in their report on this Exhibit, say:—

"First Degree of Merit was recommended to Messrs. Hugh Wilson & Sons, Flemington-road, Melbourne, for Bootmaking Machinery. Although the Exhibitors did not claim any patent, several articles in this exhibit showed improvements upon the old class of machinery, and, taken as a whole, showed good workmanship. It comprised a number of appliances well suited to the boot-trade, and calculated to lessen the cost of production."

"The Envelope and Label Cutting Machine is well adapted for the use of manufacturing stationers and printers, being strong and well made, as well as low in price.

Class 58.—Apparatus and Processes used in Paper-making, Dyeing, and Printing

Azzopardi, A. J., Melbourne.—Electrotype and stereotypers, also wax and other moulds, showing the process. Awarded First Order of Merit (Silver Medal).

In their report the Jury (Section IV) stated that—"A. J. Azzopardi, of Melbourne, showed an extensive and interesting exhibit under this head, illustrating the process employed, and hence valuable from a technological point of view, the use of wax moulds facilitating the reproduction of the finest lines with clearness and distinctness. The electrotype was planned at the back by steam machinery, so as to secure exact uniformity of height when worked in with ordinary type, perfect cohesion is secured between the backing metal and the copper shell." Mr. Azzopardi also took First Prize for Electrotypes and Stereotypes at the Melbourne and Philadelphia Exhibitions, 1876-8. (See advt., page 14.)

Furse, G., Richmond.—Wood type
 Grant, J., Melbourne.—Printer's composing sticks.
 Roeszler, C. G., Melbourne.—Numbering-machine
 Syme, D. & Co., Melbourne.—Stereotype plates.
 Titchener, H., Melbourne.—Printing type

Class 59.—Machines, Instruments, and Processes used in various Works.

Attkin, T., Melbourne.—Cask-resting apparatus
 Flegelstaub, L., Melbourne.—Jeweller's tools.
 Hamilton, G. W. N., Melbourne.—Metal press
 Harrison, T. S., & Co., Melbourne.—Assisted water bottle-coiling machine
 Musgrove, J., Geelong.—Foot lathe.
 Roberts, O., Richmond.—Patent self-acting painting machine
 Rule, H., Flemington.—Machine for hanging wall-paper.
 Stokes & Martin, Melbourne.—Model and embossing presses
 Tryer, P., Melbourne.—Patent cork extractor.
 Wilson, G. & Co., Melbourne.—Hand-bottling rack
 Stopping and extracting machine by pump

Class 60.—Carriages and Wheelwrights' Work.

Alston, G., Bulla.—Hay day Tip-day Wheelwrights' work, rough and finished
 Armfield, T. G., Windsor.—Carriage and buggy springs, fixtures for same
 Carroll, E., Carlton.—Eccentric buggy-hook
 Crutch, W., & Co., Melbourne.—Brougham
 Raouche Landan, with patent hood Stairhopper wagonette
 Dickson Bros., Richmond.—Double-seated Abbott's buggy.
 Evans, W., Melbourne.—Carriage springs
 Irving Bros., Melbourne.—Landan Brougham, Phaetons.
 Gardner, H., Ithman.—Invalid's chair and portabulators
 Hamilton, G. W. N., Melbourne.—Carriage and harness mountings.
 Harding, W., Collingwood.—Lorries, Carriage and wheelwrights' work.
 Harbutt, H., Ithman.—Carriage-axes, Brake-screws.
 Harvie, J., Richmond.—Park phaeton.
 Hewitt, E., Geelong.—Carriage-mountings Springs
 Holden & George, Ballarat.—Model of delivery cart.
 Houghton & Co., Richmond.—Bath chair. Portabulators.
 Kelly, J. T., Fitzroy.—Tip dray.
 Kelly & Preston, Ballarat.—Harris wagon.
 McDonald, A. & Sons, Ithman.—Brougham, Landan. Victoria phaeton.
 Musgrove, J., Geelong.—Hay day
 Noble, E., & Co., Melbourne.—Buggy and dray axes.
 Perry, J., Melbourne.—Articles used in carriage-building.

Press, R. A., Carlton.—Model of fire-trail.
 Proctor, W., Ballarat.—Sawdust wagonette.
 Reade, R., Talbot.—Model of farm wagon.
 Rose, J., Melbourne.—Carriage axles.
 Ross, D., Melbourne.—Steel bays.
 Royal, J., & Son, Carlton.—Horse-trail Sulk.
 Acker, Haddock, & Co., Melbourne.—Horse-trail Sulk.
 Russell, R., Melbourne.—Model of jump seat buggy.
 Samwells H., Melbourne.—Wagonette. Phaetons.
 Patent two-wheeled brougham. Buggy, &c.
 Schneider, M., Sandhurst.—Model of spring cart.
 Sharpe, A., Melbourne.—White chapel dog-cart.
 Stevens Bros., Warramundoo.—Buggies. Carriages.

Stevenson & Elliot, Melbourne.—Lantern. Pony phaeton. Stanhope phaeton. Brougham.
 This firm exhibited three Carriages, and was awarded a Gold Medal and three First class Orders of Merit. It was specially recommended for the Emperor of Germany's Prize, and obtained an extra Gold Medal for same.

Messrs Stevenson & Elliot were also recipients of First class Awards and Medals at all the International Exhibitions, as well as at the International Exhibitions in London, Philadelphia, and Paris.

Stickland & Sons, Melbourne.—Victoria extension-top phaeton, mail or Stanhope phaeton.
 Stockton, J. H., Melbourne.—Public and agricultural vehicles, carriage, wagonette.
 Sturtevant, B., Melbourne.—Electroplate carriage mountings, &c.

Victoria Carriage Co., St. Kilda.—English-shaped brougham. Wagonette or mail phaeton.

West, J. & B., Bendon.—Hay-dry.

White, D., Melbourne.—Stanhope phaeton. Double or single seated buggy. Ladies' phaeton.

The ladies' angular driving phaeton had a small runabout for a side' lighter. The iron fore-carriage was extremely light, yet possessed ample strength. It was painted lake, picked out and finished with buff. Trimmings, cloth cloth, with lace to match. This exhibit attracted much attention during the time the Exhibition was open. Awarded First Order of Merit (Silver Medal).

The Stanhope phaeton had a lever hood. The back seat was out in two, and a self-acting back stop enabled a lady to enter the carriage with comfort and safety. This vehicle can be converted into a Stanhope wagonette by removing the front and back seats and substituting a pair of wagonette seats, in which there is provided a folding top, thus making it into a perfect wagonette. It was painted lake, picked out and finished with vermilion. The trimmings were blue maroon and cloth. Awarded First Order of Merit (Silver Medal).

There was also in this exhibit a highly finished hooded buggy, capable of being used either as a double or single buggy. This vehicle was highly commended, and was awarded a First Order of Merit (Silver Medal).

Williams, M. & Sons, Collingwood.—Phaetons. Wagonette. Four-wheeled buggy.

Class 61.—Harness and Saddlery.

Aliband, T. J., Echuca.—Green hide and kangaroo-skin stock-whip throng.

Atson, D., Melbourne.—Harness Saddlery.

Baird, R. F., Geelong.—Horse-shoes and shod horse-hoofs.

Brooks, A., Melbourne.—Whip-thongs and handles.

Carey, W., Melbourne.—Horse-shoes.

Clark, F., Collingwood.—Whip thongs.

Cook, J., Hawthorn.—Harness mountings, silver and aluminum plated.

Coyle, T., Sandhurst.—Horse-shoes.

Cumack, G., Castlemaine.—Harness. Crop, &c.

Dixon, J., & Co., Heathcote.—Saddlery and harness.

Edwards Bros., Melbourne.—Saddles-trees.

Exton, T., Melbourne.—Saddles.

Forster, C. & Son, Melbourne.—Saddlery and harness.

Furley, J. F., Carlton.—Model horse-shoes.

Gregg & Lord, Melbourne.—Saddlery. Harness.

Guthridge, Power & Co., Melbourne.—Saddlery. Whips.

Hutton, J., Melbourne.—Harness.

Henderson, F., Dandenong.—Whip-thong.

Kelly, J. T., Fitzroy.—Horse-shoes.

Kennon, J. & Son, Richmond.—Whip-thongs and harness plated work.

Kerridge, W., Melbourne.—Horse-shoes.

Keystone, J., Melbourne.—Whip. Whip-thongs.

Kinnear, G., Kilmore.—Saddlery.

Lancaster, J. jun., Victoria.—Horse-shoes.

Murrell, A., Geelong.—Horse-shoes and shod horse-hoofs.

Pennington, F., Healdsworth.—Horse-shoes.

Perry, J., Melbourne.—Wool for harness and saddlery-trees.

Potter, T. J., Melbourne.—Saddlery.

Polthwell, W., Melbourne.—Saddlery and harness.

Rutledge, J., Melbourne.—Saddlery.

Turnings, J., Brunswick.—Whip thongs.

Whitmore, H., Fitzroy.—Hugby harness.

Class 62.—Railway Apparatus.

Ballarat Model Locomotive Co.—Model house engine.

Barrett, G. G., Melbourne.—Model of engine and tender.

Bryant, W., Emerald Hill.—Railway-carriage springs and iron-work.

Frencham, G., Richmond.—Model of American subson railway carriage.

Jordan, J., Melbourne.—Working model of engine and tender.

Kelly, R. H., Ballarat.—Press domes for engine-hoofs.

Langlands Foundry Co., Melbourne.—Engine and railway-carriage wheels.

Miligan & Wheeler, Carlton.—Model of electric railway brake.

Noble, E., Melbourne.—Railway buffers.

Phoenix Foundry Co. Limited, Ballarat.—Engine and tender. Steam ferry.

Rule, H., Flemington.—Model of railway-carriage safety coupling.

Thompson & Co., Castlemaine.—Paints and coatings manufactured for Victorian Railways.

Tyrer, P., Melbourne.—Self-acting model of railway signal or semaphore.

Victoria Iron Rolling Mills, Melbourne.—Traction. Pull-bolts. Dog spikes. Pins. Railway wagon axles.

Victorian Railway Department, Williams town.—Goods-engine and tender. American subson car. State carriages.

Wilson, A., Fitzroy.—Working model of Pullman's railway subson car.

Woods, The Hon. J., M.L.A., Edmon.—Wood's automatic continuous break gear.

Class 63.—Telegraphic Apparatus and Processes.

Azzopardi & Whiting, Richmond.—Telegraphic key and sounder. Galvanometer. Electric apparatus.

Crisp, H., Ballarat East.—Electro-motor. Galvanometer. Electric bell.

Edwards, J. E., Melbourne.—Electric bells. Indicators. Telephone apparatus. Telegraphic appliances.

The Jury Section XXIX, in their report, state that this was an exhibit of telephones of the Edison-Bell type, and microphone transmitters, with a specially as regards some of the carbon contacts. On trial both telephones and transmitters gave very satisfactory results; speech was received with considerable loudness, combined with moderate crispness. (See advt., page xx.)

Harris, L., Melbourne.—Electric induction apparatus.

Joseph Bros., Melbourne.—Telegraphic apparatus.

Class 64.—Apparatus and Processes of Civil Engineering, Public Works, and Architecture.

Ararat Shire.—Granite. Dressed freestone. Limestone.

Ayco, F., Carlton.—Monument in Italian and colonial marble. Works in marble.

Baker, J., Emerald Hill.—Patent safety steps. Ladders.

Bacchus Marsh Shire.—Freestone and granite.
Barningham & Lacey, Brunswick.—Bricks.
Barrabool Shire Council.—Freestone. Lime-
stone. Triassic.

Beechworth Committee.—Kaolin, clays, &c.
Blight, J., Mount Alexander Quarries.—Four twelve-
inch cubes of granite, polished.

Brunswick Pottery, Sydney-road.—Clays, raw
and prepared.

Buncle, J., Melbourne.—Furniture tools, &c.
Carey, J., Fitzroy.—Model of wooden bridge.

Castlemaine Paving Co.—Rough and sawn
flag, and slate mouldings.

Castlemaine Town Quarry.—Metamorphic
micaceous sandstone and metal.

Cawkwoll, H. A., Melbourne.—Ornamental tiles.
Chambers & Clutton, Melbourne.—Marble and
stone chimney-pieces. Fountains. Ornamental marble
flooring.

Clayton, E., Melbourne.—Longitudinal elevation
and plan of non railway girder-bridge.

Connor, J. H., Jun., Geelong.—Building stone,
serpentine, kaolin.

Cornwall, A., Melbourne.—Patent hydraulic stone,
manufactured for building purposes.

Gregan & Shearon, Melbourne.—Cement for
glass and household purposes.

Cuming, Smith & Co., Melbourne.—Model of
chemical and marine works.

Danks, J., Melbourne.—Gas and water fittings. (See
advt., page vii.)

Davis, J., Richmond.—Patent valves.
Department of Mines, Melbourne.—Building
stone.

Drysdale & Fraser, Melbourne.—Friezes,
blackstone, panels.

Finn, P. & Co., Sandhurst.—Granite monuments
and columns.

Footscray Steam Stone-cutting Co., Mel-
bourne.—Sawn bluestone flags and steps.

Galbraith & Watkins, Stawell.—Dressed free-
stone.

Gippsland Marble Co.—Polished marble.

Hoffman Patent Steam Brick & Tile Co.,
Brunswick.—Foundation, Building, Facing, and
Paving Bricks, Clays, &c.

This exhibit consisted of a Trophy representing
various kinds of Bricks, Model of Kiln; Sections of
Sewers, circular and egg-shaped, coated of special
Bricks.

This Company received the following awards:—
For Drain Pipes and Bricks, First Order of Merit
(Silver Medal), and for Stoneware for chemical
and domestic purposes, First Order of Merit (Silver
Medal).

Horne, A., Fitzroy.—Masons' and bricklayers' tools.

Hutchinson, J., Melbourne.—Cast-iron staircase.
Iron castings for verandahs.

Kaufmann, L., Dunkeld.—Ornamental stone gate-
pillars.

Kelly, R., Fitzroy.—Longitudinal section and plan
of iron lighthouse.

Kitchingman, E. L., Bethanga.—Fire-clay, &c.

Knight, A., & Co.—Kaolin and clay.

Lal Lal Ironworks.—Sandstone used for furnace
lining.

Leonard, S. S., Cobden.—Slacked and unslacked
lime.

M'Coll, Hugh, M.L.A.—Marble.

M'Pherson, D., Fitzroy.—Patent sash segments;
new method of opening, closing, and locking fan-
lights.

Mahoney, F.—Patent valveless ventilator.

Melbourn Borough Council.—Bluestone
monument.

Melbourne Bellows Co.—Blast and smiths'
bellows. Patent circular forge.

Mitchell, D., Lydiado.—Rough and polished
marble.

Munday, J., Cooper's Creek.—Fire-clay; fine sand;
fire-bricks, &c.

Murphy, E., Emerald Hill.—Patent valveless ven-
tilator, self-acting; ventilating ceiling centre-flowers,
chimney-cap.

Nash, C., Geelong.—Bluestone sawn in slab, partly
through.

Nicol, D., Melbourne.—Bell-knocker.

Ogilvie & Robinson, Geelong.—Woolen Ponds
limestone.

Parker, E., Sandhurst.—Cast steel hammers.

Paterson, A. J., Fitzroy.—Model spiral staircase.

Peppercorn, J. P., Caulfield.—Design for centre
piece of fish-basin or fountain.

Perry, J., Melbourne.—Sledge hammer and road-
pick handles.

Phillips, M'Walter & Chambers, Carlton.—
Ornamental iron castings for verandahs.

Sexton, Mrs. N.—Roller for window-blind.

Siegrfried, E., Sandridge.—Model of the Austral-
asian Works, Emerald Hill.

Sutherland, A., & Co., Melbourne.—Fire-clay.

Swanston, Willis & Stephen, Geelong.—
Dressed freestone.

Taylor, J., Sandhurst.—Granite monuments, foun-
tains.

Technological Museum.—Building stones.

Thirkettle, W. J., Kyneton.—Model of staircase.

Thorpe, J., Geelong.—White bricks.

Train, W., & Co., Emerald Hill.—Marble and
enamelled mantelpieces. Marble tiles, fountains, &c.

In addition to the above, Messrs William Train &
Co manufacture and exhibit every description of
Marble, Stone, Enamelled Slate, and Wood Work, at
their manufactory in Mornay-street North, Emerald
Hill, where they have erected the most complete
machinery for polishing Marble, &c., by steam-
power, without the aid of hand labour. Messrs W.
Train and Co. have received the following awards
at different Exhibitions:—

Melbourne Exhibition, 1875—First Order of Merit
for Enamelled Slate Mantelpieces.

Geelong Exhibition, 1878—Silver Medal for Marble
Mantelpieces, and Bronze Medal for Enamelled Wood.

Melbourne International Exhibition, 1880—Second
Order of Merit (Certificate) for Mantelpiece.

(See advt., page xxi.)

Trapp, A., Williamstown.—Model of spiral staircase.
United Shire of Metcalfe.—Granite obelisk and
pedestal, polished on one face.

Victoria Pottery Co., Lal Lal.—Tiles.

Vivian, J. B., Collingwood.—Model of Melbourne
Town Hall, made from coir.

Walker, R. B., Lara.—Hydraulic lime.

Watkins, F., Stawell.—Dressed Grampians free-
stone.

Watts, T., Sale.—Model of swing bridge.

White, J., Ballarat.—Ornamental tomb-raising.

Wiacher, W., Melbourne.—Marble, from Waratah
Bay.

Williams, P., Melbourne.—Patent fanlight opener
and fastener.

Willis, W., & Co., Melbourne.—Fire-proof shut-
ter door.

Wilson, Corben & Co., Melbourne.—Enamelled
state mantelpieces and baths. Awarded First Order
of Merit (Silver Medal). Jury report, page 87.
(See advt., page iv.)

Wolstencroft, J., Sandhurst.—Tiles. Fire-bricks.

Wood, W. U., & Co., Melbourne.—Show-cases.
Steps, &c.

Class 65.—Navigation and Life-saving.

Barker, J., Collingwood.—Drawing of cannon for
graving-dock.

Brierley, B., Epsom.—Model.

Burman, H. W., Flemington.—Life-boat fitted
with oak, covered with cane work.

Coggrave, J., Emerald Hill.—Models of yachts.

Dawbarn, W. H., & Sons, Melbourne.—Cork
life-buoys and belts.

Durand, W., Emerald Hill.—Model of turret iron-
clad ship.

Edwards, J., Melbourne.—Eight-oared sliding-
seated outrigger. Sculling outrigger. Skiff, with
rowlocks.

Firman, W. H., Brunswick.—Cork life-buoy.

Fuller, R. B., Melbourne.—Life-boat.

Gordon, W. W., Emerald Hill.—Half-models of
vessels and yachts.

Greenland, W., Melbourne.—Sailer's outrigger
racing-boat, with patent swivel rowlocks.

Handfield, P. O., South Yarra.—Model of apparatus for extinguishing fire on board ship
 Ingram, A., Williamstown.—Model of full-rigged ship

Meyer, L., St. Kilda.—Built-up model of a yacht
 Morgan, W., Melbourne.—Models of yachts and half-models of yachts and steam-launches
 Petersen, P. H., Richmond.—Model of steamship
 Prendergast, M., Fitzroy.—Models of ship, barque, and lug
 Roberts, W. J., Melbourne.—Model of ship.
 Sager, A., Footscray.—Model of a steamer.
 Selby, J., Emerald Hill.—Model of steamer
 Stevens, T. C. L., Kyneton.—Models of fore-and-aft schooner, schooner-yacht, cutter-yacht, fishing-boat, half-model of gun lug
 Stevenson, J., Sandhurst.—Model of life boat.
 Strachan, C. St. Kilda.—Model of life-boat on an improved principle. Life buoy and jacket
 Sutherland, G., Williamstown.—Ship's blocks
 Thickett, W. J., Kyneton.—Models of yachts and screw steamer
 Watts, W. K., Melbourne.—Half-models of yachts, steam-launches, ships, &c
 White, A., Williamstown.—Models of yachts, steam-launches, &c
 Williams, H. W. L., Melbourne.—Model paddle-wheel steamer.
 Wooldridge, W., Melbourne.—Model of steamer, showing best means of extinguishing fire.

Class 66.—Materials and Apparatus for Military Purposes.

Hamilton, G. W. N., Melbourne.—Military equipments and mountings.
 Harvey, E., Caulfield.—Mechanical model for defence purposes
 Hooks, T., Melbourne.—Model of field forge
 Jones, T. S., Melbourne.—Plan of fortification
 McDonald, A., Melbourne.—Model of 9-pounder muzzle-loading rifled field-piece
 Salmon, P. M., Sandridge.—Model of smooth-bore gun on garrison carriage

Class 67.—Cereals, Farinaceous Products, and Products derived from them.

Baines, G. P., Moirgum.—Wheat.
 Beaufort Agricultural Society.—Flour.
 Boncraft, G., & Co., Melbourne.—Oatmeal. Flour.
 Pearl barley. Pseudo-natural Oats. Malt-meal
 Billson, G., Beechworth.—Malt.
 Boobier, W. J., Sandhurst.—Wheat and oats.
 Burston, S., & Co., Melbourne.—Barley. Victorian-made malt
 Charlesworth, J., Maiong.—Wheat, &c
 Colford, J. T., Dandenong.—Flour
 Grosvenor, C. F., Melbourne.—Grain; seeds.
 Danelli, S., Humevale.—Italian paste, macaroni.
 Day, J., South Minton.—Flour
 Department of Agriculture.—Cereals
 Deutscher, C. T., Merton.—Purple-straw wheat
 Dimboola Flour Mill Co.—Flour.
 Edwards, W., Stawell.—Wheat. Flour
 Fry, J., Dimboola.—Flour.
 Galbraith, H. L., Lancefield.—Field peas.
 Graves, J. H., Baiyavatha.—Wheat.
 Hagenauf, Rev. F. A., Gippsland.—Arrowroot.
 Hanning, T. W., Gippsland.—Arrowroot
 Harper, R., & Co., Melbourne.—Farinaceous products, lupines, lupine-meal, arrowroot, oatmeal.
 Hirth, E., Dimboola.—Wheat.
 Hubbard, W., Yarra Flats.—Oats.
 Hughes, D. S., Melbourne.—Wheat. Barley.
 Hutchings, T., & J., Stawell.—Wheat.
 Irving, J. L., & Co., Melbourne.—Wheat.
 Jewell, E.—Wheat, chaff.
 Keane, M.—Flour.
 Kelson, J. H.—Peas, barley, wheat, oats.
 Kimpton, W. J., Melbourne.—Flour, wheat.
 Kensington Maltsters and Starch Co., Melbourne.—Maltsters. Starch.
 Kidd, A., Glenlyon.—Flour.
 Kyneton Agricultural Association.—Wheat. Oats. Barley.

Kyneton Flour Mill Co.—Wheat. Flour.
 Lal Lal Flour Mills, Rupanyup.—Wheat
 Lawrence, J., Baywood.—Oats
 Lewis & Whitty, Fitzroy.—Starch
 Lincoln, A., Melbourne.—Sheaf of cereals. Named grain scots
 Lowan Shire Council.—Oats.
 Lugin, P., Highbury.—Macaroni, vermicelli.
 McConnell, J., Northcote.—Barley. Oats.
 McDonald, J., Colman.—Starch. Oats. Wheat.
 McKenzie, J. F., & Co., Melbourne.—Pearl barley, ground oatmeal, maize meal, pearl-meal rice
 Malcolm, J., & Co., East Charlton.—Flour.
 Malcolm, J., & Co., St. Arnaud.—Flour
 Maxwell, D., Lismore.—Wheat
 Minchen, L.—Short sandy oats
 Mission Station, Gippsland.—Arrowroot
 Mitchell, P., Rouseby.—Barley
 Monra Agricultural Society.—Oats
 Moncrieff, J., Tabrik.—Purple-grass wheat.
 Moran, J., Koro.—Tatarian oats.
 Murray Valley Flour Mills.—Flour
 Nicholas, B. U., & Co., Ballarat.—Vegetable and agricultural scots
 Parsons Bros. & Co., Melbourne.—Oatmeal.
 Ginals. Pearl and patent barley. Field-seed rice.
 Perrin, W. jun., Richmond.—Victorian-made malt, from different sorts of barley

Player & Kitchen.—Wheat, oats, beans
 Polson, A., Anist.—Wheat. Oats. Beans.
 Richardson, S., & Sons, Ballarat.—Arrowroot.
 Rowbottom, E. S., Richmond.—Barley. Malt.
 Schmitt, F., Berwick.—Barley
 Schmitt, L., Berwick.—Oats. Tares.
 Schultz, C., Mount Bolton.—Oats in sheaf
 Smeaton, Spring Hill, & Bullerook Agricultural Association, Smeaton.—Barley, wheat, maize, peas, oats, buckwheat
 Smith, C., & Co., Melbourne.—Malt. Barley.
 Smith, C., Ballarat.—Wheat. Barley. Oats. Ryegrass. Peas
 Smith, J., Bunbury East.—Wheat.
 St. Arnaud Pastoral & Agricultural Society, St. Arnaud.—Wheat and oats in sheaf
 Stanton & Hood, Colliery and.—Malt
 Students' Model Farm, Cashel.—Straw-rick
 Swallow & Ariell, Melbourne.—Flour. A First Order of Merit (Silver Medal) was awarded for this exhibit.
 Swallow & Son, Shepparton.—Flour
 Taylor, R. S., Strathmore.—Wheat
 Throssell & Tankard, South Yarra.—Barley.
 Pale, amber, brown, and black malt, made from Victorian barley.
 Tickner, A. M., Rarivena.—Canary-seed
 Tinning, J., Tallawange.—Flour
 Vaughan, C., & Co., Ballarat.—Wheat. Barley. Oats. Peas. Ryegrass seed.
 Warrenheip Distillery, Ballarat.—Wheat. Malt. Rye
 Westcott, T., Catamual.—Wheat
 White, W. E.—Flour
 Wimmera Flour Mill Co., Stawell.—Tuscan wheat. Flour
 Wroe Bros., Avoca.—Flour
 Wright, R., Ballarat.—Grain. Oats and wheat in sheaf.
 Yeaman, A., Pannochmawra.—Wheat. Purple-straw wheat

Class 68.—Bread and Pastry.

Guest, T. B., & Co., Melbourne.—Machine and hand-made fancy biscuits
 Newman, O. T., Fitzroy.—Cakes. Biscuits
 Swallow & Ariell, Melbourne.—Biscuits and cakes. Messrs Swallow and Ariell received the following awards for this exhibit:—First Award (Silver Medal) for Novelty and Variety in Biscuits, First Award (Silver Medal) for Cakes and Wedding Cakes; and First Award (Silver Medal) for Excellence of Quality of Biscuits. They were also recommended by Jury Section XXXI for the Emperor of Germany's Prize for the General Excellence of their Biscuits and Flour.
 Vine, R., Hocham.—Wedding-cakes
 Walker, J. H., & Son, Melbourne.—Biscuits.

Class 60.—Fatty Substances used as Food Milk and Eggs.

Adams, J. S., Alphonston.—Olive oil.
 Bartram, J., & Sons, Melbourne.—Cheese.
 Butter.
 Bird, G., Sale.—Cheese.
 Burke, M., Woodstock-on-London.—Cheese.
 Foy, F., Lancashire.—Cheese.
 Grimes, S., & Co., Brunswick.—Lard.
 McDonald, M., Berwick.—Cheese.
 Mitchell, P., Kenney.—Cheese.
 O'Neil & Davies, Gippaland.—Cheese, Siltou and others.
 Warren, J., Melbourne.—Butter and cheese.
 Watson & Patterson, Melbourne.—Cheese.
 Wilson, W., Lancashire.—Cheese.

Class 70.—Meat and Fish.

Bartram, J., & Sons, Melbourne.—Bacon.
 Danelli, S., Brunswick.—Italian sausages.
 Grimes, S., & Co., Brunswick.—Hams. Bacon.
 Sausages. Cured provisions.
 Hutton, J. C., Melbourne.—Bacon. Hams. Ovens.
 Kierath, C., Indigo.—Hams, bacon.
 Melbourne Ham & Bacon Curing Co., Melbourne.—Hams and bacon.
 Melbourne Meat Preserving Co., Melbourne.—Preserved meats and soups.
 Red Cross Preserving Co., South Yarra.—Bottled meats. Anchovy and bloaters paste.
 Warren, J., Melbourne.—Bacon.
 Watson & Patterson, Melbourne.—Bacon and hams, sausages, lard, &c. Turtle soup.
 Western Meat Preserving Co., Limited, Colne.—Preserved meats, game, soups, &c.

Class 71.—Vegetables and Fruit.

Bennett, H., Ballarat.—Potatoes.
 Cochran, E. & J., Gippaland.—Hops.
 Dods, R., Macon.—Muscatel leaves.
 Ferguson, J., Melbourne.—Gippaland hops.
 Hanley, J., Oxley.—Hops.
 Henty, J., & Co., Melbourne.—Hops.
 Laurens, J., Dayleford.—Peas. Potatoes.
 Lewis, W. E., Avenel.—Zante currants.
 McConnell, J., Rockford.—Peas.
 Madresfield Plantation, Bainsdale.—Hops.
 Mellon, F., Dunolly.—Fruits preserved in brandy, fruits preserved in water.
 Oldmeadow, T., Dunolly.—Fruits preserved in water. Jams.
 Red Cross Preserving Co., South Yarra.—Bottled fruits. Tomatoes. Preserved peas (See advt facing page vii).
 This Company received the following First Awards for this exhibit:—

Tart Fruits	Silver Medal.
Cummary and Dotted Fruits	Silver Medal.
Tomatoes in Tins	Bronze Medal.
" in Bottles	Bronze Medal.

Redenbach, P., Gippaland.—Hops.
 Slater, W. H., Nanawading.—Dried fruits.
 Smith, C., & Co., Melbourne.—Hops.
 Smith, J., Northcote.—Sugar beet.
 Warrnambool Borough Council, Warrnambool.—Agricultural products.

Class 72.—Condiments and Stimulants, Sugar and Confectionery.

Adams, S., Richmond.—Confectionery.
 Barrett, W., Ballarat.—Worcestershire sauce.
 Browne, M., Windor.—Tomato sauce.
 Brown, W. P., Melbourne.—Tomato sauce. Conserved tomatoes. Gaudin sauce.
 Bush, J., South Yarra.—Tomato sauce.
 Cane, H., Melbourne.—Malt. Vinegar.
 Copper, E., & Co., Victoria.—Baking-powder.
 Yeast-powder. Vinegar, &c.
 Compton, H., Cheltenham.—Tomato sauce.
 Cooper, A., Brighton.—Syrups and liguors.
 Cunliff & Patterson, Fitzroy.—Jams. Jellies. Marmalade. Candied peels.
 Cunliff, M. L., Fitzroy.—Jellies. Meat. Fruit. Plums dried as prunes.

Dickson, J., & Co., Melbourne.—Vinegar.

Dillon & Burrows, Melbourne.—General and Fancy Confectionery, Chocolate Confectionery, Candied Peels, Preserved Fruits, &c.

This Firm received the following awards for their exhibits:—

Chocolate Confectionery, First Order of Merit (Silver Medal);
Fancy Confectionery, First Order of Merit (Silver Medal);
Candied Peels, First Order of Merit (Silver Medal);
Sugar-candy, the only First Order of Merit (Silver Medal);
Jujubes, Second Order of Merit;
Crystallised Fruit, Second Order of Merit;
Ordinary Confectionery, Second Order of Merit.

Dodds, R., Marong.—Oil of sweet almonds.

Guthell, H., & Co., Prahran.—Vinegar in casks and bottles.

Harper, R., & Co., Melbourne.—Coffee. Spices. Mustard. Chicory.

Hogg, T., Lyalvale.—Jams, jellies.

Kierath, C., Indigo.—Tomato sauce and chutney.

Kruse, J., Fitzroy.—Sauce piquante.

Lavers, A. R., Melbourne.—Quatre powder.

Lewis & Whitty, Fitzroy.—Baking-powder.

Custard-powder. Egg-powder. Curry-powder.

Lezza, S., Carlton.—Fancy confectionery.

Longmore, F., Melbourne.—Compound jam.

M'Clellan, E., & Sons, Bridgewater-on-London.—Liquors.

McDonald, M., Melbourne.—Liquors, soda-water, cordials, &c. Manufactory 18 Franklin-street, West Melbourne. Mr. McDonald also manufactures the new celebrated Hop Champagne, of which he is the sole inventor and patentee. Awarded Six Orders of Merit at the Melbourne International Exhibition, 1880, including one Silver Medal (the only one awarded in Australia to a Colonial Manufacturer) and two Bronze Medals, for Marmalade, Ginger Wine, Ginger Brandy, Curacao, Orange Wine, and Raspberry Vinegar.

Buchanan, C., Omdut.—Cabernet. Mataro. Laquer wine.

Burne, J., Strathfield.—Ale. Hermitage. Chasselas.

Caldwell & Co., Melbourne.—Wine.

Castella, De, & Rowan, Lyndale.—Riesling. White Hermitage. Chasselas. Tokay. Brandy.

Caughey, A. & R., Melbourne.—Wine.

Chateau Tahbilk.—Hermitage. Cabernet. Ugni Blanc. Riesling. Port. Pedro Ximenes. Muscat, and Verdinho.

Cohn Bros., Sandhurst.—Ale, in bulk.

Cooper, A., Brighton.—Cordials. Aerated waters.

Coyle, P., Melbourne.—Ale and porter, in bulk and bottled.

Cripps, F., Heppburn.—Hermitage.

Daly, H. D., Dunolly.—Hermitage. Chasselas.

Daniel, C., Bulla.—Narbonne wine.

Davies, J., Melbourne.—Hook. Ularot. Hermitage. Ngaruona.

Devie, R., Sunbury.—Hermitage. Pinenau.

Dewbarn, J., & Sons.—Cordials. Aerated waters.

Dickson, J., & Co., Melbourne.—Cordials. British wines.

Dixon, P. G., West Melbourne.—Cordials. Aerated waters. (See advt. page xviii.)

For this Exhibit Mr. Dixon was awarded the following Prizes:—First Order of Merit for Peppermint; First Order of Merit for Raspberry; First Order of Merit for Potass Water; First Order of Merit for Lithia Water; First Order of Merit for Soda Water; and First Order of Merit for Magnesia Water—in all, SIX BRONZE MEDALS.

Dunns, P., Belconnen.—Stout and ale, bottled.

Badie, J., Sunbury.—Hermitage.

Bigil, E., Talak.—Hermitage.

Farrell, A. sen., Rungby.—Riesling. Hermitage.

Faux, P., Dunolly.—Hermitage. Riesling.

Fehring, J., Yarra Trunk.—Black currant and gooseberry wine.

Fischer, A., Sandhurst.—Verdinho. Riesling. Hermitage. Frontignan.

Ford, T., Yallicho.—Cabernet. Anenot. Hermitage. Sauterne. Riesling. Shiraz.

Fitzgerald & Newman, Castlemaine.—Ale, in bulk.

Fitzgerald & Perrin, Emerald Hill.—Ale, in bulk.

Fox, A. W., Sandhurst.—Hermitage. Cabernet. Verdinho. Madras. Muscat.

Fuller, C., Inverloch.—Pinenau. Pinenau Grés.

Fulton, B. G., Erbusa.—Verdinho. Riesling. Pedro Ximenes. Cabernet. Hermitage. Chasselas. Burgundy, &c.

Gemmell, J., Woorangee.—Sweet and dry Shiraz.

Giovannoni, D., Heppburn.—Hermitage.

Gooch, H. M., Melbourne.—Wine.

Gordon, C. & Son, Adelaide.—Hermitage. Cabernet. Verdinho.

Greene, S. & Co., Fitzroy.—Cordials.

Grafenhausen, W., Strathfield.—Ale. Cabernet. Hermitage. Mataro. Verdinho. Riesling. White Hermitage.

Grosse, F., Sandhurst.—Riesling. Madras. Tokay. Verdinho. Pedro Ximenes. Cabernet. Hermitage.

Hall, A., Williamstown.—Cordials.

Hanson, G., Warri Pond.—Chasselas. Hermitage.

Harris, J., Heidelberg.—Hermitage.

Hemmons, Laws & Co., Melbourne.—Cordials.

Hennolly & Co., Melbourne.—Ale, in bulk and bottled.

Hopper, T., Camdram.—Milk punch.

Hornby, W., & Co., Williamstown.—Ale, in bulk.

Houle, Mackay & Co., Melbourne.—Bitters.

Wines. Cordials.

Hunter, J., Ale, in bulk.

Jackson, T., Bottled ale and stout.

Johnston, J. S., Sunbury.—Hermitage and hook.

Jones, W., Woddenburn.—Hermitage.

Joake, A., Melbourne.—Wine.

Kahland, J., Sandhurst.—Cabernet. Burgundy. Hermitage. Verdinho. Riesling. Pinenau Blanc.

Chasselas. Blended wines.

Kitz, L., & Son, Melbourne.—Anenot. Riesling. Cabernet. Frontignan.

Kurrie, R., Sunbury.—Hermitage and Riesling.

Latham, B., Melbourne.—Ale. Porter. Stout. In bulk and bottled.

Licensed Victuallers' Brewery Co. Limited, Melbourne.—Ale, in bulk.

Loon, L., Warrilla.—Bottled Ale. Cordials. British wines. Aerated waters.

Logan, D., Rutherglen.—Shiraz. Pedro Ximenes. Riesling, and Tokay.

Lyon, G., Beechworth.—Ale and porter, in bulk and bottled. Cordials.

M'Bean, R., Benalla.—Muscat. Olmet. Shiraz. Malher. Muscat. Tokay.

M'Bride & Martin, Melbourne.—Ale and porter, in bulk and bottled.

McClean, E. & Sons, Bridgewater-on-Loddon.—Cordials. First wines.

M'Cracken & Co., Melbourne.—Beer and stout, in bulk and bottled.

McDonald, M., Melbourne.—Butt wines. Awarded First Order of Merit (Bronze Medal) for Ginger-wine and Ginger-brandy.

McDonald, W., Docker's Plains.—Tokay. Muscat. Verdinho. Port.

Macgregor, T., Melbourne.—Cordials. Bitters. Sassafras. Ginger-brandy.

Maclean, J., Penrith.—Hermitage, and white wines.

Macpherson, J., Melbourne.—Pinenau. Hermitage.

Marks, R., & Co., Mahon.—Beer, in bulk.

Martin, J. F., Brown's Plains.—Riesling. Hermitage. Muscat.

Martin, F. J., Melbourne.—Ale and porter, in bulk and bottled.

Mellon, F. Duquell.—Hermitage. Mafaro. Pedro Amos. Riesling. Muscat. Vordelho.
 Merle, J., Daylesford.—Sauvignon.
 Metzger, L. Struett.—Hermitage. Burgundy. Riesling. Muscat.
 Meyer, H. Sheppwash.—Madena. Riesling. Chasselas. Hermitage. Carinade.
 Moore, C. R., Daylesford.—Cordons.
 Mooney, J. & L., Ararat.—Hermitage and Chasselas.
 Morris, G. F., Brown's Plains.—Shiraz. Gamache. Tokay. Vordelho. Riesling. Burgundy.
 Mueller, A., Yackandandah.—Wine, red and white. Liqueur wine.
 Myring, J., Chaldernau.—Ale and porter.
 O'Brien, H. D., Duquell.—Hermitage. Chasselas.
 Pearce, J., Wahgunyah.—Wines.
 Perini, V., Heppah.—Hermitage. Pinot.
 Pin, J. B., Brighton.—Chasselas. Vin Chut.
 Pohl, C., St. Asaph.—Hermitage. Vordelho. Riesling.
 Prevot & Bilton, Carlton.—Cordons. Cherry brandy. Rum punch. Sarsaparilla. Bitters. Maraschino. Cordon. Aromatic waters.
 Pury, G. de, Yeringburg.—White Hermitage. Chasselas. Pinot. Bland.
 Ritchie Bros., Geelong.—Hermitage.
 Reau, C., Wahgunyah.—Shiraz, Cabnet, Hermitage, and Riesling.
 Schmidt, F., Heppah.—Riesling. Hermitage.
 Schroeder, E., Chaldernau.—Riesling. Chasselas. Burgundy. Carinade. Hermitage.
 Schwertkolt, A., Ingwood.—Shiraz. Peach wine. Mead wine.
 Scott, J., Wahgunyah.—Aromatic. Shiraz.
 Shaw, F., Geelong.—Hermitage. Riesling.
 Smith, G. S., Wahgunyah.—Riesling. Ancoret. Shiraz. Cabnet, &c.
 Smith, J., & S., Riddell's Creek.—Rhemm. Chasselas. L. S. Nuvawading.—Champagne. Carinade. Burgundy. Champagne (Ordone de Bonzie). Furo d'Australie, and other wines.
 Smith, T., Riddell's Creek.—Rhemm. Shiraz. Steane, J., & Co., Melbourne.—Bitters. Tonic. Cordons. Fruit wines. Sarsaparilla. Wines.
 Stokes, S., Richmond.—Cordons.
 Tagglof, F., Williamstown.—Bottled ale and porter. Lager beer.
 Treacy, J., Geelong.—Ale and stout, in bulk and bottled.
 Trunkhaus, A., Muckelford.—Hermitage. Riesling. Tokay.
 Tronette & Blampied, Great Western.—Chablis. Riesling. Burgundy, Hermitage, Chut, Sancerre, and Hock.
 Turner, J., & Co., Melbourne.—Whisky (Ford's Castle Blend), in bulk. Awarded First Order of Merit (Silver Medal) (See advt., page 1111).
 Victoria Brewery, Wangaratta.—Ale.
 Warrenhead Distillery, Ballarat.—Spirits of wine. Malt whisky. Geneva.
 Wilson, A. S., Ianthe.—Wines, red and white.
 Wood, J., & Son, Collingwood.—Ale, in bulk and bottled. Hotter stout. Cordons. Bitters. Schnapps.
Class 72.—Specimens of Farm Buildings and Agricultural Works.
 Alston, G., Bulla.—Hay rake. Models of haymaking machinery.
 Brown, E., Benalla.—Model of new sheep-washing apparatus.
 Flood, F., Melbourne.—Incubators. Artificial mothers.
 Fraser, A., Melbourne.—Grain-mill—to strip, crush, and discharge stones.
 Hall, A., Williamstown.—Patent bottle-works.
 Joyce, A., Maryborough.—Incubator.
 Lyon, C. H., Ballarat.—Model of sheep-wash. Model apparatus for shearing lay.
 McDonald, D., Colong.—Improved field elevator.
 McLean Bros. & Riggs, Melbourne.—Wine press.
 Miller, J., Melbourne.—Portable plug reservoirs.
 Murray, M. J., Brimswood.—Wine screen for winnowing.
 Parkes, W. H. E., Sandhurst.—Models of American patent automatic gate.

Pullingham, F., Melbourne.—Iron wire bins.
 Quinnivan, T., Coghill's Creek.—Patent hand-cutter and three-thing machine.
Victoria Rolling Mills, Melbourne.—Moulds. Pests for wire fencing. Standards for cattle enclosures.
 West, J. & B., Essendon.—Hay rake.
 Willis, W., & Co., Melbourne.—Squinting requisites.
 Wright & Edwards, Melbourne.—Sheep washing machine.
Class 75.—Conservatories and Horticultural Apparatus.
 Bauld, R., Sandridge.—Aquatium.
 Breslin, N., Melbourne.—Curvilinear room and window conservatories.
 Dower, J., Sandridge.—Aquatium. Fernery.
 Jones, J., Carlton.—Box of wire iron stand.
 Trembling, G., Geelong.—Model of greenhouse.

Class 76.—Flowers and Ornamental Plants.
 Cresswell, C. F., Melbourne.—Flower seeds.
 Gullfoyle, W. R., F.L.S., &c.—Carpological collection.
 Watt, D., Richmond.—Collection of ferns and tropical plants.

Class 78.—Fruit and Fruit Trees.
Department of Agriculture, Melbourne.—Fruits.

Class 79.—Seeds and Saplings of Forest Trees.
 Cresswell, C. F., Melbourne.—Tree and shrub seeds.
 Nicholls, R. U., Ballarat.—Seeds of forest trees.

Class 81.—Apparatus and Processes of the Art of Mining and Metallurgy.

Allen, J., Ballarat.—Model of safety unning cage.
 Anderson Lithographic Co.—Lithographer.
 Awarded First Order of Merit (Silver Medal) by Jury Section XIX, page 108 (See advt., page 1111).
 Bendigo Iron Works, Sandhurst.—Model of Seymour's patent safety cage. Seymour's patent can.
 Bland, R. H., Clunes.—Model of coke or gold, representing total from the Port Phillip and Colonial G. M. Co.'s mine.
 Bright Bros., Melbourne.—Phumbeo crucibles.
 Commissioners of Exhibition.—Gold trophy, representing gold raised in Victoria from 1851 to 30th June, 1880, 49,098,478 ozs, or about 1563 tons; value of £196,934,682.
 Conway, J. P., Ballarat.—Working model of horizontal engine and winding-gear, complete.
 Cottey, J. E., Melbourne.—Patent mining signals.
 Davidson, J., Ironbark.—Davidson's safety cage, as used in the Golden Gully United Co.'s mine.
 Fletcher, D., Beechworth.—Model of sluice-box.
 Ford, R. G., East Heathen.—Ford's patent pumping-engine, electric force for blasting, improved patent rock-boring machinery, &c.
 Glasson, T. H., Sandhurst.—Working model of the Victory and Pandora Co.'s machinery.
 Goynne, J., & Co., Epwara.—Stamp-gratings used for quartz crushing mills.
 Great Extended Hustler's Co.—Collection of miners' tools.
 Harvey, T., Yackandandah.—Metallic mining hose and coupling joint.
 Her Majesty's Mint (Melbourne Branch).—Models and apparatus illustrating the operations of minting, as carried out in this department.
 Hickman, J., Ballarat.—Complete set of mining tools.
 Hillman, J., Ballarat.—Denny and Roberts' patent pulper and amalgamating pans.
 Hope, A., Melbourne.—Patent double-action stone-breaking machine.
 Hopkins, J. R., Ballarat.—Horizontal engine and ten head of stamps, showing copper plates, bluelite tables.
 Horwood's Foundry, Sandhurst.—Working model of steam-hammer. Watt's patent disc. Forgings, &c.

Hughes & Harvey, Melbourne.—Oakanned non-mining buckets.

Knobel, G. A., Hotham.—Model of twin ventilators, and full-sized improved blast and exhaust fan.

Lal Lal Iron Co.—Iron ore and products.

Langlands Foundry Co., Melbourne.—Quartz-crushing battery and appliances.

Long Tunnel G. M. Co., Wallalla.—Samples, illustrating process of separation of gold from pyrites.

McKay, J., Ballarat.—Model of safety-cage.

Macintosh, H., Melbourne.—Woven wire and quartz grating, &c.

Mathieson, J., Melbourne.—Mining tools.

Matthews, W., Ballarat.—Model of patent safety-cage.

Millen, J., Sandhurst.—Model, in silver, of quartz-crushing plant, worked by electro-magnets.

Morgan, W., Melbourne.—Whim buckets.

Munro, D. & Co., Melbourne.—Winding, pumping, and quick-acting machinery. Published "Victory" patent safety mining cage.

Perry, J., Melbourne.—Mining pick-handles.

Pleasant Creek Cross Reef G. M. Co., Stawell.—Trophy of model nuggets of gold, representing yield from mine.

Rasche, W. C. R., Melbourne.—Patent dust-netting quartz battery, and model of same.

Sale Borough Council.—Section of Antean wall.

Sandhurst School of Mines.—

Gold trophy (pyramidal), representing gold raised on Sandhurst between 1851 and 1880.

Golded pots, representing yields of gold from various mines.

Full-sized representation of a saddle-roof.

Heady's "Challenge" ore feeder. Collection of mining models.

Seymour, J. H., Sandhurst.—Full-sized patent dust-netting ram, and models of various patents.

Stewart, A. A. & Co., Melbourne.—Fire-clay bricks.

Thomas, R., Sandhurst.—Model of winding and pumping engine, and crushing-battery.

Thompson, R., Wallalla.—Mine level register.

Trezie, H., Sandhurst.—Model of Davidson's safety-cage.

Wayman & Co., Stawell.—Safety mining-cage.

White, D., Stawell.—Model of safety-cage and appliances for working in mining shafts.

Wright & Edwards, Melbourne.—Australian patent water-sucker. Took for extracting coral. Awarded First Order of Merit (Silver Medal) for the Australian Water-Sucker by Jury Session XXVIII, page 128 (see advt., page xvii).

Young, P., Melbourne.—Strong wire-work, for screening ore.

Class 82.—Mining and Metallurgy.

Abel, A. T., Ballarat.—Collection of minerals.

All Nations Reef, Ballarat.—Auriferous quartz.

Altman, E. A., Melbourne.—Models in oxidized silver.

Anderson Bros., Maryborough.—Auriferous quartz.

Anderson, Capt.—White sand, Waterloo Bay.

Ararat Shire Council.—Building stone.

Bailey, J. F., Melbourne.—Fossils.

Band of Hope & Alton Consols G. M. Co., Ballarat.—Quartz specimens.

Bank of Australasia.—Gold specimens.

Barry, J., Maryborough.—Auriferous cement and magnesian cements, from Maryborough.

Beechworth Committee.—Minerals, auriferous quartz, &c.

Bentley, C., Melbourne.—Electroplated work and stampings.

Berry, H., Melbourne.—Salt, in blocks and bags, from Lake Candore, near Colles.

Betts & Walker, Sandhurst.—Calc-spar occurring in "lava streaks" or dykes.

Black Horse United G. M. Co., Egeston.—Auriferous quartz. Amalgam, reworked and smelted gold.

Bland, R. H., Clunes.—Mineral specimens.

Blight, J., Mount Alexander Quarries.—Granite with copper pyrites and molybdenite. Cules of polished granite.

Bombay Gold & Antimony Co., Heathcote.—Mass of salubrit, 4 cwt., with regulus, fine oxide, magnesite.

Boulter, J., Ararat.—Salt.

Brache, J., Northcote.—Manganese and cobalt ore, from near Wallalla.

Bright Bros. & Co., Melbourne.—Antimony—"Sals" and "Regulus."

Bristol Hill G. M. Co., Maryborough District.—Auriferous quartz, from 600-ft level.

Butler's Reef Co., Heathcote.—Gold specimens.

Carlisle & North Garden Co., Sandhurst.—Auriferous quartz. Mammillated sandstone and pyrites.

Carter, G. D., M. P., Melbourne.—Lignite, from Cooroover.

Chapman & Edwards, Sandhurst.—Samples, illustrating pyrites roasting.

Chapman, C. W., Sandhurst.—"Lava streak," with olivine in large masses.

Clark, J., Stawell.—Quartz, found in drift.

Clarke, S. H., Fremantle.—Quartz with gold, pyrites, and galena. English and Austrian G. M. Co.

Cleland, J., Phillip Island.—Coal from Western Port. Coal Co.'s mine at Kileunda.

Cock, J., Sandhurst.—Quartz crystals.

Cole, S. G., Victoria Reef, Sandhurst.—Quartz crystals.

Connelly, T. J., Sandhurst.—Twine. Copper-wire.

Connor, J. H., Jun., Geelong.—Minerals.

Corrie, C. H., Eaglehawk.—Secondary pyrites on quartz.

Cresswell, Rev. A. W., Camberwell.—Fossils.

Crook & Busset, Melbourne.—Wine-work clothes, netting, &c. Domestic articles in wine work.

Crystalline Reef, Maryborough.—Gold-bearing clung; quartz crystals.

Cutten, W. C., Sale.—Rough, polished, and mounted stones (radio calcites).

Dangerfield & Co.—Iron castings.

Danks, J., Melbourne.—Electroplating and gilding in gold, silver, copper, and nickel.

Davidson, H., Beechworth.—Auriferous quartz, minerals.

Davidson, G., Melbourne.—Jells.

Dixon, W., Anderson's Creek.—Specimens of thulio.

Draper, Dyer & Co., Melbourne.—Nickel and electroplated goods.

Duggan, D. J., Tarnagulla.—Large crystal of smoky quartz.

Duncan, R. D., Melbourne.—Victorian minerals.

Dyring, W., Tullahoma.—Tin ores, smelted tin.

Eaglehawk Union Co., Tarnagulla.—Metamorphic schist, from crosscut at 1200 feet. Flava rock.

Egerton G. M. Co., Egeston.—Auriferous quartz.

Emmett & Shawcross, Melbourne.—Ornamental, faceted, and embossed boxes, tin, and copper goods.

Fletcher, J., Hobart.—Minerals.

Fletcher D., Beechworth.—Carnagom, cut and mounted.

Fone's Reef G. M. Co., Dunke's Flat.—Auriferous quartz, with copper, zinc, galena, and pyrites.

Fraser, R., Castlemaine.—"Shickenside" of quartz with gold. Quartz with gold and galena. From "Eureka Reef."

German Reef Tribute Co., Maldon.—Auriferous quartz and mineral pyrites. Roasted quartz.

Gilbert, T., Clunes.—Auriferous quartz, raw pyrites, and pyrite refuse, oxide of manganese, &c.

Great Southern Co., Great Extended Hustler's.—Auriferous quartz.

Greer & Ashburner, Melbourne.—Wire cloth. Wire fire-slacks.

Gregory, J. W., Wandsworth.—Quartz.

Hale, T., Daylesford.—Auriferous quartz and wash-dirt; fossil wood, &c.

Hamilton, G. W. N., Melbourne.—Electroplated goods.

Harris & Hollow, Bethanga.—Three blocks copper ore from "Pride of Bethanga" mine.

- Holloway, H. W., Melbourne.—Specimens of galvano plastic art, electrotypes, &c.
- Holstein, G., Light.—Amethysts quartz and washdirt, from Froehburg, Bricks, &c.
- Howes, D. J., Melbourne.—Coal, from Mosquito Creek, Mo.
- Howitt, W., jun., Melbourne.—Smiths' work.
- Hughes & Harvey, Melbourne.—Japanned and other tinware.
- Hughes & Preston, Collingwood.—Star anti-mony, pig lead, and ores.
- Hunter, J., Stawell.—Blocks of quartz, from G. N. Co.
- Jessop, J. P., Yackandandah.—Drift and cement.
- Jewell, E. B., Birdgewater-on-London.—Gypsum.
- Kennedy, J. R., Gaffney's Creek.—Amethyst quartz.
- Kirkwood, H., Eaglehawk.—Samples, illustrating the treatment of gold-quartz.
- Kissane, W. K., Melbourne.—Coal, from Cape Paterson.
- Kitchingman, E. L., Bethanga.—Mineral specimens, &c.
- Knobel, G. A., Hotham.—Antimony ore, with gold, from Ardena mine, near Minton.
- Lal Lal Iron Co., Lal Lal.—Iron ore, pig iron, castings, &c.
- Lane, Zelina, Malmesbury.—Washdirt, secondary pyrites, cement, &c.
- Lavater, G. T. A., Melbourne.—Coal, from Narracan Creek.
- Lee, Mrs.—Dendrites, from Grampians tunnel.
- Leonard, S. S., Cobden.—Burnt limestones, slacked and unslackd.
- Lockridge, D., Melbourne.—Electrotypes.
- Lock, Messrs., Malden.—Amethyst quartz.
- McIlwraith, Melbourne.—Blocks of Lead Shot lead, Lead, congo, and tin pipe. Pig lead, &c.
- McMasters, R. J., Malmesbury.—Washdirt, with minerals and gems found in it.
- McMullan, A., Carlton.—Hardware.
- MacKenzie, L., Anshut.—Infusorial earth.
- Malmesbury Confluence G. M. Co.—Washdirt, &c.
- Mansfield, C. W. J., Bethanga.—Ores from Pride of Bethanga, Gift, and Polson's claims, and their products.
- Marks, J., Melbourne.—Gilding and electroplating.
- Marks, M., & Co., Melbourne.—Electroplated ware.
- Masey, J. W., Malden.—Arsenical pyrites.
- Mayes, J., Stawell.—Elvan dykestone.
- Meins' Freehold G. M. Co., Guldfield.—Block of washdirt.
- Mines Department of.—Rocks, Fossils, Minerals. Coal. Building stone. Cores from bores.
- Munday, J., Cooper's Creek.—Collection of ore, "country" rock, and products of the mine.
- National Bank of Australasia.—Gold specimens.
- New Chum Consolidated Co., Sandhurst.—Amethysts quartz.
- New Era G. M. Co., Fryer's Creek.—Amethysts quartz, with pyrites and zinc blende. Quartz crystals.
- New Good Hope Co., Grant.—Amethysts quartz.
- Nicholas, E. B., Castlemaine.—Quartz crystals, amethysts quartz, and cement. Rocks, &c.
- Nicholls, C. F., Melbourne.—Quartz, coal, tin, &c.
- Normanby G. M. Co., Dargo.—Quartz specimens.
- North Shandooah G. M. Co., Sandhurst.—Amethysts quartz.
- Oakley, G. N., Melbourne.—Molybdenite in granite, from near Y. Y.
- Ord, M., Stawell (for local Exhibitors).—Mineral specimens, &c.
- Parker, W., Wallalla.—Diorites and other rocks.
- Parkins' Reef Tribute Co., Malden.—Amethysts quartz, with pyrites and mixed sulphides.
- Paton, E. S. Row.—Iron monumental tablets.
- Peak, T. P.—L. yielded g. pyrite, from Jung Jung.
- Pearson, W., Melbourne.—Amethysts quartz, from Long Tunnel Gold Mining Co., Wallalla; pyrites.
- Penal Establishment, Colong.—Tinware. Furniture castings.
- Pigdon, J., Melbourne.—Flagging sawn out of Lethbridge stone, for Parliament House.
- Queen G. M. Co., Ballarat.—Case of reef showing the number of iron and indicator slabs.
- Queen's Birthday G. Co., Dunolly.—Golden quartz.
- Radcliffe, W., Buckland.—Washdirt from Buckland River.
- Radford, W. J., Melbourne.—Zincware iron tubes.
- Rea, M. B., Eldorado.—Tin furnace droppings.
- Ristoni Freehold G. M. Co., Kingston.—Alluvial washdirt, with gold.
- Roller, G., Daylesford.—Amethysts quartz, magneesian concretions.
- Rocales, H., Wallalla.—Specimens illustrating his patent process for extracting gold from pyrites without roasting, models, &c.
- Rowe Bros., Fryer's.—Quartz crystals. Quartz with gold and galena; gold. Conglomerate of secondary pyrites and quartz.
- Rowley, W. & G., Melbourne.—Metallic bird-case.
- Royal Saxon Co., Fryer's Creek.—Quartz with coarse gold, and "country" rock from hanging and foot walls of reef.
- Schlossman, S., Melbourne.—Model of the "Vis count Castlebury" nugget.
- Sandhurst School of Mines.—Antimony ore (substitute with cerussite), from Wiroo. Pyrites, apatites, auriferous quartz, &c.
- Scott, R., Melbourne.—Infusorial earth.
- Selle, C. H., Carlton.—Fester goods, candle-moulds, non-corroding taps, &c.
- Shaw & Co., Melbourne.—Tinned, japanned, and galvanised ware.
- Sherring, Mrs., Dry Creek.—Cut gems.
- Sloan, J. H., Alexandria.—Cobalt ore.
- Smith, S. W., Footscray.—Dendrites.
- Smith, T. Y., Stawell.—Mucousia n. n. from Mount Wootak, Grampians.
- St. Catherine's Reef United Co.—Fine slabs, with dendrites.
- Tasmanian Manufacturing Co., Melbourne.—Castings. Raw material and prepared.
- Technological Museum, Melbourne.—Trophy of the late Mrs. Zoolia, "Phaenolite" and "Phillipite," from the corporation quarries, &c.
- Telegraph Extended G. M. Co., Maryborough.—Amethysts quartz, with pyrites and galena, with hanging and foot wall.
- Temperance G. M. Co., Ballarat.—Amethysts quartz.
- Thomson, R., Wallalla.—Amethysts quartz, diorite, slate quartz, calcite, talings, and pyrites.
- Union G. M. Co., Anshut.—Amethysts quartz, with pyrites and zinc blende.
- Union G. M. Co., Tribute, Mount Gresnock.—Washdirt and reef.
- Victoria Iron Rolling Co., Melbourne.—Rail-iron. Iron for special purposes. Angle-iron.
- Ridley iron Strippers-tooth iron.
- Victorian Compressed Fuel Co., Geelong.—Hunter's patent compressed fuel. Lignite.
- Virtue, P., jun., Daylesford.—Washdirt from Perseverance Co., Majocas.
- Vulcan Foundry, Geelong.—Wire strainer.
- Walker, Mrs., Stawell.—Dendrites, from Cosmo-pubian reef, Stawell.
- Washington Freehold G. M. Co., Ballarat.—Amethysts quartz.
- Western Port Coal Mining Co. Limited, Melbourne.—Coal.
- White, D., Stawell.—Cores taken out by the diamond drill, and showing sections of the bore.
- Quartz. Tailings. Pyrites, &c.
- White, W. W., Castlemaine.—Pot-holed stone.
- Willis, W. & Co., Melbourne.—Wire strainer.
- Winterbottom & Stephens, Sandhurst.—Dendritic markings on slate, from Caraballen reef.
- Working Miners' G. M. Co., Homebush.—Zinc washdirt, with model of 80-oz. nugget.
- Wrath, H., Hamersley.—Minerals, rocks, fossils, amethysts quartz, &c.
- Yates, G., Castlemaine.—Oxide of iron, crude arsenic. Arsenic and sulphuric acid.
- Young, P., Melbourne.—Arches, arbours, flower-stands, fireguards, in wire-work.

LADIES' COURT.

Aarons, Miss.—Oil painting on satin.
 Aclair, E. M., Richmond.—Fruit tables.
 Addis, Miss, South Yarra.—Point lace embroidery on satin.
 Anderson, A., Belfast.—Cuttlefish flowers.
 Anderson, C., Morney Point.—Feather flowers.
 Armistead, A. E., Hotham.—Wool flowers.
 Aspmall, P.—Sale of the Exhibition.
 Austin, Mrs.—Heathrug.
 Baker, F. A., Windsor.—Silk and paper flowers.
 Painted hand screens.
 Barclay, G. M., Ballarat.—Wool-work shippers.
 Barry, I. H., Coburg.—Wax flowers.
 Bassett, E., Richmond.—Lambeck lace, velvet cushion, embroidered with Irish salmon stalks, velvet cushion, &c.
 Batters, E. A., Prahua.—Wool work picture.
 Bayden, C. A.—Wool-work fire screen.
 Beale, Miss, Greenborough.—Piece of best-embroidery taken from Napoleon's death-bed at St. Helena.
 Bedford, Miss, Geelong.—Flowers embroidered on satin.
 Bell, Mrs. L. W., St. Kilda.—Hand-painted table.
 Bibbey, B., Richmond.—Covers, in tape work.
 Bice, H., Richmond.—Children's wooden boots.
 Boobier, N., Sandhurst.—Paintings on silk, &c.
 Borland, M., Maryborough.—Picture in leather-work frame, stuffed birds and flying squirrels.
 Boyd, S. F., St. Kilda.—Vase of flowers.
 Bragg, M. J., Carlton.—Cross, in imitation Persian miniature.
 Bray, E. A., St. Kilda.—Articles made of rock-union beads.
 Brearley, J. L., Kew.—Embroidery on crewel canvas, for cushion and table.
 Bride, A., Hawthorn.—Silk patchwork cushion.
 Broadbent, I., Melbourne.—Child's dress. Lady's dress.
 Brooker, G., sen., Collingwood.—Cuttlefish flowers.
 Brookman, M. R., Sandhurst.—Painted groups of flowers. Point lace.
 Brown, Miss E. A., Balaklava.—Imitation old Venetian point lace.
 Bruce, M. A., Windsor.—Crochet antimacassar, and wool-work cushion.
 Bryer, K., Emerald Hill.—Dolls' millinery.
 Bull, Mrs. G., Melbourne.—Wool-work chair.
 Burton, Miss, Melbourne.—Ottoman and antimacassar.
 Burton, I. A., Melbourne.—Fancy-work made in the school.
 Caldwell, E., Geelong.—Fancy-work in perforated cardboard.
 Chapman, J., Colac.—Hacelots, rings, crosses, &c., in hart-work.
 Clarke, Master.—Carving on wood.
 Clarkson, E., Fitzroy.—Wool flowers.
 Clarkson, J., Fitzroy.—Wool flowers.
 Coates, A. C., South Yarra.—Fret-work bracket and frames.
 Cocking, J., Kew.—Splash work table. Venetian point-lace handkerchief.
 Cole, C., Geelong.—Flowers painted on silk.
 Cooper, E. S., Fitzroy.—Embroidered cushion and fender-stool. Fern-work vase-case.
 Cruikshank, F. & B., Sandhurst.—Fancy work, painting on silk, head-work, &c.
 Davison, J. A., Woodend.—Fringing, caps, and bugle collar.
 Dawbin, Mrs. T.—Needle-work and wool-work pictures.
 De Grandet, Mrs., Ararat.—Hill flowers.
 Denham, Miss.—Painted scenes and cushion.
 Dunselow, Miss, Richmond.—Cane whatnot.
 Doherty, E. J., St. Kilda.—Wax flowers. Leather-work brackets. Darned net table-cover.
 Douglass, Mrs. A., Geelong.—Skeleton leaves.
 Ebley, M., Castlemaine.—Knitted quilt.
 Esmond, G. M., Ballarat.—Wax, lace, and paper flowers. Wool antimacassar.
 Esmond, S., Ballarat.—Lace, silk embroidery.
 Finley, A. & E., Kew.—Embroidery in silk. Doll.
 Fisher, A., Geelong.—Fret-work.

Fisher, S. A., Geelong.—Fancy work in satin.

Milton, Bradley & Co., Springfield.—Massachusetts—Industrial toys and amusements.
Philadelphia Novelty Co., Philadelphia.—Novelties, &c.

Class 43.—Products of the Cultivation of Forests and of the Trades appertaining thereto.

Sinning, A., Yosemite.—Specimens of the woods of the Yosemite Valley.

Class 44.—Products of Hunting, Shooting, Fishing, and Spontaneous Products. Machines and Instruments connected therewith.

Davidson Rubber Co., Boston.—Rubber goods.
Esna Rubber Co., Boston.—Rubber goods.
Gutta-percha & Rubber Manufacturing Co., New York.—Rubber belting, &c.
Harris, A. M., & Co., New York.—Machinery oils.
New Haven Fishhook Co., New Haven.—Fish-hooks.

Class 45.—Agricultural Products, not used for Food.

Allen & Ginter, Richmond.—Tobacco.
Cameron, W., & Brother, Petersburg, and Cameron, A. & Co., Richmond.—Manufactured and leaf tobacco.
Gail & A. R., Baltimore.—Manufactured tobacco.
Kimball, W. S., & Co., Rochester.—Vanity Fair smoking tobacco and cigarettes.
Williams, T. C., & Co., Richmond.—Manufactured tobacco.

Class 46.—Chemical and Pharmaceutical Products.

Barclay & Co.—Medical specialties.
Brown, B. F., & Co., Boston.—Blackings and dyes for leather.
Brown, F. K., Philadelphia.—Extract of Jamaica ginger.
Burnett, J., & Co., Boston, Massachusetts.—Peruvian extracts, animal, essence of ginger.
Candee, The L., & Co., New Haven.—Rubber boots and shoes.
Carniola Chemical Works, Anthony Puz, Louis Island.—Cosmoline (toilet vinegar). Various chemical products.
Cheney & Myrick, Boston.—Botanic medicines.

Gill, T., New York City.—Soap (boars).
Green, C. G., Woodbury.—Machines.
Hauthaway, C. L., & Sons, Boston.—Leather
dressing, blacking, and perfumery goods.
Miller, F., & Sons, New York City.—Leather
dressing, blackings, harness oils, &c.
Pacific Rubber Paint Co., San Francisco.—
Rubber paint, ready mixed.
Pense, F. S., Buffalo.—Lubricating and illuminating
oil.
Philadelphia College of Pharmacy, Phila-
delphia.—Drugs.
Schreffel, W. H., & Co., New York.—Pharma-
ceutical preparations, fluid extracts, essences, syrups,
soluble pills and granules.
Seabury & Johnson, New York.—Pharmaceutical
preparations.
Valentine & Co., New York City.—Vanish
warmer.
Warner, W. R., & Co., Philadelphia.—Drugs and
pills.

Class 48.—Leather and Skins.

Cummings, J., & Co., Boston.—Boot-upper
leathers.
Schultz, Southwick & Co., New York City.—
Hemlock and Union tanned leather.

Class 49.—Agricultural Implements and Processes used in the Cultivation of Fields and Forests.

Ames, Oliver & Son Corporation, North-
ampton.—Shovel, rakes.
Ayers & Co., San Francisco.—Iron horse-rake.
Chadborn & Caldwell Manufacturing Co.,
Newburgh.—Lawn-mowers.
"Charter Oak" Lawn-Mower Co., Hartford.
—"The Charter Oak" lawn-mower.
Deering, W., Chicago.—Reaper and string-binder.
Dickey, A. F., Rome.—Grinding-mills.
Dodge & Jackson, Dayton.—Lawn-rakes.
Eagle Co., Riverton.—Scythes.
Everett & Small, Boston.—Harrows, with jointed
universal disc.
Frick & Co., Waynesboro.—Reaper farm engine.
Higginson Manufacturing Corporation
Hingham.—Agricultural implements.
Holt, H., & Co., East Wilton.—Hay-knife.
Johnston Harvester Co., Bradford.—Agricul-
tural implements.
Lawson & Brenizer, Philadelphia.—Forks: hay,
manure, spading, slanes.
McCormick Harvesting Machine Co., The
Chicago.—Hayrack and self-binder; combined
reaper and mower; iron mower.
New York Plough Co., New York.—Lawn-
mower and cow-chaffer.
Osborne, D. M., & Co., Auburn.—Reaper and
binder, wire and string attachment available for
either.
Peabody, H. W., & Co., Boston.—Hay-rakes.
Pennsylvania Lawn-Mower Co., Philadelphia
—Lawn-mowers.
Perpoint, C., & Co., New Haven.—Folder-cutter.
Stephens and Woodin.—Thrashing machinery,
hay presses, &c.
Stoddard J. W., Dayton.—"Tiger" horse hay-rake.
Watt & Call, Richmond.—Ploughs.
Williams Brothers, Ithaca.—Agricultural ma-
chinery and portable engine.
Winsted Manufacturing Co., Winsted.—
Scythes and hay-rakes.
Wood, W. A., Housack Falls.—Self-binding har-
row, sweep-rake, reaper, two horse mower.

Class 50.—Apparatus and Processes used in Agricultural Works, and in Works for the Preparation of Food.

Barnard & Lea's Manufacturing Co.,
Moline.—Wheat separators and smutters.
Blatchley, Chas. G., Philadelphia.—Ice cream
freezers.
Enterprise Manufacturing Co., Philadelphia.
—General hardware.
Wilton Manufacturing Co., Wilton.—Meal an-
derers and anti-shunt rollers.

Class 52.—Machines and Apparatus in general.
Ballard, S., & Co., New York City.—Leather
belting.
Blake, George F., Manufacturing Co., Bos-
ton.—Steam pump.
Brooks, Ezra, Hartford.—The Hartford automatic
pump.
Colt's Patent Firearms Manufacturing Co.
—"The Bixby portable steam engine."
Coon, W. L., Wakefield.—Model of steam engine.
Douglas, W. & B., Middletown.—Pumps.
Fairbanks & Co., New York.—Weighing-
machines.
Gould Manufacturing Co., Seneca Falls.—
Pumps.
Howe Scale Co., The, Rutland.—Weighing-
machinery.
Hoyt, J. B., & Co., New York City.—Leather
belting.
Kewanee Manufacturing Co., New York City.
—Windmill.
Lovegrove & Co., Philadelphia.—Two horse
power engine.
Mason, V. W., & Co., Providence.—Friction-
clutch pulley.
National Drill & Compressor Co., New York
City.—Air compressor and rock drill.
Oscillating Pump Co., Philadelphia.—Force and
large pumps.
Page Belting Co., Concord.—Leather belting
Page Belting Co., Concord.—Manufacturers of
superior standard short-lap leather belting and lace
leather.
Ransley & Co., Seneca Falls.—Iron and brass hand
and power pumps.
Rowley & Horman, Williamsport.—Band-saws,
planer, &c.
Star Rubber Co., Trenton.—Rubber hose and
belting.
Turk Bros & Johnson, Chicago.—Hydraulic
engine.
Victor Sewing Machine Co., Middletown.—
Measurers, calipers, and clunks.

Class 53.—Machine Tools.

American Twist Drill Co., Newburgh.—
Knives, cutters, reamers, guides.
Bettie Creek Machinery Co.—Machinists' es-
sential lathe, with chuck and scroll saw and
moulding attachment, patent nutting-machine.
Bliss & Williams, Brooklyn.—Howe's patent
soldering-machine.
Collins & Co., Hartford.—Machinists, &c., and
other edge tools.
Douglas Axe Manufacturing Co., Boston.—
Axes, hatchets.
Fay, J. A., & Co., Cincinnati.—Automatic planing-
knife grinding machine, universal planer and jointer.
Frank Co., Buffalo.—Planer and matcher, poly
surface.
Horton & Son Co., The E., Windsor Locks.—
Chucks for lathes.
Ives, W. A., & Co., New Haven.—Augers, bits, &c.
Morso Twist Drill & Machine Co., The,
New Bedford.—Twist drills, taps, dies, &c.

Class 54.—Apparatus and Processes used in Spinning and Rope-making.

Silver Lake Co., Boston.—Braided cordage and
steam packing.

Class 55.—Apparatus and Processes used in Weaving.

Gilbert, C., & Co., Worcester.—Looms for weaving
Lamb Knitting Machine Manufacturing
Co., Cinncipin Falls.—Hand-knitting machines.

Class 56.—Apparatus and Processes for Sewing and for Making-up Clothing.

Davis Sewing-Machine Co., Watertown, New
York.—Sewing-machines.
Johnson, Clark & Co., New York City.—Sewing-
machines.
Supplee Needle Co., Philadelphia.—Needles for
sewing-machines.
Wheeler & Wilson Manufacturing Co.,
Bridgeport.—Sewing-machines.

Stephens & Woodin, San Francisco—Windmills, well-boring and rock-drilling machine. Awarded First Order of Merit (Silver Medal).

This is a Californian firm, but Mr Stephens has taken up his residence in Melbourne in order to establish an Australian business.

These machines are in extensive and successful operation in most of the American states. One valuable feature in these machines is that they will either bore in earth or drill in rock, and may be worked by either horse or steam power, the construction being ingeniously adapted to either motive power. By either means the drills and augers can be raised or lowered. No alteration is required in the gear, whichever power may be used. This is an advantage quite unique in machines of this description. The method of working is very simple. On referring to the illustration, it will be noticed that the auger (*B*)

is turned by the boring-wheel (*D*) by the means of the uprights (*EE*), and the cross-head (*F*), which engages the shaft or boring-rod (*A*). The cross-arm is provided with friction pulleys, which allow it to pass down freely as the auger goes down. When the auger is full it is quickly raised by pushing the lever (*H*) to the right, which throws the winch in gear. Several lengths of shaft can be raised in this way by an experienced well-borer in less time than it takes to describe the process. If it be found desirable to enlarge the bore, the runner (*C*) is fastened at the top of the auger, as shown in the engraving, the additional earth to cut out falling into the auger. When the auger is raised it is not necessary to remove it in order to empty it, as, the lift being hinged, all that is required is to swing it to one side, and knock a hook loose, the bottom then swings out, emptying the auger of its contents. By simply closing the hook again the auger is ready to be lowered once more. This is done by means of a foot-board. When the bed-rock is reached the work of a single hour is

sufficient to convert the machine into a perfect rock drill. In the case—very common in this country—of drift being encountered in sinking, by a simple but ingenious contrivance a forcing apparatus is connected with the auger, so that the operator is enabled to force the jaws down at the same time as the boring progresses—an auger being used inside the pipe. There is also an appliance for use in the case of alternate strata of hard clay and drift being met with. By means of it the hole can readily be rammed below the pipe large enough

to allow it to pass down freely. In this way pipes may be lowered to a very considerable depth, say from 300 feet to 400 feet. It will be seen, from the foregoing description, that this machine possesses peculiar advantages for use in this country; especially will it be valuable to those to whom sinking deep shafts for mining or boring for water are necessary undertakings.

All further information respecting this machine can be obtained at the office of the manufacturers, 69 Elizabeth-street, Melbourne.

Class 57.—Apparatus and Processes used in the Manufacture of Furniture and Objects for Dwellings.

Trump Brothers' Manufacturing Co., Watlington.—Scroll saws.

Class 58.—Apparatus and Processes used in Paper-making, Dyeing, and Printing.

Farbanks & Co., New York.—Improved type

writers

Gally, M., New York City.—A-liver-alp-printing press

Golding & Co., Boston.—Printing presses

Perkins' Institution & Massachusetts

School for Blind.—Type, for use of the blind

Remington, E., & Sons, Ithaca.—American type

writer.

Class 59.—Machines, Instruments, and Processes used in various Works

Boston Blower Co., The, Boston.—One forge-

blower

Osborne, C. S., & Co., Newark.—Tools for saddles

and harness-makers

Smith, W., Pittsburgh.—National gas works

Class 60.—Carriages and Wheelwrights' Work

Abbott Downing Co., The, Concord.—Buggies

and carriage wheels

North, O. B., & Co., New Haven.—Patent adjust-

able lugger top

Frag, J. F., Boston.—American buggy.

Class 61.—Harness and Saddlery.

Carnes, W. J., sen., New Britain.—Carnes' patent

seamless harness-buckles

Ell, J. R., & Co., Concord.—Carriage and buggy

harness.—General harness

Magee, N., New York.—Harness-makers' tools and

machinery.

North, O. B., & Co., New Haven.—Saddlery hard-

ware.

Class 62.—Railway Apparatus.

Farbanks & Co.—Railway sockets.

Ell, W., Boston.—Ticket punches

Tillotson, L. G., & Co., New York City.—Rail-

way supplies

Whitney, A., & Sons, Philadelphia.—Wheels for

railroads

Class 63.—Telegraphic Apparatus and Processes.

Bell, A. G., Washington.—Telephonic apparatus.

Western Electric Manufacturing Co., Chi-

cago and New York.—Telephones and telegraphic

instruments, and hotel annunciators.

Class 64.—Apparatus and Processes of Civil

Engineering, Public Works, and Architecture.

Miller, D. K., Lock Co., Philadelphia.—Padlocks.

Disston, H., & Sons, Philadelphia.—Crosscut

and circular saws, knives, files, &c.

Eagle Lock Co., Troyville.—Locks.

Hoopes & Townsend, Philadelphia.—Bolts, nuts,

and pivots.

Nashua Tull Co., The, Nashua.—White's patent

improved alarm money drawer.

Peck Bros. & Co., New Haven.—Funerals' goods

Russell & Erwin Manufacturing Co., New

Britain.—Locks and carpenters' tools.

Stanley Rule & Level Co., New Britain.—

Carpenters' tools, &c.

Trucker & Dorey, Indianapolis.—Money drawer.

Yale Lock Manufacturing Co., Stamford.—

Locks, &c.

Class 65.—Navigation and Life-saving.

De Grau, Aymar & Co., New York.—Oars, hand-

spikes, &c.

Page, E. W., & Son, New York City.—Oars,

sails, &c.

Class 66.—Fatty Substances used as Food. Milk

and Eggs.

Cooper, E., Santa Barbara.—Olive oil

Popham, W. H., New York.—Cheese and lard, in

tins

HELD AT THE

MELBOURNE INTERNATIONAL
EXHIBITION.

WOOL CATALOGUE.

DIVISION 1 B—MERINO WOOL—UNWASHED—SECTION 1.

Name of Exhibitor and Station.	Colony.	How the Sheep were Bred	No of Days Growth.	Age of Hoggets or Sheep	No of Fleeces	Net Weight in lbs	Judges' Valuation per lb
Wilson, Hon. Sir S., Mount Bute	Vict.	From ewes and rams from Exclidoune	350	1 to 5 years	96	312½	13½d.
Wilson, Hon. Sir S., Exclidoune	Vict.	From Exclidoune pure Merino flocks	360	4 to 6 tooth	89	300½	15
Peel River Land & Mineral Co., N.S.W.	N.S.W.	From Peel River Co's sheep	366	3 to 8 years	100	345½	15½
McDonald, J. M. L., Wallabadah	N.S.W.	From Wallabadah stud flock	368	3 years to aged	100	360½	11
McDonald, J. M. L., Wallabadah	N.S.W.	From station-bred rams and ewes	378	3, 4, 5 years	100	375½	10
Keach, G. W., Chiswick, Ross	N.Z.	From general flock	382	2 and 4 tooth	81	307½	12½
Gollan, D., Mangaratu	N.Z.	From Currie and Chiswick flocks	388	2, 4, 6 tooth	73	307½	12½
Anderson, J., Fort Lincoln	N.S.W.	From Merino and Cheviot stock crossed with Steagor's	385	2, 4, 6 tooth	73	317½	10½
Bowling, J., Blanding Park	N.S.W.	Originally from imported Silesian rams and ewes	340 to 360	2 and 2 year	100	270	10½
Bowling, J., Blanding Park	N.S.W.	From Salvo Merino rams, bred at Archersfield	363	2-tooth up	100	270	10½
Bowling, J., Blanding Park	N.S.W.	Station-bred	363	2-tooth	81	314½	11
Bruchman, A., Lismore	Vict.	From pure Australian Merino stock	361	2 and 4 tooth	100	316½	17½
Oliver, C. E., Collaroy	N.S.W.	From pure-bred Merinos	365	2, 3, and 4 yrs	88	310	14
Currie, J. L., Larn	Vict.	From Australian Merino, by Camden rams	362	13 months	82	382½	16
Currie, J. L., Larn	Vict.	From Australian Merino, by Camden rams	383	Various	75	330½	16½
Dowling, V., Mudgee	N.S.W.	From Australian flock, bred at Larc	380	6 to 8 tooth	55	302½	10½
Gibson, J., Balls Yuc	Tas.	Pure Merinos, entirely Tasmanian blood	366	2-tooth	90	310½	15½

SECTION IV.

Wilson, Hon. Sir S., Exclidoune	Vict.	From Exclidoune pure Merino flocks	368 to 380	10 to 11 months	88	200½	13
Wilson, Hon. Sir S., Mount Bute	Vict.	From Exclidoune pure Merino flocks	350	11 months	130	212½	17½
Bowman, Mrs. G. P., Graupian Hills	Vict.	Station-bred, originally from Saxon Merinos	350 to 470	1 year	122	327½	10
Oliver, C. E., Collaroy	N.S.W.	From pure-bred Merinos	424	13 months	126	370½	11
Gibson, W. & Son, Soona	Tas.	From pure Merinos, originally imported 60 years ago	413	425 days	138	394½	17½
Macdonald, J. M. L., Wallabadah	N.S.W.	From Wallabadah station flock	13 mths	13 months	100	384½	10
Macdonald, J. M. L., Wallabadah	N.S.W.	From Wallabadah station flock	13 mths	13 months	70	406½	10
Peel River Land & Mineral Co., N.S.W.	N.S.W.	From Company's sheep	416	410 days	110	312½	11½

DIVISION 1, A—MERINO WOOL—WASHED—SECTION 1.

Currie, J. L., Larn	Vict.	Australian Merino, by Camden (Spanish) Merino	362	18 months	90	310	9
Gunning, J., Terminus	Vict.	From station Merino sheep	365	4 to 6 tooth	90	351½	6
Garth, S., Glenis	Vict.	Rainforest, imported French Maïnos	366	Full 4 to 6 tooth	100	196	9
Armitage, W., Gexham Park	Vict.	From 4000 yrre rams and ewes	359	4 tooth	100	199½	10
Wilson, Hon. Sir S., Mount Bute	Vict.	From ewes and rams from Exclidoune	378	2 and 4 tooth	100	315½	3
Wilson, Hon. Sir S., Exclidoune	Vict.	From ewes and rams from Exclidoune	379	1 to 5 years	100	315½	3
Wilson, Hon. Sir S., Exclidoune	Vict.	From Exclidoune pure Merino flocks	355	4 and 6 tooth	97	209	3
Wilson, Hon. R., Laing Kai Kai	Vict.	From Laing Kai Kai bred Merino ewes	371	1½ years	100	203½	3
Shaw, T., Woorayrite	Vict.	From pure Camden rams and Learmonth's ewes	370	2 tooth	100	202½	3
Shaw, T., Woorayrite	Vict.	From pure Camden rams and Learmonth's ewes	370	2 tooth	100	202½	3
Russell, T. & Co., Baruah	Vict.	From sheep bred by exhibitors	368	1 yr. 5 mths.	90	206½	3
M'Intyre, P., Maalook	Vict.	From Learmonth's pure Exclidoune Merinos	346	4 and 6 tooth	100	203½	3

Gibson, W., & Son, Socon	365	4-tooth	91	1084	3 9
Gibson, J., Belle Vue	340 to 365	2-tooth	100	204	3 0

CONTRACTOR FOR THE GASFITTINGS

AT THE

INTERNATIONAL EXHIBITION, 1880.

ROBERT S. INGLIS, PLUMBER & GASFITTER,

28 Little Collins Street East,

MELBOURNE.

To NEWSPAPER PROPRIETORS in the AUSTRALIAN COLONIES.

ILLUSTRATED LITERARY SUPPLEMENTS FOR NEWSPAPERS.

I AM now supplying Weekly Illustrated Literary Supplements, two pages News, containing Tales, Humorous and other Sketches, Incidents of Travel, Extracts from and Notices of late Books; Poetry, Fables, Good Thoughts, Family Matters, including Household Recipes; Latest Fashions; Scientific and Agricultural Notes; Chat; and Miscellaneous Extracts, and one or more Illustration of Australian Scenery, Prominent Public Men, Work of Art, &c.

Having been the first in Australia to publish and supply Supplements (now ten years since), my long experience enables me to so select matter as to give the greatest satisfaction to readers and newspaper proprietors.

Terms—5s. per 100 for 200 and upwards; under 200, 1s. extra on order. Orders from parts outside of the Colony of Victoria not proceeded with unless accompanied by P.O.O. or bank draft, or order upon Melbourne house for payment on delivery.

The charge for the necessary stereotype heading (the use of type not admissible) is 10s.

They are despatched in parcels of three, four, or more, at consignee's risk.

NEWS AND GENERAL AGENCY.

GENERAL COMMISSIONS undertaken in the matter of Paper, Type, Machinery, &c., or the selection and engagement of Editors, Reporters, Compositors, &c.; the very long and extensive practical experience (extending over 35 years) I have had in these matters affording me the best opportunity of giving satisfaction to those requiring such services.

Consultations and advice on trade subjects can be had, by letter, or personally by appointment.

I am prepared to supply Letters, Leading Articles, and all other kinds of contributions for the Press, having the fullest benefit of a connection with one of the oldest Press Agencies in Melbourne.

Special Reports (by letter or telegram), on any subject, supplied at moderate rates.

W. H. WILLIAMS,

PRINTING AND PUBLISHING OFFICE
